

Valve Clearance

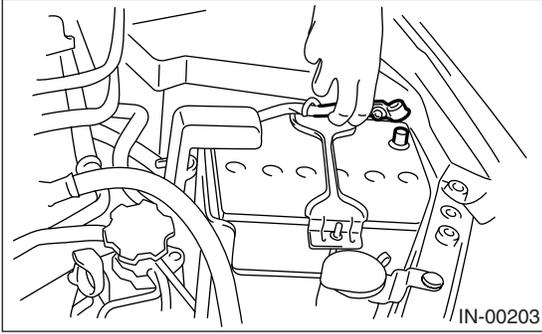

MECHANICAL

8. Valve Clearance

A: INSPECTION

Inspection and adjustment of valve clearance should be performed while engine is cold.

- 1) Lift-up the vehicle.
- 2) Remove the under cover.
- 3) Lower the vehicle.
- 4) Remove the collector cover.
- 5) Disconnect the ground cable from battery.

6) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>

7) Remove a bolt which secures timing belt cover (RH).

8) Loosen the remaining bolts which secure timing belt cover (RH), then remove the timing belt cover.

9) When inspecting #1 and #3 cylinders:

- (1) Remove the air cleaner case.<Ref. to IN(H4DOTC)-8, REMOVAL, Air Cleaner Case.>
- (2) Disconnect the connector from ignition coil.
- (3) Remove the ignition coil.
- (4) Place a suitable container under the vehicle.
- (5) Disconnect the PCV hose from rocker cover (RH).
- (6) Remove the bolts, then remove the rocker cover (RH).

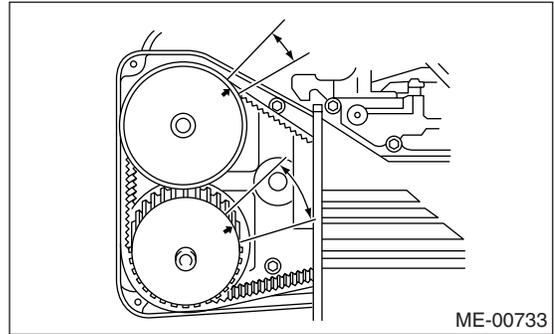

10) When inspecting #2 and #4 cylinders:

- (1) Disconnect the battery cable, and then remove the battery and battery carrier.
- (2) Disconnect the connector from ignition coil.
- (3) Remove the ignition coil.
- (4) Place a suitable container under the vehicle.
- (5) Disconnect the PCV hose from rocker cover (LH).
- (6) Remove the bolts, then remove the rocker cover (LH).

11) Turn the crank pulley clockwise until arrow mark on the cam sprocket is set to position shown in the figure.

NOTE:

Turn the crankshaft using a socket wrench.

12) Measure the #1 cylinder intake valve and #3 cylinder exhaust valve clearance by using thickness gauge (A).

NOTE:

- Insert the thickness gauge in as horizontal a direction as possible with respect to the valve lifter.
- Measure the exhaust valve clearances while lifting-up the vehicle.

Valve clearance

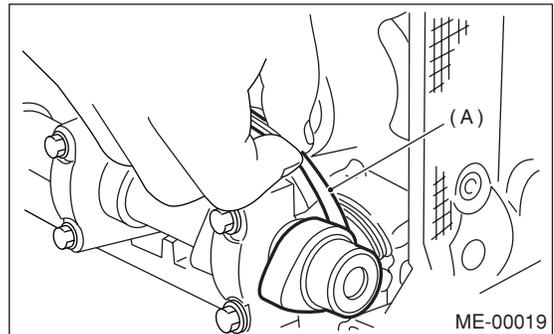

Intake:

$$0.20^{+0.04}_{-0.06} \text{ mm } (0.0079^{+0.0016}_{-0.0024} \text{ in})$$

Exhaust:

$$0.35 \pm 0.05 \text{ mm } (0.0138 \pm 0.0020 \text{ in})$$

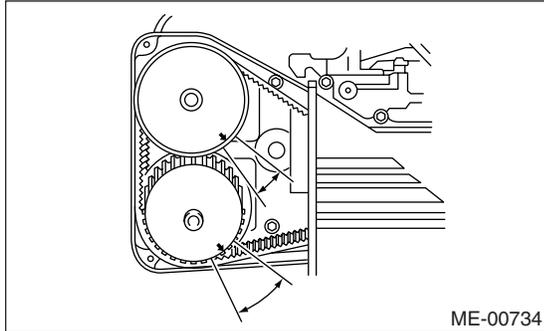

- If the measured value is not within specification, take notes of the value in order to adjust the valve clearance later on.

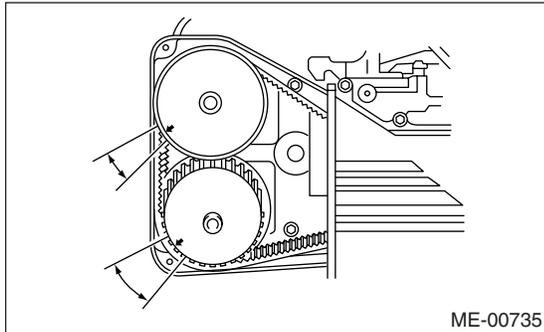

13) If necessary, adjust the valve clearance. <Ref. to ME(H4DOTC)-27, ADJUSTMENT, Valve Clearance.>

14) Further turn the crank pulley clockwise and then measure the valve clearances again.

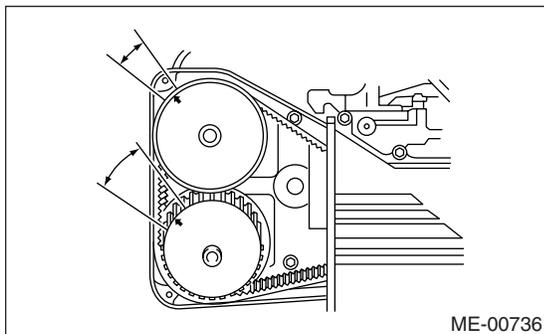

(1) Set the arrow mark on cam sprocket to the position shown in the figure, and measure the #2 cylinder exhaust valve and #3 cylinder intake valve clearances.

(2) Set the arrow mark on cam sprocket to the position shown in the figure, and measure the #2 cylinder intake valve and #4 cylinder exhaust valve clearances.

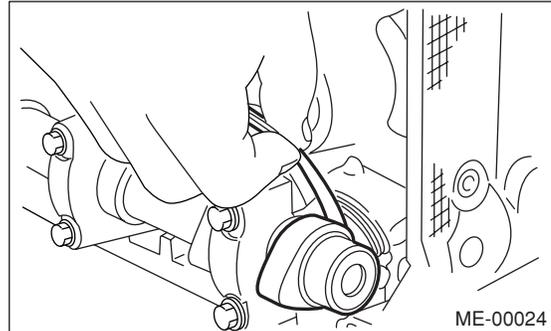

(3) Set the arrow mark on cam sprocket to the position shown in the figure, and measure the #1 cylinder exhaust valve and #4 cylinder intake valve clearances.

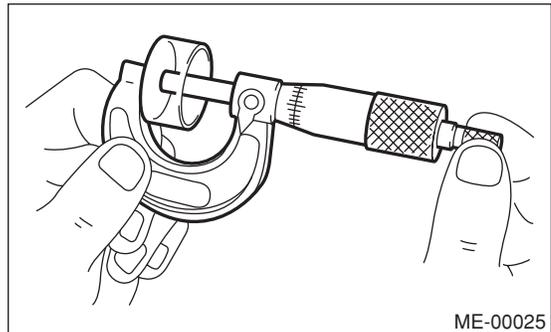

NOTE:

Record each valve clearance after it has been measured.

- 2) Remove the camshaft. <Ref. to ME(H4DOTC)-51, REMOVAL, Camshaft.>
- 3) Remove the valve lifter.
- 4) Measure the thickness of valve lifter with a micrometer.

5) Select a valve lifter of suitable thickness based on the measured valve clearance and valve lifter thickness, by referring to the following table.

Unit: (mm)
Intake valve: $S = (V + T) - 0.20$
Exhaust valve: $S = (V + T) - 0.35$
S: Valve lifter thickness required
V: Measured valve clearance
T: Valve lifter thickness to be used

15) After inspection, install the related parts in the reverse order of removal.

B: ADJUSTMENT

CAUTION:

Adjustment of valve clearance should be performed while engine is cold.

1) Measure all valve clearances. <Ref. to ME(H4DOTC)-26, INSPECTION, Valve Clearance.>

Valve Clearance

13228 AC021	5.63 (0.2217)
13228 AC031	5.65 (0.2224)

6) Inspect all valves for clearance again at this stage. If the valve clearance is not correct, repeat the procedure over again from the first step.

7) After inspection, install the related parts in the reverse order of removal.
