A: GENERAL

Sedan models

- | | |
|--------------------------------------|--------------------------------------|
| (1) High mount stop light | (4) Stop/tail/rear side marker light |
| (2) Turn signal/hazard warning light | (5) License plate light |
| (3) Backup light | |

Wagon models

- | | |
|----------------------------|--------------------------------------|
| (1) High mount stop light | (4) Turn signal/hazard warning light |
| (2) Rear side marker light | (5) Backup light |
| (3) Stop/tail light | (6) License plate light |

REAR

LIGHTING SYSTEM

- On sedan models, the rear turn signal/hazard warning light, stop/tail/rear side marker light, and the backup light are incorporated into the rear combination light. On wagon models, the rear turn signal/hazard warning light, stop/tail light, and the rear side marker light are incorporated into the rear combination light. On both the sedans and wagons, the rear reflex reflector and the rear side reflex reflector are incorporated into the rear combination light. On wagons, the backup lights are built in the rear gate garnish.
- The high mount stop light is installed to the bottom inside of the rear window on sedans, and to the rear of the roof spoiler on wagons.
- By using LEDs (light emitting diodes) as light source for the high mount stop light on wagon models, space is saved, efficiency is improved, and power consumption is reduced while the durability is improved.
