# GLASS/WINDOWS/MIRRORS

## 1. Power Window

### A: CONSTRUCTION

- The power window system consists of regulator motors and switches for individual doors, relays and a circuit breaker unit.
- Each door window can be opened/closed by pushing down/pulling up the switch.
- Only the driver's door window switch has a 2-stage mechanism:
  - When the switch is pushed down or pulled up lightly and held, the window continues to lower or raise until the switch is released.
  - When the switch is pushed down fully, the window opens to the end position automatically.

|---------------------------------------|---|
| (1) Raise                             | (11) Ignition                             |
| (2) Lower                             | (12) Auto                                 |
| (3) Power window lock switch          | (13) Passenger's seat                     |
| (4) Lock                              | (14) Rear right                           |
| (5) Unlock                            | (15) Rear left                            |
| (6) Controller                        | (16) Power window passenger's seat switch |
| (7) Power window driver's seat switch | (17) Power window rear right seat switch  |
| (8) Door lock switch                  | (18) Power window rear left seat switch   |
| (9) Driver's seat side                | (19) Ground                               |
| (10) Door lock controller             |   |

## 2. Door Mirrors

### A: GENERAL

- Door mirrors are powered and remote controllable, and on some models each mirror has a side turn signal light built in it.
- The mirror body is structured as a scalp cap. The portion that may be damaged easier (scalp cap part and the side turn signal lamp part) can be replaced, contributing to reduce repair cost.
- Water drops cannot easily adhere to the mirror surface or front door glass while driving in rain.
- Mirror heaters are used on some models.

- (1) Scalp cap
- (2) Groove
- (3) Side turn signal light
