3	<b>CHECK OUTPUT OF YAW RATE &amp; LATERAL G SENSOR WITH SUBARU SELECT MONITOR.</b> 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select {Current Data Display & Save} in Subaru Select Monitor. 4) Read the yaw rate output displayed on display.	Is the reading indicated on monitor display -4 — 4 deg/s?	Go to step 4.	Replace the yaw rate & lateral G sensor.
4	<b>CHECK OUTPUT OF STEERING ANGLE SENSOR WITH SUBARU SELECT MONITOR.</b> 1) Drive the vehicle on a flat road. 2) Park the vehicle straight. 3) Select {Current Data Display & Save} in Subaru Select Monitor. 4) Read the steering angle sensor output displayed on display.	Is the reading indicated on monitor display -5 — 5°?	Go to step 5.	Perform the centering adjustment of steering wheel.
5	<b>CHECK YAW RATE &amp; LATERAL G SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Connect all connectors. 3) Erase the memory. 4) Perform the Inspection Mode. 5) Read the DTC.	Is the same DTC displayed?	Go to step 6.	Go to step 7.
6	<b>CHECK THE VDCCM&amp;H/U.</b> 1) Turn the ignition switch to OFF. 2) Replace the yaw rate & lateral G sensor. 3) Erase the memory. 4) Perform the Inspection Mode. 5) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-10, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 8.
7	<b>CHECK OTHER DTC DETECTION.</b>	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.
8	<b>CHECK OTHER DTC DETECTION.</b>	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Malfunction is found in original yaw rate & lateral G sensor.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK YAW RATE &amp; LATERAL G SENSOR INSTALLATION.</b>	Is the yaw rate & lateral G sensor installation bolt tightened to 7.5 N·m (0.76 kgf-m, 5.5 ft-lb)?	Go to step 2.	Tighten the yaw rate & lateral G sensor installation bolt.
<b>2 CHECK LATERAL G SENSOR OUTPUT.</b> 1) Park the vehicle on a level surface. 2) Select {Current Data Display & Save} in Subaru Select Monitor. 3) Read the lateral G sensor output displayed on screen.	Is the indicated reading on the monitor display $-1.5 — 1.5 \text{ m/s}^2$ ?	Go to step 3.	Replace the yaw rate & lateral G sensor.
<b>3 CHECK LATERAL G SENSOR OUTPUT.</b> 1) Turn the ignition switch to OFF. 2) Remove the yaw rate & lateral G sensors from vehicle. 3) Turn the ignition switch to ON, and select {Current Data Display & Save} in Subaru Select Monitor. 4) Read the lateral G sensor output displayed on screen.	When the yaw rate & lateral G sensor is inclined $90^\circ$ to the right, is the indicated value $6.8 — 12.8 \text{ m/s}^2$ ?	Go to step 4.	Replace the yaw rate & lateral G sensor.
<b>4 CHECK LATERAL G SENSOR.</b> Read the lateral G sensor output displayed on screen.	When the yaw rate & lateral G sensor is inclined $90^\circ$ to the left, is the indicated value $-6.8 — -12.8 \text{ m/s}^2$ ?	Go to step 5.	Replace the yaw rate & lateral G sensor.
<b>5 CHECK POOR CONTACT IN CONNECTORS.</b> Turn the ignition switch to OFF.	Is there poor contact in connector between VDCCM& H/U and yaw rate & lateral G sensor?	Repair the connector.	Go to step 6.
<b>6 CHECK THE VDCCM&amp;H/U.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM only. <Ref. to VDC-10, REPLACEMENT, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 7.
<b>7 CHECK OTHER DTC DETECTION.</b>	Is any other DTC displayed?	Perform the diagnosis according to DTC.	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

VEHICLE DYNAMICS CONTROL (VDC) (DIAGNOSTICS)

## AZ:DTC C0074 PRESSURE SENSOR

### DTC DETECTING CONDITION:

Defective pressure sensor

### TROUBLE SYMPTOM:

- ABS does not operate.
- VDC does not operate.

Step	Check	Yes	No	
1	<b>CHECK STOP LIGHT SWITCH CIRCUIT.</b> Check stop light switch open circuit.	Is the stop light switch circuit OK?	Go to step 2.	Repair the stop light switch circuit. NOTE: If there is malfunction in the stop light circuit, DTC may be memorized.
2	<b>CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.</b> 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the pressure sensor output displayed on display.	When the brake pedal is released, is the displayed value -40 — 40 bar?	Go to step 3.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
3	<b>CHECK OUTPUT OF PRESSURE SENSOR WITH SUBARU SELECT MONITOR.</b> 1) Select {Current Data Display & Save} in Subaru Select Monitor. 2) Read the pressure sensor output displayed on display.	When operating the brake pedal, does the pressure sensor output value on the display change according to the brake pedal operation?	Go to step 4.	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
4	<b>CHECK PRESSURE SENSOR.</b> 1) Erase the memory. 2) Perform the Inspection Mode. 3) Read the DTC.	Is the same DTC displayed?	Replace the VDCCM&H/U. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 5.
5	<b>CHECK OTHER DTC DETECTION.</b>	Is any other DTC displayed?	Perform the diagnosis according to DTC. <Ref. to VDC(diag)-34, List of Diagnostic Trouble Code (DTC).>	It results from a temporary noise interference.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

# General Description

BRAKE

---

## C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.

## D: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
Snap ring pliers	Used for removing and installing snap rings.

## 2. Front Brake Pad

### A: REMOVAL

#### 1. 16-INCH TYPE

- 1) Lift up the vehicle, and remove the front wheels.
- 2) Remove the caliper bolt.

- 3) Raise the caliper body and support it.

**NOTE:**

Do not disconnect the brake hose from the caliper body.

- 4) Remove the pad.

**NOTE:**

If the brake pad is difficult to remove, proceed as follows:

- (1) Remove the caliper body from support.
- (2) Remove the support.

- (3) Place the support between wooden blocks in the vise.

- (1) Support
- (2) Wooden block

- (4) Attach a rod of 12 mm (0.47 in) diameter or less to the shaded area of the brake pad, and strike the rod with a hammer to drive brake pad out.

#### 2. 17-INCH TYPE

Refer to 16-inch type. <Ref. to BR-13, 16-INCH TYPE, REMOVAL, Front Brake Pad.>

# Front Brake Pad

## BRAKE

### B: INSTALLATION

#### 1. 16-INCH TYPE

1) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the pad clip.

2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to both surfaces of the pad inner shim.

3) Install the pad to support.  
4) Install the caliper body to the support.

#### **Tightening torque:**

**27 N·m (2.8 kgf·m, 19.9 ft·lb)**

#### 2. 17-INCH TYPE

1) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the pad clip.

2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to both surfaces of the pad inner shim.

3) Install the pad to support.

#### **NOTE:**

Install the pad indicator in proper direction.

- (1) LH – IN
- (2) LH – OUT
- (3) RH – IN
- (4) RH – OUT
- (5) Pad indicator
- (6) Pad return spring

**CAUTION:**

- Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
- Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
- If the pad return spring is deformed or damaged, replace the brake pad.

- (1) Pad return spring
- (2) Supporting surface of pad clip
- (3) Direction of brake rotor rotation

4) Install the caliper body to the support.

**Tightening torque:**

**27 N·m (2.8 kgf·m, 19.9 ft·lb)**

## C: INSPECTION

### 1. 16-INCH TYPE

Check the pad thickness A.

Pad thickness mm (in)	Standard	11 (0.43)
	Wear limit	1.5 (0.059)

**NOTE:**

- Always replace the pads of both sides as a set.
- Replace pad clips if they are twisted or worn.
- Replace the pad if there is oil or grease on it.

### 2. 17-INCH TYPE

Check the pad thickness A.

Pad thickness mm (in)	Standard	11 (0.43)
	Wear limit	1.5 (0.059)

**NOTE:**

- Always replace the pads of both sides as a set.
- Replace the pad if there is oil or grease on it.

## 3. Front Disc Rotor

### A: REMOVAL

#### 1. 16-INCH TYPE

- 1) Lift up the vehicle, and remove the front wheels.
- 2) Remove the caliper body and the support from housing, and suspend it from the strut using a wire.

- 3) Remove the disc rotor.

#### NOTE:

If it is difficult to remove the disc rotor from the hub, drive an 8 mm bolt into the threaded section (B) of the rotor, then remove the rotor.

- 4) Remove mud and foreign matter from the caliper body assembly and the support.

#### 2. 17-INCH TYPE

Refer to 16-inch type. <Ref. to BR-16, 16-INCH TYPE, REMOVAL, Front Disc Rotor.>

### B: INSTALLATION

- 1) Install the disc rotor.
- 2) Install the caliper body and the support to housing.

#### Tightening torque:

**120 N·m (12.2 kgf·m, 88.5 ft·lb)**

- 3) Install the front wheels.

### C: INSPECTION

- 1) Check the front wheel bearing play and axle hub runout before the inspection of disc rotor runout limit. <Ref. to DS-16, INSPECTION, Front Axle.>
- 2) Secure the disc rotor by tightening the five wheel nuts.
- 3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference. Rotate the disc rotor to check runout. If the runout of disc rotor exceeds the service limit, resurface the disc rotor. After re-surfacing, check disc rotor thickness as in step 4).

#### Disc rotor runout limit:

**0.05 mm (0.0020 in)**

- 4) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of the disc rotor exceeds the service limit, replace with a new disc rotor.

		Standard	Limit	Disc rotor outer diameter
Disc rotor thickness A mm (in)	16"	24 (0.94)	22 (0.87)	294 (11.57)
	17"	30 (1.18)	28 (1.10)	316 (12.44)

## 4. Front Disc Brake Assembly

### A: REMOVAL

#### 1. 16-INCH TYPE

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body. If it does, wash off with water and wipe away completely.

- 1) Lift up the vehicle, and remove the front wheels.
- 2) Remove the union bolt, and disconnect the brake hose from the caliper body assembly.

- 3) Remove the bolt securing the lock pin to caliper body.

- 4) Raise the caliper body, and then move it toward vehicle center to separate it from the support.

- 5) Remove the support from housing.

**NOTE:**

Remove the support only when replacing the rotor or support. It need not be removed when servicing the caliper body assembly.

- 6) Remove mud and foreign matter from the caliper body assembly and the support.

#### 2. 17-INCH TYPE

Refer to 16-inch type. <Ref. to BR-17, 16-INCH TYPE, REMOVAL, Front Disc Brake Assembly.>

# Front Disc Brake Assembly

BRAKE

## B: INSTALLATION

### 1. 16-INCH TYPE

1) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the support.

2) Install the support to the housing.

**Tightening torque:**

**120 N·m (12.2 kgf·m, 88.5 ft·lb)**

3) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the pad clip.

4) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to both surfaces of the pad inner shim.

5) Install the pad to support.

6) Install the caliper body to the support.

**Tightening torque:**

**27 N·m (2.8 kgf·m, 19.9 ft·lb)**

7) Connect the brake hose using a new brake hose gasket.

**Tightening torque:**

**18 N·m (1.8 kgf·m, 13.0 ft·lb)**

8) Bleed air from the brake system.

### 2. 17-INCH TYPE

1) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the support.

2) Install the support to the housing.

**Tightening torque:**

**120 N·m (12.2 kgf·m, 88.5 ft·lb)**

3) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the pad clip.

4) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to both surfaces of the pad inner shim.

5) Install the pad to support.

**NOTE:**

Install the pad indicator in proper direction.

- (1) LH – IN
- (2) LH – OUT
- (3) RH – IN
- (4) RH – OUT
- (5) Pad indicator
- (6) Pad return spring

**CAUTION:**

- Be sure to install so that the pad return spring faces the input side of the direction of brake rotor rotation, as shown in the figure.
- Correctly install the pad return spring to the supporting surface of the pad clip as shown in the figure.
- If the pad return spring is deformed or damaged, replace the brake pad.

- (1) Pad return spring
- (2) Supporting surface of pad clip
- (3) Direction of brake rotor rotation

6) Install the caliper body to the support.

7) Connect the brake hose using a new brake hose gasket.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

8) Bleed air from the brake system.

# Front Disc Brake Assembly

## BRAKE

### C: DISASSEMBLY

#### 1. 16-INCH TYPE

1) Remove mud and foreign matter from the caliper body assembly and the support.

#### CAUTION:

**Be careful not to allow foreign matter to enter the brake hose connector.**

2) Place a wooden block in the caliper body as shown in the figure to prevent the piston from jumping out and being damaged.

3) Gradually apply compressed air via the brake hose installation hole to push the piston out.

(1) Place a wooden block of 30 mm (1.18 in) width.

4) Remove the piston boot.

5) Remove the piston seal from caliper body cylinder.

#### CAUTION:

**Do not damage the cylinder and piston seal groove.**

(1) Piston seal

6) Remove the guide pin and boot from caliper body.

#### 2. 17-INCH TYPE

Refer to 16-inch type. <Ref. to BR-20, 16-INCH TYPE, DISASSEMBLY, Front Disc Brake Assembly.>

### D: ASSEMBLY

#### 1. 16-INCH TYPE

1) Clean the inside of the caliper body using brake fluid.

2) Apply a coat of brake fluid to piston seal and install piston seal in the groove on caliper body.

3) Apply a coat of brake fluid to the inner surface of cylinder and the entire outer surface of the piston.

4) Apply a coat of specified grease to the boot, and fit to the groove on the ends of the cylinder.

#### Grease:

**NIGLUBE RX-2 (Part No. 000041000)**

5) Insert the piston into cylinder.

#### CAUTION:

**Do not force the piston into cylinder.**

(1) Piston

(2) Piston boot

6) Position the boot in the grooves on cylinder and piston.

(1) Piston

(2) Piston boot

(3) Caliper body

(4) Piston seal

7) Apply a coat of specified grease to the lock pin and guide pin outer surface, cylinder inner surface, and boot grooves.

**Grease:**

***NIGLUBE RX-2 (Part No. 000041000)***

8) Insert the lock pin and guide pin boot into the support.

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Grease applied area

## 2. 17-INCH TYPE

Refer to 16-inch type. <Ref. to BR-20, 16-INCH TYPE, ASSEMBLY, Front Disc Brake Assembly.>

### E: INSPECTION

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

## 5. Rear Brake Pad

### A: REMOVAL

- 1) Lift up the vehicle, then remove the rear wheels.
- 2) Remove the caliper bolt.

- 3) Raise the caliper body and support it.

**NOTE:**

Do not disconnect the brake hose from the caliper body.

- 4) Remove the pad.

**NOTE:**

If it is difficult to remove the brake pad, use the same procedure as front disc brake pad.

<Ref. to BR-13, REMOVAL, Front Brake Pad.>

### B: INSTALLATION

- 1) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the pad clip.

- 2) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the contact surface between the pad and shim.

- 3) Install the pad to support.

- 4) Install the caliper body to the support.

**Tightening torque:**

**Solid disc brake model**

**27 N·m (2.8 kgf-m, 19.9 ft-lb)**

**Ventilated disc brake model**

**37 N·m (3.7 kgf-m, 27.2 ft-lb)**

### C: INSPECTION

Check the pad thickness A.

Type of disc rotor		Solid	Ventilated
Pad thickness	Standard	9.0 (0.35)	9.0 (0.35)
	Wear limit	1.5 (0.059)	1.5 (0.059)

**NOTE:**

- Always replace the pads of both sides as a set.
- Replace pad clips if they are twisted or worn.
- A wear indicator is installed on the inner disc brake pad. If the pad is worn to the limit, the end of wear indicator contacts disc rotor, and a squeaking sound is heard as the wheel rotates. If the sound is heard, replace the pad.
- Replace the pad if there is oil or grease on it.

## 6. Rear Disc Rotor

### A: REMOVAL

- 1) Lift up the vehicle, then remove the rear wheels.
- 2) Release the parking brake.
- 3) Remove the two mounting bolts, and remove the disc brake assembly.

- 4) Suspend the disc brake assembly so that the hose is not stretched.
- 5) Remove the disc rotor.

#### NOTE:

If it is difficult to remove the disc rotor, perform the following two methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe is far enough away to allow removal of the disc rotor.

- (1) Adjusting screw
- (2) Cover
- (3) Flat tip screwdriver
- (4) Back plate

- (2) If it is difficult to remove the disc rotor from the hub, drive an 8 mm bolt into the threads B of the rotor, then remove the rotor.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

# Rear Disc Rotor

## BRAKE

### C: INSPECTION

- 1) Check the rear wheel bearing play and axle hub runout before inspecting the disc rotor runout limit. <Ref. to DS-22, INSPECTION, Rear Hub Unit Bearing.>
- 2) Secure the disc rotor by tightening the five wheel nuts.
- 3) Set a dial gauge 10 mm (0.39 in) inward from the disc rotor outer circumference. Rotate the disc rotor to check runout. If the runout of disc rotor exceeds the service limit, resurface the disc rotor. After resurfacing, check disc rotor thickness as in step 4).

**Disc rotor runout limit:**  
**0.05 mm (0.0020 in)**

- 4) Set a micrometer 10 mm (0.39 in) inward from the disc rotor outer perimeter, and then measure the disc rotor thickness. If the thickness of disc rotor exceeds the service limit, replace with a new disc rotor.

		Standard	Limit	Disc outer dia.
Disc rotor thickness A mm (in)	Solid disc	10 (0.39)	8.5 (0.335)	274 (10.79)
	Ventilated disc	18 (0.71)	16 (0.63)	290 (11.42)

## 7. Rear Disc Brake Assembly

### A: REMOVAL

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body. If it does, wash off with water and wipe away completely.

- 1) Lift up the vehicle, then remove the rear wheels.
- 2) Disconnect the brake hose from caliper body assembly.
- 3) Remove the caliper lower bolt.

- 4) Raise the caliper body, and then move it toward vehicle center to separate it from the support.
- 5) Remove the support from housing.

**NOTE:**

Remove the support only when replacing the rotor or support. It need not be removed when servicing the caliper body assembly.

- 6) Remove mud and foreign matter from the caliper body assembly and the support.

**CAUTION:**

Be careful not to allow foreign matter to enter the brake hose connector.

### B: INSTALLATION

- 1) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the support.

- 2) Install the support to the housing.

**Tightening torque:**

**66 N·m (6.7 kgf-m, 48.7 ft-lb)**

- 3) Apply a thin coat of Molykote M7439 (Part No. K0777YA000) to the pad clip.

- 4) Apply a thin coat of Molykote AS880N (Part No. K0779YA010) to the contact surface between the pad and shim.
- 5) Install the pad to support.
- 6) Install the caliper body to the support.

**Tightening torque:**

**Solid disc brake model**

**27 N·m (2.8 kgf-m, 19.9 ft-lb)**

**Ventilated disc brake model**

**37 N·m (3.7 kgf-m, 27.2 ft-lb)**

- 7) Connect the brake hose using a new brake hose gasket.

**Tightening torque:**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 8) Bleed air from the brake system.

# Rear Disc Brake Assembly

## BRAKE

### C: DISASSEMBLY

- 1) Remove the piston boot.

- 2) Place a wooden block in the caliper body as shown in the figure to prevent the piston from jumping out and being damaged.
- 3) Gradually apply compressed air via the brake hose installation hole to push the piston out.

- (1) Place a wooden block of 30 mm (1.18 in) width.

- 4) Remove the piston seal from caliper body cylinder.

**CAUTION:**  
Do not damage the cylinder and piston seal groove.

- 5) Remove the lock pin sleeve and boot from caliper body.
- 6) Remove the guide pin boot.

### D: ASSEMBLY

- 1) Clean the inside of the caliper body using brake fluid.
- 2) Apply a coat of brake fluid to piston seal and install piston seal in the groove on caliper body.
- 3) Apply a coat of brake fluid to the inner surface of cylinder and the entire outer surface of the piston.
- 4) Apply a coat of specified grease to the boot and fit to the groove on the ends of cylinder.

**Grease:**

**NIGLUBE RX-2 (Part No. 000041000)**

- 5) Insert the piston into cylinder.

**CAUTION:**

**Do not force the piston into cylinder.**

- 6) Position the boot in the grooves on piston and cylinder.

- (1) Piston
- (2) Piston boot
- (3) Caliper body
- (4) Piston seal

- 7) Apply a coat of specified grease to the guide pin, outer surface, sleeve outer surface, cylinder inner surface, and boot grooves.

**Grease:**

**NIGLUBE RX-2 (Part No. 000041000)**

- (1) Pin boot
- (2) Lock pin or guide pin
- (3) Grease applied area

- 8) Insert the guide pin boot to the support.
- 9) Install the lock pin boot to the support, and then insert the lock pin sleeve into the specified position.

### **E: INSPECTION**

- 1) Repair or replace the faulty parts.
- 2) Check the caliper body and piston for uneven wear, damage or rust.
- 3) Check the rubber parts for damage or deterioration.

## 8. Master Cylinder

### A: REMOVAL

**CAUTION:**

Do not allow brake fluid to come in contact with vehicle body. If it does, wash off with water and wipe away completely.

- 1) Drain brake fluid from the reservoir tank completely.
- 2) Disconnect the harness connector of the fluid level gauge.
- 3) Remove the brake pipe from the master cylinder.
- 4) Remove the master cylinder mounting nuts, and remove the master cylinder from the brake booster.

### B: INSTALLATION

- 1) Replace the O-ring for the master cylinder with a new part.

**CAUTION:**

Be careful not to install the O-ring in the wrong location.

- (1) Primary piston
- (2) O-ring
- (3) Do not install the O-ring on this groove.

- 2) Install in the reverse order of removal.

**Tightening torque:**

**Master cylinder mounting nut**  
**13 N·m (1.3 kgf-m, 9.6 ft-lb)**

**Piping flare nut**  
**Model with ABS**  
**15 N·m (1.5 kgf-m, 10.8 ft-lb)**  
**Model with VDC**  
**19 N·m (1.9 kgf-m, 14.0 ft-lb)**

**CAUTION:**

Be sure to use recommended brake fluid.  
 3) Bleed air from brake system. <Ref. to BR-36, PROCEDURE, Air Bleeding.>

### C: REPLACEMENT

- 1) Remove mud and dirt from the surface of brake master cylinder.
- 2) Secure the master cylinder in a vise.

**NOTE:**

To avoid damaging the master cylinder, place between aluminum plates or other material when holding with a vise.

- 3) Remove the pin which secures the master cylinder and reservoir tank, then remove the reservoir tank and seal.

- 4) While pushing in the primary piston, remove the C-ring using pliers.

- 5) While pushing in the primary piston, remove the straight pin from the port on the reservoir tank attachment location using a magnet pick-up tool.

- (1) Straight pin

- 6) Extract the primary piston assembly and secondary piston assembly straight out while taking care not to scratch the inner surface of the cylinder.

7) Clean the inside of master cylinder with brake fluid. Check the inside of the cylinder for damage, deformation and wear. Replace the master cylinder as assembly if faulty.

8) Apply brake fluid to the inner surface of master cylinder and piston assembly.

9) Make sure that the inner surface of master cylinder and the piston assembly are free of foreign matter. Install the primary piston assembly and the secondary piston assembly to master cylinder, while taking care not to scratch the master cylinder inner surface.

10) While pushing-in the primary piston, install the cylinder pin.

11) While pushing-in the primary piston, install the C-ring to the groove using pliers.

**CAUTION:**  
Make sure the C-ring is installed to the groove securely.

12) Install the seal to reservoir tank.

(1) Seal

13) Install the reservoir tank to the master cylinder, and secure with pin.

14) Replace the O-ring for the master cylinder with a new part.

(1) Primary piston

(2) O-ring

(3) Do not install the O-ring on this groove.

## D: INSPECTION

Inspect for oil leakage from the master cylinder.

### NOTE:

After replacing the piston kit, if an oil leakage is found even though there is no damage or scratches on the inside of the cylinder, the master cylinder inner wall may be worn. In this case, replace the master cylinder as an assembly.

## 9. Brake Booster

### A: REMOVAL

1) Remove or disconnect the following parts in the engine compartment.

- (1) Disconnect the connector of brake fluid level gauge.
- (2) Remove the brake pipe from the master cylinder.
- (3) Remove the master cylinder installation nut.
- (4) Disconnect the vacuum hose from brake booster.

2) Remove the following parts from the pedal bracket.

- (1) Snap pin and clevis pin
- (2) Four brake booster installation nuts

- (1) Nut
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod

3) Remove the brake booster while avoiding the brake pipe.

#### NOTE:

- Make sure that the booster shell and vacuum pipe are not subject to strong impacts.
- Be careful not to drop the brake booster. If the booster is dropped, replace it.
- Use special care when handling the operating rod. If excessive force is applied to the operating rod, the angle may change by  $\pm 3^\circ$ , and it may result in damage to power piston cylinder.
- Be careful when placing the brake booster on floor.
- Do not change the push rod length.

#### CAUTION:

- **Do not disassemble the brake booster.**
- **If external force is applied from above when brake booster is placed in this position, the resin portion as indicated by "P" may become damaged.**

- (1) Force

## B: INSTALLATION

1) Check and adjust the operating rod of the brake booster.

### Specification L:

**136.5 mm (5.38 in)**

If it is out of specification, adjust it with the brake booster operating rod.

- 2) Mount the brake booster in position.
- 3) Connect the operating rod to brake pedal with clevis pin and snap pin.

- (1) Nut
- (2) Clevis pin
- (3) Snap pin
- (4) Operating rod

### NOTE:

Apply a thin coat of SUNLIGHT 2 (Part No. 003602010) to the clevis pin.

4) Connect the vacuum hose to the brake booster.

5) After replacing the O-ring, install the master cylinder to brake booster.

- (1) Primary piston
- (2) O-ring
- (3) Do not install the O-ring on this groove.

- 6) Connect the brake pipes to the master cylinder.
- 7) Connect the connector of the brake fluid level gauge.
- 8) Measure the clearance between the threaded end of the stop light switch and the stopper. If it is not within the specification, adjust it by adjusting the position of the stop light switch. <Ref. to BR-45, ADJUSTMENT, Stop Light Switch.>

### CAUTION:

**Be careful not to rotate the stop light switch.**

### Stop light switch clearance A:

**0.3 mm (0.012 in)**

- 9) Apply grease to the operating rod connecting pin to prevent it from wear.
- 10) Bleed air from brake system.

### Tightening torque (air bleeder screw):

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

11) Perform a road test to make sure the brakes do not drag.

# Brake Booster

## BRAKE

### C: INSPECTION

#### 1. OPERATION CHECK (WITHOUT GAUGES)

##### CAUTION:

When checking operation, be sure to apply the parking brake securely.

##### • Check without gauges

This method can not determine exactly what part is defective. But it is possible to identify the outline of the defect by performing the check according to the following procedures.

##### • Air tightness check

Start the engine, and idle it for 1 to 2 minutes, then turn it OFF. Depress the brake pedal several times applying the normal pedal force. The pedal stroke should be the longest at the 1st depression, and it should become shorter at each successive depression. If no change occurs in the pedal height when pressed, the brake booster is faulty.

- (1) Normal operation
- (2) Not OK
- (3) 1st
- (4) 2nd
- (5) 3rd

##### NOTE:

- In case of defective operation, inspect the condition of the check valve and vacuum hose as well.
- Replace them if faulty, and perform the test again.
- If no improvement is observed, check precisely with gauges.

##### • Operation check

- 1) While the engine is OFF, depress the brake pedal several times applying the same pedal force, to check for a change in pedal height.

- (1) When engine is stopped
- (2) When engine is started

- 2) With the brake pedal depressed, start the engine.

- 3) As the engine starts, the brake pedal should move slowly toward the floor. If the pedal height does not change, the brake booster is faulty.

##### NOTE:

If faulty, check precisely with gauges.

##### • Loaded air tightness check

Depress the brake pedal while the engine is running, and turn the engine to OFF while the pedal is depressed. Keep the pedal depressed for 30 seconds. If the pedal height does not change, the function of brake booster is normal. If the pedal height increases, it is faulty.

##### NOTE:

If faulty, check precisely with gauges.

## 2. OPERATION CHECK (WITH GAUGES)

### CAUTION:

When checking operation, be sure to apply the parking brake securely.

#### • Check with gauges

Connect the gauge as shown in the figure. After bleeding air from the pressure gauge, perform the checks.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Adapter hose
- (4) Vacuum hose
- (5) Pedal force gauge

#### • Air tightness check

1) Start the engine and keep it running until vacuum pressure indicates point A of the vacuum gauge = 66.7 kPa (500 mmHg, 19.69 inHg). Do not depress the brake pedal at this time.

- (1) Pressure gauge
- (2) Vacuum gauge

2) Stop the engine and check the gauge. If the vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less, the function of brake booster is normal.

If faulty, the cause may be one of the following.

- Check valve malfunction
- Leak from vacuum hose
- Leak from shell joint section or stud bolt welded section
- Damaged diaphragm
- Leak from valve body seal and bearing section
- Leak from plate and seal assembly section
- Leak from poppet valve assembly section

#### • Loaded air tightness check

1) Start the engine and depress the brake pedal with a pedal force of 196 N (20 kgf, 44 lb). Keep the engine running and keep the pedal pressed until a vacuum of point B = 66.7 kPa (500 mmHg, 19.69 inHg) is indicated on the vacuum gauge.

- (1) Pressure gauge
- (2) Vacuum gauge
- (3) Pedal force gauge
- (4) Depressed

# Brake Booster

## BRAKE

---

2) Stop the engine and check the vacuum gauge. If the vacuum pressure drop within 15 seconds after stopping the engine is 3.3 kPa (25 mmHg, 0.98 inHg) or less, the function of brake booster is normal.

If defective, refer to "AIR TIGHTNESS CHECK".

<Ref. to BR-32, INSPECTION, Brake Booster.>

3) If the brake booster is faulty, replace it with a new part.

### • Lack of boost action check

Turn the engine OFF, and set the value of the vacuum gauge to "0". Then, check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal operation force N (kgf, lb)	147 (15, 33)	294 (30, 66)
Fluid pressure kPa (kg/cm <sup>2</sup> , psi)	545 (6, 79)	1,564 (16, 227)

### • Boosting action check

Set the vacuum gauge reading to 66.7 kPa (500 mmHg, 19.69 inHg) with the engine running. Then, check the fluid pressure when the brake pedal is depressed. The pressure must be greater than the specification listed.

Brake pedal operation force N (kgf, lb)	147 (15, 33)	294 (30, 66)
Fluid pressure kPa (kg/cm <sup>2</sup> , psi)	6,003 (61, 871)	11,273 (115, 1,635)

## 10.Brake Fluid

### A: INSPECTION

1) Check that the brake fluid level is between “MIN” and “MAX”. If out of the specified range, refill or drain fluid. If the fluid level is close to “MIN”, check the brake pad for wear and refill the fluid.

2) Check the fluid for discoloration. If the fluid color has changed excessively, drain the fluid and refill with new fluid.

### B: REPLACEMENT

#### CAUTION:

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

#### NOTE:

- During the operation, keep the reservoir tank filled with brake fluid to eliminate entry of air.
  - Operate the brake pedal slowly.
  - For convenience and safety, two people should work together.
  - The required amount of brake fluid is approximately 500 ml (16.9 US fl oz, 17.6 Imp fl oz) for the entire brake system.
- 1) Lift up the vehicle and set rigid racks at the specified locations, or keep the vehicle lifted.
  - 2) Remove both the front and rear wheels.
  - 3) Drain brake fluid from the reservoir tank.
  - 4) Refill the reservoir tank with the recommended brake fluid.

#### **Recommended brake fluid:**

**Refer to the specification. <Ref. to BR-2, SPECIFICATION, General Description.>**

Perform the same procedure as for bleeding the brake line, until new brake fluid comes out from vinyl tube. <Ref. to BR-36, PROCEDURE, Air Bleeding.>

## 11. Air Bleeding

### A: PROCEDURE

**CAUTION:**

- Do not let brake fluid come into contact with the painted surface of the vehicle body. Wash away with water immediately and wipe off if it is spilled by accident.
- Avoid mixing brake fluid of different brands to prevent fluid performance from degrading.
- Be careful not to allow dirt or dust to enter the reservoir tank.

#### 1. MASTER CYLINDER

**NOTE:**

- When the master cylinder is disassembled or the reservoir tank is empty, bleed the master cylinder.
- If bleeding of the master cylinder is not necessary, omit the following procedures, and perform bleeding of the brake line. <Ref. to BR-36, BRAKE LINE, PROCEDURE, Air Bleeding.>

1) Fill the reservoir tank of the master cylinder with brake fluid.

**NOTE:**

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

- 2) Disconnect the brake line at primary and secondary sides.
- 3) Wrap the master cylinder with a plastic bag.
- 4) Depress the brake pedal slowly and hold it.

5) Plug the outlet plug with your finger, and then release the brake pedal.

- 6) Repeat the step 4) and 5) several times.
- 7) Remove the plastic bag.

8) Install the brake pipe to the master cylinder.

**Tightening torque:**

**Model with ABS**

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

**Model with VDC**

**19 N·m (1.9 kgf-m, 14.0 ft-lb)**

9) Bleed air from the brake line. <Ref. to BR-36, BRAKE LINE, PROCEDURE, Air Bleeding.>

#### 2. BRAKE LINE

1) When the master cylinder is disassembled or the reservoir tank is empty, bleed the master cylinder before bleeding the brake line. <Ref. to BR-36, MASTER CYLINDER, PROCEDURE, Air Bleeding.>

2) Fill the reservoir tank of the master cylinder with brake fluid.

**NOTE:**

While bleeding air, keep the reservoir tank filled with brake fluid to prevent entry of air.

3) Attach one end of the vinyl tube to the air bleeder and the other end to the brake fluid container.

4) Depress the brake pedal several times, and hold it.

5) Loosen the air bleeder screw to drain brake fluid. Tighten the air bleeder quickly, and release the brake pedal.

6) Repeat the steps 4) to 5) until there are no more air bubbles in the vinyl tube.

7) Repeat the steps from 2) to 6) above to bleed air from each wheel.

**NOTE:**

Perform the operation in the order from the farthest wheel cylinder from the master cylinder.

8) Securely tighten the air bleeder screws.

**Tightening torque:**

**8 N·m (0.8 kgf-m, 5.8 ft-lb)**

9) Check that there are no brake fluid leaks in the entire system.

10) Check the pedal stroke.

Run the engine at idle after warming up the engine, and depress the brake pedal with a force of 500 N (51 kgf, 112 lb). Measure the distance between the brake pedal and steering wheel. Release the pedal, and measure the distance between pedal and steering wheel again.

- (1) Steering wheel
- (2) Toe board

**Specification of pedal stroke:**

**When depressing the pedal with a force of 500 N (51 kgf, 112 lbf).**

**95 mm (3.74 in) or less**

11) If the distance is more than specification, there is a possibility of air being caught in the brake line. Bleed the brake line of all air until the pedal stroke meets the specification.

12) Operate the hydraulic control unit in the sequence control mode. <Ref. to ABS-10, ABS Sequence Control.>

13) Check the pedal stroke again.

14) If the distance is more than specification, there is a possibility of air being caught in the hydraulic unit. Repeat above steps 2) to 9) until the pedal stroke meets the specification.

15) Fill the reservoir tank with brake fluid up to the "MAX" level.

16) Test run the vehicle and ensure that the brakes operate normally.

## 12.Brake Hose

### A: REMOVAL

#### 1. FRONT BRAKE HOSE

- 1) Separate the brake pipe from brake hose using a flare nut wrench.
- 2) Remove the clamp, the strut mount bolts, and union bolt.

- (1) Brake hose
- (2) Brake pipe

#### 2. REAR BRAKE HOSE

- 1) Remove the union bolt from the rear brake caliper.

- (1) Brake hose

- 2) Separate the brake pipe from brake hose using a flare nut wrench.
- 3) Remove the clamp, and then remove the brake hose.

- (1) Brake pipe
- (2) Brake hose clamp

- (1) Brake pipe
- (2) Brake hose
- (3) Brake hose clamp

## B: INSTALLATION

### 1. FRONT BRAKE HOSE

- 1) Secure the brake hose to strut mount.

**Tightening torque:**

**33 N·m (3.4 kgf-m, 24.3 ft-lb)**

- 2) Install the brake hose to the caliper using a new gasket.

**Tightening torque (union bolt):**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 3) Position the disc in straight position and route the brake hose through the hole in the bracket on the wheel apron side.

**CAUTION:**

**Do not twist the brake hose.**

- 4) Temporarily tighten the flare nut which connects brake pipe and hose.
- 5) Secure the brake hose to wheel apron bracket with clamp.
- 6) Tighten the flare nut to the specified torque.

**Tightening torque (brake pipe flare nut):**

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- 7) Bleed air from brake system.

### 2. REAR BRAKE HOSE

- 1) Route the brake hose through the hole of bracket, and lightly tighten the flare nut to connect brake pipe.
- 2) Insert the clamp to secure brake hose.

- (1) Brake pipe
- (2) Brake hose
- (3) Brake hose clamp

- (1) Brake pipe
- (2) Brake hose clamp

- 3) Install the brake hose to rear brake caliper using a new gasket.

**Tightening torque (union bolt):**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- (1) Brake hose

- 4) Tighten the flare nut to the specified torque.

**Tightening torque (brake pipe flare nut):**

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- 5) Bleed air from the brake system.

### **C: INSPECTION**

Make sure there are no cracks, breakage or damage on hoses. Check the joint for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the hose.

## 13. Brake Pipe

### A: REMOVAL

NOTE:

The airbag system wiring harness is routed near the center brake pipe.

**CAUTION:**

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When removing the brake pipe, do not bend.

### B: INSTALLATION

NOTE:

The airbag system wiring harness is routed near the center brake pipe.

**CAUTION:**

- All airbag system wiring harness and connectors are colored yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the center brake pipe.
- When installing the brake pipe, do not bend.
- After installing the brake pipe and hose, perform air bleed.
- After installing the brake hoses, make sure that they do not contact the tires or suspension assembly, etc.

**Brake pipe tightening torque:**

*<Ref. to BR-7, FRONT BRAKE PIPES AND HOSES, COMPONENT, General Description.>*

*<Ref. to BR-8, CENTER AND REAR BRAKE PIPES AND HOSES, COMPONENT, General Description.>*

### C: INSPECTION

Make sure there are no cracks, breakage or damage on hoses. Check the joint for fluid leakage. If any cracks, breakage, damage or fluid leakage is found, repair or replace the pipes.

NOTE:

Use a mirror when inspecting back sides and other locations which are hard to see.

## 14. Brake Pedal

### A: REMOVAL

#### 1. MT MODEL

- 1) Remove the steering shaft.
- 2) Disconnect the connector (stop light switch etc.) from the pedal bracket.
- 3) Remove the clevis pin which secures the lever and push rod.
- 4) Remove the nut which secures the clutch master cylinder.
- 5) Remove the bolt and nut which secures the pedal bracket.

#### 2. AT MODEL

- 1) Remove the steering shaft.
- 2) Disconnect the connector (stop light switch etc.) from the pedal bracket.
- 3) Remove the clevis pin which secures the lever and push rod.
- 4) Remove the bolt and nut which secures the pedal bracket.

- (1) Clevis pin
- (2) Snap pin
- (3) Operating rod

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### CAUTION:

**Always use a new clevis pin.**

- 2) Check the brake pedal after installation. <Ref. to BR-43, INSPECTION, Brake Pedal.>

## C: INSPECTION

1) Move the brake pedal pads in a horizontal direction with a force of approx. 10 N (1 kgf, 2 lb), and check that the pedal deflection is in the range of specifications.

### CAUTION:

If excessive deflection is noted, replace with a new bushing.

### *Deflection of brake pedal:*

#### *Limit*

**5.0 mm (0.197 in) or less**

(1) Brake pedal

2) Check the position of the pedal pad.

### *Pedal height L:*

**150 — 160 mm (5.91 — 6.30 in)**

### *Brake pedal free play A:*

**0.5 — 2 mm (0.02 — 0.08 in) [When pulling the brake pedal upward with a force of less than 10 N (1 kgf, 2 lb).]**

- (1) Stop light switch
- (2) Mat
- (3) Toe board
- (4) Brake booster operating rod

3) If it is not within the specification, adjust it by adjusting the brake booster operating rod length.

# Stop Light Switch

BRAKE

## 15. Stop Light Switch

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Disconnect the stop light switch connector.
- 3) Loosen the nuts, unscrew the stop light switch, and remove stop light switch.

(1) Stop light switch

### B: INSTALLATION

- 1) Install the stop light switch onto the bracket with screws and position it with the nut.
  - 2) Adjust the stop light switch position, and then tighten the nut.
- <Ref. to BR-45, ADJUSTMENT, Stop Light Switch.>

#### Tightening torque:

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

### C: INSPECTION

#### 1. CHECK SPECIFIED POSITION

- 1) If the stop light switch does not operate properly (or if it is not secured at the specified position), replace with a new part.

**Specified position L:**  
**2 mm (0.079 in)**

- 2) Measure the clearance between the threaded end of the stop light switch and the stopper.

#### CAUTION:

**Be careful not to rotate the stop light switch.**

**Stop light switch clearance A:**  
**0.3 mm (0.012 in)**

- (1) Stop light switch
- (2) Stopper
- (3) Brake pedal

- 3) If it is not within the specification, adjust it by adjusting the position of the stop light switch.

#### CAUTION:

**Be careful not to rotate the stop light switch.**

## 2. CHECK RESISTANCE

- 1) If the stop light switch does not operate properly, replace with a new part.
- 2) Measure the resistance of stop light switch terminals.

Pedal	Terminal No.	Standard value
Released	1 and 4	Less than 1 Ω
	2 and 3	1 MΩ or more
Depressed	1 and 4	1 MΩ or more
	2 and 3	Less than 1 Ω

## D: ADJUSTMENT

Loosen the lock nut, and adjust the stop light switch position until the clearance between the threaded end of the stop light switch and stopper (A) becomes 0.3 mm (0.012 in). Then, tighten the lock nut.

### Tightening torque:

**8 N·m (0.8 kgf·m, 5.8 ft·lb)**

- (1) Stop light switch
- (2) Lock nut A
- (3) Lock nut B
- (4) Stopper
- (5) Brake pedal

### NOTE:

Tighten lock nut B until the threaded end of switch contacts the stopper. Hold the switch so that it does not rotate, and loosen the lock nut B approx. 60°. The clearance (A) will become 0.3 mm (0.012 in).

# General Diagnostic Table

BRAKE

## 16. General Diagnostic Table

### A: INSPECTION

	Trouble and possible cause	Corrective action
<b>1. Insufficient braking</b>	(1) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(2) Entry of air into the hydraulic mechanism	Bleed air.
	(3) Wear, deteriorated surface material, water or fluid on lining	Replace, grind or clean.
	(4) Improper operation of master cylinder, disc caliper, brake booster or check valve	Correct or replace.
<b>2. Unstable or uneven braking</b>	(1) Fluid on lining or rotor	Correct the cause of fluid leakage, and clean or replace.
	(2) Rotor defective	Repair or replace the rotor.
	(3) Improper lining contact, deteriorated surface, deteriorated or worn lining material	Repair by grinding, or replace.
	(4) Deformed back plate	Correct or replace.
	(5) Overinflation of tires	Adjust the air pressure.
	(6) Defective wheel alignment	Adjust alignment.
	(7) Loose back plate or support installation bolt	Tighten to the specified torque.
	(8) Faulty wheel bearing	Replace.
	(9) Defective hydraulic system	Replace the cylinder, brake pipe or hose.
	(10) Unstable performance of the parking brake	Check, adjust or replace the rear brake and cable system.
<b>3. Excessive pedal stroke</b>	(1) Entry of air into the hydraulic mechanism	Bleed air.
	(2) Excessive play in the master cylinder push rod	Adjust.
	(3) Fluid leakage from the hydraulic mechanism	Correct or replace. (cup, piston seal, piston boot, master cylinder piston kit, pipe or hose)
	(4) Improper lining contact or worn lining	Correct or replace.
<b>4. Brake dragging or improper brake return</b>	(1) Insufficient pedal play	Adjust play.
	(2) Improper master cylinder return	Clean or replace the cylinder.
	(3) Clogged hydraulic system	Replace.
	(4) Improper return or adjustment of parking brake	Repair or adjust.
	(5) Weakened spring tension or breakage of shoe return spring	Replace the spring.
	(6) Improper disc caliper operation	Correct or replace.
	(7) Faulty wheel bearing	Replace.
<b>5. Brake noise (1) (creaking sound)</b>	(1) Hardened or deteriorated brake pad	Replace the pad.
	(2) Worn brake pad	Replace the pad.
	(3) Loose back plate or support installation bolt	Tighten to the specified torque.
	(4) Loose wheel bearing	Tighten to the specified torque.
	(5) Dirty rotor	Clean the rotor, or clean and replace brake assembly.
<b>6. Brake noise (2) (hissing sound)</b>	(1) Worn brake pad	Replace the pad.
	(2) Improperly installed pad	Correct or replace the pad.
	(3) Loose or bent rotor	Retighten or replace.
<b>7. Brake noise (3) (click sound)</b>	Excessively worn pad or support	Replace the pad or the support.

# General Description

## PARKING BRAKE

### 1. General Description

#### A: SPECIFICATION

Type		Mechanical, drum in disc rear brakes
Effective drum diameter	mm (in)	170 (6.69)
Lining dimensions (Length × Width × Thickness)	mm (in)	163.1 × 30.0 × 3.2 (6.421 × 1.181 × 0.126)
Clearance adjustment		Manual adjustment
Lever stroke	notches/N (kgf, lb)	5 — 6/200 (20.4, 45)

#### B: COMPONENT

##### 1. PARKING BRAKE (REAR DISC BRAKE)

PB-00048

- |                                    |                              |                            |
|------------------------------------|------------------------------|----------------------------|
| (1) Back plate                     | (7) Strut spring             | (13) Adjuster              |
| (2) Retainer                       | (8) Strut                    | (14) Shoe hold-down cup    |
| (3) Spring washer                  | (9) Shoe guide plate         | (15) Shoe hold-down spring |
| (4) Lever                          | (10) Primary return spring   | (16) Shoe hold-down pin    |
| (5) Parking brake shoe (Primary)   | (11) Secondary return spring | (17) Adjusting hole cover  |
| (6) Parking brake shoe (Secondary) | (12) Adjusting spring        |                            |

## 2. PARKING BRAKE CABLE

PB-00113

- |                                      |                            |
|--------------------------------------|----------------------------|
| (1) Parking brake lever              | (6) Clamp                  |
| (2) Parking brake switch             | (7) Parking brake cable RH |
| (3) Adjusting nut (Self-locking nut) | (8) Clamp                  |
| (4) Equalizer                        | (9) Parking brake cable LH |
| (5) Bracket                          |                            |

**Tightening torque: N-m (kgf-m, ft-lb)**

**T1: 18 (1.8, 13.0)**

**T2: 33 (3.4, 24.3)**

### C: CAUTION

- Wear appropriate work clothing, including a cap, protective goggles and protective shoes when performing any work.
- Before removal, installation or disassembly, be sure to clarify the failure. Avoid unnecessary removal, installation, disassembly and replacement.
- Vehicle components are extremely hot after driving. Be wary of receiving burns from heated parts.
- Use SUBARU genuine grease etc. or equivalent. Do not mix grease etc. of different grades or manufacturers.
- Be sure to tighten fasteners including bolts and nuts to the specified torque.
- Place shop jacks or rigid racks at the specified points.
- Before securing a part in a vise, place cushioning material such as wood blocks, aluminum plate or cloth between the part and the vise.
- Make sure grease does not come into contact with the parking shoes.

## 2. Parking Brake Lever

### A: REMOVAL

- 1) Set the wheel stoppers to tires.
- 2) Remove the console box.
- 3) Disconnect the parking brake switch connector.
- 4) Remove the parking cable adjusting nut (self-locking nut).
- 5) Remove the parking brake lever.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### **Tightening torque:**

##### **Parking brake lever**

**18 N·m (1.8 kgf-m, 13.0 ft-lb)**

- 2) Install a new adjusting nut (self-locking nut).
- 3) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

### C: INSPECTION

- 1) Operate the parking brake lever 3 to 4 times and fully return the lever.
- 2) While slowly pulling the parking brake lever upward, count the notches.

#### **Lever stroke:**

**5 to 6 notches when pulled with a force of 200 N (20.4 kgf, 45 lb)**

If it is not within the specified value, adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

### D: ADJUSTMENT

Adjust the parking lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

## 3. Parking Brake Cable

### A: REMOVAL

- 1) Remove the rear seat cushion.
- 2) Remove the console box.
- 3) Remove the parking cable adjusting nut (self-locking nut).
- 4) Remove the parking brake lever. <Ref. to PB-4, REMOVAL, Parking Brake Lever.>
- 5) Roll up the floor mat and remove the clamps.

- 6) Remove the inner cable end from equalizer.

- (1) Equalizer
- (2) Inner cable end

- 7) Lift up the vehicle, and then remove the rear wheels.
- 8) Remove the parking brake cable from rear brake. <Ref. to PB-6, REMOVAL, Parking Brake Assembly (Rear Disc Brake).>

- 9) Remove the clamp from the rear brake.
- 10) Remove the cable clamp from the rear arm bracket.
- 11) Remove the cable clamp from rear floor.

- 12) Remove the cable assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

#### NOTE:

- Be sure to pass the cable through the tunnel in the cable guide.
- 2) Be sure to adjust the lever stroke. <Ref. to PB-4, ADJUSTMENT, Parking Brake Lever.>

### C: INSPECTION

- Check and replace the removed cable if damaged, rusty or faulty.
- 1) Check the cable for smooth operation.
- 2) Check the inner cable for damage and rust.
- 3) Check the outer cable for damage, bends and cracks.
- 4) Check the boot for damage, cracks, and corrosion.

# Parking Brake Assembly (Rear Disc Brake)

## PARKING BRAKE

### 4. Parking Brake Assembly (Rear Disc Brake)

#### A: REMOVAL

- 1) Release the parking brake.
- 2) Remove the two mounting bolts and remove the brake caliper assembly.

- 3) Suspend the brake caliper assembly so that the hose is not stretched.
- 4) Remove the disc rotor.

#### NOTE:

If the disc rotor is difficult to remove, try the following two methods in order.

- (1) Turn the adjusting screw using a flat tip screwdriver until the brake shoe moves adequately away from the disc rotor.

- (1) Adjuster
- (2) Adjusting hole cover (rubber)
- (3) Flat tip screwdriver
- (4) Back plate

- (2) If disc rotor is seized on the hub, drive the disc rotor out by pushing two 8 mm bolts in holes B on the rotor.

- 5) Remove the shoe return spring from the parking brake assembly.
- 6) Remove the front shoe hold down spring and pin.

- 7) Remove the strut and strut spring.
- 8) Remove the adjuster assembly from the parking brake assembly.
- 9) Remove the brake shoe.
- 10) Remove the rear shoe hold down spring and pin with pliers.
- 11) Remove the parking brake cable from lever.

- (1) Parking brake cable
- (2) Lever

- 12) Using a flat tip screwdriver, raise the retainer. Remove the parking lever and washer from brake shoe.

## B: INSTALLATION

### CAUTION:

Be sure the lining surface is free from oil and grease.

1) Apply brake grease to the following locations.

#### Brake grease:

##### Brake Grease (Part No. 003602002)

- Six contact surfaces of the shoe rim and back plate gasket
- Contact surface of the shoe wave and the anchor pin
- Contact surface of the lever and strut
- Contact surface of the shoe wave and the adjuster assembly
- Contact surface of the shoe wave and the strut
- Contact surface of the lever and the shoe wave

2) Insert the primary side brake shoe into the anchor pin groove.

3) Secure the brake shoe with the shoe hold-down pin and cup.

4) Install the plate to the anchor pin, then install the primary return spring.

- (1) Primary return spring
- (2) Anchor pin
- (3) Plate
- (4) Primary shoe
- (5) Shoe hold-down pin and shoe hold-down cup

5) Install the parking brake cable to the lever.

6) Install the strut and adjuster, then secure the secondary side brake shoe with the shoe hold-down pin and cup.

### NOTE:

- Install the strut spring of both right and left wheel facing vehicle front.
- Install the adjuster assembly with screw section on the left side.

(1) LH

7) Install the secondary return spring and the adjusting spring.

- (1) Lever
- (2) Secondary brake shoe
- (3) Strut spring
- (4) Strut
- (5) Return spring
- (6) Adjuster
- (7) Shoe hold-down cup
- (8) Adjusting spring

8) Adjust the parking brake. <Ref. to PB-8, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

# Parking Brake Assembly (Rear Disc Brake)

## PARKING BRAKE

9) Drive the vehicle to break-in the parking brake lining.

- (1) Drive the vehicle at about 35 km/h (22 MPH).
- (2) With the parking brake release button pushed in, pull the parking brake lever gently.
- (3) Drive the vehicle for about 200 m (0.12 miles) in this condition.
- (4) Wait 5 to 10 minutes for the parking brake to cool down. Repeat again from step (1).
- (5) After breaking-in, re-adjust the parking brakes.

## C: INSPECTION

1) Measure the brake disc rotor inside diameter. If the disc is scored or worn, replace the brake disc rotor.

### **Disc rotor inside diameter:**

#### **Standard:**

**170 mm (6.69 in)**

#### **Service limit:**

**171 mm (6.73 in)**

2) Measure the lining thickness. If it exceeds the limit, replace shoe assembly.

### **Lining thickness:**

#### **Standard:**

**3.2 mm (0.126 in)**

#### **Service limit:**

**1.5 mm (0.059 in)**

### **NOTE:**

Replace the right and left brake shoe as a set.

## D: ADJUSTMENT

### 1. SHOE CLEARANCE

- 1) Return the parking brake lever fully.
- 2) Remove the adjusting hole cover from the back plate.
- 3) Turn the adjusting screw using a flat tip screwdriver until the brake shoe is in close contact with the disc rotor.

- (1) Adjusting screw
- (2) Adjusting hole cover (rubber)
- (3) Flat tip screwdriver
- (4) Back plate

4) Turn back (downward) the adjusting screw 3 to 4 notches.

### **CAUTION:**

**Check there is no brake drag.**

- 5) Install the adjusting hole cover to the back plate.
- 6) Adjust the parking lever stroke. <Ref. to PB-8, LEVER STROKE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>

### 2. LEVER STROKE

- 1) Adjust the shoe clearance before adjusting lever stroke. <Ref. to PB-8, SHOE CLEARANCE, ADJUSTMENT, Parking Brake Assembly (Rear Disc Brake).>
- 2) Remove the parking lever cover.
- 3) Operate the parking brake lever 3 to 4 times.
- 4) Turn the adjusting nut until the lever stroke is at the specified value.

### **Lever stroke:**

**5 to 6 notches when pulled with a force of 200 N (20.4 kgf, 45 lb)**

(1) Adjusting nut (Self-locking nut)

- 5) Check there is no brake drag.
- 6) Install the parking lever cover.

## 5. General Diagnostic Table

### A: INSPECTION

Symptoms	Possible cause	Corrective action
Brake drag	Parking brake lever not adjusted correctly.	Adjust.
	Parking brake cable does not move.	Correct or replace.
	Parking brake shoe clearance is maladjusted.	Adjust.
	Return spring is faulty.	Replace.
Noise from brake	Return spring is faulty.	Replace.
	Shoe hold-down spring faulty.	Replace.

# Steering Wheel

POWER ASSISTED SYSTEM (POWER STEERING)

## 2. Steering Wheel

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Set the tire to the straight-ahead position.
- 3) Remove the airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

#### WARNING:

**Always refer to "Airbag System" before performing service on the airbag modules. <Ref. to AB-4, CAUTION, General Description.>**

- 4) Place alignment marks on the steering wheel and steering shaft.

(1) Alignment mark

- 5) Remove the steering wheel nut, and then draw out the steering wheel from shaft using steering puller.

### B: INSTALLATION

#### WARNING:

**Always refer to "Airbag System" before performing service on the airbag modules. <Ref. to AB-4, CAUTION, General Description.>**

- 1) Align the center position of the roll connector. <Ref. to AB-24, ADJUSTMENT, Roll Connector.>
- 2) Install in the reverse order of removal.

#### NOTE:

Align the alignment marks on the steering wheel and steering shaft.

#### Tightening torque:

**39 N·m (4.0 kgf-m, 28.8 ft-lb)**

#### Column cover-to-steering wheel clearance:

**2 — 4 mm (0.08 — 0.16 in)**

#### CAUTION:

Insert the roll connector guide pin into the guide hole on the lower end of the steering wheel surface. Avoid damaging the pin.

### C: INSPECTION

- 1) Check the steering wheel for deformation. If the deformation is excessive, replace the steering wheel.
- 2) Check the splines on the steering wheel for damage. If the damage is excessive, replace the steering wheel.

# Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

## 3. Universal Joint

### A: REMOVAL

- 1) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 2) Place alignment marks on universal joint.
- 3) Remove the universal joint bolt, and then remove the universal joint.

### B: INSTALLATION

- 1) Align the cutout portion at serrated section of the column shaft and yoke, then install the universal joint into column shaft.

- (1) Cutout portion
- (2) Yoke
- (3) Column shaft
- (4) Column shaft side
- (5) Gearbox side

- 2) Install the universal joint to the serrations of gearbox assembly by matching alignment marks.
- 3) Tighten the bolt.

#### **Tightening torque:**

**24 N·m (2.4 kgf-m, 17.7 ft-lb)**

#### **CAUTION:**

**Excessively large tightening torque of universal joint bolts may lead to heavy steering wheel operation.**

- 4) Align the center position of the roll connector. <Ref. to AB-24, ADJUSTMENT, Roll Connector.>
- 5) Install the steering wheel. <Ref. to PS-14, INSTALLATION, Steering Wheel.>

# Universal Joint

POWER ASSISTED SYSTEM (POWER STEERING)

## C: INSPECTION

Check for wear, damage or any other faults. Replace as necessary.

### Service limit:

**Universal joint play: 0 mm (0 in)**

**Maximum swing torque: 0.3 N (0.03 kgf, 0.07 lb)**

- (1) Swing torque
- (2) Play

Measure the swing torque of universal joint.

### Service limit:

**Maximum load: 3.8 N (0.39 kgf, 0.86 lb) or less**

- (1) Yoke (Gearbox side)

### Service limit:

**Maximum load: 3.8 N (0.39 kgf, 0.86 lb) or less**

- (1) Yoke (Gearbox side)

### Service limit:

**Maximum load: 7.3 N (0.74 kgf, 1.64 lb) or less**

- (1) Yoke (Steering column side)

### Service limit:

**Maximum load: 7.3 N (0.74 kgf, 1.64 lb) or less**

- (1) Yoke (Steering column side)

# Tilt Steering Column

POWER ASSISTED SYSTEM (POWER STEERING)

## 4. Tilt Steering Column

### A: REMOVAL

PS-00768

(1) Tilt steering column

(2) Universal joint

- 1) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 2) Remove the universal joint. <Ref. to PS-15, REMOVAL, Universal Joint.>
- 3) Remove the instrument panel lower cover under.
- 4) Remove the instrument panel lower cover upper.
- 5) Remove all connectors from the steering column.
- 6) Remove the two bolts under instrument panel securing the steering column.

7) Pull out the steering shaft assembly from the hole on toe board.

#### CAUTION:

- Be sure to remove the universal joint before removing steering shaft assembly installing bolts when removing steering shaft assembly or when lowering it for servicing other parts.
- Do not loosen the tilt lever when the steering column is not secured to the vehicle.

PS-00798

# Tilt Steering Column

## POWER ASSISTED SYSTEM (POWER STEERING)

### B: INSTALLATION

- 1) Install the grommet to the toe board.

- 2) Insert the end of the steering shaft into the toe board grommet.
- 3) With the tilt lever secured, tighten the steering shaft mounting bolts under instrument panel.

#### **Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

- 4) Connect all the connectors under the instrument panel.
- 5) Connect the airbag system connector at the harness spool.

#### **NOTE:**

Make sure to apply double lock.

- 6) Install the instrument panel lower cover with tilt lever held in the lowered position.
- 7) Install the universal joint. <Ref. to PS-15, INSTALLATION, Universal Joint.>
- 8) Align the center position of the roll connector. <Ref. to AB-24, ADJUSTMENT, Roll Connector.>
- 9) Install the steering wheel. <Ref. to PS-14, INSTALLATION, Steering Wheel.>

#### **CAUTION:**

**Insert the roll connector guide pin into the guide hole on lower end of steering wheel surface to prevent damage.**

### C: DISASSEMBLY

Remove the two screws securing the upper steering column covers, and the two screws securing the combination switch, and then remove related parts.

### D: ASSEMBLY

Insert the combination switch to the upper column shaft, and install the upper column cover. Then route the ignition key harness and combination switch harness between the column cover mounting bosses.

#### **Tightening torque:**

**1.2 N·m (0.12 kgf·m, 0.9 ft·lb)**

#### **CAUTION:**

**Do not overtorque the screw.**

### E: INSPECTION

#### 1. BASIC INSPECTION

Measure the overall length of steering column. If not within specification, replace it.

#### **Standard: Overall length L**

**Tilt & telescopic column (measure the minimum length)**

**Except for OUTBACK model**

**818.6<sup>+1.5</sup> mm<sub>-1.5</sub> (32.23<sup>+0.059</sup> in<sub>-0.059</sub>)**

**OUTBACK model**

**810.4<sup>+1.5</sup> mm<sub>-1.5</sub> (31.89<sup>+0.059</sup> in<sub>-0.059</sub>)**

#### 2. INSPECTION OF AIRBAG SYSTEM

Refer to "Airbag System" for airbag inspection procedure. <Ref. to AB-14, INSPECTION, Driver's Airbag Module.>

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 5. Steering Gearbox

### A: REMOVAL

- 1) Set the vehicle on a lift.
- 2) Disconnect the ground cable from the battery.
- 3) Loosen the front wheel nuts.
- 4) Lift up the vehicle, and remove the front wheels.
- 5) Remove the under cover. <Ref. to EI-26, REMOVAL, Front Under Cover.>
- 6) Remove the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO)-4, REMOVAL, Front Exhaust Pipe.>

#### WARNING:

**Be careful not to burn yourself because the exhaust pipe is hot.**

- 7) After pulling off the cotter pin and removing the castle nut, use a puller to remove the tie-rod end from the knuckle arm.

- (1) Castle nut
- (2) Tie-rod end
- (3) Knuckle arm

- 8) Remove the front crossmember support plate, jack-up plate and front stabilizer. <Ref. to FS-17, REMOVAL, Front Stabilizer.>

- Large type

- (1) Front crossmember support plate

- Small type

- (1) Crossmember support plate
- (2) Jack-up plate

- 9) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

- (1) Pipe A
- (2) Pipe B

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

10) Remove the universal joint. <Ref. to PS-15, REMOVAL, Universal Joint.>

11) Disconnect the pipe C from pressure hose first, then disconnect pipe D from the return hose.

- (1) Pipe C
- (2) Pipe D
- (3) Pressure hose
- (4) Return hose

12) Remove the clamp bolts securing the gearbox to the crossmember, and remove the clamp.

- (1) Clamp

13) Remove the bolts which secure the gearbox bracket, and remove the bracket and gearbox.

- (1) Bracket

## B: INSTALLATION

1) Insert the gearbox into crossmember, being careful not to damage gearbox boot.

2) Install the gearbox and bracket. Temporarily tighten the bolts.

- (1) Bracket

3) Insert bolts through the clamp to temporarily tighten the gearbox to the crossmember bracket.

- (1) Clamp

4) Tighten the bolts temporarily holding the gearbox clamp and bracket together to the specified torque.

**Tightening torque:**

**60 N·m (6.1 kgf·m, 44.1 ft·lb)**

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

5) Connect pipe D to the return hose, then connect pipe C to the pressure hose.

### **Tightening torque:**

**15 N·m (1.5 kgf-m, 10.8 ft-lb)**

- (1) Pipe C
- (2) Pipe D
- (3) Pressure hose
- (4) Return hose

6) Install the universal joint. <Ref. to PS-15, INSTALLATION, Universal Joint.>

7) Connect the tie-rod end and knuckle arm, and tighten with castle nut.

### **Castle nut tightening torque:**

**27 N·m (2.75 kgf-m, 19.9 ft-lb)**

### **CAUTION:**

**When connecting, do not hit the cap at the bottom of tie-rod end with hammer.**

8) After tightening the castle nut to the specified tightening torque, tighten it further within 60° until the cotter pin hole is aligned with slot in the nut. Fit the cotter pin into the nut, and then bend the pin to lock.

- (A) Cotter pin
- (B) Castle nut
- (C) Tie-rod end

9) Install the front stabilizer. <Ref. to FS-17, INSTALLATION, Front Stabilizer.>

10) Install the front crossmember support plate and jack-up plate.

11) Install the front exhaust pipe assembly. (Non-turbo model) <Ref. to EX(H4SO)-5, INSTALLATION, Front Exhaust Pipe.>

12) Install the under cover. <Ref. to EI-26, INSTALLATION, Front Under Cover.>

13) Install the front wheels.

14) Tighten the wheel nuts to the specified torque.

### **Tightening torque:**

**90 N·m (9.1 kgf-m, 65.8 ft-lb)**

15) Lower the vehicle.

16) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>

17) Align the center position of the roll connector. <Ref. to AB-24, ADJUSTMENT, Roll Connector.>

18) Install the steering wheel. <Ref. to PS-14, INSTALLATION, Steering Wheel.>

19) Connect the battery ground cable to the battery.

20) Pour fluid into the oil tank, and bleed air. <Ref. to PS-55, Power Steering Fluid.>

21) Check for fluid leaks.

22) Check the fluid level in oil tank.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

23) After adjusting toe-in and steering angle, tighten the lock nut on tie-rod end.

### Tightening torque:

**85 N·m (8.7 kgf-m, 62.7 ft-lb)**

### NOTE:

When adjusting toe-in, hold the boot as shown to prevent it from being rotated or twisted. If it becomes twisted, straighten it.

4) Remove the small clip from the boot using pliers, and then move the boot to tie-rod end side.

(1) Clip

5) Using a flat tip screwdriver, remove the band from boot.

### NOTE:

Replace the boot if there is damage, cracks or deterioration.

(1) Band

## C: DISASSEMBLY

### 1. RACK HOUSING ASSEMBLY

1) Disconnect the four pipes from gearbox.

### NOTE:

Remove the pipes C and D, which are fixed to clamp plate, as a unit.

2) Secure the gearbox removed from vehicle in a vise using ST.

ST1 926200000 STAND

ST2 34199AG000 BOSS D

### CAUTION:

**Secure the gearbox in a vise using ST as shown in the figure. Do not secure the gearbox without this ST.**

(1) Clamp

6) Using the ST, loosen the lock nut.

ST 926230000 SPANNER

(1) Lock nut

3) Remove the tie-rod end and lock nut from gearbox.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

7) Tighten the adjusting screw until it can no longer be tightened.

(1) Adjusting screw

8) Using the ST, remove the tie-rod.  
ST 926230000 SPANNER

9) Loosen the adjusting screw, and remove the spring and sleeve.

10) Remove the two bolts securing valve assembly.

PS-00116

11) Carefully draw out the input shaft and remove the valve assembly.

PS-00117

12) Using a drill, release the crimping of holder.

**CAUTION:**

**Make a hole of 2 mm (0.08 in) depth using a drill with 3 mm (0.12 in) diameter.**

PS-00516

13) Remove the holder.

PS-00512

(1) Holder

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

14) Attach the ST to the pinion housing side of the rack and push out the rack along with the outer side oil seal.

ST 34199FE000 INSTALLER & REMOVER

### NOTE:

Plug the connecting section of the steering body pipe to prevent the fluid from flowing out.

- (1) Rack piston
- (2) Outer side oil seal

15) Insert the ST from pinion housing side and remove the oil seal using a press.

ST 927580000 OIL SEAL REMOVER

- (1) Press
- (2) Oil seal

16) Using a press, remove the bushing of gearbox installation portion.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 2. CONTROL VALVE

- 1) Disconnect the pipes A and B from gearbox.
- 2) Secure the gearbox removed from vehicle in a vise using ST.

ST1 926200000 STAND  
ST2 34199AG000 BOSS D

### CAUTION:

Secure the gearbox in a vise using ST as shown in the figure. Do not secure the gearbox without this ST.

(1) Clamp

- 3) Using the ST, loosen the lock nut.  
ST 926230000 SPANNER

(1) Lock nut

- 4) Tighten the adjusting screw until it can no longer be tightened.

(1) Adjusting screw

- 5) Loosen the adjusting screw, and remove the spring and sleeve.

- 6) Remove the two bolts securing valve assembly.

- 7) Carefully draw out the input shaft and remove the valve assembly.

- 8) Put a vinyl tape around the spline portion, and slide the dust cover to remove.

(1) Dust cover

- 9) Using a press, remove the pinion & valve assembly from valve housing.

- (1) Pinion & valve ASSY
- (2) Valve housing
- (3) Cloth

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

10) Using the ST and a press, remove the bushing and oil seal from the valve housing.

ST 34199AG090 INSTALLER & REMOVER

### CAUTION:

- Do not apply a force to the end surface of valve housing.
- Do not reuse the oil seal after removal.

- (1) Oil seal
- (2) Bushing

11) Using a snap ring pliers, remove the snap ring, valve, oil seal and back-up washer.

### CAUTION:

Be careful not to scratch the pinion and valve assembly.

- (1) Snap ring
- (2) Valve
- (3) Oil seal
- (4) Back-up ring

## D: ASSEMBLY

### 1. RACK HOUSING ASSEMBLY

1) Using a press, install the bushing to gearbox installation portion.

2) Insert the ST to rack.

ST 34199AG030 GUIDE

- (1) Seal ring
- (2) Rack

3) Install the seal ring to piston portion of rack.

4) Using the ST, form the seal ring properly.

ST2 34199AG050 GUIDE G (24)

- (1) Seal ring
- (2) Rack

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

5) Fit the ST over toothed portion of rack assembly, and insert the oil seal to rack.

ST 926390001 COVER & REMOVER

(1) Rack ASSY

6) Remove the ST from rack assembly.

7) Install the back-up washer from the gear side of rack.

(1) Oil seal  
(2) Back-up washer  
(3) Rack

8) Check the threaded end of holder and gearbox cylinder end for burrs, damage, etc. Correct if faulty.

9) Apply a coat of grease to the grooves in rack, sliding surface of sleeve and sealing surface of piston. Then insert the rack into steering body from cylinder side.

10) Temporarily tighten the new holder to gearbox cylinder.

11) Put a mark at the specified position from the end surface of the ST as shown in the figure.

**Specified position:**

**Except for 2.5 GT-B:**

**13.5 mm (0.53 in)**

**2.5 GT-B:**

**18.9 mm (0.74 in)**

ST 34199FE000 INSTALLER & REMOVER

(1) 13.5 mm (0.53 in) or 18.9 mm (0.74 in)  
(2) Put a mark.

12) Attach the ST to the rack end surface.

ST 34199FE000 INSTALLER & REMOVER

13) Using a press, press-fit until the mark on the ST is aligned to the end surface of the holder.

(1) Marked position  
(2) Holder

14) Remove the ST and the holder.

15) Insert the outer side oil seal to the rack in the same procedure as in step 5) and 6).

ST 926390001 COVER & REMOVER

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

16) Put the ST and pipe through the rack and press-fit the outer side oil seal using a press.

ST 34199AG010 INSTALLER

- (1) Pipe
- (2) Outer side oil seal

17) Secure the gearbox in a vise using ST.

ST1 926200000 STAND

ST2 34199AG000 BOSS D

- (1) Clamp

18) Tighten the new holder.

**Tightening torque:**

**70 N·m (7.1 kgf·m, 51.6 ft·lb)**

19) Using the ST, crimp so that the diameter of punch hole is 2 — 2.5 mm (0.08 — 0.10 in) and is aligned to the position of 2 mm (0.08 in) from gearbox cylinder end surface.

ST1 34099FA060 PUNCH HOLDER

ST2 34199XA050 BASE

- (A) Holder
- (B) 2 mm (0.08 in)

20) Put a vinyl tape around the spline portion and apply genuine grease to the dust cover and install to valve assembly.

**CAUTION:**

**Be sure to install the dust cover to groove of shaft.**

- (1) Dust cover
- (2) Groove

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

21) Apply the genuine grease to the pinion gear and bearing of valve assembly.

22) Install a new gasket on valve assembly. Insert the valve assembly into place while facing the rack teeth toward pinion.

23) Tighten the bolts alternately to secure the valve assembly.

**Tightening torque:**

**20 N·m (2.0 kgf·m, 14.8 ft·lb)**

**CAUTION:**

**Be sure to alternately tighten the bolts.**

24) Temporarily install the tie-rod to rack end, and then operate the rack from lock to lock for two or three times to make it fit in.

**CAUTION:**

**Operating the rack from lock to lock without installing tie-rods may damage the oil seal. Always install the left and right tie-rods.**

25) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

**Liquid gasket:**

**THREE BOND 1141**

26) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.

- (1) Sleeve
- (2) Spring
- (3) Adjusting screw

27) Tighten the adjusting screw to the specified torque, then loosen it.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

28) Tighten the adjusting screw to the specified torque, then loosen it 20°.

**Tightening torque:**

**3.9 N·m (0.4 kgf·m, 2.9 ft·lb)**

29) Remove the tie-rod.

30) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-37, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.>

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

31) Apply liquid gasket to lock nut and install it into adjusting screw. While holding the adjusting screw with wrench, tighten the lock nut using ST.

### Liquid gasket:

**THREE BOND 1141**

ST 926230000 SPANNER

### Tightening torque (lock nut):

**25 N·m (2.5 kgf-m, 18.1 ft-lb)**

### NOTE:

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

32) Extend the rack approx. 40 mm (1.57 in) from steering body.

33) Install the tie-rod and new lock washer into rack.

### Tightening torque:

**90 N·m (9.1 kgf-m, 65.8 ft-lb)**

(1) Lock washer

(2) Approx. 40 mm (1.57 in)

34) Bend the lock washer and crimp it.

### CAUTION:

**Be careful not to scratch the rack when crimping lock washer.**

(1) Lock washer

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

35) Apply a coat of grease to the tie-rod groove, and then install the boot to the housing.

### CAUTION:

Right side boot has groove for identification, be sure to install the right and left of boot.

- (1) Right side boot
- (2) Groove for identification

### NOTE:

Make sure that the boot is installed without unusual inflation or deflation.

36) Install a new boot band. Using band clamp pliers, crimp it so that the clearance of crimping portion becomes 2 mm (0.079 in) or less.

- (A) Boot band
- (B) 2 mm (0.079 in) or less

37) Fix the boot end with small clip.

- (1) Clip

38) After installing, check that the boot end is installed to the groove of the tie-rod.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

39) If the tie-rod end has been removed, screw in lock nut and tie-rod end to the screwed portion of tie-rod, and tighten the lock nut temporarily in a position as shown in the figure.

**Installed tie-rod length L:**  
**31 mm (1.22 in)**

40) Inspect the gearbox as follows:  
Holding the "A" tie-rod end, repeat movement from lock to lock two or three times as quickly as possible.  
Holding the "B" tie-rod end, turn a few times as slowly as possible.  
Finally, make sure that the boot is installed in the specified position without inflating.

41) Remove the gearbox from ST.  
ST1 92620000 STAND  
ST2 34199AG000 BOSS D

42) Install the four pipes on gearbox.  
(1) Connect the pipes A and B to the four pipe joints of gearbox.

**Tightening torque:**

**Refer to the component parts. <Ref. to PS-5, POWER ASSISTED SYSTEM, COMPONENT, General Description.>**

(2) Connect the pipes C and D to gearbox.

**Tightening torque:**

**Pipe C: 37 N·m (3.8 kgf-m, 27.3 ft-lb)**

**Pipe D: 29 N·m (3.0 kgf-m, 21.4 ft-lb)**

(1) Pipe C

(2) Pipe D

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 2. CONTROL VALVE ASSEMBLY

**Specified steering grease:**

**VALIANT GREASE M2 (Part No. 003608001)**

- 1) Clean all parts and tools before reassembling.
- 2) Apply a coat of specified power steering fluid to the inner wall of valve housing.

- (1) Apply fluid.

- 3) Apply a coat of grease to the oil seal.
- 4) Verify the direction of oil seal.
- 5) Using the ST and a press, install the oil seal and bushing in valve housing.

ST 34199AG090 INSTALLER & REMOVER

- (1) Bushing
- (2) Oil seal

- 6) Apply vinyl tape to the groove of pinion.

- 7) Install the back-up ring and oil seal to pinion, and then remove the vinyl tape.

- (1) Oil seal
- (2) Vinyl tape
- (3) Back-up ring

- 8) Attach the ST to pinion, and install the seal ring.

- (1) Seal ring

- 9) Remove the ST GUIDE, and form the seal ring properly using ST FORMER.  
ST 34199AG070 FORMER

- (1) Seal ring

- 10) Put vinyl tape around pinion shaft spline to protect oil seal from damage.

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

11) Install the valve to pinion, and install the snap ring.

- (1) Snap ring
- (2) Valve

12) Attach the pinion and valve assembly into the valve housing.

- (1) Valve housing
- (2) Pinion & valve ASSY

13) Using a press, push the outer race of bearing and press-fit the pinion & valve assembly into housing.

- (1) Pinion & valve ASSY
- (2) Bearing
- (3) Housing

14) Apply the specified grease to dust cover.  
15) Install the dust cover on valve assembly.

### CAUTION:

Be sure to install the dust cover to groove of shaft.

- (1) Dust cover
- (2) Groove

16) Apply the genuine grease to the pinion gear and bearing of valve assembly.

17) Install new O-ring to valve assembly.

- (1) O-ring

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

18) Insert the valve assembly into place while facing the rack teeth toward pinion.

19) Tighten the bolts alternately to secure the valve assembly.

**Tightening torque:**

**20 N·m (2.0 kgf·m, 14.8 ft·lb)**

**CAUTION:**

**Be sure to alternately tighten the bolts.**

20) Apply liquid gasket to 1/3 or more of entire perimeter of adjusting screw thread.

**Liquid gasket:**

**THREE BOND 1141 (Part No. 004403006)**

21) Apply a coat of grease to the sliding surface of sleeve and seating surface of spring, and then insert the sleeve into steering body.

Charge the adjusting screw with grease, and then insert the spring into adjusting screw. Then install on the steering body.

- (1) Sleeve
- (2) Spring
- (3) Adjusting screw

22) Tighten the adjusting screw to the specified torque, then loosen it.

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

23) Tighten the adjusting screw to the specified torque, then loosen it 20°.

**Tightening torque:**

**3.9 N·m (0.4 kgf·m, 2.9 ft·lb)**

24) Adjust the turning resistance of gearbox so that it is within specification using adjusting screw. <Ref. to PS-37, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.>

25) Apply liquid gasket to lock nut and install it into adjusting screw. While holding the adjusting screw with wrench, tighten the lock nut using ST.

**Liquid gasket:**

**THREE BOND 1141**

ST 926230000 SPANNER

**Tightening torque (lock nut):**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

**NOTE:**

Hold the adjusting screw with a wrench to prevent it from turning while tightening lock nut.

26) Remove the gearbox from ST.

ST1 926200000 STAND

ST2 34199AG000 BOSS D

27) Install the four pipes on gearbox.

(1) Connect the pipes A and B to gearbox.

**Tightening torque:**

**Refer to the component parts. <Ref. to PS-5, POWER ASSISTED SYSTEM, COMPONENT, General Description.>**

(2) Connect the pipes C and D to gearbox.

**Tightening torque:**

**Pipe C: 37 N·m (3.8 kgf·m, 27.3 ft·lb)**

**Pipe D: 29 N·m (3.0 kgf·m, 21.4 ft·lb)**

- (1) Pipe C
- (2) Pipe D

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### E: INSPECTION

#### 1. BASIC INSPECTION

1) Clean all the disassembled parts, and check for wear, damage or any other faults, then repair or replace as necessary.

2) When disassembling, check the inside of gearbox for water. If any water is found, carefully check the boot for damage, input shaft dust seal, adjusting screw and boot clips for poor sealing. If faulty, replace with new parts.

No.	Parts	Inspection	Corrective action
1	Input shaft	(1) Bent input shaft (2) Damage on serration	If the bend or damage is excessive, replace the entire gearbox.
2	Dust seal	(1) Crack or damage (2) Wear	If the outer wall slips, the lip is worn out or damage is found, replace it with a new part.
3	Rack & pinion	Poor mating of rack with pinion	(1) Adjust the backlash properly. By measuring the turning torque of the gearbox and sliding resistance of rack, check if the rack & pinion engage uniformly and smoothly with each other. (Refer to Service limit.) (2) Pull out the entire rack to allow viewing of the teeth, and check for damage. Even if abnormality is found in either (1) or (2), replace the entire gearbox.
4	Gearbox unit	(1) Bending of the rack shaft (2) Bending of the cylinder portion (3) Crack or damage on the cast iron portion	Replace the gearbox with a new part.
		(4) Wear or damage on rack bushing	If the free play of rack shaft in radial direction is out of the specified range, replace the gearbox with new part. (Refer to Service limit.)
		(5) Wear on input shaft bearing	If the free play of input shaft in radial and axial direction is out of the specified range, replace the gearbox with a new part. (Refer to Service limit.)
5	Boot	Crack, damage or deterioration	Replace.
6	Tie-rod	(1) Looseness of ball joint (2) Bend of tie-rod	Replace.
7	Tie-rod end	Damage or deterioration of dust seal	Replace.
8	Adjusting screw spring	Deterioration	Replace.
9	Boot clip	Deterioration	Replace.
10	Sleeve	Damage	Replace.
11	Pipe	(1) Damage to flared surface (2) Damage to flare nut (3) Damage to pipe	Replace.

# Steering Gearbox

POWER ASSISTED SYSTEM (POWER STEERING)

## 2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the specified service limits, adjust or replace.

NOTE:

When making a measurement, vise the gearbox using ST. Never vise the gearbox by inserting aluminum plates etc. between vise and gearbox.

ST1 926200000 STAND  
ST2 34199AG000 BOSS D

## 3. RACK SHAFT PLAY IN THE RADIAL DIRECTION

*Right-turn steering:*

**Service limit**

**0.12 mm (0.005 in) or less**

**On condition**

**Weighting point**

**L1: 10 mm (0.39 in)**

**P: 98 N (10 kgf, 22 lb)**

**Measuring point**

**L2: 25 mm (0.98 in)**

## 4. INPUT SHAFT PLAY

*In radial direction:*

**Service limit**

**0.26 mm (0.01 in) or less**

**On condition**

**P: 98 N (10 kgf, 22 lb)**

*In axial direction:*

**Without play**

## 5. TURNING RESISTANCE OF GEARBOX

Using the ST, measure the gearbox turning resistance.

ST 34099PA100 SPANNER

**Service limit:**

**Maximum allowable resistance:**

**11.3 N (1.15 kgf, 2.54 lb) or less.**

**Difference between right and left turning resistance:**

**24% or less**

# Steering Gearbox

## POWER ASSISTED SYSTEM (POWER STEERING)

### 6. OIL LEAKAGE

PS-00622

- (1) Power cylinder  
(2) Cylinder

- (3) Rack piston  
(4) Rack axle

- (5) Input shaft  
(6) Valve housing

1) Lift up the vehicle.

2) If a fluid leak is found, clean the fluid completely from the suspect area, and turn the steering wheel 30 to 40 times to the left and right from lock to lock, with the engine running, and check again for leaks immediately, and also after a few hours have passed.

3) Cause and solution for oil leakage from "a"  
The oil seal is damaged. Replace the valve assembly with a new part.

4) Cause and solution for oil leakage from "b"  
The torsion bar O-ring is damaged. Replace the valve assembly with a new part.

5) Cause and solution for oil leakage from "c"  
The oil seal is damaged. Replace the valve assembly or oil seal with a new part.

6) Cause and solution for oil leakage from "d".  
The pipe is damaged. Replace the faulty pipe or O-ring.

7) Cause and solution for oil leakage from "g".  
The hose is damaged. Replace the hose with a new part.

8) If leak is other than a, b, c, d or g, or if oil is leaking from gearbox, move the right and left boots toward tie-rod end side, respectively, with the gearbox mounted to the vehicle, and remove fluid from surrounding portions. Then, turn the steering wheel from lock to lock about 30 to 40 times with the engine running, and make comparison of the leaked portion immediately after and several hours after this operation.

(1) Leakage from "e"

The cylinder seal is damaged. Replace the rack bushing with a new part.

(2) Leakage from "f"

There are two possible causes. Perform the following step first. Remove the pipe assembly B from the valve housing, and close the circuit using ST.

ST 926420000 PLUG

Turn the steering wheel from lock to lock approx. 30 to 40 times with the engine running, then inspect the leaked portion immediately after and several hours after this operation.

- If leakage from "f" is noted again:  
The oil seal of pinion and valve assembly is damaged. Replace the pinion & valve assembly with a new part. Or replace the oil seal and the parts that are damaged during disassembly with new parts.

- If oil stops leaking from "f":

The oil seal of rack housing is damaged. Replace the oil seal and parts that are damaged during disassembly with new parts.

## F: ADJUSTMENT

1) Adjust the front toe.  
 <Ref. to FS-13, FRONT WHEEL TOE-IN, INSPECTION, Wheel Alignment.>

### **Standard of front toe:**

**IN 3 — OUT 3 mm (IN 0.12 — OUT 0.12 in)**

(1) Lock nut

2) Adjust the steering angle of the wheels.

### **Standard of steering angle:**

Model	Excluding 2.5 GT spec. B	2.5 GT spec. B
Inner wheel	$37.6^{\circ} \pm 1.5^{\circ}$	$33.8^{\circ} \pm 1.5^{\circ}$
Outer wheel	$33.0^{\circ} \pm 1.5^{\circ}$	$30.2^{\circ} \pm 1.5^{\circ}$

3) If the steering wheel spokes are not horizontal when wheels are set in the straight ahead position, or error is more than  $5^{\circ}$  on the periphery of the steering wheel, correctly re-install the steering wheel.

(1)  $5^{\circ}$  or less

4) If the steering wheel spokes are not horizontal with vehicle set in the straight ahead position after this adjustment, correct it by turning the right and left tie-rods in the opposite direction from each other by the same angle.

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

### 6. Pipe Assembly

#### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Lift up the vehicle, and then remove the front crossmember support plate and jack-up plate.

- Large type

(1) Front crossmember support plate

- Small type

(1) Crossmember support plate  
(2) Jack-up plate

- 3) Remove the one pipe joint at the center of the gearbox, and connect the vinyl hose to the pipe and the joint. Discharge the fluid by turning the steering wheel fully clockwise and counterclockwise. Discharge the fluid similarly from other pipes.

(1) Pipe A  
(2) Pipe B

- 4) Remove the clamp E from return hose and pressure hose.

(1) Return hose  
(2) Pressure hose  
(3) Clamp E

- 5) Disconnect the pipe D from return hose and pipe C from pressure hose.

(1) Pipe C  
(2) Pipe D  
(3) Pressure hose  
(4) Return hose

- 6) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.> <Ref. to IN(H4SO)-8, REMOVAL, Air Intake Duct.>

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

7) Disconnect the suction hose and pressure hose from oil pump.

- (1) Suction hose
- (2) Pressure hose

8) Disconnect the suction hose and return hose from the reservoir tank.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

9) Remove the hose bracket and take out the hose assembly from vehicle.

- (1) Hose ASSY
- (2) Hose bracket

## B: INSTALLATION

1) Temporarily tighten the hose bracket bolt.

- (1) Hose ASSY
- (2) Hose bracket

2) Install the plastic clip to the pressure hose and suction hose.

### CAUTION:

Align the installation position of the plastic clip with the protector edge of the suction hose.

- (1) Plastic clip
- (2) Protector
- (3) Suction hose
- (4) Pressure hose

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

3) Connect the suction hose and return hose to the reservoir tank.

**CAUTION:**

**Firmly insert the plastic clip of return hose to the bracket.**

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

4) Connect the suction hose and pressure hose to the oil pump. Tighten the eye bolt of pressure hose.

**Tightening torque:**

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

- (1) Suction hose
- (2) Pressure hose

5) Temporarily connect pressure hose and pipe C, and the return hose and pipe D. Place clamp E in the position shown in the figure, and tighten the bolt temporarily.

- (1) Return hose
- (2) Pressure hose
- (3) Approx. 18 mm (0.71 in)
- (4) Clamp E
- (5) Pipe C
- (6) Pipe D

6) Tighten clamp E.

**Tightening torque:**

**7.4 N·m (0.75 kgf·m, 5.4 ft·lb)**

7) Tighten the pressure hose and pipe C, and the return hose and pipe D.

**Tightening torque:**

**15 N·m (1.5 kgf·m, 10.8 ft·lb)**

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

8) Connect pipes A and B to the four pipe joints of the gearbox.

### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to PS-5, POWER ASSISTED SYSTEM, COMPONENT, General Description.>**

- (1) Pipe A
- (2) Pipe B

9) Install the front crossmember support plate and jack-up plate.

10) Lower the vehicle.

11) Tighten the bolts which hold the hose bracket.

### **Tightening torque:**

**10 N·m (1.02 kgf·m, 7.4 ft·lb)**

- (1) Hose ASSY
- (2) Hose bracket

12) Install the air intake duct. <Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO)-8, INSTALLATION, Air Intake Duct.>

13) Connect the battery ground cable to the battery.

14) Fill with the specified fluid.

### **CAUTION:**

**Never start the engine before feeding the fluid otherwise the vane pump might be seized.**

15) Finally, check the clearance between pipes or hoses as shown in the figure indicated in "General Diagnostic Table". <Ref. to PS-60, INSPECTION OF CLEARANCE, INSPECTION, General Diagnostic Table.>

# Pipe Assembly

## POWER ASSISTED SYSTEM (POWER STEERING)

### C: INSPECTION

Check all disassembled parts for wear, damage or other problems. Repair or replace the defective parts as necessary.

Part	Maintenance parts	Corrective action
Pipe	<ul style="list-style-type: none"> <li>• O-ring fitting surface damage</li> <li>• Nut damage</li> <li>• Pipe damage</li> </ul>	Replace with a new part.
Clamp	<ul style="list-style-type: none"> <li>• Loose clamps</li> </ul>	Replace with a new part.
Hose	<ul style="list-style-type: none"> <li>• Flare surface damage</li> <li>• Flare nut damage</li> <li>• Outer surface cracks</li> <li>• Outer surface wear</li> <li>• Clip damage</li> <li>• End coupling or adapter deformation</li> </ul>	Replace with a new part.

#### CAUTION:

**Although the surface layer materials of rubber hoses have excellent weathering resistance, heat resistance and resistance for low temperature brittleness, they are likely to be damaged chemically by brake fluid, battery electrolyte, engine oil and automatic transmission fluid and their service lives are to be very shortened. Wipe off hoses immediately if any of these come into contact with the hoses. Since resistances for heat or low temperature brittleness are gradually declining according to time accumulation of hot or cold conditions for the hoses and their service lives are shortening accordingly, it is necessary to perform careful inspection frequently when the vehicle is used in hot weather areas, cold weather areas and a driving condition in which many steering operations are required in short time.**

**Continuous discharge of the relief valve for 5 seconds or more will reduce the service lives of hoses, oil pump, fluid, etc., due to over heating.**

Trouble	Possible cause	Corrective action
Pressure hose burst	Excessive holding time of relief status	Instruct customers.
	Malfunction of the relief valve	Replace the oil pump.
	Poor cold characteristic of fluid	Replace fluid.
Disconnection of the return hose	Improper connection	Repair.
	Loosening of the clip	Retighten.
	Poor cold characteristic of fluid	Replace fluid.
Fluid slightly leaking out of hose	Wrong layout, tensioned	Replace the hose.
	Excessive play of engine due to deterioration of engine mounting rubber	Replace the parts if defective.
	Improper stop position of pitching stopper	Replace the parts if defective.
Crack on hose	Excessive holding time of relief status	Replace. Instruct customers.
	Excessive tightening torque for return hose clip	Replace.
	Power steering fluid, engine oil, electrolyte adhere on the hose surface	Replace. Be careful during service work.
	Too many uses in extremely cold weather	Replace. Instruct customers.

# Pipe Assembly

POWER ASSISTED SYSTEM (POWER STEERING)

## NOTE:

There are conditions in which a fluid leak is diagnosed, but is not actually leaking. This is because the fluid spilt during the last maintenance was not completely wiped off. Be sure to wipe off spilt fluid thoroughly after maintenance.

PS-00805

Fluid leaking area	Possible cause	Corrective action
Leakage from pipe and hose connections numbered with (1) through (8) in the figure	Insufficient tightening of flare nut, adhesion of dirt, damage to flare or flare nut or eye bolt	Loosen and retighten. Replace if ineffective.
	Improper installation of hose or clamp	Retighten or replace the clamp.
	Damaged O-ring or gasket	Replace the O-ring, gasket pipe or hose with new part, if still no improvement, replace the gearbox as well.
Leakage from hose (9) through (13) in the figure	Crack or damage in hose	Replace with a new part.
	Crack or damage in hose hardware	Replace with a new part.
Leakage from surrounding of cast iron portion of oil pump, (14) and (15) in the figure	Damaged O-ring	Replace the oil pump.
	Damaged gasket	Replace the oil pump.
Leakage from oil tank, (16) and (17) in the figure	Crack in oil tank	Replace the oil tank.
Leakage from filler neck of (18)	Damaged cap gasket	Replace the cap.
	Crack in root of filler neck	Replace the oil tank.
	Fluid level too high	Adjust the fluid level.
Leakage from power cylinder of gearbox area (19) in the figure	Damaged oil seal	Replace the oil seal.
Leakage from (20), (21) in the figure and control valve of gearbox	Damaged gasket or oil seal	Replace the problem parts.
	Damage in control valve	Replace the control valve.

## POWER ASSISTED SYSTEM (POWER STEERING)

### 7. Oil Pump

#### A: REMOVAL

##### 1. H4 MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the air intake duct. <Ref. to IN(H4DOTC)-9, REMOVAL, Air Intake Duct.>  
<Ref. to IN(H4SO)-8, REMOVAL, Air Intake Duct.>
- 3) Remove the pulley belt cover.
- 4) Loosen the belt tension securing bolt and generator securing bolt, then remove the power steering pump V-belt.

- 5) Disconnect the connector from the power steering pressure switch.
- 6) Disconnect the pressure hose and suction hose from the oil pump.

#### CAUTION:

- Do not allow fluid to come into contact with the pulley belt.
- To prevent foreign matter from entering the hose and pipe, cover the open ends with clean cloth.
- Non-turbo model

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose
- (2) Pressure hose

- 7) Remove the installation bolt of the power steering pump bracket.

- 8) Place the oil pump bracket in a vise, and remove the two bolts from the front side of the oil pump.

#### CAUTION:

When securing the oil pump bracket in a vise, hold the oil pump bracket with the least possible force between two pieces of wood.

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

- 9) Remove the bolt from the rear side of oil pump.
- 10) Disassemble the oil pump and bracket by inserting a flat tip screwdriver as shown in the figure.

## 2. H6 MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the cover of the pulley belt.
- 3) Remove the V-belts.
- 4) Remove the power steering pressure switch connector.
- 5) Remove the tensioner adjuster.
- 6) Disconnect the pressure hose and suction hose from the oil pump.

### CAUTION:

- Do not allow fluid to flow from the hose end and contact the pulley belt.
- To prevent foreign objects from entering the hose, cover the hose openings with a clean cloth.

- (1) Suction hose
- (2) Pressure hose

- 7) Remove the bolts which holds the power steering pump bracket.

- 8) Place the oil pump bracket in a vise, and remove the two bolts from the front side of the oil pump.

### CAUTION:

- When securing the oil pump bracket in a vise, hold the oil pump bracket with the least possible force between two pieces of wood.**

- 9) Remove the bolt from the back side of the oil pump.

- 10) Remove the oil pump from the bracket.

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## B: INSTALLATION

### 1. H4 MODEL

1) Install the oil pump to bracket.

(1) Place the oil pump bracket in a vise. Tighten the bushing using a 12.7 mm (1/2") type, 14 and 21 mm box wrench until it is in contact with the oil pump mounting surface.

#### CAUTION:

When securing the oil pump bracket in a vise, hold the oil pump bracket with the least possible force between two pieces of wood.

- (1) Bushing
- (2) Nut
- (3) 21 mm
- (4) 14 mm
- (5) Bolt

(2) Tighten the bolts which hold the oil pump to the bracket.

**Tightening torque:**

**15.7 N·m (1.6 kgf-m, 11.6 ft-lb)**

**Tightening torque:**

**48.4 N·m (4.9 kgf-m, 35.7 ft-lb)**

2) Attach the installation bolts of the power steering pump bracket.

**Tightening torque:**

**<Ref. to PS-7, OIL PUMP, COMPONENT, General Description.>**

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

3) After installing the oil pump, fill the fluid while rotating the pulley by hand and bleed the air from the oil pump.

### CAUTION:

**Always fill the oil pump with the fluid to prevent abnormal noise and seizure of the oil pump.**

4) Connect the pressure hose and suction hose.

### Tightening torque:

#### Eye bolt

**40 N·m (4.1 kgf·m, 29.5 ft·lb)**

### CAUTION:

**Be careful when installing; If the hose is twisted it may come into contact with other parts.**

- (1) Suction hose
- (2) Pressure hose

- Turbo model

- (1) Suction hose
- (2) Pressure hose

5) Connect the power steering pressure switch connector.

6) Install the V-belts to the oil pump.

7) Check the tension of the V-belt.

<Ref. to ME(H4SO)-39, INSPECTION, V-belt.>

8) Tighten the lock bolt of the belt tension nut.

### Tightening torque:

**25 N·m (2.5 kgf·m, 18.4 ft·lb)**

9) Install the pulley belt cover.

10) Install the air intake duct.

<Ref. to IN(H4DOTC)-9, INSTALLATION, Air Intake Duct.> <Ref. to IN(H4SO)-8, INSTALLATION, Air Intake Duct.>

11) Connect the battery ground cable to the battery.

12) Fill with the specified power steering fluid. <Ref. to PS-55, Power Steering Fluid.>

### CAUTION:

**Never start the engine before feeding the fluid otherwise the vane pump might be seized.**

## 2. H6 MODEL

1) Install the oil pump to bracket.

(1) Place the oil pump bracket in a vise. Tighten the bushing using a 12.7 mm (1/2") type 14- and 21- mm box wrench until it is in contact with the oil pump mounting surface.

### CAUTION:

**When securing the oil pump bracket in a vice, hold the oil pump bracket with the least possible force between two pieces of wood.**

- (1) Bushing
- (2) Nut
- (3) 21 mm
- (4) 14 mm
- (5) Bolt

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

(2) Tighten the bolt which attaches the oil pump to the bracket.

**Tightening torque:**  
**15.7 N·m (1.6 kgf-m, 11.6 ft-lb)**

**Tightening torque:**  
**37.3 N·m (3.8 kgf-m, 27.5 ft-lb)**

2) Tighten the bolt which attaches the power steering pump bracket.

**Tightening torque:**  
**<Ref. to PS-7, OIL PUMP, COMPONENT, General Description.>**

3) After installing the oil pump, fill the fluid while rotating the pulley by hand and bleed the air from the oil pump.

**CAUTION:**  
**Always fill the oil pump with the fluid to prevent abnormal noise and seizure of the oil pump.**  
4) Connect the pressure hose and suction hose.

**Tightening torque:**  
**Eye bolt**  
**40 N·m (4.1 kgf-m, 29.5 ft-lb)**

**CAUTION:**  
**Be careful when installing; If the hose is twisted it may come into contact with other parts.**

- (1) Suction hose
- (2) Pressure hose

- 5) Connect the power steering pressure switch connector.
- 6) Install the tensioner adjuster.
- 7) Install the V-belts.
- 8) Install the cover of the pulley belt.
- 9) Connect the ground cable to the battery.
- 10) Pour the specified power steering fluid. <Ref. to PS-55, Power Steering Fluid.>

**CAUTION:**  
**Never start the engine before feeding the fluid otherwise the vane pump might be seized.**

# Oil Pump

POWER ASSISTED SYSTEM (POWER STEERING)

## C: INSPECTION

### 1. BASIC INSPECTION

Perform the following inspection procedures and replace faulty parts.

No.	Parts	Inspection	Corrective action
1	Oil pump (Exterior)	(1) Crack, damage or oil leakage	Replace the oil pump with a new part.
		(2) Play of pulley shaft	Measure the radial play and axial play. If any of these exceeds the service limit, replace the oil pump with a new part.
2	Pulley	(1) Damage	Replace with a new part.
		(2) Bend	Measure the V groove deflection. If it exceeds the service limit, replace the pulley with a new part.
3	Oil pump (Interior)	(1) Faulty or seized of vane pump	Check the rotating resistance of pulley. If it exceeds the service limit, replace the oil pump with new part.
		(2) Bend in the shaft or damage to bearing	If the a string is wrapped on the pulley and rotated, and the oil pump emits a noise that is markedly different in tone and loudness from a sound of a new oil pump, replace the oil pump with a new part.
4	O-ring	Cracking or deterioration	Replace with a new part.
5	Bracket	Crack	Replace with a new part.

### 2. SERVICE LIMIT

Make a measurements as follows. If it exceeds the service limit, replace with a new part.

#### CAUTION:

- When securing the oil pump on a vise, hold the oil pump with the least possible force between two pieces of wood.
- Do not set the outside of flow control valve or pulley on a vise; otherwise outside or pulley might be deformed. Select properly sized wood pieces.

1) Play of the pulley shaft

#### Condition:

**P: When applying the force of 9.8 N (1.0 kgf, 2.2 lb)**

#### Service limit:

**Play in the radial direction (Direction ◀ ▶) 0.4 mm (0.016 in) or less**

(1) Dial gauge

**Axial play (Direction ⇐ ⇒) 0.9 mm (0.035 in) or less**

(1) Dial gauge

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2) Deflection of the pulley groove

#### Service limit:

**1.0 mm (0.039 in) or less**

#### NOTE:

Read the value for one surface of V ditch, and then the value for another off the dial gauge.

(1) Dial gauge

### 3) Rotating resistance of pulley

#### Service limit:

**Maximum load: 9.22 N (0.94 kgf, 2.07 lb) or less**

#### NOTE:

- A rather higher value may be indicated when pulley starts turning.
- Measure the load during rotation to make a judgment.

(1) Spring scale

## 3. HYDRAULIC PRESSURE

#### NOTE:

• To measure hydraulic pressure correctly, be sure to complete all the items in "INSPECTION", prior to performing the measurement. <Ref. to PS-56, INSPECTION, General Diagnostic Table.>

- Do not leave the valve of pressure gauge closed or hold the steering wheel at lock for 5 seconds or more in any case, this can damage the oil pump.
- Before attaching a pressure gauge, place cloth at locations where fluid is expected to spill. Wipe off any spilt fluid completely after the measurement.

#### 1) Regular pressure measurement

(1) Connect the ST1, ST2 and ST3.

ST1 925711000 PRESSURE GAUGE

ST2 34099AC020 ADAPTER HOSE B

ST3 34099AC010 ADAPTER HOSE A

(2) Remove the air intake duct.

(3) Disconnect the pipe C from pump.

(4) Using the gasket (Part No. 34621AC021) and bolt (Part No. 34620AC010), install the ST2 to pump instead of pressure hose.

- Non-turbo model

(1) Suction hose

(2) Pressure hose

- Turbo model

(1) Suction hose

(2) Pressure hose

(5) Attach the ST3 to the end of pressure hose which is removed from pump.

(6) Replenish power steering fluid up to the specified level.

# Oil Pump

## POWER ASSISTED SYSTEM (POWER STEERING)

- (7) Open the valve, and start the engine.
- (8) Measure the regular pressure.

ST1 925711000 PRESSURE GAUGE  
ST2 34099AC020 ADAPTER HOSE B  
ST3 34099AC010 ADAPTER HOSE A

(1) Valve

### Service limit:

**981 kPa (10 kg/cm<sup>2</sup>, 142 psi) or less**

- (9) If it is not within the specification, replace the problem part for the following problems. (Pipe or hose clogged, leaks from fluid line, and mixture of foreign matter in fluid line)
- 2) Measure the relief pressure.
  - (1) Using the STs, measure the relief pressure.
  - (2) Close the valve.
  - (3) Measure the relief pressure.

ST1 925711000 PRESSURE GAUGE  
ST2 34099AC020 ADAPTER HOSE B  
ST3 34099AC010 ADAPTER HOSE A

(1) Valve

### Service limit:

#### H4 model:

**7,350 — 8,050 kPa  
(75 — 82 kg/cm<sup>2</sup>, 1,067 — 1,165 psi)**

#### H6 model:

**8,300 — 9,000 kPa  
(85 — 92 kg/cm<sup>2</sup>, 1,204 — 1,305 psi)**

- (4) If it is not within the specification, replace the oil pump.

- 3) Measure the working pressure.

- (1) Using the ST, measure the working pressure.
- (2) Open the valve.
- (3) Measure the working pressure of control valve by turning steering wheel from stop to stop.

ST1 925711000 PRESSURE GAUGE  
ST2 34099AC020 ADAPTER HOSE B  
ST3 34099AC010 ADAPTER HOSE A

(1) Valve

### Service limit:

**7,650 — 8,330 kPa  
(78 — 85 kg/cm<sup>2</sup>, 1,110 — 1,208 psi)**

- (4) If it is out of specification, measure the steering effort. <Ref. to PS-59, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>If it is not within specification, replace the control valve itself or control valve and pinion as a single unit, using new parts.

# Reservoir Tank

POWER ASSISTED SYSTEM (POWER STEERING)

## 8. Reservoir Tank

### A: REMOVAL

- 1) Drain fluid from the reservoir tank.
- 2) Disconnect the hose from reservoir tank.

#### CAUTION:

To prevent foreign matter from entering the hose and pipe, cover the open ends of them with clean cloth.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

- 3) Remove the reservoir tank from the body.

### B: INSTALLATION

- 1) Install the reservoir tank to the body.

#### Tightening torque:

**13 N·m (1.32 kgf·m, 9.6 ft·lb)**

- 2) Connect the hose to the reservoir tank.

- (1) Reservoir tank
- (2) Suction hose
- (3) Return hose

- 3) Replenish power steering fluid up to the specified level. <Ref. to PS-55, Power Steering Fluid.>

### C: INSPECTION

Check the reservoir tank for cracks, breakage or damage. If a failure is found, replace the reservoir tank.

# Power Steering Fluid

POWER ASSISTED SYSTEM (POWER STEERING)

## 9. Power Steering Fluid

### A: SPECIFICATION

Recommended power steering fluid
SUBARU ATF or ATF DEXRON III

### B: INSPECTION

1) Check the power steering fluid for deterioration or contamination. If the fluid is highly deteriorated or contaminated, drain it and refill with new fluid.

2) Check the joints and units for oil leakage. If any oil leaks are found, repair or replace the applicable part.

3) Inspect the fluid level of reservoir tank with vehicle on level surface and engine stopped.

If the level is at "MIN." point or below, add fluid to keep the level in the specified range of the indicator. If fluid level is at "MAX." point or above, drain fluid by using a syringe or the like.

(1) Check at power steering fluid temperature 20°C (68°F); read the fluid level on the "COLD" side.

(2) Check at power steering fluid temperature 80°C (176°F); read the fluid level on the "HOT" side.

### C: REPLACEMENT

1) Lift up the vehicle.  
2) Remove the crossmember support.  
3) Remove the pipe joint in the center of gearbox, and connect the vinyl hose to the pipe and joint. Wipe fluid off while turning the steering wheel.

4) Add the specified fluid to reservoir tank at "MAX" level.

5) Maintaining the fluid level of Step 4), continue to turn the steering wheel slowly from lock to lock until the bubbles stop appearing on oil surface.

6) If the steering wheel is turned in a low fluid level condition, air will be sucked into the pipe. If air has entered, leave it for about half an hour and then repeat step 5) again.

7) Start the engine and let it idle.

8) Continue to turn the steering wheel slowly from lock to lock again until the bubbles stop appearing on oil surface, while keeping the fluid at the level in Step 4).

Normally bubbles will stop appearing after turning the steering wheel from lock to lock three times.

9) In case bubbles do not stop appearing in the tank, leave it about half an hour and then do the step 4) all over again.

10) Lower the vehicle, and then idle the engine.

11) Continue to turn the steering wheel from lock to lock until the bubbles stop appearing and change of the fluid level is within 3 mm (0.12 in).

12) In case the following happens, leave it about half an hour and then do step 8) to 11) again.

(1) The fluid level changes 3 mm (0.12 in) or more.

(2) Bubbles remain on the upper surface of the fluid.

(3) Grinding noise is generated from oil pump.

13) Check the fluid leakage after turning steering wheel from lock to lock with engine running.

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

## 10. General Diagnostic Table

### A: INSPECTION

Trouble	Possible cause	Corrective action
<ul style="list-style-type: none"> <li>Steering effort is heavy in all ranges.</li> <li>Steering effort is heavy at stand still.</li> <li>Steering wheel vibrates when turning.</li> </ul>	1. Pulley belt <ul style="list-style-type: none"> <li>Unequal length of pulley belts</li> <li>Contact with oil or grease</li> <li>Looseness or damage of the pulley belt</li> <li>Poor uniformity of the pulley belt cross section</li> <li>Pulley belt touches to pulley bottom</li> <li>Poor revolution of pulleys (except oil pump pulley)</li> <li>Poor revolution of oil pump pulley</li> </ul>	Adjust or replace.
	2. Tire and wheel <ul style="list-style-type: none"> <li>Improper tire out of specifications<sup>*1</sup></li> <li>Improper wheel out of specifications<sup>*1</sup></li> <li>Tires not properly inflated</li> </ul>	Replace or reinflate.
	3. Fluid <ul style="list-style-type: none"> <li>Low fluid level</li> <li>Air entry in fluid</li> <li>Dust entry in fluid</li> <li>Fluid deterioration</li> <li>Inadequate warm-up of fluid<sup>*2</sup></li> </ul>	Refill, bleed air, replace or instruct customer.
	4. Idle speed <ul style="list-style-type: none"> <li>Lower idle speed</li> <li>Excessive drop of idle speed at start or when turning the steering wheel<sup>*3</sup></li> </ul>	Adjust or instruct customer.
	5. Measure the hydraulic pressure. <Ref. to PS-51, INSPECTION, Oil Pump.>	Replace the problem parts.
	6. Measure the steering wheel effort. <Ref. to PS-59, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.
<ul style="list-style-type: none"> <li>Vehicle leads to one side or the other.</li> <li>Returning force of steering wheel to center is poor.</li> <li>Steering wheel vibrates when turning.</li> </ul>	1. Fluid line <ul style="list-style-type: none"> <li>Folded hose</li> <li>Flattened pipe</li> </ul>	Correct or replace.
	2. Tire and wheel <ul style="list-style-type: none"> <li>Flat tire</li> <li>Mixed use of different tires</li> <li>Mixed use of different wheels</li> <li>Abnormal wear of tire</li> <li>Unequal tread remaining</li> <li>Unequal pressure of tire</li> </ul>	Adjust, fix or replace.
	3. Front alignment <ul style="list-style-type: none"> <li>Improper or unequal caster</li> <li>Improper or unequal toe-in</li> <li>Loose suspension connections</li> </ul>	Adjust or retighten.
	4. Others <ul style="list-style-type: none"> <li>Damaged joint assembly</li> <li>Unbalanced height</li> <li>Unbalanced weight</li> </ul>	Replace, adjust or instruct customer.
	5. Measure the steering wheel effort. <Ref. to PS-59, MEASUREMENT OF STEERING EFFORT, INSPECTION, General Diagnostic Table.>	Adjust or replace.

<sup>\*1</sup> If the tires or wheels are wider than standard, the load to the power steering system is increased. Accordingly, in a condition, for example before fluid warms-up, relief valve may work before reaching maximum turning angle. In this case, steering effort may be heavy. When the measured hydraulic pressure is normal, there is no abnormal thing.

<sup>\*2</sup> In cold weather, steering effort may be heavy due to increased flow resistance of cold fluid. After warming-up engine, turn the steering wheel from stop to stop several times to warm-up fluid. If steering effort reduces normally, function is normal.

<sup>\*3</sup> In cold weather or with insufficient warm-up of the engine, steering effort may be heavy due to excessive drop of idle rpm when turning the steering wheel. In this case, start the vehicle with increasing engine speed than usual. If steering effort reduces normally, function is normal.

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

## 1. NOISE AND VIBRATION

### CAUTION:

**Do not keep the relief valve operated for five seconds or more at any time or inner parts of the oil pump may be damaged due to rapid increase of fluid temperature.**

### NOTE:

- A screeching noise may be heard immediately after the engine start in extremely cold conditions. In this case, if the noise goes off during warm-up there is no abnormal function in the system. This is due to the fluid characteristics in extremely cold condition.
- The oil pump normally makes a small whining noise due to its mechanism. Even if a noise is heard when steering wheel is turned at stand still, there is no abnormal function in the system provided that the noise eliminates when the vehicle is driving.
- When turning the steering wheel with the brake applied when the vehicle is parked, a screeching noise may be generated by the brake disc and pads. This is not a fault in the steering system.
- There may be a small vibration around the steering devices when turning the steering wheel at standstill, even though the component parts are operating properly.

Hydraulic systems are likely to generate this kind of vibration as well as working noise and fluid noise because of combined conditions, i.e., road surface and tire surface, engine speed and turning speed of steering wheel, fluid temperature and braking condition.

These conditions do not indicate a problem in the system.

Confirm vibration for an AT model, by applying the parking brake on a concrete surface, shifting into the "D" range, and turning the steering wheel repeatedly from slow to rapid, step by step.

Trouble	Possible cause	Corrective action
Hiss noise (continuous) While engine is running.	Relief valve emits operating sound when steering wheel is completely turned in either direction. (Do not keep this condition for 5 seconds or more.)	Normal operation
	Relief valve emits operating sound when steering wheel is not turned. This means that the relief valve is defective.	Replace the oil pump.
Rattling noise (intermittent) While engine is running.	Interference with adjacent parts	Check the clearance. Correct if necessary. <Ref. to PS-44, INSPECTION, Pipe Assembly.>
	Loosened installation of oil pump, oil tank, pump bracket, gearbox or crossmember	Retighten.
	Loose oil pump pulley or other pulley(s)	Retighten.
	Looseness of linkage, play of steering, improper tightening (looseness) of suspension joint or steering column	Retighten or replace.
	Sound generates from the inside of gearbox or oil pump.	Replace faulty parts in the gearbox or oil pump.
Knocking When turning steering wheel in both directions with small angle repeatedly at engine ON or OFF.	Excessive backlash Loosened lock nut for adjusting backlash	Adjust and retighten.
	Insufficient tightening or play in the tie-rod or tie-rod end	Retighten or replace.
Grinding noise (continuous) While engine is running.	Air in vane pump	Inspect and retighten the fluid line connection. Refill the fluid and vent air.
	Vane pump seizing	Replace the oil pump.
	Oil pump pulley bearing seized	Replace the oil pump.
	Folded hose, flattened pipe	Replace.
Squeal, squeak (intermittent or continuous) While engine is running.	Improper adjustment of pulley belt Damaged or over tensioned pulley belt Unequal length of pulley belts	Adjust or replace. (Replace two belts as a set.)
	Runout or dirty V-groove surface of oil pump pulley	Clean or replace.

## General Diagnostic Table

### POWER ASSISTED SYSTEM (POWER STEERING)

Trouble	Possible cause	Corrective action
Sizzling noise (continuous) While engine is running.	Fluid aeration	Fix the faulty part causing aeration. Replace the fluid and vent air.
	Damaged pipe of gearbox	Replace the pipe.
	Faulty inside of hose or pipe Flattened hose or pipe	Correct or replace.
	Abnormal inside of oil tank	Replace.
	Removed oil tank cap	Install cap.
Whistle (continuous) While engine is running.	Faulty pipe of gearbox or faulty hose	Replace the faulty parts of the gearbox or the hose.
Whine or growl (intermittent or continuous) While engine is running with/ without steering turned.	Looseness of oil pump, oil pump bracket attachment	Retighten.
	Fault inside of oil pump or hose	Replace the oil pump or hose, if the noise can be heard when vehicle is running as well as being stopped.
	Torque converter growl, air conditioner compression growl	Remove the power steering pulley belt and check.
Grinding noise (continuous) While engine is running with the steering turned.	Fault inside of gearbox	Replace the faulty parts of gearbox.
	Faulty steering shaft bearing	Apply grease or replace.
	Occurs when turning the steering wheel with brakes (service or parking) applied.	If the noise goes off when brake is released, it is normal.
Vibration While engine is running with/ without steering turned.	Engine speed is too low.	Adjust, and notify customer.
	Air in vane pump	Repair faulty part Vent air.
	Damaged valve in oil pump or gearbox	Replace the faulty parts in gearbox and oil pump.
	Excessive play in steering, looseness of suspension parts	Retighten.

# General Diagnostic Table

POWER ASSISTED SYSTEM (POWER STEERING)

## 2. MEASUREMENT OF STEERING EFFORT

Step	Check	Yes	No
<b>1 CHECK STEERING EFFORT.</b> 1) Stop the vehicle on paved road. 2) Start the engine. 3) Run the engine at idle. 4) Install a spring scale on the steering wheel. 5) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.  NOTE: When turning the steering more quickly than necessary from a direction to the other direction at an engine speed of 2,000 rpm or more, steering effort may be heavy. This is caused by flow characteristic of the fluid in the oil pump and is not a defect.	Is the steering effort less than 29.4 N (3.0 kgf, 6.6 lb)?	Go to step 2.	Adjust the backlash.
<b>2 CHECK STEERING EFFORT.</b> 1) Stop the engine. 2) Pull the spring scale at a right angle to the steering wheel, and measure both right and left steering wheel efforts.	Is the steering effort less than 294.2 N (30 kgf, 66.2 lb)?	Go to step 3.	Perform the adjustment.
<b>3 CHECK STEERING WHEEL EFFORT.</b> 1) Remove the universal joint. 2) Measure the steering wheel effort.	Is steering effort less than 2.26 N (0.23 kgf, 0.51 lb)?	Go to step 4.	Check, adjust and replace if necessary.
<b>4 CHECK STEERING WHEEL EFFORT.</b> Measure the steering wheel effort.	Is the difference of steering effort between right and left less than 20%?	Go to step 5.	Check, adjust and replace if necessary.
<b>5 CHECK UNIVERSAL JOINT.</b> Measure the swing torque of the joint (yoke of steering column side). <Ref. to PS-16, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint less than 7.3 N (0.74 kgf, 1.64 lb)?	Go to step 6.	Replace with a new part.
<b>6 CHECK UNIVERSAL JOINT.</b> Measure the swing torque of the joint (yoke of gearbox side). <Ref. to PS-16, INSPECTION, Universal Joint.>	Is the swing torque of the universal joint less than 3.8 N (0.39 kgf, 0.86 lb)?	Go to step 7.	Replace with a new part.
<b>7 CHECK FRONT WHEEL.</b> Check the front wheels.	Does the front wheels have unsteady revolution or rattling, or does the brake drag?	Inspect, readjust and replace if necessary.	Go to step 8.
<b>8 CHECK TIE-ROD ENDS.</b> Remove the tie-rod ends.	If the tie-rod ends of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step 9.
<b>9 BALL JOINT CHECK.</b> Remove the ball joint.	If the ball joints of suspension have unsteady revolution or rattling?	Inspect and replace if necessary.	Go to step 10.
<b>10 CHECK GEARBOX.</b> Measure the rotating of gearbox. <Ref. to PS-37, TURNING RESISTANCE OF GEARBOX, INSPECTION, Steering Gearbox.>	Is the rotating resistance of steering gearbox less than 11.3 N (1.15 kgf, 2.54 lb)? Is the difference between right and left sides less than 24%?	Steering effort is normal.	Readjust the backlash, and if ineffective, replace the faulty parts.

## General Diagnostic Table

### POWER ASSISTED SYSTEM (POWER STEERING)

#### 3. INSPECTION OF CLEARANCE

This table lists various clearances that must be correctly adjusted to ensure the normal vehicle driving without interfering noise, or any other faults.

Location	Minimum allowance mm (in)
(1) Crossmember to-Hose ASSY	3 (0.12)
(2) Front exhaust pipe to Hose ASSY (Turbo model)	15 (0.59)
(3) Front frame side to Hose ASSY	10 (0.39)
(4) Turbo cover to Hose ASSY (Turbo model)	10 (0.39)
(5) Master cylinder to Return hose (Turbo model)	10 (0.39)
(6) Master cylinder to Hose clip (Model with vehicle dynamics control (VDC))	10 (0.39)
(7) VDC H/U to Hose ASSY (Model with vehicle dynamics control (VDC))	5 (0.20)
(8) Air cleaner to Hose ASSY (Turbo model)	5 (0.20)
(9) Air boot to Hose ASSY	10 (0.39)
(10) Protector to Hose ASSY (Turbo model, DOHC non-turbo model)	10 (0.39)
(11) Blow-by hose to Hose ASSY (Turbo model)	8 (0.31)
(12) Over flow hose to Hose ASSY (Turbo model)	8 (0.31)
(13) Brake pipe to Return hose (Model with ABS)	10 (0.39)
(14) Front suspension bracket to Return hose	5 (0.20)
(15) Front wheel apron to Return hose	5 (0.20)
(16) VDC H/U bracket to Suction hose (Model with vehicle dynamics control (VDC))	5 (0.20)
(17) Air cleaner case to Suction hose	5 (0.20)
(18) Air intake duct to Suction hose (Turbo model)	10 (0.39)
(19) Air duct to Suction hose (Turbo model)	10 (0.39)
(20) Front wheel apron to Reservoir tank	5 (0.20)
(21) VDC H/U to Reservoir tank (Model with vehicle dynamics control (VDC))	5 (0.20)
(22) Valve housing to DOJ (MT model)	12 (0.47)
(23) Valve housing to Crossmember (Hole)	1 (0.04)
(24) Bracket to Crossmember	1 (0.04)
(25) Cylinder to Crossmember	5 (0.20)
(26) Elbow to Crossmember	1 (0.04)
(27) Cylinder to Exhaust pipe	18 (0.71)
(28) Universal joint coupling to Turbo cover (Turbo model)	15 (0.59)
(29) Universal joint column side yoke to Master cylinder (Closest point of approach when the universal joint turns by 360°) (OUTBACK model)	5 (0.20)
(30) Cruise control to Hose ASSY (Model with cruise control)	10 (0.39)
(31) Universal joint coupling to ATF level gauge (LHD model)	10 (0.39)
(32) Boot to Exhaust pipe (LHD model)	18 (0.71)
(33) Return hose to Pressure hose	No contact between hoses

- (6) Rear heater duct (RH)

# General Description

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### C: CAUTION

#### 1. HFC-134A A/C SYSTEM

- The cooling system components for the HFC-134a system such as the refrigerant and compressor oil are different from the conventional CFC-12 system components and they are incompatible with each other.
- Vehicles with the HFC-134a system can be identified by the label (A) attached to the vehicle. Before maintenance, check which A/C system is installed to the vehicle.

#### 2. COMPRESSOR OIL

- HFC-134a compressor oil has no compatibility with that of CFC-12 system.
  - Use only Denso Oil 8, the manufacturer-authorized compressor oil for the HFC-134a system.
  - Do not mix multiple compressor oils.
- If CFC-12 compressor oil is used in the HFC-134a A/C system, the compressor may become stuck due to poor lubrication, or the refrigerant may leak due to swelling of rubber parts.
- On the other hand, if HFC-134a compressor oil is used in a CFC-12 A/C system, the durability of the A/C system will be lowered.
- HFC-134a compressor oil is very hygroscopic. When replacing or installing/removing A/C parts, immediately isolate the oil from atmosphere using a plug or tape. In order to avoid moisture, store the oil in a container with its cap tightly closed.

#### 3. REFRIGERANT

- CFC-12 refrigerant cannot be used in a HFC-134a A/C system. HFC-134a refrigerant, also cannot be used in a CFC-12 A/C system.
- If an incorrect or no refrigerant is used, it will result in poor lubrication and the compressor itself may be damaged.

#### 4. HANDLING OF REFRIGERANT

- The refrigerant boils at approx.  $-30^{\circ}\text{C}$  ( $-22^{\circ}\text{F}$ ). When handling it, be sure to wear protective goggles and protective gloves. Direct contact of the refrigerant with skin may cause frostbite. If the refrigerant gets into your eye, avoid rubbing your eyes with your hands. Wash your eye with plenty of water, and receive medical treatment from an eye doctor.
- Do not heat a service can. If a service can is directly heated, or put into boiling water, the inside pressure will become extremely high. This may cause the can to explode. If a service can must be warmed up, use warm water of  $40^{\circ}\text{C}$  ( $104^{\circ}\text{F}$ ) or less.
- Do not drop or impact a service can. (Observe the precautions and operation procedure described on the refrigerant can.)
- When the engine is running, do not open the high-pressure valve of the manifold gauge. High-pressure gas can back-flow resulting in an explosion of the can.
- Provide good ventilation and do not work in a closed area.
- In order to prevent global warming, avoid releasing HFC-134a into the atmosphere. Using a refrigerant recovery system, discharge and recycle the gas.

- (A) Goggles
- (B) Gloves
- (C) Avoid open flame
- (D) No direct heat on container
- (E) Do not discharge
- (F) Loosen

# General Description

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 5. O-RING CONNECTIONS

- Always use a new O-ring.
- In order to keep the O-rings free of lint which can cause a refrigerant gas leak, perform operations without gloves and cloth.
- Apply compressor oil to O-rings to avoid sticking, before installation.
- Use a torque wrench to tighten the O-ring fittings. Over-tightening will cause damage to the O-ring and cause tube end distortion.
- If the work is interrupted before completing pipe connections, recap the tubes, components and fittings with a plug or tape to prevent foreign matter from entering.

(A) Seal

- Visually check the surfaces and mating surfaces of O-rings, threads and connecting points. If a failure is found, replace the applicable parts.
- Install the O-rings at a right angle to tube beads.

- (A) O-ring
- (B) OK
- (C) NG
- (D) Groove

- Use compressor oil specified in the service manual to lubricate the O-rings. Apply oil to the top and sides of O-rings before installation. Apply compressor oil to grooves of the tube.

- After tightening, use a clean cloth to remove excess compressor oil from the connections and any oil which may have run on the vehicle body or other parts.
- If any leakage is suspected after tightening, do not tighten the connections further, but disconnect the connections, remove the O-rings, and check the O-rings, threads, and connections.

## D: PREPARATION TOOL

### CAUTION:

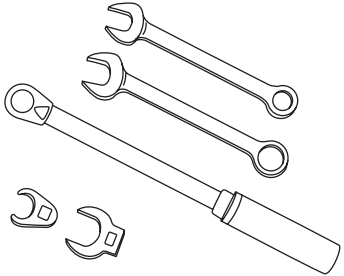

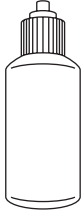

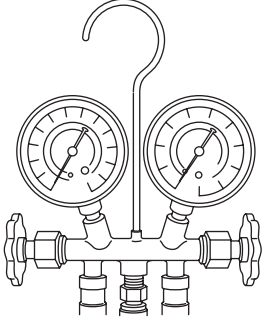

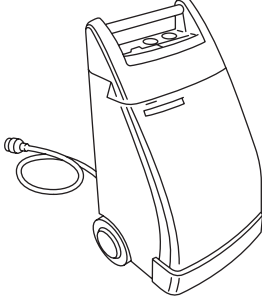

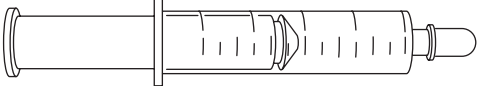

When working on vehicles with a HFC-134a system, only use HFC-134a specified tools and parts. Do not mix CFC-12 tools and parts. If HFC-134a and CFC-12 refrigerant or compressor oil is mixed, it will result in poor lubrication and the compressor itself may be damaged.

In order to prevent the mixture of HFC-134a and CFC-12 parts and liquid, the tool and screw type and the type of service valves used are different. The gas leak detectors for the HFC-134a and CFC-12 systems must also not be interchanged.

	HFC-134a	CFC-12
Tool & screw type	Millimeter size	Inch size
Valve type	Quick joint type	Screw-in type

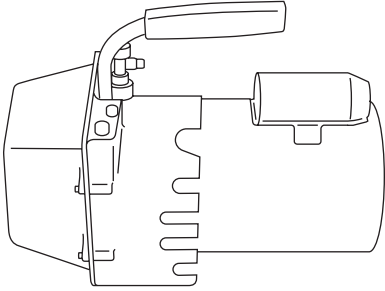

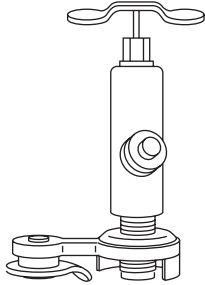

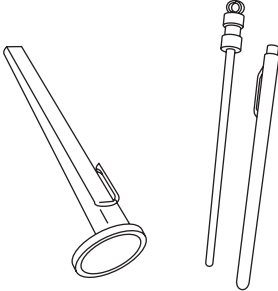

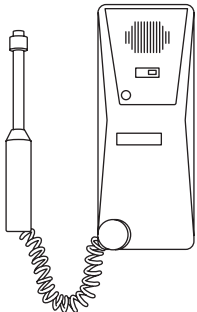

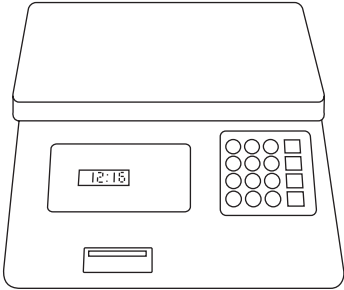

# General Description

# Refrigerant Pressure with Manifold Gauge Set

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 2. Refrigerant Pressure with Manifold Gauge Set

### A: PROCEDURE

- 1) Place the vehicle in the shade and windless condition.
- 2) Connect the manifold gauge set.
- 3) Open the front windows and close all doors.
- 4) Open the front hood.
- 5) Increase the engine to 1,500 rpm.
- 6) Turn on the A/C switch.
- 7) Turn the temperature control switch to MAX COOL.
- 8) Put in RECIRC position.
- 9) Turn the blower control switch to HI.
- 10) Read the gauge.

#### Standard:

**Low: 127 — 196 kPa (1.3 — 2.0 kg/cm<sup>2</sup>, 18 — 28 psi)**

**High: 1,471 — 1,667 kPa (15 — 17 kg/cm<sup>2</sup>, 213 — 242 psi)**

**Ambient temperature: 30 — 35°C (86 — 95°F)**

### B: INSPECTION

Symptom	Probable cause	Repair order
High-pressure side is unusually high.	<ul style="list-style-type: none"><li>• Defective condenser fan motor</li><li>• Clogged condenser fin</li><li>• Too much refrigerant</li><li>• Air inside the system</li><li>• Defective receiver dryer</li></ul>	<ul style="list-style-type: none"><li>• Replace the fan motor.</li><li>• Clean the condenser fin.</li><li>• Discharge refrigerant.</li><li>• Replace the receiver dryer.</li><li>• After evacuating again, charge an appropriate amount of refrigerant.</li></ul>
High-pressure side is unusually low.	<ul style="list-style-type: none"><li>• Defective compressor</li><li>• Not enough refrigerant</li><li>• Clogged expansion valve</li><li>• Expansion valve frozen temporarily by moisture.</li></ul>	<ul style="list-style-type: none"><li>• Replace the compressor.</li><li>• Check for leaks.</li><li>• Replace the expansion valve.</li><li>• Fully evacuate the expansion valve.</li></ul>
Low-pressure side is unusually high.	<ul style="list-style-type: none"><li>• Defective compressor</li><li>• Defective expansion valve</li><li>• Too much refrigerant</li></ul>	<ul style="list-style-type: none"><li>• Replace the compressor.</li><li>• Replace the expansion valve.</li><li>• Discharge refrigerant.</li></ul>
Low-pressure side is unusually low.	<ul style="list-style-type: none"><li>• Not enough refrigerant</li><li>• Clogged expansion valve</li><li>• Expansion valve frozen temporarily by moisture.</li><li>• Saturated receiver dryer</li></ul>	<ul style="list-style-type: none"><li>• Check for leaks.</li><li>• Replace the expansion valve.</li><li>• Replace the receiver dryer.</li></ul>

# Refrigerant Recovery Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 3. Refrigerant Recovery Procedure

### A: PROCEDURE

#### CAUTION:

- During operation, be sure to wear protective goggles and protective gloves.
- Connect the refrigerant recovery system with the manifold gauge set to discharge the refrigerant from the A/C system and recycle the gas.
- When recycling the discharged refrigerant, keep service cans on hand. Because the recovery rate with the recovery system is approx. 90%, service cans are necessary to charge the refrigerant.
- Follow the detailed operation procedure described in the operation manual attached to the refrigerant recovery system.

- 1) Perform the compressor oil return operation. <Ref. to AC-26, PROCEDURE, Compressor Oil.>
- 2) Stop the engine.
- 3) Make sure the valves on low/high pressure sides of manifold gauge set are fully closed.

- (A) Low-pressure gauge  
(Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

- 4) Install the low/high pressure hoses to the service ports on the low/high pressure sides of the vehicle respectively.

- (A) Low-pressure gauge  
(Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close
- (D) Low-pressure side service port
- (E) High-pressure side service port

- 5) Connect the center hose to the refrigerant recovery system.
- 6) Follow the operation manual to activate the refrigerant recovery system.

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 4. Refrigerant Charging Procedure

### A: PROCEDURE

#### CAUTION:

- During operation, be sure to wear protective goggles and protective gloves.
- Before charging the refrigerant, evacuate the system to remove small amounts of moisture remaining in the system.

The moisture in the system can be completely evacuated only under the minimum vacuum level. The minimum vacuum level affects the temperature in the system.

- The list below shows the vacuum values necessary to boil water at various temperatures. In addition, the vacuum levels indicated on the gauge are approx. 3.3 kPa (25 mmHg, 0.98 inHg) lower than those measured at 304.8 m (1,000 ft) above sea level.

Vacuum level required to boil water (at sea level)	
Temperature	Vacuum
1.7°C (35°F)	100.9 kPa (757 mmHg, 29.8 inHg)
7.2°C (45°F)	100.5 kPa (754 mmHg, 29.7 inHg)
12.8°C (55°F)	99.8 kPa (749 mmHg, 29.5 inHg)
18.3°C (65°F)	99.2 kPa (744 mmHg, 29.3 inHg)
23.9°C (75°F)	98.5 kPa (739 mmHg, 29.1 inHg)
29.4°C (85°F)	97.2 kPa (729 mmHg, 28.7 inHg)
35°C (95°F)	95.8 kPa (719 mmHg, 28.3 inHg)

- 1) Close the valves on low/high pressure sides of the manifold gauge.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

- 2) Install the low/high pressure hoses to the corresponding service ports on the vehicle.
- 3) Connect the center hose of the manifold gauge set with the vacuum pump.

- 4) Carefully open the valves on the low/high pressure sides to activate the vacuum pump.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Slowly open
- (D) Vacuum pump turn on

- 5) After the low-pressure gauge reaches 100.0 kPa (750 mmHg, 29.5 inHg) or higher, evacuate the system for approx. 15 minutes. (Continue evacuation).

- 6) After 15 minutes of evacuation, if the reading shows 100.0 kPa (750 mmHg, 29.5 inHg) or higher, close the valves on the both sides to stop the vacuum pump.

- (A) Low-pressure gauge (Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close
- (D) Vacuum pump turn off

# Refrigerant Charging Procedure

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

7) Note the low-pressure gauge reading.

8) Leave it at least 5 minutes, and then check the low-pressure gauge reading for any changes. If the gauge indicator shows near zero point, it is a sign of leakage. Check pipe connector points, repair them, and make sure there is no leakage.

9) Follow the can tap operation manual, install to the refrigerant can.

- (A) Tap valve
- (B) Center manifold hose

10) Disconnect the center manifold hose from the vacuum pump, and connect the hose to the tap valve.

11) When a 13.6 kg (30 lb) refrigerant container is used, measure the weight of the refrigerant amount to use using a scale.

- (A) Refrigerant container (HFC-134a)
- (B) Weight scale

12) Confirm that all the 3 hoses are connected securely to the manifold gauge set.

- (A) Low-pressure gauge  
(Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

13) Open the valve on the HFC-134a source.

14) Loosen the center hose connection on the manifold gauge set (if applicable, press a purge valve on the manifold gauge set) for a few seconds to allow the air in the center hose to escape by the refrigerant pressure.

15) Stop the engine and carefully open the high-pressure valve.

### CAUTION:

**Do not open the low-pressure valve.**

- (A) Low-pressure gauge  
(Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close
- (D) Ignition switch OFF
- (E) Slowly open

### CAUTION:

**Never run the engine while charging from the high-pressure side.**

16) Close the high-pressure valve when the low-pressure gauge reaches 98 kPa (1 kg/cm<sup>2</sup>, 14 psi). Using a leak tester, check the system for leaks. If any leakage is found after the refrigerant recovery is completed, repair the applicable area.

# Refrigerant Charging Procedure

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

17) After confirming that there are no leaks with the leak test, charge the required amount of refrigerant.

### CAUTION:

**Never run the engine while charging from the high-pressure side.**

- 18) Close the high-pressure valve when;
- the readings of low-/high-pressure gauges become almost equal, after the charging speed is reduced,
  - the HFC-134a source becomes empty, or the system is full with the gas.

19) If the HFC-134a source is empty, close the high-pressure valve, close the valve on the can tap, and replace the HFC-134a source with a new part to restart the operation.

- (A) Low-pressure gauge  
(Compound pressure gauge)
- (B) High-pressure gauge
- (C) Close

20) Confirm that both the low-/high-pressure valves can be closed. Start the engine with the A/C switch OFF.

21) Quickly repeat ON-OFF cycles a few times to prevent initial compressor damage.

22) Set up the vehicle to the following status:

- A/C switch ON
- Engine running at 1,500 rpm
- Blower speed setting to "HI"
- Temperature setting to "MAX COOL"
- Air inlet setting to "RECIRC"
- Window open

23) While reading the low-pressure gauge, carefully open the low-pressure valve with the refrigerant source connected and the service hose purged.

### CAUTION:

**Never open the high-pressure valve with the engine running. The high-pressure gas will back-flow resulting in an explosion of the can.**

24) Adjust the refrigerant flow to maintain the pressure on the low-pressure side at 276 kPa (2.81 kg/cm<sup>2</sup>, 40 psi) max.

25) After the system is fully charged, close the low-pressure valve.

26) Close the valve on the refrigerant source.

Refrigerant amount		
Refrigerant	Minimum	Maximum
HFC-134a	370 g (0.82 lb)	430 g (0.95 lb)

27) Disconnect the hose from the service port, and install the service port cap.

# Refrigerant Leak Check

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 5. Refrigerant Leak Check

### A: INSPECTION

1) Operate the A/C system for approx. 10 minutes, and check that the high-side pressure shows at least 690 kPa (7.03 kg/cm<sup>2</sup>, 100 psi). Then stop the engine to start the leak test.

2) Starting from the connection between high-pressure pipe and evaporator, check the system for leaks along the high-pressure side through the compressor. The following items must be checked thoroughly.

3) Check the joint and seam between pressure switch (dual switch) and high-pressure pipe.

4) Check the connections between condenser and pipes, and welded joints on the condenser.

The leak tester may detect the oil on the condenser fins as a leak.

5) Check the joint between compressor and hoses.

6) Check the machined area of the compressor and other joints on the compressor.

7) Check the compressor shaft seal at the area near the center of compressor clutch pulley.

Some shaft seals show a slight amount of leakage, about 3 g (0.1 oz) per year. This is not a problem.

8) Starting from the connection between low-pressure pipe and evaporator, check the system for leakage along the low-pressure side through the compressor. The following items must be checked thoroughly.

- Connection between 2 parts
- Connection between pipe and plate

9) Visually check the rubber area of the flexible hose for cracks.

Check the entire length of the flexible hose, especially the connection with the metal hose end.

### CAUTION:

**Carefully check the external surface of hoses and tubes at approx. 25 mm (0.98 in) per second.**

(A) Flexible hose

10) Disconnect the drain hose from the heater case, and check the hose end for at least 10 seconds.

After the test is finished, reconnect the drain hose.

11) Turn the ignition key to the ON position, and run the blower at high speed for approx. 1 minute. Stop the blower to check the ventilation grill on the instrument panel. While moving the tester closer to the grill, run the blower for 1 or 2 seconds, then stop it. Check the grill at that point for at least 10 seconds.

12) Check the valve in the service port.

13) Visually check the rubber seal in the service port cap.

# Compressor Oil

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 6. Compressor Oil

### A: PROCEDURE

NOTE:

Before making repairs, perform the oil return operation to return the compressor oil in circulation with the refrigerant to the compressor.

- 1) Increase the engine to 1,500 rpm.
- 2) Turn on the A/C switch.
- 3) Turn the temperature control switch to MAX COOL.
- 4) Put in RECIRC position.
- 5) Turn the blower control switch to HI.
- 6) Leave in this condition for 10 minutes.

### B: REPLACEMENT

NOTE:

- If a component has been replaced, add an appropriate amount of compressor oil (same as the amount of remaining oil in removed component).
- When replacing the compressor, the new compressor will already have the specified amount of oil in it. Adjust the oil amount (so that the amount remains the same as that of the removed compressor) and install the new compressor.

# Blower Motor Unit Assembly

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 7. Blower Motor Unit Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-52, REMOVAL, Glove Box.>
- 3) Disconnect the connectors of the A/C control module, intake door actuator, blower motor, power transistor and blower resistor.
- 4) Loosen the bolt and nut to remove blower motor unit assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”.** <Ref. to AC-7, HEATER COOLING UNIT, COMPONENT, General Description.>  
<Ref. to AC-10, BLOWER MOTOR UNIT, COMPONENT, General Description.>

# Blower Motor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 8. Blower Motor

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box lower cover. <Ref. to EI-52, REMOVAL, Glove Box.>
- 3) Disconnect the connector of the blower motor.
- 4) Loosen the screw to remove the blower motor.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Connect the battery positive (+) terminal to terminal No. 2 of blower motor connector, and negative (-) terminal to terminal No. 1. Check the blower motor for smooth rotation.

## Power Transistor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 9. Power Transistor (Auto A/C Model)

#### A: REMOVAL

- 1) Remove the glove box lower cover on passenger's side. <Ref. to EI-52, REMOVAL, Glove Box.>
- 2) Disconnect the power transistor connector.
- 3) Remove the two screws and remove the power transistor.

#### B: INSTALLATION

Install in the reverse order of removal.

# Blower Resistor (Manual A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 10. Blower Resistor (Manual A/C Model)

### A: REMOVAL

- 1) Remove the glove box lower cover on passenger's side. <Ref. to EI-52, REMOVAL, Glove Box.>
- 2) Disconnect the blower resistor connector.
- 3) Remove the two screws and remove the blower resistor.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the blower resistor resistance.

Terminal No.	Standard
4 and 2	Approx. 0.44 $\Omega$
4 and 3	Approx. 1.12 $\Omega$
4 and 1	Approx. 2.92 $\Omega$

If NG, replace the blower resistor.

## 11.Heater Core

### A: REMOVAL

- 1) Remove the heater and cooling unit. <Ref. to AC-37, REMOVAL, Heater and Cooling Unit.>
- 2) Remove the screws and remove the heater core cover and pipe clamp.

- 3) Remove the heater core (A).

### B: INSTALLATION

Install in the reverse order of removal.

## Control Panel (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 12. Control Panel (Auto A/C Model)

#### A: REMOVAL

- 1) Remove the audio assembly. <Ref. to ET-4, REMOVAL, Audio.>
- 2) Remove the six screws.

#### NOTE:

When working with the removed audio assembly with its back facing down, place wooden blocks between the audio assembly and the workbench to prevent the ground terminal from folding.

- 3) Use a fine flat tip screwdriver to lift the hooks in 10 locations gradually. Starting from the sides, proceed to loosen the lower hooks, then the upper hooks, then remove.

(A) Hook

- 4) Pull the panel straight out to remove.

#### CAUTION:

**Be careful not to touch the circuit board of the panel to prevent damage by static electricity.**

#### B: INSTALLATION

- 1) After attaching the hooks, push the center of the panel by hand and secure the connection between the circuit board and the connector.
- 2) Install in the reverse order of removal.

### 13. Control Unit (Manual A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 3) Remove the control wires.

- 4) Remove the audio assembly. <Ref. to ET-4, REMOVAL, Audio.>
- 5) Loosen the screw to remove the control unit from the bracket.

#### B: INSTALLATION

Install in the reverse order of removal.

## Control Unit (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 14. Control Unit (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-52, REMOVAL, Glove Box.>
- 3) Remove the screw, disconnect the connector and remove the control unit.

#### B: INSTALLATION

Install in the reverse order of removal.

# Compressor

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 15. Compressor

### A: INSPECTION

#### 1. MAGNETIC CLUTCH CLEARANCE

Check the clearance of the entire circumference around the drive plate and pulley.

#### Standard:

$0.45 \pm 0.15 \text{ mm}$  ( $0.0177 \pm 0.0059 \text{ in}$ )

#### 2. MAGNETIC CLUTCH OPERATION

- 1) Disconnect the compressor connector.
- 2) Connect the battery positive (+) terminal to terminal No. 1 of the compressor connector, and the negative (-) terminal to terminal No. 2.

- 3) Check the magnet clutch engagement. If there is a problem, replace the compressor.

### B: REMOVAL

- 1) Perform the compressor oil return operation. <Ref. to AC-26, PROCEDURE, Compressor Oil.>
- 2) Turn the A/C switch to OFF and stop the engine.
- 3) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 4) Disconnect the ground cable from battery.
- 5) Remove the V-belts. <Ref. to ME(H4SO)-37, REMOVAL, V-belt.> <Ref. to ME(H4DOTC)-37, REMOVAL, V-belt.> <Ref. to ME(H6DO)-40, REMOVAL, V-belt.>
- 6) Remove the generator. <Ref. to SC(H4SO)-15, REMOVAL, Generator.>
- 7) Remove the bolt and remove the low-pressure hose and high-pressure hose.

- 8) Disconnect the compressor harness from the body harness.
- 9) Remove the bolts and remove the compressor bracket.

- H4 model

- H6 model

- 10) Remove the bolts, then remove the bracket from the compressor.

### C: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Replace the O-rings on low-/high-pressure hoses with new parts, then apply compressor oil.
- 3) After replacing the compressor, adjust the amount of compressor oil. <Ref. to AC-26, PROCEDURE, Compressor Oil.>
- 4) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to AC-12, AIR CONDITIONING UNIT, COMPONENT, General Description.> <Ref. to AC-13, COMPRESSOR, COMPONENT, General Description.>

# Condenser

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 16. Condenser

### A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Disconnect the ground cable from battery.
- 3) Disconnect the pressure hose and pipe from the condenser.

- 4) Remove the radiator bracket (A) and hood stay (B).

- 5) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
- 6) Remove two bolts. While lifting the condenser, pull out through space between the radiator and the radiator panel.

### CAUTION:

- Be careful not to damage the condenser fins. If a damaged fin is found, repair it using a thin screwdriver.
- If the condenser is replaced, add an appropriate amount of compressor oil to the compressor. <Ref. to AC-26, REPLACEMENT, Compressor Oil.>

### B: INSTALLATION

- 1) Install in the reverse order of removal.

### CAUTION:

Replace the O-rings on hoses or pipes with new parts, and then apply compressor oil. Confirm that lower guide (A) of condenser fits into holes on radiator panel.

- 2) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to AC-12, AIR CONDITIONING UNIT, COMPONENT, General Description.> <Ref. to CO(H4SO)-5, RADIATOR & RADIATOR FAN, COMPONENT, General Description.>

### C: INSPECTION

- 1) Check to see that the condenser fins are not clogged with debris or insects. Blow with compressed air or flush fins with water as needed.
- 2) Inspect for oil leakage from the condenser. If a failure is found, replace the condenser with a new part.

## 17.Heater and Cooling Unit

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 3) Drain engine coolant from the radiator.
- 4) Remove the bolts securing expansion valve and pipe in engine compartment. Release the heater hose clamps in engine compartment to remove the hoses.

- 5) Remove the instrument panel. <Ref. to EI-57, REMOVAL, Instrument Panel Assembly.>
- 6) Remove the support beam.
- 7) Remove the blower motor unit assembly. <Ref. to AC-27, REMOVAL, Blower Motor Unit Assembly.>
- 8) Disconnect the actuator connector.
- 9) Remove the bolt and nuts and remove the heater and cooling unit.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to AC-7, HEATER COOLING UNIT, COMPONENT, General Description.>**

# Evaporator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 18. Evaporator

### A: REMOVAL

- 1) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
- 2) Disconnect the ground cable from battery.
- 3) Remove the blower motor unit assembly. <Ref. to AC-27, REMOVAL, Blower Motor Unit Assembly.>
- 4) Disconnect the connector, remove the screw and then remove the air-mix door actuator and mode door actuator.

- 5) Disconnect the connector, remove the pipe cover and evaporator sensor.

- 6) Remove the bolts securing expansion valve and pipe in engine compartment.

- 7) Remove the bolt which holds the pipe to the evaporator.

- 8) Remove the screws and clip to remove the evaporator cover.

- 9) Pull out the evaporator (A) in the direction of the arrow.

### CAUTION:

If the evaporator is replaced, add an appropriate amount of compressor oil to evaporator. <Ref. to AC-26, REPLACEMENT, Compressor Oil.>

### B: INSTALLATION

Install in the reverse order of removal.

## 19.Hose and Tube

### A: REMOVAL

#### CAUTION:

- When disconnecting/connecting hoses, do not apply an excessive force to them. After installing, check that no torsion or excessive tension applied to the hoses.
  - Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.
- 1) Disconnect the ground cable from battery.
  - 2) Using the refrigerant recovery system, discharge refrigerant. <Ref. to AC-21, PROCEDURE, Refrigerant Recovery Procedure.>
  - 3) Remove the evaporator unit mounting bolt (A) and low-pressure hose bracket bolt (B).
  - 4) Remove the low-pressure hose attaching bolts (C).
  - 5) Disconnect the low-pressure hose from evaporator unit.
  - 6) Disconnect the low-pressure hose from compressor.
  - 7) Remove the low-pressure hose from vehicle.
  - 8) Remove the high-pressure hose attaching bolt (D).
  - 9) Disconnect the high-pressure hose from compressor.
  - 10) Disconnect the high-pressure hose from condenser.
  - 11) Remove the high-pressure hose from vehicle.
  - 12) Remove the high-pressure tube attaching bolt (E).
  - 13) Remove the high-pressure tube from vehicle.

### B: INSTALLATION

#### CAUTION:

- When disconnecting or connecting the hoses, do not apply excessive force. After installing, check that no torsion or excessive tension applied to the hoses.
  - Seal the disconnected hose with a plug or vinyl tape to prevent foreign matter from entering.
- 1) Install in the reverse order of removal.
  - 2) Charge refrigerant. <Ref. to AC-22, PROCEDURE, Refrigerant Charging Procedure.>

#### Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to AC-12, AIR CONDITIONING UNIT, COMPONENT, General Description.>

### C: INSPECTION

Check the hoses for cracks, damage and expansion. If any fault is found, replace with new parts.

# Relay and Fuse

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 20. Relay and Fuse

### A: LOCATION

- (1) Joint box
- (2) Main fuse box

Main fan relay 1	(A)
Main fan relay 2	(B)
Sub fan relay	(C)
A/C relay	(D)
A/C Fuse	(E)

### B: INSPECTION

- (3) — (4): Continuity exists
- (1) — (2): Continuity does not exist

While applying battery voltage to the terminal between (3) and (4), check continuity between (1) and (2). If no continuity exists, replace the relay with a new part.

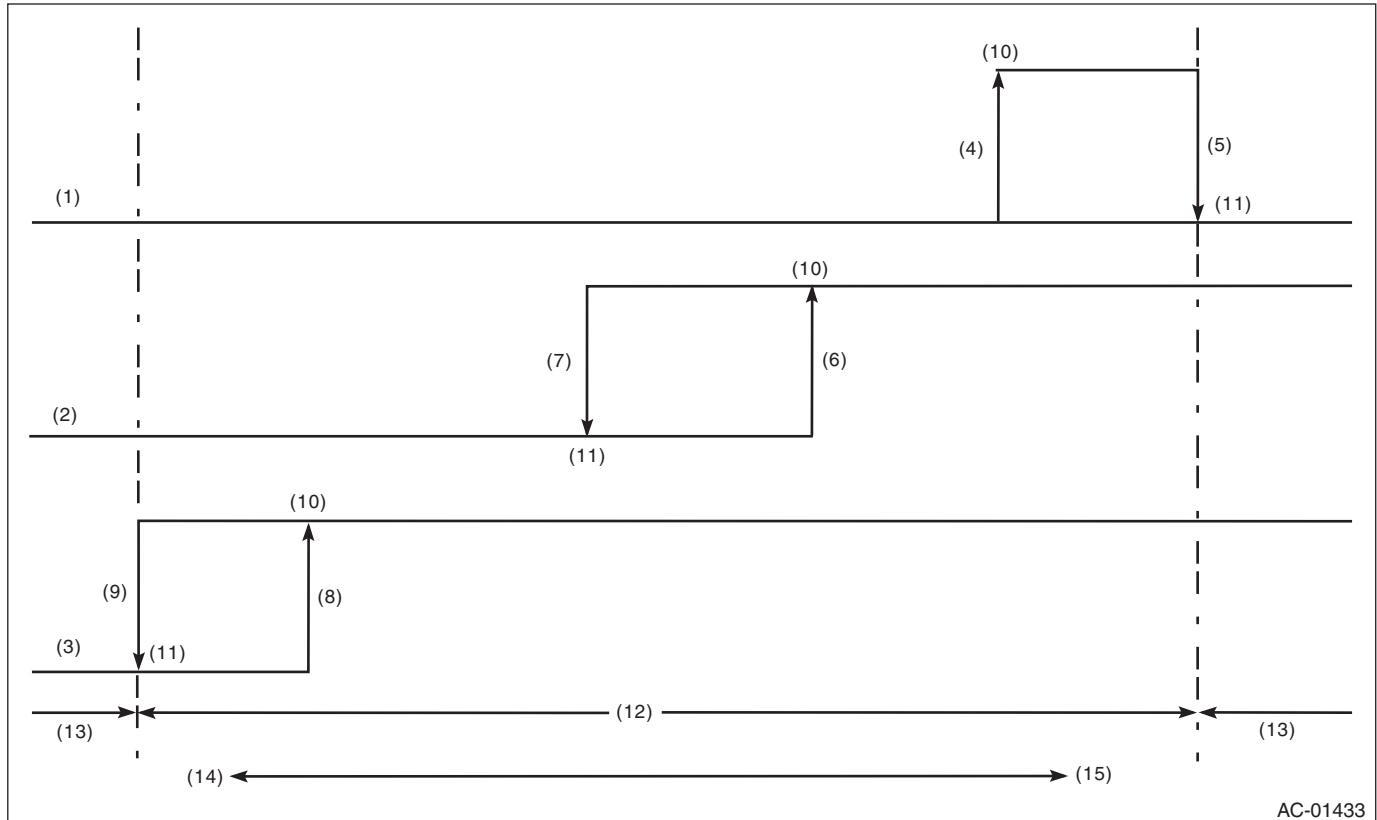

# Pressure Switch (Triple Pressure Switch)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 21. Pressure Switch (Triple Pressure Switch)

### A: INSPECTION

- 1) Connect the manifold gauge to the service valve on the high-pressure side.
- 2) Start the air conditioner, and check the operating pressure of switch by turning the compressor (magnet clutch) to ON/OFF. Operation of each switch is as follows.

AC-01433

(1) High pressure switch	(7) $1370 \pm 120$ kPa ( $13.97 \pm 1.22$ kg/cm <sup>2</sup> , $198.65 \pm 14.5$ psi)	(10) ON
(2) Middle pressure switch	(8) $225^{+25}_{-29}$ kPa ( $2.99^{+0.25}_{-0.3}$ kg/cm <sup>2</sup> , $3.6^{+32.6}_{-4.2}$ psi)	(11) OFF
(3) Low pressure switch	(9) $196 \pm 20$ kPa ( $2.0 \pm 0.2$ kg/cm <sup>2</sup> , $28.4 \pm 2.9$ psi)	(12) Operative range of compressor
(4) $2550 \pm 200$ kPa ( $24 \pm 2$ kg/cm <sup>2</sup> , $341 \pm 28$ psi)		(13) Inoperative range of compressor
(5) $3140^{+50}_{-200}$ kPa ( $32.02^{+0.51}_{-2.04}$ kg/cm <sup>2</sup> , $455.4^{+72.5}_{-29.0}$ psi)		(14) Low pressure
(6) $1770 \pm 80$ kPa ( $18.05 \pm 0.82$ kg/cm <sup>2</sup> , $256.81 \pm 11.6$ psi)		(15) High pressure

#### NOTE:

- High pressure switch turns the compressor (magnet clutch) to OFF when the refrigerant pressure becomes extremely high to prevent the evaporator, air conditioner piping and expansion valve from getting damaged or frozen.
- Middle pressure switch effectively controls the radiator fan output by judging hight load/low load in normal range.
- Low pressure switch turns the compressor (magnet clutch) to OFF, judging as low refrigerant level when the refrigerant pressure becomes extremely low, to prevent the possible seizure if the compressor rotates.

# Actuator

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 22. Actuator

### A: REMOVAL

#### 1. MODE DOOR ACTUATOR

Disconnect the connector, remove the screw, and then remove the mode door actuator from the heater and cooling unit.

#### 2. INTAKE DOOR ACTUATOR

Disconnect the connector, remove the screw, and then remove the intake door actuator from the blower motor unit.

#### 3. AIR MIX DOOR ACTUATOR (AUTO A/C MODEL)

Disconnect the connector, remove the screw, and then remove the air mix door actuator from the heater and cooling unit.

- Driver's side

- Passenger's side

### B: INSTALLATION

Install in the reverse order of removal.

## Ambient Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

### 23. Ambient Sensor (Auto A/C Model)

#### A: REMOVAL

- 1) Open the front hood.
- 2) Disconnect the ground cable from battery.
- 3) Disconnect the ambient sensor connector.
- 4) Remove the ambient sensor from the radiator lower panel.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

<Ref. to AC(diag)-29, AMBIENT SENSOR, Diagnostic Procedure for Sensors.>

## Sunload Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 24. Sunload Sensor (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Disconnect the connector and remove the sunload sensor.

#### CAUTION:

Be careful not to damage the interior trims when removing the sensor.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

<Ref. to AC(diag)-35, SUNLOAD SENSOR, Diagnostic Procedure for Sensors.>

## In-vehicle Sensor (Auto A/C Model)

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 25. In-vehicle Sensor (Auto A/C Model)

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the console side panel of the driver's side. <Ref. to EI-55, REMOVAL, Center Console.>
- 3) Disconnect the connector and aspirator hose, remove the claw and remove the in-vehicle sensor from the center console frame.

#### CAUTION:

**Be careful not to damage the sensors and interior trims when removing.**

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

<Ref. to AC(diag)-31, IN-VEHICLE SENSOR, Diagnostic Procedure for Sensors.>

# Air Vent Grille

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 26. Air Vent Grille

### A: REMOVAL

#### 1. CENTER GRILLE

- 1) Disconnect the ground cable from battery.
- 2) Remove the three claws and connector to remove center air vent grill.

#### 2. SIDE GRILLE

Remove the catch in 2 locations to remove the side air vent grill.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Check that the direction and amount of air can be adjusted smoothly.
- 2) Check that the adjustment can be maintained in each position.

## 27.Heater Duct

### A: REMOVAL

#### 1. FRONT HEATER DUCT

- 1) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 2) Remove the screws and detach the front heater duct (A).

#### 2. REAR HEATER DUCT

- 1) Remove the heater cooling unit. <Ref. to AC-37, REMOVAL, Heater and Cooling Unit.>
- 2) Remove the front seats. <Ref. to SE-9, REMOVAL, Front Seat.>
- 3) Remove the front side sill cover.
- 4) Pull off the floor mat to remove the rear center heater duct (A) and rear heater duct LH, RH (B).

### B: INSTALLATION

Install in the reverse order of removal.

# Heater Vent Duct

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## 28.Heater Vent Duct

### A: REMOVAL

- 1) Remove the instrument panel. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 2) Remove the screws and detach the center vent duct (A).
- 3) Remove the screws and detach the side vent duct (B).
- 4) Remove the insulator, remove the screws and detach the defroster duct.

### B: INSTALLATION

Install in the reverse order of removal.

# A/C Filter

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 29. A/C Filter

### A: REPLACEMENT

1) Remove the instrument panel side cover.

2) Remove the clip and the damper (string).

- (1) Clip
- (2) Damper

3) Remove the upper storage box.

4) Remove the screws, and then remove the cover.

5) Remove the A/C filter.

6) Install in the reverse order of removal.

# General Diagnostic Table

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 30. General Diagnostic Table

### A: INSPECTION

Symptom		Repair order
Blower motor	Does not operate.	Fuse
		Blower motor relay
		Blower motor
		Blower motor resistor
		Blower switch
		Wiring harness
	Noise	Blower motor
Compressor	Does not operate.	Refrigerant
		Fuse
		Air conditioning relay
		Magnet clutch
		Compressor
		Pressure switch
		A/C switch
		Blower switch
		Wiring harness
	Noise	V-belt
		Magnet clutch
		Compressor
Cold air not emitted.	Refrigerant	
	V-belt	
	Magnet clutch	
	Compressor	
	Pressure switch	
	A/C switch	
	Blower switch	
	Wiring harness	
	Heater duct	
	Heater vent duct	
Warm air not emitted.	Engine coolant	
	Blower switch	
	Heater core	
	Heater cock solenoid valve	
Temperature of air from vents does not change.	Engine coolant	
	Air mix door actuator (Auto A/C)	
	Wiring harness (Auto A/C)	
	Temperature control cable (Manual A/C)	
Unable to switch blow vents.	Mode door actuator	
	Air flow switch	
	Wiring harness	
Unable to switch suction vents.	Air inlet select switch	
	Intake door actuator	
	Wiring harness	

# Basic Diagnostic Procedure

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

Step	Check	Yes	No
<b>1 START INSPECTIONS.</b> 1) Perform the pre-inspection. <Ref. to AC(diag)-3, INSPECTION, General Description.> 2) Perform the self-diagnosis. <Ref. to AC(diag)-9, OPERATION, Diagnostic Chart for Self-diagnosis.>	Does the self-diagnosis operate?	Go to step 2.	<Ref. to AC(diag)-14, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
<b>2 IDENTIFY MALFUNCTION PART.</b> Identify the malfunction part with self-diagnosis.	Can the malfunction part be confirmed?	Repair the malfunctioning part in accordance with each diagnostic chart.	Go to step 3.
<b>3 CHECK COMPARTMENT TEMPERATURE.</b> 1) Turn on the A/C switch. 2) Turn the temperature control dial at maximum cool position. 3) Check the compartment temperature change.	Does the compartment temperature change?	Go to step 4.	<Ref. to AC(diag)-18, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY, Diagnostics for A/C System Malfunction.>
<b>4 CHECK A/C SYSTEM RESPONSE.</b> Change the temperature setting, and check the response of A/C system.	Does the A/C system respond quickly?	A/C system is normal.	<Ref. to AC(diag)-18, COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY, Diagnostics for A/C System Malfunction.>

# General Description

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 2. General Description

### A: CAUTION

- 1) Never connect the battery in reverse polarity. Doing so may immediately damage the auto A/C control module.
- 2) Do not disconnect the battery terminals while the engine is running. A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as auto A/C control module etc.
- 3) Before disconnecting the connectors of sensors and the auto A/C control module, be sure to turn off the ignition switch. Auto A/C control module may be damaged.
- 4) Every A/C-related part is a precision part. Do not drop them.
- 5) Airbag system wiring harness is routed near the A/C control panel and junction box.

### CAUTION:

- Do not use electrical test equipment on wiring harness and connector circuits of the airbag system.
- Be careful not to damage the airbag system wiring harness when servicing the A/C control panel and junction box.

### B: INSPECTION

Before performing the diagnosis, check the following items which may cause problems in the A/C system.

#### 1. BATTERY

- 1) Measure the battery voltage and specific gravity of electrolyte.

**Standard voltage: 12 V**

**Specific gravity: 1.260 or more**

- 2) Check the condition of the fuses for A/C system power supply and other fuses.
- 3) Check the condition of harness and harness connector connections.

#### 2. ASPIRATOR HOSE

- 1) Turn the ignition switch to ON, and press the A/C switch.
- 2) Turn the temperature control dial to maximum hot position.
- 3) Turn the air flow control dial to "DEF" position.
- 4) Turn the fan dial to MAX.
- 5) Put a strip of paper close to the front side of in-vehicle sensor suction port (A) located in the driver's side console side panel, and check that air is being sucked into the port by seeing the paper moving towards the port.

### NOTE:

Be careful not to let the paper get sucked into the port.

- 6) If the paper does not move at all, remove the driver's side console side panel <Ref. to EI-55, REMOVAL, Center Console.> and check for improper connection of the aspirator hose, in-vehicle sensor and heater unit, and repair them if necessary.

#### 3. A/C LINE

Check the connection for A/C line (A) and lower side high-pressure pipe.

#### 4. CONTROL LINKAGE

- 1) Check the state of mode door linkage.
- 2) Check the state of air mix door linkage.
- 3) Check the state of FRESH/RECIRC door linkage.

## General Description

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

#### 5. CONTROL SWITCHES

Start the engine and warm-up completely.

##### 1) Inspection using switches

No.	Point to check	Switch operation	Judgment standard
1	OFF switch	Press the OFF switch.	Setting temperature display goes out. <ul style="list-style-type: none"> <li>• Blower fan: OFF</li> <li>• Inlet opening: FRESH</li> <li>• Compressor: OFF</li> </ul>
2	AUTO switch, driver's side temperature control dial and passenger's side temperature control dial	1) Press the AUTO switch. 2) Turn the temperature control dial to the left fully, and set to 18°C (65°F) (maximum cool position).	AUTO display illuminates. <ul style="list-style-type: none"> <li>• Outlet air temperature: COOL</li> <li>• Blower fan: HI (AUTO)</li> <li>• Outlet opening: FACE</li> <li>• Inlet opening: AUTO</li> <li>• Compressor: AUTO</li> </ul>
		3) Turn the temperature control dial to the right slowly, and change the setting from 18°C (65°F) (maximum cool position) to 32°C (85°F).	<ul style="list-style-type: none"> <li>• Outlet air temperature: COOL → HOT</li> <li>• Blower fan: AUTO</li> <li>• Outlet opening: FACE → B/L → FOOT</li> <li>• Inlet opening: AUTO</li> <li>• Compressor: AUTO</li> </ul>
		4) Turn the temperature control dial to the right fully, and set to 32°C (85°F) (maximum hot position).	<ul style="list-style-type: none"> <li>• Outlet air temperature: HOT</li> <li>• Blower fan: HI (AUTO)</li> <li>• Outlet opening: FOOT</li> <li>• Inlet opening: FRESH (AUTO)</li> <li>• Compressor: AUTO</li> </ul>
3	Defroster switch	Press the defroster switch.	Defroster switch indicator illuminates. <ul style="list-style-type: none"> <li>• Outlet air temperature: AUTO</li> <li>• Blower fan: AUTO</li> <li>• Outlet opening: DEF</li> <li>• Inlet opening: FRESH</li> <li>• Compressor: ON</li> </ul>
4	FRESH/RECIRC switch	Press the FRESH/RECIRC switch.	Inlet opening switches RECIRC → FRESH or FRESH → RECIRC each time pressing the switch.
5	MODE switch	Press the MODE switch.	Outlet opening switches FACE → B/L → FOOT → F/D each time pressing the switch.
6	FAN switch	Press the FAN switch (+).	Inlet opening switches LO → M1 → M2 → M3 → M4 → HI each time pressing the switch.

##### 2) Compressor operation inspection

No.	Point to check	Switch operation	Judgment standard
1	Compressor	1) Turn the A/C switch to ON. 2) Set the FAN switch between LO and HI.	Compressor: ON

##### 3) Inspection of illumination control

No.	Point to check	Switch operation	Judgment standard
1	Illumination	Turn the lighting switch to ON.	Illumination comes on.

# Auto A/C Control Module I/O Signal

## HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Terminal No.	Remarks	Measuring condition	Standard
1	Battery power supply	Ignition switch: OFF	Battery voltage
3	Mode door actuator position signal	Mode door: FACE position	4 V
		Mode door: DEF position	1 V
4	Air mix door actuator (passenger's side) position signal	Air mix door: Maximum cool position	4 V
		Air mix door: Maximum hot position	1 V
5	In-vehicle sensor	Ignition switch: ON	25°C: 1 — 5 V 40°C: 1 — 5 V
6	Sunload sensor	Ignition switch: ON, With Sunload (No sunload: 0 V)	Sunlight: 3 V Indoor light: 3 V
8	Each potentiometer and sunload sensor power supply	Ignition switch: ON	5 V
9	CAN LO	—	*1
10	CAN HI	—	*1
11	Blower motor voltage feedback	Ignition switch : ON, Blower switch : ON	0.45 — 10 V
12	Blower motor control signal	Ignition switch : ON, Blower switch : ON	9.05 V
13	RAM monitor Tx	Outputs the RAM value when the terminal No. 33 (RAMver) is connected to GND.	*1
14	RAM monitor Rx		*1
15	Magnet clutch ON demand signal output sensor GND	Ignition switch: ON, Blower switch: ON, A/C switch: ON	HI: 5.5 V LO: 2.0 V
16	Mode servo drive signal	When the actuator is operating 16 (+) - 36 (-): rotate to the FACE side 16 (-) - 36 (+): rotate to the DEF side 16 - 36 short: brake	0 or 12 V
36			
17	Air mix door actuator (passenger's side) drive signal	When the actuator is operating 17 (+) - 37 (-): rotate to the COOL side 17 (-) - 37 (+): rotate to the HOT side 17 - 37 short: brake	0 or 12 V
37			
18	Air mix door actuator (driver's side)	When the actuator is operating 18 (+) - 38 (-): rotate to the COOL side 18 (-) - 38 (+): rotate to the HOT side 18 - 38 short: brake	0 or 12 V
38			
20	Intake door actuator drive signal	When the intake door actuator is operating	0.7 V or less
40			
21	Ignition power supply	Ignition switch: ON	Battery voltage
22	Pressure switch signal	Ignition switch: ON	Normal: ON Abnormal: OFF
24	Air mix door actuator (driver's side) position signal	Air mix door: Maximum cool position	4 V
		Air mix door: Maximum hot position	1 V
25	After-evaporator sensor signal	Changes by the temperature after the evaporator	1 — 4.5 V
26	VER switch signal (FOOT switch)	When switching FOOT	0 V
27	Sensor ground	Always	0 V
28	Control module GND	Always	0 V
32	Heater main relay drive signal	Ignition switch: ON	Battery voltage
33	RAM monitor ON signal	RAM monitor ON	0 V
34	Heater control panel communication	—	*1
35	Heater control panel communication	—	*1

\*1: Unable to measure the voltage for digital signal.

#### NOTE:

For A/C system self-diagnosis, there is one that checks the control panel, and the other that checks the whole control system (sensor, actuator, blower motor, etc.). Perform the self-diagnosis for control panel first, and then perform the self-diagnosis for control system.

# Diagnostic Chart for Self-diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 1. A/C CONTROL PANEL SELF-DIAGNOSIS

Step	Check	Yes	No
<b>1 PERFORM A/C CONTROL PANEL SELF-DIAGNOSIS FUNCTION.</b> 1) Turn the ignition switch to OFF. 2) Turn the ignition switch to ON with the AUTO switch and MODE switch pressed at the same time. 3) All the screen display illuminate (for approx. 5 seconds) and the self-diagnosis mode starts.	Does the self-diagnosis function operate?	Go to step 2.	<Ref. to AC(diag)-14, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
<b>2 CHECK SCREEN DISPLAY.</b> Check the illumination condition while the display is illuminated.	Does all the screen display and indicators illuminate?	Go to step 3.	Replace the A/C control panel.
<b>3 CHECK SCREEN DISPLAY.</b> After the illumination ends, check the display.	Are the numbers 11 — 14 displayed at the setting temperature display area?	Go to step 5.	Go to step 4.
<b>4 CHECK SWITCH AND TEMPERATURE CONTROL DIAL INPUT.</b> 1) Operate each switch or dial according to the switch check table. 2) Check the display or indicator illumination condition when operating the switch or dial. <Ref. to AC(diag)-11, SWITCH CHECK TABLE, OPERATION, Diagnostic Chart for Self-diagnosis.>	Does the input of each switch or dial correspond to the switch check list?	Go to step 5.	Replace the heater control panel.
<b>5 CHECK A/C CONTROL PANEL COMMUNICATION.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector of the auto A/C control module. 3) Using a suitable lead wire, short the terminal No. 34 and No. 35 of auto A/C control module vehicle side connector (B282). 4) Turn the ignition switch to ON with the A/C switch and AUTO switch pressed at the same time. 5) Check the screen display when operating each switch and dial.	Is "CL" displayed on the screen when operating each switch and dial?	Go to step 6.	Go to step 7.
<b>6 CHECK A/C CONTROL PANEL COMMUNICATION.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the lead wire used to short the terminals. 3) Turn the ignition switch to ON with the A/C switch and AUTO switch pressed at the same time. 4) Check the screen display when operating each switch and dial.	Is "OP" displayed on the screen when operating each switch and dial?	A/C control panel and body harness are normal.	Go to step 7.
<b>7 CHECK HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the A/C control panel connector (i88). 3) Measure the resistance between connectors with a tester. <b>Connector &amp; terminal</b> (i88) No. 7 — (B282) No. 34: (i88) No. 3 — (B282) No. 35:	Is the resistance less than 10 Ω?	Go to step 8.	Repair the open circuit of the harness between A/C control panel and auto A/C control module.

# Diagnostic Chart for Self-diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>8</b> <b>CHECK HARNESS.</b> Measure the resistance between connectors with a tester. <i>Connector &amp; terminal (i88) No. 7 — No. 3:</i>	Is the resistance less than 10 Ω?	Repair the short circuit of the harness between A/C control panel and auto A/C control module.	Replace the A/C control panel.

## 2. SWITCH CHECK TABLE

AC-01684

Switch	Display screen	Switch	Display screen
A/C switch	(6)	FAN switch (+)	(4)
AUTO switch	(1)	FAN switch (-)	(3)
Air flow control switch	(9)	Driver's side temperature control dial	(9), (10), (12)
FRESH/RECIRC	(13)	Passenger's side temperature control dial	(9), (11), (12)
Defroster switch	(7), (12)	OFF switch	(2), (5)
Rear defogger switch	(8)		

## Diagnostic Chart for Self-diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

### 3. A/C CONTROL SYSTEM SELF-DIAGNOSIS

Step	Check	Yes	No
<p><b>1 SET SELF-DIAGNOSIS MODE BY OPERATING A/C CONTROL PANEL.</b></p> <p>1) Start the engine with the A/C switch and front defroster switch pressed.</p> <p>NOTE: Self-diagnosis can also be performed with ignition switch ON, but start the engine because observing the magnet clutch operation is difficult.</p> <p>2) All the indicators blink four times.</p>	Does the self-diagnosis function operate?	Go to step 2.	<Ref. to AC(diag)-14, A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE, Diagnostics for A/C System Malfunction.>
<p><b>2 CHECK EACH SENSOR AND POTENTIOMETER.</b></p> <p>1) After the indicators stop blinking, automatically change to the Inspection Mode of sensor and potentiometer.</p> <p>NOTE: Display items can be changed each time the A/C switch is pressed. (Step Operation)</p> <p>2) When malfunction occurs in each sensor and potentiometer, codes are displayed on the screen. When no malfunction occurs in each sensor and potentiometer, code "20" is displayed on the screen.</p> <p>3) Identify the defective sensor according to the sensor check table. &lt;Ref. to AC(diag)-13, SENSOR CHECK TABLE, OPERATION, Diagnostic Chart for Self-diagnosis.&gt;</p>	Are other codes except "20" displayed?	Repair the defective sensor. <Ref. to AC(diag)-29, Diagnostic Procedure for Sensors.>	Go to step 3.
<p><b>3 CHECK EACH ACTUATOR, BLOWER FAN AND MAGNET CLUTCH.</b></p> <p>1) After completing each sensor and potentiometer inspection, change to the Inspection Mode of actuator, blower fan and magnet clutch by pressing the defroster switch.</p> <p>2) Each mode will change and operate automatically every four seconds.</p> <p>NOTE: Operation mode items can be changed each time the A/C switch is pressed. (Step Operation)</p> <p>3) Check the operation of actuator, blower fan and magnet clutch in each mode according to the operating mode table. &lt;Ref. to AC(diag)-13, OPERATING MODE TABLE, OPERATION, Diagnostic Chart for Self-diagnosis.&gt;</p>	Do the actuator, blower fan and magnet clutch operate as described in the operating mode table?	A/C control system is normal. Press the OFF switch and complete the self-diagnosis function.	Repair the defective part in accordance with each diagnostic chart. <Ref. to AC(diag)-14, Diagnostics for A/C System Malfunction.> or <Ref. to AC(diag)-22, Diagnostic Procedure for Actuators.>

# Diagnostic Chart for Self-diagnosis

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 4. SENSOR CHECK TABLE

**NOTE:**

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor with the sun shining on it.

Display screen (Malfunction at present) *1	Sensor	Trouble contents
21/AUTO Blink	In-vehicle sensor	Open
-21/AUTO Blink		Short
22/AUTO Blink	Ambient sensor	Sensor trouble or communication failure
23/AUTO Blink	Evaporator sensor	Open
-23/AUTO Blink		Short
24/AUTO Blink	Engine coolant temperature sensor	Sensor trouble or communication failure
25 Blink	Sunload sensor	Open *2
-25/AUTO Blink		Short
26/AUTO Blink	Driver's side air mix door actuator potentiometer	COOL
27/AUTO Blink		HOT
-26/AUTO Blink	Passenger's side air mix door actuator potentiometer	COOL
-27/AUTO Blink		HOT
28/AUTO Blink	Mode door actuator potentiometer	FACE
29/AUTO Blink		DEF
20 Blink	When all conditions are normal	

\*1: AUTO display does not blink when past malfunction occurred. Past malfunction means that abnormal signals were continuously input for a certain time in the past.

\*2: Present malfunction only is displayed for sunload sensor open circuit.

## 5. OPERATING MODE TABLE

Display screen	FRESH/RECIRC door	Mode door	Air mix door*	Blower fan	A/C compressor (Magnet clutch)
31	FRESH	FACE	Maximum cool	LO	OFF
32	RECIRC	FACE	Maximum cool	LO	ON
33	RECIRC	FACE	Maximum cool	M1	ON
34	FRESH	B/L	50%	M1	ON
35	FRESH	FOOT	50%	M1	ON
36	FRESH	FOOT	Maximum hot	M3	ON
37	FRESH	F/D	Maximum hot	M3	ON
38	FRESH	DEF	Maximum hot	HI	ON

\* Same opening angle for both driver's and passenger's side

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

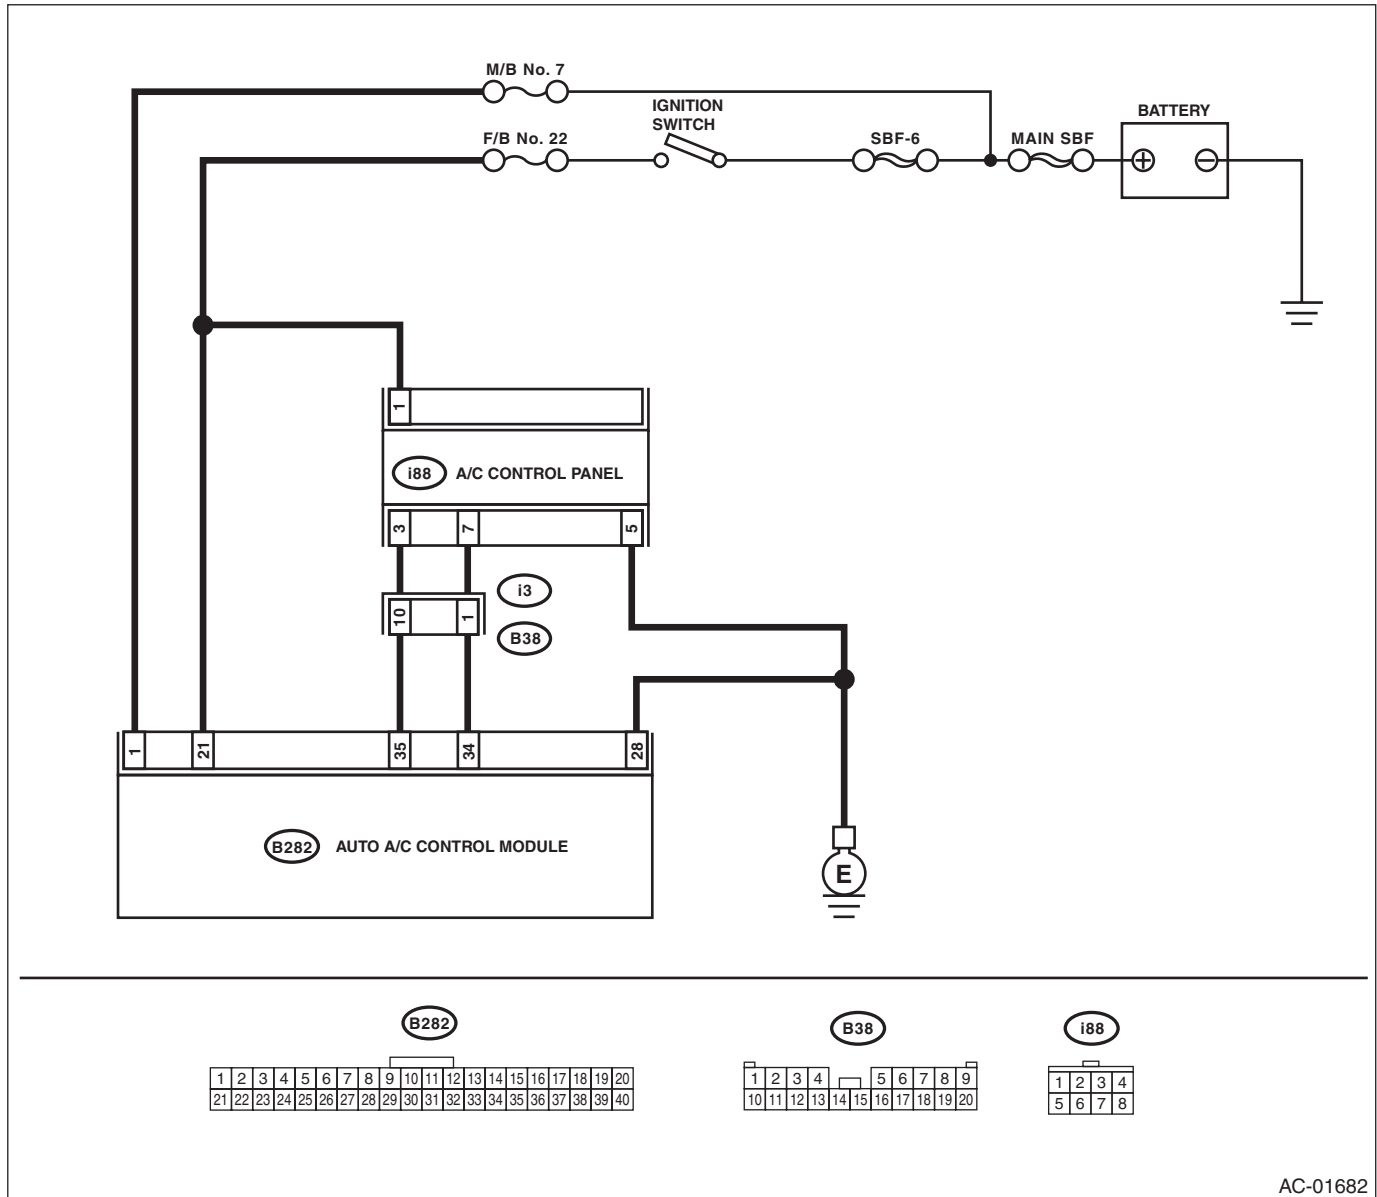

## 6. Diagnostics for A/C System Malfunction

### A: A/C OR SELF-DIAGNOSIS SYSTEMS DO NOT OPERATE

#### TROUBLE SYMPTOM:

- Set temperature is not indicated on the display, switch LEDs are faulty and switches do not operate.
- Self-diagnosis system does not operate.

#### WIRING DIAGRAM:

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 7 from main fuse box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
<b>2 CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22 from the fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 3.
<b>3 CHECK A/C CONTROL PANEL POWER CIRCUIT.</b> Measure the voltage between A/C control panel harness connector terminal and chassis ground after turning the ignition switch to ON. <i>Connector &amp; terminal</i> <i>(i88) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between A/C control panel and fuse.
<b>4 CHECK A/C CONTROL PANEL GROUND POWER CIRCUIT.</b> Measure the resistance of harness between A/C control panel and chassis ground after turning the ignition switch to OFF. <i>Connector &amp; terminal</i> <i>(i88) No. 5 — Chassis ground:</i>	Is resistance less than 10 $\Omega$ ?	Go to step 5.	Repair the harness for ground line.
<b>5 CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.</b> Measure the voltage between auto A/C control module connector terminal and chassis ground after turning the ignition switch to OFF. <i>Connector &amp; terminal</i> <i>(B282) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Check open or short circuit of harness between auto A/C control module and fuse.
<b>6 CHECK AUTO A/C CONTROL MODULE POWER CIRCUIT.</b> Measure the voltage between auto A/C control module connector terminal and chassis ground after turning the ignition switch to the ON position. <i>Connector &amp; terminal</i> <i>(B282) No. 21 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 7.	Check open or short circuit of harness between auto A/C control module and fuse.
<b>7 CHECK AUTO A/C CONTROL MODULE GROUND CIRCUIT.</b> Measure the resistance of harness between auto A/C control module and chassis ground. <i>Connector &amp; terminal</i> <i>(B282) No. 28 — Chassis ground:</i>	Is resistance less than 5 $\Omega$ ?	Go to step 8.	Repair the harness for ground line.
<b>8 CHECK COMMUNICATION CIRCUIT.</b> Measure the resistance of harness between A/C control panel and auto A/C control module. <i>Connector &amp; terminal</i> <i>(i88) No. 3 — (B282) No. 35:</i> <i>(i88) No. 7 — (B282) No. 34:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 9.	Repair the harness.
<b>9 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnostics for A/C System Malfunction

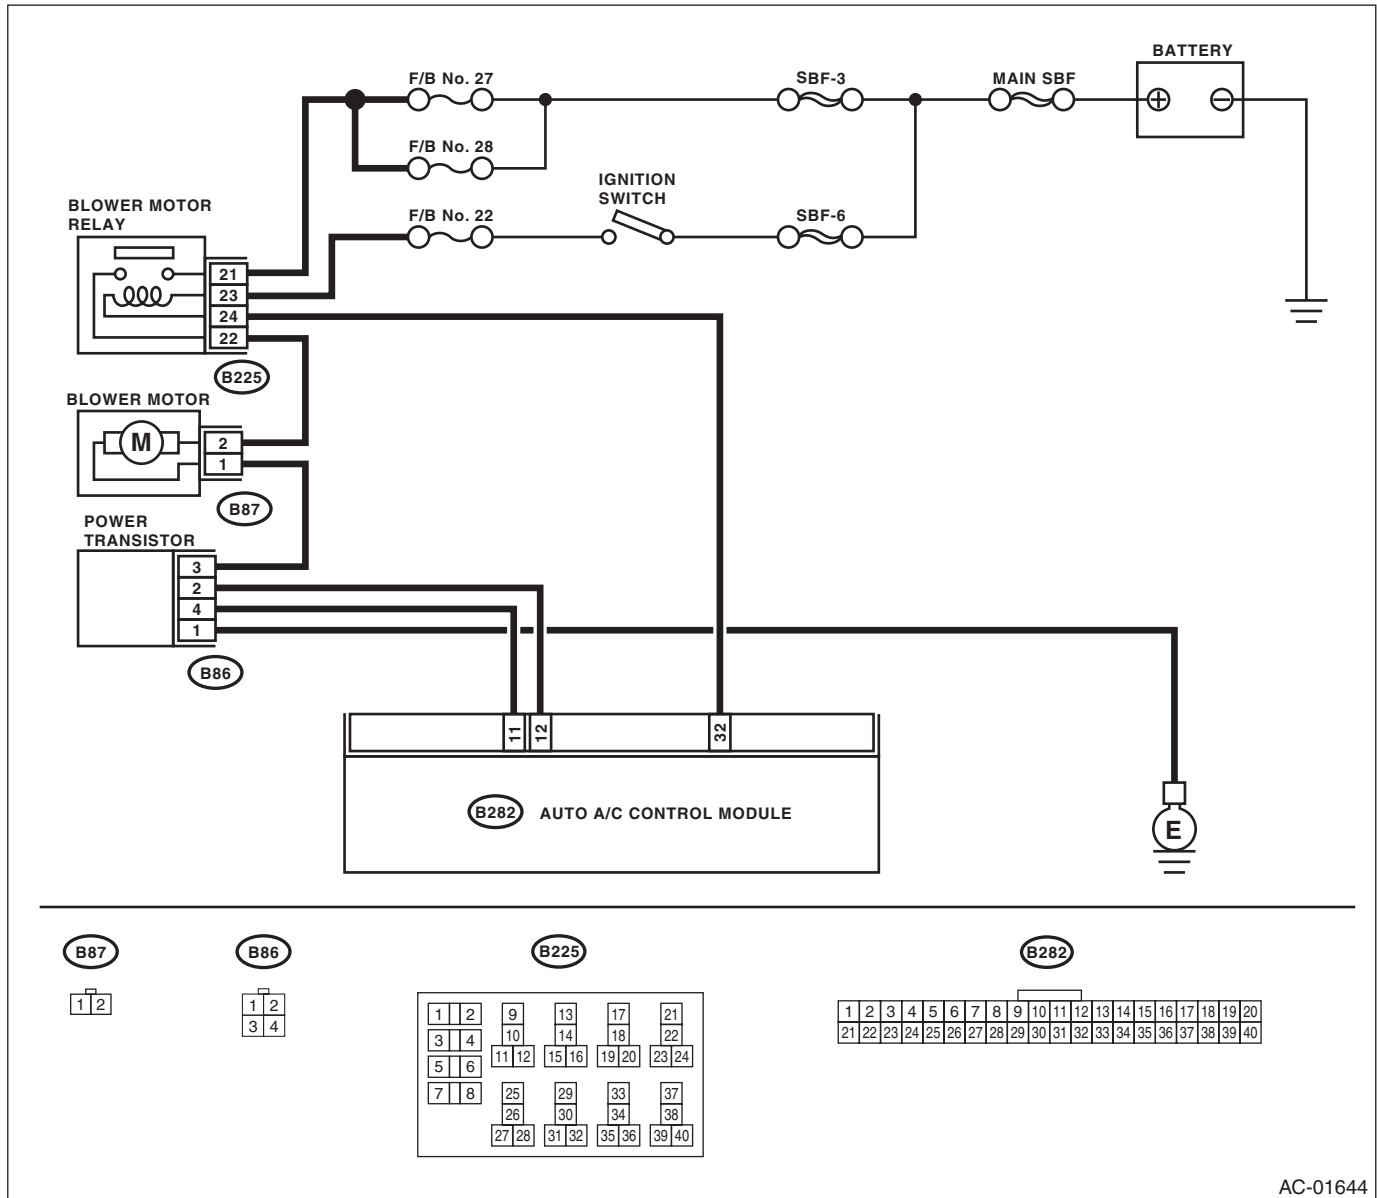

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: BLOWER FAN DOES NOT ROTATE

### TROUBLE SYMPTOM:

- Blower motor does not rotate.
- Blower motor does not rotate in "HI".

### WIRING DIAGRAM:

AC-01644

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

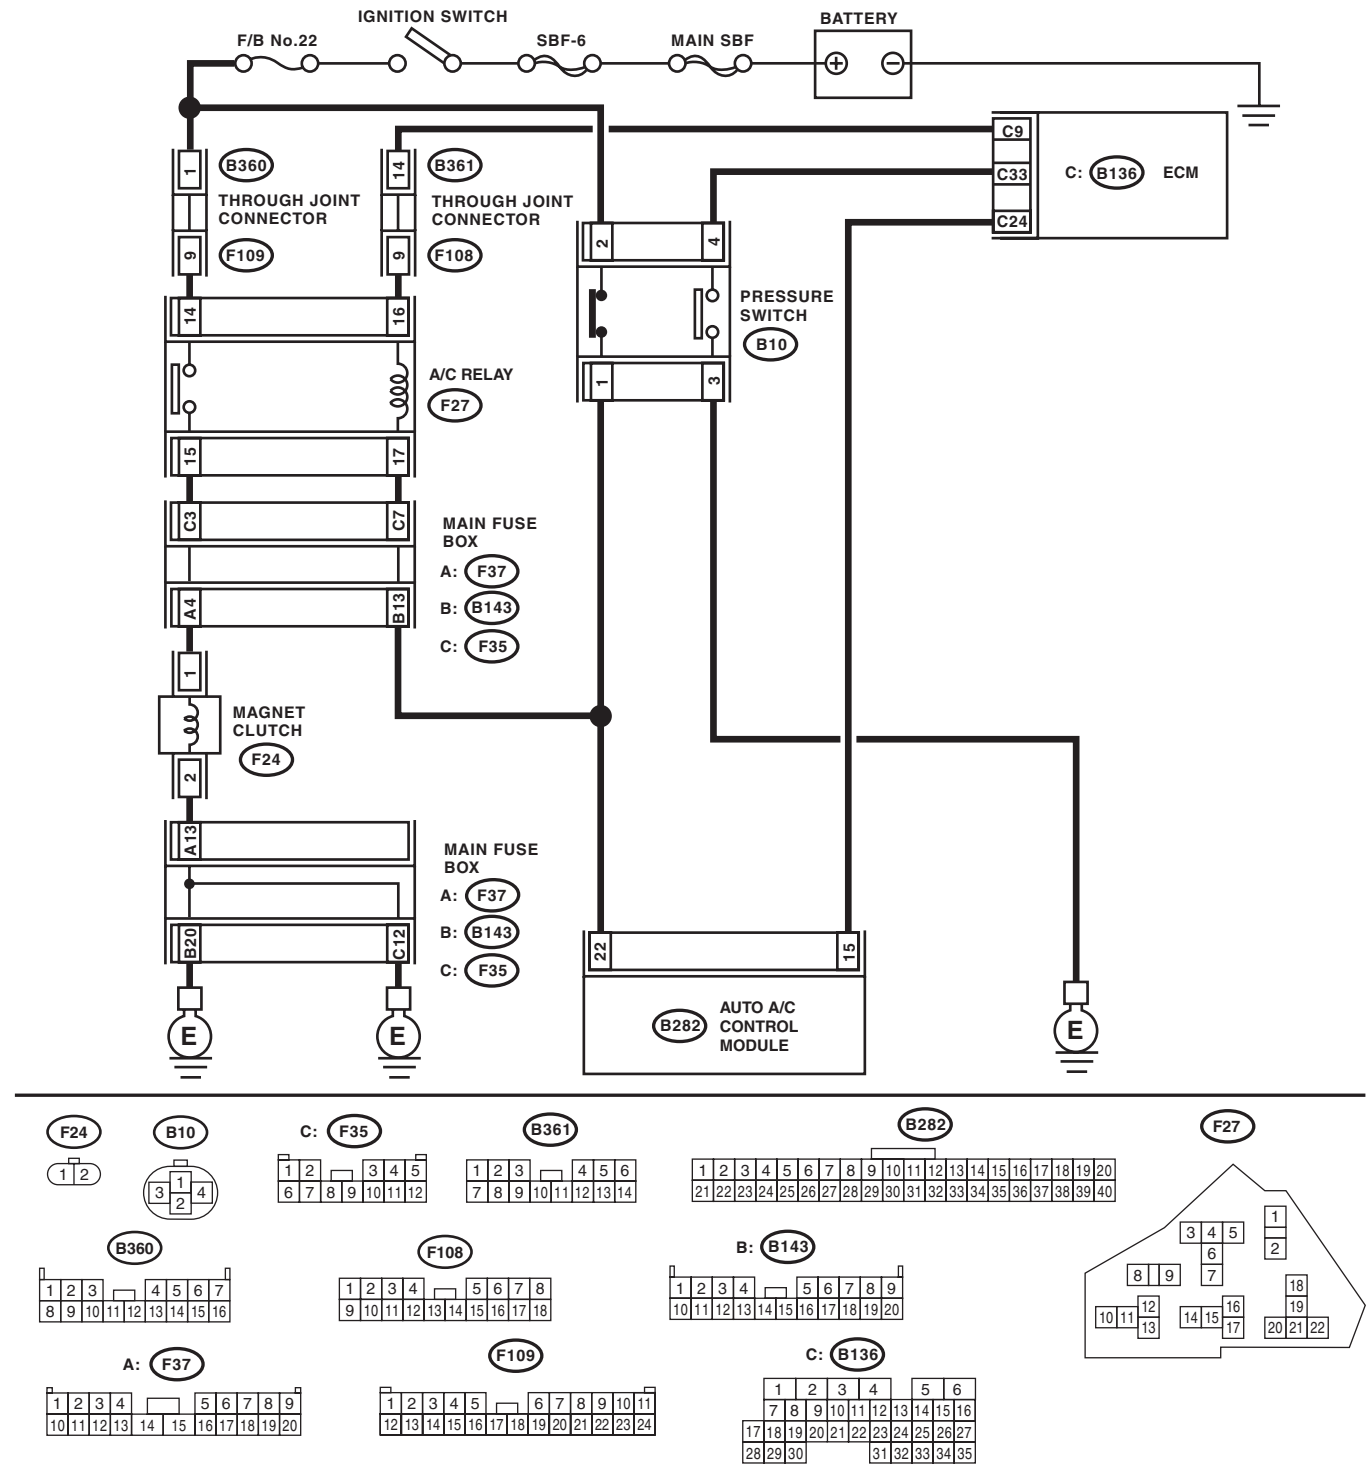

Step	Check	Yes	No
<b>1 CHECK FUSE.</b> 1) Remove fuse No. 22, 27 and 28 from fuse & relay box. 2) Check the condition of fuse.	Is any fuse blown out?	Replace the fuse.	Go to step 2.
<b>2 CHECK POWER SUPPLY FOR BLOWER MOTOR.</b> 1) Turn the ignition switch to ON. 2) Turn the blower switch to ON. 3) Measure the voltage between blower motor and chassis ground. <b>Connector &amp; terminal</b> <b>(B87) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Repair the open circuit of blower motor power supply line harness.
<b>3 CHECK BLOWER MOTOR RELAY.</b> 1) Turn the ignition switch to OFF. 2) Remove the blower motor relay. 3) Connect the battery positive (+) terminal to terminal No. 23 of blower motor relay, and negative (-) terminal to terminal No. 24. 4) Measure the resistance between terminals No. 21 and No. 22. <b>Terminals</b> <b>(B225) No. 21 — (B225) No. 22:</b>	Is resistance less than 1 $\Omega$ ?	Go to step 4.	Replace the blower motor relay.
<b>4 CHECK BLOWER MOTOR.</b> 1) Disconnect the connector from the blower motor. 2) Connect the battery positive (+) terminal to terminal No. 2 of blower motor connector, and negative (-) terminal to terminal No. 1. 3) Make sure the blower motor runs.	Does the blower motor run?	Go to step 5.	Replace the blower motor.
<b>5 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnosics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: COMPARTMENT TEMPERATURE DOES NOT CHANGE, OR A/C SYSTEM DOES NOT RESPOND PROMPTLY

WIRING DIAGRAM:

AC-01683

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse No. 22 from fuse & relay box. 3) Check the condition of fuse.	Is the fuse blown out?	Replace the fuse.	Go to step 2.
<b>2 CHECK POWER SUPPLY TO A/C RELAY AND AUTO A/C CONTROL MODULE.</b> 1) Disconnect the A/C relay and auto A/C control module harness connector. 2) Turn the ignition switch to ON. 3) Measure the voltage between A/C relay connector terminal and chassis ground. 4) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F27) No. 17 (+) — Chassis ground (-):</b> <b>(B282) No. 22 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 5.	Go to step 3.
<b>3 CHECK POWER SUPPLY FOR PRESSURE SWITCH.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the pressure switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between pressure switch harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B10) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 4.	Check for open or short circuit in the harness between fuse and pressure switch.
<b>4 CHECK HARNESS BETWEEN PRESSURE SWITCH AND A/C RELAY, AUTO A/C CONTROL MODULE.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance of harness between pressure switch connector and A/C relay connector. 3) Measure the resistance of harness between pressure switch connector and auto A/C control module connector. <b>Connector &amp; terminal</b> <b>(B10) No. 1 — (F27) No. 17:</b> <b>(B10) No. 1 — (B282) No. 22:</b>	Is the resistance less than 1 $\Omega$ ?	Check the pressure switch. <Ref. to AC-41, INSPECTION, Pressure Switch (Triple Pressure Switch).>	Repair the harness.
<b>5 CHECK POWER SUPPLY FOR A/C RELAY.</b> Measure the voltage between A/C relay connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F27) No. 14 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 6.	Check open or short circuit of harness between fuse and A/C relay.
<b>6 CHECK A/C RELAY.</b> Check the A/C relay. <Ref. to AC-40, INSPECTION, Relay and Fuse.>	Is there a malfunction in the A/C relay?	Replace the A/C relay.	Go to step 7.

## Diagnostics for A/C System Malfunction

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>7 CHECK A/C ON SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Connect the A/C relay and all disconnected connectors. 3) Start the engine and turn the AUTO switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between auto A/C control module harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B282) No. 15 (+) — Chassis ground (-):</b>	Is the voltage 5.5 V or more?	Go to step 9.	Go to step 8.
<b>8 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND ECM.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of auto A/C control module and ECM. 3) Measure the resistance of harness between auto A/C control module connector and ECM connector. <b>Connector &amp; terminal</b> <b>(B282) No. 15 — (B136) No. 24:</b>	Is the resistance less than 1 $\Omega$ ?	Replace the auto A/C control module.	Repair the harness.
<b>9 CHECK MAGNET CLUTCH ON SIGNAL.</b> 1) Stop the engine, and turn the AUTO switch to OFF. 2) Turn the ignition switch to ON. 3) Measure the voltage between ECM connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B136) No. 9 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 10.	Check for open or short circuit in the harness between A/C relay and ECM.
<b>10 CHECK MAGNET CLUTCH ON SIGNAL.</b> 1) Start the engine and turn the AUTO switch to ON. 2) Turn the temperature control dial at maximum cool position. 3) Measure the voltage between ECM connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B136) No. 9 (+) — Chassis ground (-):</b>	Is the voltage 0 V?	Go to step 11.	Replace the ECM.
<b>11 CHECK POWER SUPPLY FOR MAGNET CLUTCH.</b> 1) Stop the engine, and turn the AUTO switch to OFF. 2) Disconnect the harness connector of magnet clutch. 3) Start the engine and turn the AUTO switch to ON. 4) Turn the temperature control dial at maximum cool position. 5) Measure the voltage between magnet clutch harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F24) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 12.	Check for open or short circuit in the harness between A/C relay and magnet clutch.

# Diagnostics for A/C System Malfunction

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

	Step	Check	Yes	No
12	<b>CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND ECM.</b> 1) Stop the engine, and turn the AUTO switch to OFF. 2) Measure the resistance between magnet clutch harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F24) No. 2 — Chassis ground:</b>	Is the resistance less than 1 $\Omega$ ?	Inspect the compressor. <Ref. to AC-35, INSPECTION, Compressor.>	Repair the harness.

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

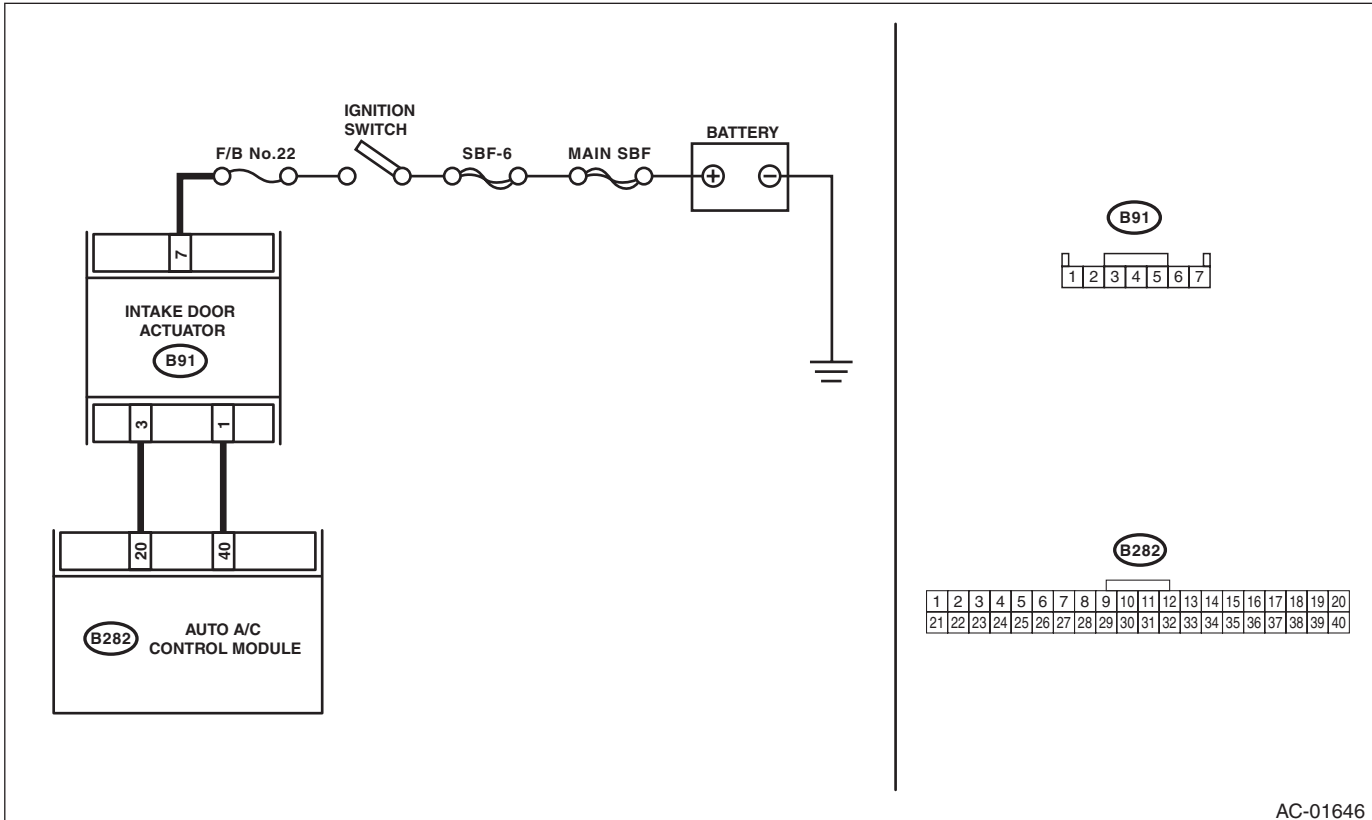

## 7. Diagnostic Procedure for Actuators

### A: INTAKE DOOR ACTUATOR

**TROUBLE SYMPTOM:**

FRESH/RECIRC mode is not changed.

**WIRING DIAGRAM:**

AC-01646

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK POWER SUPPLY FOR INTAKE DOOR ACTUATOR.</b></p> <p>1) Turn the ignition switch to OFF.                      2) Disconnect the intake door actuator connector.                      3) Turn the ignition switch to ON.                      4) Measure the voltage between intake door actuator connector and chassis ground.</p> <p><b>Connector &amp; terminal</b>  <b>(B91) No. 7 (+) — Chassis ground (-):</b></p>	<p>Is the voltage 7 V (at normal temperature)?</p>	<p>Go to step 2.</p>	<p>Check for open or short circuit in the harness between intake door actuator and fuse.</p>
<p><b>2</b></p> <p><b>CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND INTAKE DOOR ACTUATOR.</b></p> <p>1) Turn the ignition switch to OFF.                      2) Disconnect the auto A/C control module connector.                      3) Measure the resistance between intake door actuator connector and auto A/C control module connector.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 20 — (B91) No. 3:</b>  <b>(B282) No. 40 — (B91) No. 1:</b></p>	<p>Is the resistance less than 1 Ω?</p>	<p>Go to step 3.</p>	<p>Repair the harness between auto A/C control module and intake door actuator.</p>
<p><b>3</b></p> <p><b>CHECK OPERATION OF INTAKE DOOR ACTUATOR.</b></p> <p>1) Connect the intake door actuator connector.                      2) Ground the auto A/C control module connector with a suitable wire.                      3) Turn the ignition switch to ON, and check the operation of intake door actuator.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 20 — Chassis ground:</b></p>	<p>Does the actuator move to the FRESH side?</p>	<p>Go to step 4.</p>	<p>Replace the intake door actuator.</p>
<p><b>4</b></p> <p><b>CHECK OPERATION OF INTAKE DOOR ACTUATOR.</b></p> <p>1) Turn the ignition switch to OFF.                      2) Ground the auto A/C control module connector with a suitable wire.                      3) Turn the ignition switch to ON, and check the operation of intake door actuator.</p> <p><b>Connector &amp; terminal:</b>  <b>(B282) No. 40 — Chassis ground:</b></p>	<p>Does the actuator move to the RECIRC side?</p>	<p>Replace the auto A/C control module.</p>	<p>Replace the intake door actuator.</p>

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: MODE DOOR ACTUATOR

### TROUBLE SYMPTOM:

Air flow outlet is not changed.

### WIRING DIAGRAM:

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1 CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR POSITION SENSOR.</b></p> <p>1) Turn the ignition switch to OFF.                      2) Disconnect the mode door actuator connector.                      3) Turn the ignition switch and AUTO switch to ON.                      4) Measure the voltage between auto A/C control module connector terminals.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 8 (+) — (B282) No. 27 (-):</b></p>	Is the voltage approx. 5 V?	Go to step 2.	Replace the auto A/C control module.
<p><b>2 CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.</b></p> <p>Measure the voltage between auto A/C control module connector and chassis ground after turning the air flow control switch to FACE position.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 16 (+) — Chassis ground (-):</b></p>	Is the voltage 7 V (at normal temperature)?	Go to step 3.	Replace the auto A/C control module.
<p><b>3 CHECK POWER SUPPLY FOR MODE DOOR ACTUATOR.</b></p> <p>Measure the voltage between auto A/C control module connector and chassis ground after turning the air flow control switch to DEF position.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 36 (+) — Chassis ground (-):</b></p>	Is the voltage 7 V (at normal temperature)?	Go to step 4.	Replace the auto A/C control module.
<p><b>4 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND MODE DOOR ACTUATOR.</b></p> <p>1) Turn the A/C and ignition switch to OFF.                      2) Disconnect the auto A/C control module connector.                      3) Measure the resistance between auto A/C control module and mode door actuator connector.</p> <p><b>Connector &amp; terminal</b>  <b>(B77) No. 1 — (B282) No. 27:</b>  <b>(B77) No. 3 — (B282) No. 8:</b>  <b>(B77) No. 5 — (B282) No. 3:</b>  <b>(B77) No. 6 — (B282) No. 36:</b>  <b>(B77) No. 7 — (B282) No. 16:</b></p>	Is the resistance less than 1 Ω?	Go to step 5.	Repair the harness between auto A/C control module and mode door actuator.
<p><b>5 CHECK MODE DOOR ACTUATOR POSITION SWITCH SIGNAL.</b></p> <p>1) Connect the connector of auto A/C control module and mode door actuator.                      2) Turn the ignition switch and AUTO switch to ON.                      3) Check the voltage between auto A/C control module connector terminals while changing the mode between DEF and FACE.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 3 (+) — (B282) No. 27 (-):</b></p>	Does the voltage change between 1 V (DEF) and 4 V (FACE)?	Go to step 6.	Replace the mode door actuator.
<p><b>6 CHECK POOR CONTACT.</b></p> <p>Check poor contact of auto A/C control module and connector.</p>	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: AIR MIX DOOR ACTUATOR

### TROUBLE SYMPTOM:

Outlet air temperature does not change.

### WIRING DIAGRAM:

# Diagnostic Procedure for Actuators

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK POWER SUPPLY FOR AIR MIX DOOR ACTUATOR POSITION SWITCH.</b>                      1) Turn the ignition switch to OFF.                      2) Disconnect the air mix door actuator connector.                      3) Turn the ignition switch and AUTO switch to ON.                      4) Measure the voltage between auto A/C control module connector terminals.</p> <p><b>Connector &amp; terminal</b>  <b>(B282) No. 8 (+) — (B282) No. 27 (-):</b></p>	Is the voltage approx. 5 V?	Go to step 2.	Replace the auto A/C control module.
<p><b>2</b></p> <p><b>CHECK POWER SUPPLY FOR AIR MIX DOOR ACTUATOR.</b>                      Measure the voltage between auto A/C control module connector and chassis ground after turning the temperature control dial to maximum COOL position.</p> <p><b>Connector &amp; terminal</b>  <b>Driver's side</b>  <b>(B282) No. 18 (+) — Chassis ground (-):</b>  <b>Passenger's side</b>  <b>(B282) No. 17 (+) — Chassis ground (-):</b></p>	Is the voltage 7 V (at normal temperature)?	Go to step 3.	Replace the auto A/C control module.
<p><b>3</b></p> <p><b>CHECK POWER SUPPLY FOR AIR MIX DOOR ACTUATOR.</b>                      Measure the voltage between auto A/C control module connector and chassis ground after turning the temperature control dial to maximum HOT position.</p> <p><b>Connector &amp; terminal</b>  <b>Driver's side</b>  <b>(B282) No. 38 (+) — Chassis ground (-):</b>  <b>Passenger's side</b>  <b>(B282) No. 37 (+) — Chassis ground (-):</b></p>	Is the voltage 7 V (at normal temperature)?	Go to step 4.	Replace the auto A/C control module.
<p><b>4</b></p> <p><b>CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND AIR MIX DOOR ACTUATOR.</b>                      1) Turn the A/C and ignition switch to OFF.                      2) Disconnect the auto A/C control module connector.                      3) Measure the resistance between auto A/C control module and air mix door actuator connector.</p> <p><b>Connector &amp; terminal</b>  <b>Driver's side</b>  <b>(B390) No. 1 — (B282) No. 27:</b>  <b>(B390) No. 3 — (B282) No. 8:</b>  <b>(B390) No. 5 — (B282) No. 24:</b>  <b>(B390) No. 6 — (B282) No. 38:</b>  <b>(B390) No. 7 — (B282) No. 18:</b>  <b>Passenger's side</b>  <b>(B235) No. 1 — (B282) No. 8:</b>  <b>(B235) No. 3 — (B282) No. 27:</b>  <b>(B235) No. 5 — (B282) No. 4:</b>  <b>(B235) No. 6 — (B282) No. 17:</b>  <b>(B235) No. 7 — (B282) No. 37:</b></p>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the harness between auto A/C control module and air mix door actuator.

## Diagnostic Procedure for Actuators

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>5</b> <b>CHECK AIR MIX DOOR ACTUATOR POSITION SWITCH SIGNAL.</b> 1) Connect the connector of auto A/C control module and air mix door actuator. 2) Turn the ignition switch and AUTO switch to ON. 3) Check the voltage between auto A/C control module connector terminals while changing the setting temperature between maximum COOL and maximum HOT. <b>Connector &amp; terminal</b> <i>Driver's side</i> (B282) No. 24 (+) — (B282) No. 27 (-): <i>Passenger's side</i> (B282) No. 4 (+) — (B282) No. 27 (-):	Does the voltage change between 1 V (Max. HOT) and 4 V (Max. COOL)?	Go to step 6.	Replace the air mix door actuator.
<b>6</b> <b>CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module and connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## 8. Diagnostic Procedure for Sensors

### A: AMBIENT SENSOR

**TROUBLE SYMPTOM:**

Fan speed is not switched when the fan speed control dial is in AUTO position.

**WIRING DIAGRAM:**

AC-01652

## Diagnostic Procedure for Sensors

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK AMBIENT SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ambient sensor. 3) Measure the resistance between connector terminals of ambient sensor. <b>Terminals</b> <b>No. 1 — No. 2:</b>	Is the resistance approximately 2.2 k $\Omega$ at 25°C (77°F)?	Go to step 2.	Replace the ambient sensor.
<b>2 CHECK INPUT SIGNAL FOR AMBIENT SENSOR.</b> 1) Turn the ignition to ON. 2) Measure the voltage between connector (F78) terminals. <b>Connector &amp; terminal</b> <b>(F78) No. 1 (+) — No. 2 (-):</b>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
<b>3 CHECK OUTPUT SIGNAL OF BODY INTEGRATED UNIT.</b> 1) Turn the ignition switch to OFF. 2) Draw out the body integrated unit. 3) Disconnect the connector from ambient sensor. 4) Turn the ignition switch to ON. 5) Measure the voltage between connector terminals of body integrated unit. <b>Connector &amp; terminal</b> <b>(B281) No. 3 (+) — No. 10 (-):</b>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.
<b>4 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND AMBIENT SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the resistance of harness between body integrated unit and ambient sensor. <b>Connector &amp; terminal</b> <b>(F78) No. 1 — (B281) No. 10:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the open circuit of harness between body integrated unit and ambient sensor.
<b>5 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND AMBIENT SENSOR.</b> Measure the resistance of harness between body integrated unit and ambient sensor. <b>Connector &amp; terminal</b> <b>(F78) No. 2 — (B281) No. 3:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 6.	Repair the open circuit of harness between body integrated unit and ambient sensor.
<b>6 CHECK DTC.</b> 1) Connect the connectors of body integrated unit and ambient sensor as originally connected. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC "U xxx" of CAN communication displayed?	Check the communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step 7.
<b>7 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## B: IN-VEHICLE SENSOR

### TROUBLE SYMPTOM:

Blower fan speed, outlet port and inlet port do not change after turning the AUTO switch to ON

### WIRING DIAGRAM:

AC-01649

## Diagnostic Procedure for Sensors

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK IN-VEHICLE SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Remove the driver's side lower cover. 3) Disconnect the connector from in-vehicle sensor. 4) Measure the resistance between connector terminals of in-vehicle sensor. <b>Terminals</b> <b>No. 1 — No. 2:</b>	Is the resistance approximately 2.7 k $\Omega$ at 20°C (68°F)?	Go to step 2.	Replace the in-vehicle sensor.
<b>2 CHECK INPUT SIGNAL FOR IN-VEHICLE SENSOR.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between in-vehicle sensor harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(i55) No. 2 (+) — No. 1 (-):</b>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
<b>3 CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. <b>Connector &amp; terminal</b> <b>(B282) No. 5 (+) — (B282) No. 27 (-):</b>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.
<b>4 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of harness between auto A/C control module and in-vehicle sensor. <b>Connector &amp; terminal</b> <b>(i55) No. 2 — (B282) No. 5:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the harness between auto A/C control module and in-vehicle sensor.
<b>5 CHECK HARNESS BETWEEN AUTO A/C CONTROL MODULE AND IN-VEHICLE SENSOR.</b> Measure the resistance of harness between auto A/C control module and in-vehicle sensor. <b>Connector &amp; terminal</b> <b>(i55) No. 1 — (B282) No. 27:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 6.	Repair the harness between auto A/C control module and in-vehicle sensor.
<b>6 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## C: EVAPORATOR SENSOR

WIRING DIAGRAM:

AC-01650

## Diagnostic Procedure for Sensors

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK EVAPORATOR SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Remove the glove box. 3) Disconnect the connector from evaporator sensor. 4) Measure the resistance between connector terminals of the evaporator sensor. <b>Terminals</b> <b>No. 1 — No. 2:</b>	Is the resistance approximately 3.3 k $\Omega$ at 20°C (68°F)?	Go to step 2.	Replace the evaporator sensor.
<b>2 CHECK INPUT SIGNAL FOR EVAPORATOR SENSOR.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (B88) terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B88) No. 1 (+) — No. 2 (-):</b>	Is the voltage approx. 5 V?	Go to step 6.	Go to step 3.
<b>3 CHECK AUTO A/C CONTROL MODULE OUTPUT SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Remove the auto A/C control module. 3) Turn the ignition switch to ON. 4) Measure the voltage between connector terminals of auto A/C control module. <b>Connector &amp; terminal</b> <b>(B282) No. 25 (+) — No. 27 (-):</b>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 6.
<b>4 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of harness between auto A/C control module and evaporator sensor. <b>Connector &amp; terminal</b> <b>(B88) No. 2 — (B282) No. 27:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Repair the open circuit of harness between auto A/C control module and evaporator sensor.
<b>5 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND EVAPORATOR SENSOR.</b> Measure the resistance of harness between auto A/C control module and evaporator sensor. <b>Connector &amp; terminal</b> <b>(B88) No. 1 — (B282) No. 25:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 6.	Repair the open circuit of harness between auto A/C control module and evaporator sensor.
<b>6 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

# Diagnostic Procedure for Sensors

HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

## D: SUNLOAD SENSOR

### TROUBLE SYMPTOM:

- Sensor identifies that sunlight is at maximum. Then, A/C system is controlled to COOL side.
- Sensor identifies that sunlight is at minimum. Then, A/C system is controlled to HOT side.

### NOTE:

When the sunload sensor check is performed indoors or in the shade, it could be diagnosed as having an open circuit. Always check the sunload sensor with the sun shining on it.

### WIRING DIAGRAM:

AC-01651

## Diagnostic Procedure for Sensors

### HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY VOLTAGE FOR SUNLOAD SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from sunload sensor. 3) Turn the ignition switch to ON. 4) Measure the power supply voltage for sunload sensor. <i>Connector &amp; terminal (i51) No. 1 (+) — No. 2 (-):</i>	Is the voltage approx. 5 V?	Go to step 4.	Go to step 2.
<b>2 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from the auto A/C control module. 3) Measure the resistance of the harness between the auto A/C control module and sunload sensor. <i>Connector &amp; terminal (i51) No. 2 — (B282) No. 6:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 3.	Repair the harness between auto A/C control module and sunload sensor.
<b>3 CHECK HARNESS CONNECTOR BETWEEN AUTO A/C CONTROL MODULE AND SUNLOAD SENSOR.</b> Measure the resistance of the harness between the auto A/C control module and sunload sensor. <i>Connector &amp; terminal (i51) No. 1 — (B282) No. 8:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 4.	Repair the harness between auto A/C control module and sunload sensor.
<b>4 CHECK INPUT VOLTAGE FOR AUTO A/C CONTROL MODULE.</b> 1) Connect the connectors of sunload sensor and auto A/C control module. 2) Turn the ignition switch to ON. 3) Measure the voltage between connector terminals of auto A/C control module. <i>Connector &amp; terminal (B282) No. 8 (+) — (B282) No. 6 (-):</i>	Is the voltage approx. 2.5 V?	Go to step 5.	Replace the sunload sensor.
<b>5 CHECK POOR CONTACT.</b> Check poor contact of auto A/C control module connector.	Is there poor contact in connector?	Repair the connector.	Replace the auto A/C control module.

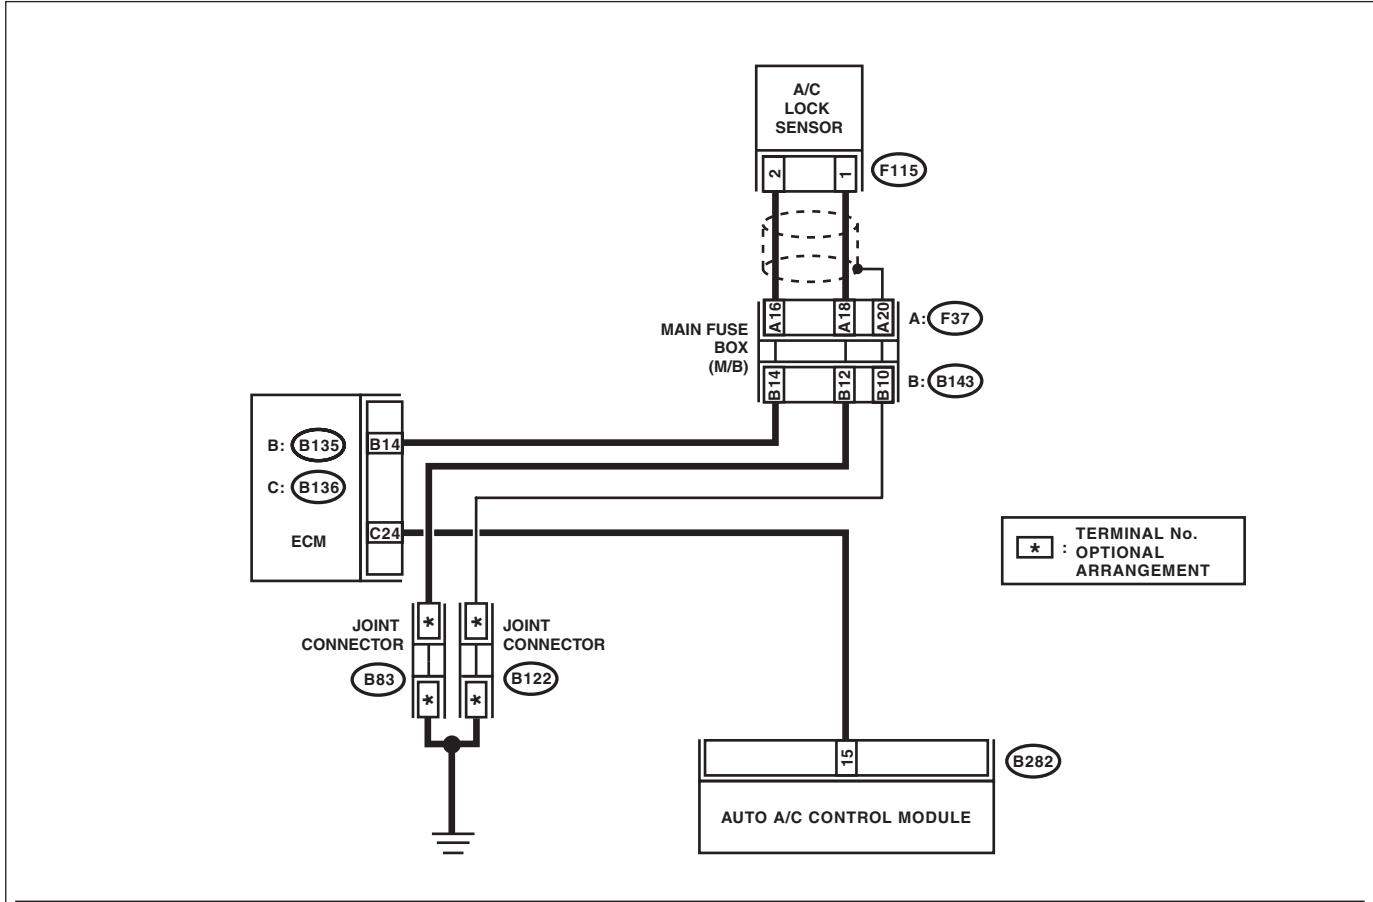

# Diagnostic Procedure for Sensors

## HVAC SYSTEM (AUTO A/C) (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK A/C LOCK SENSOR SIGNAL.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to the data link connector. 3) Start the engine and turn the A/C switch to ON. 4) Read the data of A/C lock signal using Subaru Select Monitor. NOTE: • Subaru Select Monitor For detailed operation procedure, refer to "READ CURRENT DATA FOR ENGINE". <Ref. to EN(H6DO)(diag)-36, READ CURRENT DATA FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>	Is the A/C lock signal switch ON?	Go to step 4.	Go to step 2.
<b>2 CHECK A/C LOCK SENSOR SIGNAL.</b> 1) Start the engine and turn the A/C switch to ON. 2) Measure the voltage between auto A/C control module harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B282) No. 15 (+) — Chassis ground (-):</b>	Is the voltage 7 — 14 V?	Replace the auto A/C control module.	Go to step 3.
<b>3 CHECK ECM.</b> Measure the voltage between ECM and chassis ground. <b>Connector &amp; terminal</b> <b>(B136) No. 24 (+) — Chassis ground (-):</b>	Is the voltage 7 — 14 V?	Repair the harness between the ECM and the auto A/C control module connector.	Replace the ECM.
<b>4 CHECK A/C LOCK SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from ECM. 3) Measure the resistance between ECM connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B135) No. 14 — Chassis ground:</b>	Is the resistance between 240 — 290 $\Omega$ ?	Replace the ECM.	Go to step 5.
<b>5 CHECK A/C LOCK SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the main fuse box harness connector. 3) Measure the resistance between main fuse box terminal. <b>Connector &amp; terminal</b> <b>(F37) No. 16 — No. 18:</b>	Is the resistance between 240 — 290 $\Omega$ ?	Go to step 7.	Go to step 6.
<b>6 CHECK A/C LOCK SENSOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the A/C lock sensor connector. 3) Measure the resistance between A/C lock sensor terminals. <b>Connector &amp; terminal</b> <b>(F115) No. 1 — No. 2:</b>	Is the resistance between 240 — 290 $\Omega$ ?	Repair or Replace the harness between A/C lock sensor and main fuse box.	Replace the A/C compressor assembly. (A/C lock switch malfunction)
<b>7 CHECK MAIN FUSE BOX.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector and then measure the resistance between main fuse box terminal. <b>Connector &amp; terminal</b> <b>(F37) No. 16 — (B143) No. 12:</b> <b>(F37) No. 18 — (B143) No. 14:</b>	Is the resistance less than 10 $\Omega$ ?	Repair or Replace the harness between A/C lock sensor and main fuse box.	Replace the main fuse box.

# General Description

## AIRBAG SYSTEM

### 1. General Description

#### A: COMPONENT

#### 1. DRIVER'S AIRBAG MODULE

**Tightening torque:**

**10 N·m (1.0 kgf·m, 7.2 ft·lb)**

#### 2. PASSENGER'S AIRBAG MODULE

**Tightening torque:**

**7.4 N·m (0.75 kgf·m, 5.5 ft·lb)**

#### 3. SIDE AIRBAG MODULE

**Tightening torque:**

**6 N·m (0.61 kgf·m, 4.4 ft·lb)**

#### 4. AIRBAG CONTROL MODULE

(A) Bolt

**Tightening torque:**

**25 N·m (2.5 kgf·m, 18.1 ft·lb)**

**CAUTION:**

**Do not reuse mounting bolts and nuts.**

#### 5. FRONT SUB SENSOR

(A) Bolt

**Tightening torque:**

**13 N·m (1.32 kgf·m, 9.6 ft·lb)**

**CAUTION:**

**Do not reuse mounting bolts and nuts.**

## 6. SIDE AIRBAG SENSOR

(A) Nut

**Tightening torque:**  
**8.0 N·m (0.82 kgf-m, 5.9 ft-lb)**

**CAUTION:**  
Do not reuse mounting bolts and nuts.

## 7. CURTAIN AIRBAG SENSOR

(A) Nut

**Tightening torque:**  
**8.0 N·m (0.82 kgf-m, 5.9 ft-lb)**

**CAUTION:**  
Do not reuse mounting bolts and nuts.

## 8. SATELLITE SAFING SENSOR

(A) Nut

**Tightening torque:**  
**8.0 N·m (0.82 kgf-m, 5.9 ft-lb)**

**CAUTION:**  
Do not reuse mounting bolts and nuts.

## 9. STEERING ROLL CONNECTOR

# General Description

## AIRBAG SYSTEM

### 10. CURTAIN AIRBAG MODULE

- Sedan model

- Wagon model

- |                            |                 |
|----------------------------|-----------------|
| (A) Model with sunroof     | (1) Bolt        |
| (B) Models without sunroof | (2) Clip        |
| (F) Front side of vehicle  | (3) Plate guard |

**Tightening torque:**  
**7.5 N·m (0.77 kgf-m, 5.5 ft-lb)**

### 11. AIRBAG HARNESS

- (1) Airbag main harness
- (2) Airbag rear harness

### B: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- The airbag system is fitted with a backup power source. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds or more before starting airbag system servicing.

- If sensors, airbag module, airbag control module, pretensioner or harness is deformed or damaged, replace with new part.

- Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- Do not drop the airbag system parts, or keep them at high temperature of 93°C (199°F) or more, or let water, oil or grease get on them; the internal parts may be damaged and reliability greatly lowered.

- Do not allow water or oil to come in contact with the connector terminals. Also do not touch the connector terminals.

- The driver's, passenger's, side, curtain airbag modules, and the pretensioner must not be disassembled.

# General Description

## AIRBAG SYSTEM

- The airbag module cannot be used again if deployed once.
- After removal, keep the airbag module with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

- Do not check continuity of the airbag modules for driver's side, passenger's side and curtain, or the pretensioner.

- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) 200 mm (8 in) or more

- When painting or performing sheet metal work on the side of the vehicle, including the side sill, center pillar and front and rear doors, remove the side airbag sensors and wiring harness of the airbag system.

- Do not discard undeployed airbag module. They could easily cause a serious accident if accidentally deployed.

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wiring harness of airbag system.

# General Description

AIRBAG SYSTEM

- When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile airbag modules on top of each other. If the airbag inflates for some reason when an airbag module pad is touching other objects, it may cause serious accident.

(1) Driver's airbag module

(2) Passenger's airbag module

## C: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
TORX® T30	Used for removing and installing driver's airbag module.

# Airbag Connector

AIRBAG SYSTEM

## 2. Airbag Connector

### A: PROCEDURE

#### 1. AIRBAG CONTROL MODULE

1) How to disconnect:

Press the lock lever plate (A) and pull out the lock lever.

2) How to connect:

Insert the connector, push the lock lever in securely.

#### CAUTION:

**Be sure to insert the connector in until it is locked. Then pull it lightly to make sure that it is locked.**

#### 2. DRIVER'S AIRBAG MODULE, PRETENSIONER AND CURTAIN AIRBAG MODULE

1) How to disconnect:

(1) Using a flat tip screwdriver, pry the push lock upward to unlock.

(2) Pull the connector to disconnect from the driver's airbag module assembly or the retractor assembly.

2) How to connect:

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert the push lock until a clicking sound is heard.

#### CAUTION:

- **Be sure to insert the connector in until it is locked. Then pull it lightly to make sure that it is locked.**
- **Be sure to push the push lock in securely.**

#### NOTE:

The connector cannot be connected when the push lock is in the lock position. Move the push lock to the release position and connect the connector.

### 3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR) AND SIDE AIRBAG

1) How to disconnect:

(1) Push the slide lock (A) in the direction of arrow.

(2) With the slide lock pushed, disconnect the connector.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it is locked. Then pull it lightly to make sure that it is locked.

### 4. SIDE AIRBAG

1) How to disconnect:

(1) Push the lock arm (A).

(2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.

(3) With the slide lock moved, release the lock arm (return to original position) and disconnect the connector.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it is locked. Then pull it lightly to make sure that it is locked.

# Airbag Connector

## AIRBAG SYSTEM

### 5. FRONT SUB SENSOR, SIDE AIRBAG SENSOR, CURTAIN AIRBAG SENSOR AND SATELLITE SAFING SENSOR

1) How to disconnect:  
Holding outer part (A), pull it in the direction of arrow.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:  
Holding the connector, push it in securely until a clicking sound is heard.

**CAUTION:**

- Do not touch the outer side section or else the outer side (A) will move back.
- Be sure to insert the connector in until it is locked. Then pull it lightly to make sure that it is locked.

### 6. PASSENGER DETECTION SYSTEM (BETWEEN AIRBAG REAR HARNESS AND SEAT HARNESS) AND BELT TENSION SENSOR

1) How to disconnect:  
Push lock arm (A), then disconnect the connector.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:  
Holding the connector, push it in securely until a clicking sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it is locked. Then pull it lightly to make sure that it is locked.

## 3. Inspection Locations After a Collision

### A: REPLACEMENT

Replace the following parts when the airbag is deployed.

#### 1. FRONT COLLISION

- 1) Driver's airbag module
- 2) Passenger's airbag module
- 3) Driver's seat belt (Pretensioner)
- 4) Passenger's seat belt (Pretensioner)
- 5) Airbag control module
- 6) Front sub sensor (L/R)
- 7) Roll connector
- 8) Instrument panel (for integrating with passenger's airbag module)
- 9) Passenger's side seat cushion pad and frame assembly

#### 2. SIDE COLLISION

- 1) Airbag control module
- 2) Satellite safing sensor
- 3) Side airbag module (operating side seat backrest)
- 4) Side airbag sensor (operating side)
- 5) Curtain airbag module (operating side)
- 6) Curtain airbag sensor (operating side)

#### 3. INSPECTION OF OTHER PARTS

Check for the following parts, and replace the damaged parts with new parts.

- 1) Steering wheel and steering shaft  
Check the steering shaft for mounting conditions and deflection of front and rear, upward and downward directions, and deflection of front and rear direction with tilt lever released. (After a collision, absorbing part of steering shaft may have been operated.)
- 2) Check the direct type connector of drivers airbag module, curtain airbag module and pretensioner, etc. for damage, and also check each harness for pinch and connector damage. Replace the harness as a unit if damage is found.
- 3) Check the seat cushion frame, backrest, slide rail and headrest for deformation, distortion, crack, and installing condition and play.
- 4) For the passenger's seat, replace the seat cushion pad and frame assembly with a new part if the seat cushion pad and frame assembly is deformed or cracked.
- 5) If there are tears or loosening in the passenger's side seat cushion cover, it may interfere with the proper operation of the passenger detection system. Replace with a new cushion cover.

6) Be sure to perform the system calibration for the occupant detection system after removing or replacing the passenger seat cushion cover. Failure to do so may cause improper operation of the occupant detection system. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

7) Use the Subaru Select Monitor to check whether the passenger's seat belt buckle switch is operating normally.

### B: INSPECTION

If the vehicle is involved in a collision, even if it is a slight collision, be sure to check the following systems.

#### 1. DRIVER'S AIRBAG MODULE

1) Check for the following, and replace the damaged parts with new parts.

- Airbag module is cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
- The module surface is fouled with grease, oil, water or cleaning solvent.

2) When installing a new driver's airbag module, check for the following, and replace the damaged parts with new parts.

- The steering wheel is in the way, making it difficult to install the airbag module.
- The clearance between the driver's airbag module and steering wheel is not constant.
- When steering wheel deformation in axial and vertical directions exceed limits.

#### Specification:

##### **Axial deflection A**

**Less than 6 mm (0.24 in)**

##### **Vertical deflection L**

**Less than 15 mm (0.59 in)**

# Inspection Locations After a Collision

## AIRBAG SYSTEM

### 2. PASSENGER'S AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Airbag module and instrument panel are cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
- Mounting bracket is cracked or deformed.

### 3. SIDE AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Front seat, airbag module and mounting bracket are damaged or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

### 4. CURTAIN AIRBAG MODULE

Check for the following, and replace the damaged parts with new parts.

- Airbag cover is scratched or torn.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.
- Mounting bracket and securing clip are cracked or deformed.

### 5. AIRBAG CONTROL MODULE

Check for the following, and replace the damaged parts with new parts.

- Control module is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.
- Side airbag is deployed.
- Curtain airbag is deployed.

### 6. FRONT SUB SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Front sub sensor is cracked or deformed.
- Mounting bracket is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Airbag is deployed.

### 7. SATELLITE SAFING SENSOR, SIDE AIRBAG SENSOR AND CURTAIN AIRBAG SENSOR

If the section of vehicle as shown in the figure is damaged, check the following items and replace the damaged parts with new parts.

- Satellite safing sensor, Side airbag sensor and curtain airbag sensor are cracked or deformed.
- Mounting bracket is cracked or deformed.
- Satellite safing sensor is cracked or deformed.
- Connector is scratched, cracked or deformed.
- Side airbag or curtain airbag is deployed. (operating side)

### 8. ROLL CONNECTOR

Check for the following, and replace the damaged parts with new parts.

Combination switch or steering roll connector is cracked or deformed.

### 9. STEERING SHAFT

Check for the following, and replace the damaged parts with new parts.

Overall length of steering column should be within specification.

**Specification:**

**Overall length L**

**Tilt and telescopic column (measure while minimized)**

**Except for OUTBACK model**  
 $818.6^{+1.5}_{-1.5} \text{ mm } (32.23^{+0.059}_{-0.059} \text{ in})$

**OUTBACK model**  
 $810.4^{+1.5}_{-1.5} \text{ mm } (31.89^{+0.059}_{-0.059} \text{ in})$

## 10. DRIVER'S SEAT

Check for the following, and replace the damaged parts with new parts.

- Seat belt buckle body/bracket is cracked or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

## 11. PASSENGER'S SEAT

1) Check for the following, and replace the damaged parts with new parts.

- Seat belt buckle body, bracket or connector is scratched, cracked or deformed.
- Backrest frame for crack or deformation
- Headrest for deformation or play
- If the seat cushion cover and seat backrest cover is scratched or coming loose, replace with a new cover and readjust the system. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

### **CAUTION:**

**If any of the following applies, replace the seat cushion pad and frame assembly. Do not disassemble.**

- **Cracks or deformation found in the seat cushion frame or seat cushion pad.**
- **Scratches, cracks, or deformation found on the passenger detection system pressure sensor hoses or passenger detection control module, or attachment brackets of the control module.**
- **Harness and/or connector is cracked, deformed or open. Harness wire is exposed.**

2) After checking the installing condition of passenger's seat, perform the system calibration of occupant detection system. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

## 12. BELT TENSION SENSOR

Check for the following, and replace the damaged parts with new parts.

- Belt tension sensor is scratched, cracked, or deformed.
- Harness and/or connector is cracked, deformed or open. Harness wire is exposed.

## 4. Driver's Airbag Module

### A: REMOVAL

#### CAUTION:

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

- 1) Position the front wheels straight ahead. (After moving a vehicle 5 m (16 ft) or more with front wheels positioned straight ahead, make sure that the vehicle moves straight ahead.)
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® bit T30 (1), remove the two TORX® bolts on the side of steering wheel.

- 5) Disconnect the horn harness.
- 6) Disconnect the airbag connector on the back of airbag module, and then remove the airbag module. <Ref. to AB-8, PROCEDURE, Airbag Connector.>

- 7) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-4, CAUTION, General Description.>

### B: INSTALLATION

#### CAUTION:

- Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>
- To prevent the misconnection, the connector is colored. Connect the harness side connector to the same color of module side connector. Install in the reverse order of removal.

#### Tightening torque:

10 N·m (1.0 kgf-m, 7.2 ft-lb)

### C: INSPECTION

#### CAUTION:

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts.

Airbag module, harness, connector and mounting bracket are damaged. <Ref. to AB-11, DRIVER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

## 5. Passenger's Airbag Module

### A: REMOVAL

**CAUTION:**

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the instrument panel. <Ref. to EI-57, INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM), REMOVAL, Instrument Panel Assembly.>
- 4) Remove the claw, and remove the passenger's airbag module.

- 5) Refer to "CAUTION" for handling of a removed airbag module. <Ref. to AB-4, CAUTION, General Description.>

### B: INSTALLATION

**CAUTION:**

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Install in the reverse order of removal.

**Tightening torque:**

*7.4 N·m (0.75 kgf-m, 5.5 ft-lb)*

### C: INSPECTION

**CAUTION:**

Refer to "CAUTION" of "General Description" before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts.

Airbag module, harness, connector and mounting bracket are damaged. <Ref. to AB-12, PASSENGER'S AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

## 6. Side Airbag Module

### A: REMOVAL

**CAUTION:**

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

**NOTE:**

Remove the passenger’s side by referring to driver’s side.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the front seats. <Ref. to SE-9, REMOVAL, Front Seat.>
- 4) Disconnect the connector from the back side of seat cushion assembly, then remove the side airbag harness.
- 5) Remove the backrest cover. <Ref. to SE-9, DISASSEMBLY, Front Seat.>
- 6) Remove the nuts, and remove the side airbag module assembly from the back rest frame assembly.

### B: INSTALLATION

**CAUTION:**

- Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>
- Be sure to perform the system calibration for occupant detection system after passenger’s seat installation. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

- 1) Make sure that there is no foreign matter on side airbag module.
- 2) Install the side airbag module (A) to backrest frame assembly.

**CAUTION:**

When attaching the side airbag module assembly, make sure to sandwich the seat backrest cover between the seat backrest side bracket and side airbag module.

- (1) Backrest frame ASSY
- (2) Backrest cover
- (3) Side airbag module ASSY
- (4) Hexagon cap nut

**Tightening torque:**

**6.0 N·m (0.61 kgf-m, 4.4 ft-lb)**

- 3) Install the backrest cover. <Ref. to SE-15, ASSEMBLY, Front Seat.>
- 4) Draw the side airbag harness around the back side of seat cushion assembly.
- 5) Recline the seat or slide it backward and forward, and check there is no contact between the seat backrest assembly, cushion cover assembly and side airbag harness.

## C: INSPECTION

### CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts. <Ref. to AB-12, SIDE AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when side airbag is deployed)

- Side airbag module assembly
- Satellite safing sensor
- Side airbag sensor
- Backrest pad assembly
- Backrest frame assembly
- Backrest cover assembly

2) When damage is found by visual check

- Headrest assembly
- Bushing
- Slide rail OUT (Driver's side)
- Slide rail IN (Driver's side)
- Seat cushion pad and frame assembly
- Seat hinge cover
- Seat lifter lever
- Reclining lever
- Side airbag harness and connector on body side
- Satellite safing sensor cover and mounting bracket

3) With side collision (when side airbag is not deployed)

Check the seat, airbag module, sensor visually, and then replace them with new parts if damaged or cracked.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

4) Without side collision (dirt and damage of cover)

Replace the corresponding part with a new part.

# Curtain Airbag Module

## AIRBAG SYSTEM

### 7. Curtain Airbag Module

#### A: REMOVAL

##### CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the rear quarter trim. (Sedan model) <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 4) Remove the quarter rear pillar trim. (Wagon model) <Ref. to EI-64, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
- 5) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
- 6) Disconnect the curtain airbag module connector.
- 7) Remove bolt (A) and clip (B), and then remove the curtain airbag module.

##### CAUTION:

- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before deploying it. Never reuse the deployed curtain airbag module.
- Sedan model

- Wagon model

##### NOTE:

Remove the rear center seat belt retractor on the RH side before servicing.

- 8) Remove the airbag guide A from the front pillar.

- 9) Remove the airbag guide B from the center pillar.

- Sedan model

- Wagon model

10) Remove airbag guide C from quarter pillar.

- Sedan model

- Wagon model

## B: INSTALLATION

### CAUTION:

- Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>
- When installing the curtain airbag module, install a specified part at specified place.
- Be careful not to damage the curtain airbag module during removal.
- Never open the curtain airbag module before deploying it. Never reuse the deployed curtain airbag module.
- Make sure that there are no foreign matter on airbag module.

Install in the reverse order of removal.

### Tightening torque:

**7.5 N·m (0.77 kgf-m, 5.5 ft-lb)**

## C: INSPECTION

### CAUTION:

Refer to “CAUTION” of “General Description” before handling the airbag module. <Ref. to AB-4, CAUTION, General Description.>

Check for the following, and replace the damaged parts with new parts. <Ref. to AB-12, CURTAIN AIRBAG MODULE, INSPECTION, Inspection Locations After a Collision.>

1) With side collision (when curtain airbag is deployed)

- Curtain airbag module assembly
  - Satellite safing sensor
  - Curtain airbag sensor
  - Roof trim
  - Front pillar upper trim
  - Center pillar upper trim
  - Rear quarter pillar trim
  - Airbag guide A, B, C
- 2) When damage is found by visual check
- Assist grip
  - Assist grip bracket
  - Curtain airbag harness and connector on body side
  - Satellite safing sensor cover and mounting bracket

3) With side collision (when curtain airbag is not deployed)

Check the roof trim, pillar trim and airbag module visually, and then replace them with new parts if damaged or cracked.

Specially inspect the damage of airbag module body, mounting bracket and harness connector.

4) Without side collision (dirt and damage of cover)  
Replace the corresponding part with a new part.

## 8. Airbag Control Module

### A: REMOVAL

#### CAUTION:

- Do not disassemble the airbag control module.
- If the airbag control module is deformed or if the fault occurs by water, replace the airbag control module with a new part.
- Do not drop the airbag control module.
- After removal, keep the airbag control module on a dry, clean surface away from moisture, heat and dust.

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the center console. <Ref. to EI-55, REMOVAL, Center Console.>
- 4) Remove screws and pull out the audio unit assembly, and disconnect the connector for removal.

- 5) Disconnect the connector from airbag control module.
- 6) Remove the bolts and remove airbag control module.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.
- Always use new bolts and nuts for them.
- Be sure to put the water protection cover over the connector.

Install in the reverse order of removal.

#### Tightening torque:

25 N·m (2.5 kgf·m, 18.1 ft·lb)

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Control module, connector, and mounting bracket are damaged.
- Airbag is deployed.
- Side airbag is deployed.
- Curtain airbag is deployed.

## 9. Side Airbag Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the center pillar lower trim. <Ref. to EI-61, REMOVAL, Lower Inner Trim.>
- 4) Remove the center pillar inner protector lower.
- 5) Remove the front outer seat belt retractor. <Ref. to SB-13, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>
- 6) Remove the nuts to remove the side airbag sensor.

#### CAUTION:

Do not separate the side airbag sensor and bracket. It cause the airbag system malfunction.

If the sensor is removed from the bracket, replace them with new parts.

- 7) Disconnect the airbag connector.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.
- Always use new bolts and nuts for them.

Install in the reverse order of removal.

#### *Tightening torque:*

**8.0 N·m (0.82 kgf-m, 5.9 ft-lb)**

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Mounting bracket or connector of side airbag sensor is damaged.
- Side airbag is deployed.

## 10. Curtain Airbag Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 4) Remove the nuts to remove the curtain airbag sensor.

- 5) Disconnect the airbag connector.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.
- Always use new bolts and nuts for them.

Install in the reverse order of removal.

#### *Tightening torque:*

*8.0 N·m (0.82 kgf-m, 5.9 ft-lb)*

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Curtain airbag sensor connector is damaged.
- Curtain airbag is deployed.

## 11. Satellite Safing Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the rear seat cushion. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 4) Remove the nut and remove the cover.

- 5) Remove the bolt, and then detach the satellite safing sensor.

- 6) Disconnect the airbag connector.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.
- Always use new bolts and nuts for them.

Install in the reverse order of removal.

#### *Tightening torque:*

**8.0 N·m (0.82 kgf-m, 5.9 ft-lb)**

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Mounting bracket or connector of satellite safing sensor is damaged.
- Side airbag or curtain is deployed.

## 12.Roll Connector

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
- 4) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 5) Remove the steering column cover.
- 6) Remove the screws, and then remove the roll connector.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Before installing the steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-24, ADJUSTMENT, Roll Connector.>

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.  
Combination switch and roll connector are cracked or deformed.

### D: ADJUSTMENT

- 1) Check that front wheels are positioned in straight ahead direction.
- 2) Turn the roll connector pin (A) clockwise until it stops.
- 3) Turn the roll connector pins (A) approx. 3.25 turns until "▲" marks are aligned.

## 13. Front Sub Sensor

### A: REMOVAL

- 1) Turn the ignition switch to OFF.
- 2) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 3) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 4) Remove the bolt, and then detach the front sub sensor.

- 5) Disconnect the connector from front sub sensor.

### B: INSTALLATION

#### CAUTION:

- Do not reuse the bolt and nut.
- Always use new bolts and nuts for them.

Install in the reverse order of removal.

#### Tightening torque:

**13 N·m (1.32 kgf-m, 9.6 ft-lb)**

### C: INSPECTION

Check for the following, and replace the damaged parts with new parts.

- Front sub sensor, mounting bracket and connector are damaged.
- Airbag is deployed.

# Front Sub Sensor

AIRBAG SYSTEM

---

# Basic Diagnostic Procedure

## AIRBAG SYSTEM (DIAGNOSTICS)

### 1. Basic Diagnostic Procedure

#### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK WARNING LIGHT.</b> Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	<b>READ DTC.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to the data link connector. 3) Turn the ignition switch to ON and run the Subaru Select Monitor. 4) Read the DTC. <Ref. to AB(diag)-35, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to AB(diag)-32, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	<Ref. to AB(diag)-39, Airbag Warning Light Failure.> Go to "Airbag Warning Light Failure".
3	<b>PERFORM DIAGNOSIS.</b> 1) Judge the possible cause from "List of Diagnostic Trouble Code". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).> 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to AB(diag)-37, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to AB(diag)-36, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

# Check List for Interview

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

### 3. General Description

#### A: CAUTION

- When servicing a vehicle, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- The airbag system is fitted with a backup power source. If the airbag system is serviced within 20 seconds after the ground cable is disconnected, it may inflate.

- If sensors, airbag module, airbag control module, pretensioner or harness is deformed or damaged, replace with new parts.

- Do not use the airbag system and pretensioners on other vehicles. When replacing parts, be sure to replace them with new parts.
- When checking the airbag system, be sure to use a digital circuit tester. Use of an analog circuit tester may cause the airbag to activate erroneously due to a minimal current inside tester.

- When checking, use a test harness (1). Damage to connector terminal causes malfunction. Do not directly put the tester probe on airbag connector terminal.

- Do not drop the airbag system parts, or keep them at high temperature of 93°C (199°F) or more, or let water, oil or grease get on them; the internal parts may be damaged and reliability greatly lowered.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

- If damage, open circuit or rust is found on airbag system wiring harness, do not use a soldering equipment to repair. Replace the faulty harness with a new genuine part.

- Install the wiring harness securely with the specified clips to avoid interference or tangled with other parts.

- Do not allow water or oil to come in contact with the connector terminals. Also, do not touch the connector terminals.

- Do not disassemble driver's airbag module, passenger's airbag module, side or curtain airbag modules, or pretensioner.

- The airbag module cannot be used again if deployed once.
- After removal, keep the airbag module with the pad side facing upward on a dry, clean and flat surface away from heat, light sources, moisture and dust.

- Do not check continuity of the airbag modules for driver's side, passenger's side and curtain, or the pretensioner.

- The removed front seat with airbag module must be kept at least 200 mm (8 in) away from walls and other objects.

(1) 200 mm (8 in) or more

- When painting or performing sheet metal work on the front part of the vehicle, including the front wheel apron, front fender and front side frame, remove the front sub sensors and wiring harness of airbag system.

## General Description

### AIRBAG SYSTEM (DIAGNOSTICS)

---

- When painting or repairing sheet metal work on the side of the vehicle, including the side sill, center pillar, front and rear doors, rear crossmember and rear floorpan, remove the side airbag sensors, satellite safing sensor and wiring harness of the airbag system.

- Do not discard undeployed airbag module. They could easily cause a serious accident if accidentally deployed.

# General Description

## AIRBAG SYSTEM (DIAGNOSTICS)

- When storing a removed airbag module, do not place it with the pad side facing downward. Do not place any objects on the airbag module. Do not pile up the airbag module. If the airbag inflates for some reason when an airbag module pad is touching other objects, it may cause serious accident.

AB-01543

(1) Driver's airbag module

(2) Passenger's airbag module

### B: INSPECTION

Measure the battery voltage and check electrolyte.

**Standard voltage: 12 V**

**Specific gravity: 1.260 or more**

## 5. Airbag Connector

### A: PROCEDURE

#### 1. BUCKLE SWITCH

1) How to disconnect:

- (1) Move the slide lock (A) in the direction of arrow.
- (2) While holding the slide lock (A) in the moved position, disconnect the connector.

**CAUTION:**

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:

Holding the connector (A), and push it in carefully until a clicking sound is heard.

**CAUTION:**

Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

#### 2. DRIVER'S AIRBAG MODULE, PRETENSIONER AND CURTAIN AIRBAG

1) How to disconnect:

- (1) Using a flat tip screwdriver, pry the push lock upward to unlock.

- (2) Pull the connector to disconnect from the driver's airbag module assembly or the retractor assembly.

2) How to connect:

Connect the connector in the reverse order of disconnecting. At this time, be sure to insert the push lock until a clicking sound is heard.

**CAUTION:**

- Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.
- Be sure to push the push lock in securely.

**NOTE:**

The connector cannot be connected when the push lock is in the lock position. To connect the connector, set the push lock to unlock position.

# Airbag Connector

## AIRBAG SYSTEM (DIAGNOSTICS)

### 3. DRIVER'S AIRBAG (BETWEEN AIRBAG MAIN HARNESS AND ROLL CONNECTOR) AND SIDE AIRBAG

1) How to disconnect:

(1) Push the slide lock (A) in the direction of arrow.

(2) With the slide lock pushed, disconnect the connector.

**CAUTION:**  
When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

**CAUTION:**  
Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

### 4. SIDE AIRBAG

1) How to disconnect:

(1) Push the lock arm (A).

(2) With the lock arm (A) pushed in, move the slide lock (B) in the direction of arrow.

(3) While holding the slide lock in that position, release the lock arm (back to the original position), and disconnect the connector.

**CAUTION:**

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

## 5. FRONT SUB SENSOR, SIDE AIRBAG SENSOR, CURTAIN AIRBAG SENSOR AND SATELLITE SAFING SENSOR

1) How to disconnect:

Holding outer part (A), pull it in the direction of arrow.

### CAUTION:

When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.

2) How to connect:

Holding the connector, push it in securely until a clicking sound is heard.

### CAUTION:

- Do not touch the outer side section or else the outer side (A) will move back.
- Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.

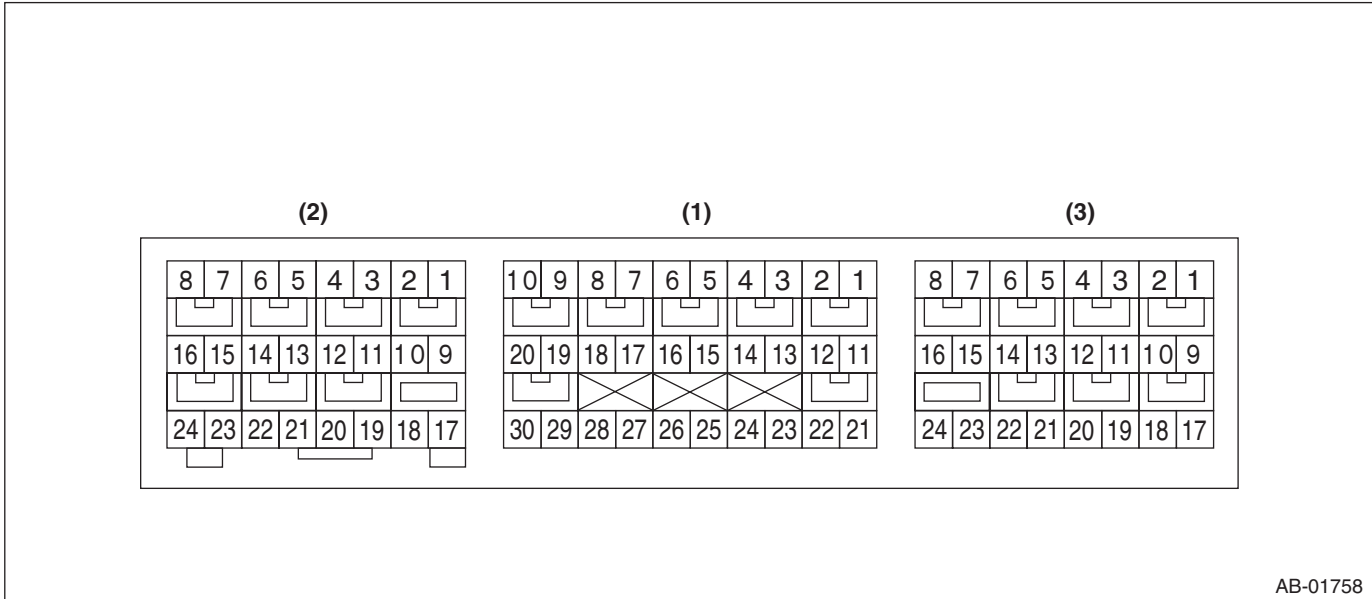

# Airbag Control Module I/O Signal

## B: WIRING DIAGRAM

Refer to the WI section wiring diagram. <Ref. to WI-150, WIRING DIAGRAM, Airbag System.>

## 7. Subaru Select Monitor

### A: OPERATION

#### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

When malfunction of airbag system occurs, the DTC stored in airbag control module will be read out.

1) Prepare the Subaru Select Monitor kit. <Ref. to AB(diag)-8, SPECIAL TOOL, PREPARATION TOOL, General Description.>

2) Connect the diagnosis cable to the Subaru Select Monitor.

3) Connect the Subaru Select Monitor to the data link connector.

(1) Data link connector is located in the lower portion of instrument panel (on the driver's side).

(1) Data link connector

(2) Connect the diagnosis cable to the data link connector.

#### **CAUTION:**

**Do not connect scan tools other than the Subaru Select Monitor.**

4) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.

5) On the «Main Menu», select {Each System Check}.

6) On the «System Selection Menu», select {Airbag System}.

7) After {Airbag System} is displayed, select [OK].

8) Select the {Diagnostic Trouble Code} in «Airbag System».

#### **NOTE:**

- For details concerning operation procedures, refer to the "SUBARU SELECT MONITOR OPERATION MANUAL".

- For details concerning DTCs, refer to List of Diagnostic Trouble Code (DTC). <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>

## 2. DISPLAY OF STATUS INFORMATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch, or when the seat belt buckle switch has been replaced.

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Airbag System}.
- 3) Select the {Status Data} in «Airbag System».

The following table is for support data.

Item	Display
Seat position sensor LH	— <sup>*5</sup>
Seat position sensor RH	— <sup>*5</sup>
Seat belt buckle switch LH	— <sup>*9</sup>
Seat belt buckle switch RH	Belted <sup>*6</sup> /Unbelted <sup>*7</sup> /Other <sup>*8</sup> /Initial Setting <sup>*4</sup> /— <sup>*9</sup>
Passenger's airbag control status	ON <sup>*10</sup> /OFF <sup>*11</sup> /Initial Setting <sup>*4</sup>

\*1: The seat position is forward.

\*2: The seat position is rearward.

\*3: Displayed when data other than before and behind the seat, such as the breakdown etc, is input.

\*4: Displayed when it is initial.

\*5: Seat position sensor not supported

\*6: Seat belt fastened

\*7: Seat belt not fastened

\*8: Displayed when data other than belt fastened or not fastened, such as breakdowns is input.

\*9: Seat belt buckle switch not supported

\*10: Passenger's airbag operating state

\*11: Passenger's airbag non-operating state

### NOTE:

For details concerning operation procedures, refer to the "SUBARU SELECT MONITOR OPERATION MANUAL".

## 3. CLEAR MEMORY MODE

Clear the DTC stored in the airbag control module after repairing the airbag system. (After the breakdown is recovered, the breakdown code for completed recoveries are read out when the next breakdown occurs if the memory clear work is not performed.)

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Airbag System}.
- 3) Select the {Clear Memory} in «Airbag System».
- 4) When the "Clear Memory?" is shown on the screen, press [OK].
- 5) When "Done" is displayed, end the Subaru Select Monitor.

### NOTE:

For details concerning the operation procedure, refer to the «help on PC application for Subaru Select Monitor».

# Subaru Select Monitor

AIRBAG SYSTEM (DIAGNOSTICS)

## B: INSPECTION

### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

#### DETECTING CONDITION:

Defective harness connector

#### TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the Subaru Select Monitor.

#### WIRING DIAGRAM:

AB-01759

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK IGNITION SWITCH.</b>	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select the airbag mode using the Subaru Select Monitor.
2	<b>CHECK BATTERY.</b> 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	<b>CHECK BATTERY TERMINAL.</b>	Is there poor contact at battery terminal?	Repair or tighten the battery terminal.	Go to step 4.
4	<b>CHECK SUBARU SELECT MONITOR COMMUNICATION.</b> 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be performed normally.	Is the system name displayed on Subaru Select Monitor?	Go to step 10.	Go to step 5.
5	<b>CHECK FUSE NO. 25 (IN FUSE &amp; RELAY BOX).</b> Remove the fuse No. 25 and perform visual inspection.	Is the fuse No. 25 (in fuse & relay box) blown out?	Replace the fuse No. 25. If fuse No. 25 is blown out again, check the power supply circuit.	Go to step 6.
6	<b>CHECK AIRBAG CONTROL MODULE CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait 20 seconds or more. 2) Confirm that the connector of airbag control module (AB6) is securely connected.	Is the connector of the airbag control module securely connected?	Go to step 7.	Connect the connector of the airbag control module.
7	<b>CHECK SUBARU SELECT MONITOR COMMUNICATION.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the airbag control module connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed on Subaru Select Monitor?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 8.
8	<b>CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL MODULE AND DATA LINK CONNECTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the airbag control module, ABSCM&H/U, ECM and TCM. 3) Measure the resistance between data link connector and chassis ground. <b>Connector &amp; terminal (B40) No. 7 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 9.	Repair the harness and connector between each control module and data link connector. (Replace the harness without repairing the airbag harness.)
9	<b>CHECK OUTPUT SIGNAL TO THE AIRBAG CONTROL MODULE.</b> 1) Turn the ignition switch to ON in the condition of step 8. 2) Measure the voltage between data link connector and chassis ground. <b>Connector &amp; terminal (B40) No. 7 (+) — Chassis ground (-):</b>	Is the voltage less than 1 V?	Go to step 10.	Repair the harness and connector between each control module and data link connector. (Replace the harness without repairing the airbag harness.)

# Subaru Select Monitor

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>10 CHECK THE HARNESS BETWEEN THE AIRBAG CONTROL MODULE AND DATA LINK CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB6) from airbag control module. 3) Connect the connector (1AG) in the test harness AG to the connector (AB6). 4) Measure the resistance between connector (4AG) in the test harness AG and the data link connector. <b>Connector &amp; terminal (4AG) No. 1 — (B40) No. 7:</b>	Is the resistance less than 10 Ω?	Go to step 11.	Repair the harness between the airbag control module and the data link connector. Or replace the airbag main harness along with the bulkhead harness.
<b>11 CHECK POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal (2AG) No. 1 — Chassis ground:</b>	Is the voltage 10 V or more?	Go to step 12.	Repair the harness between the airbag control module and the battery. Or replace the airbag main harness along with the bulkhead harness.
<b>12 CHECK BETWEEN THE AIRBAG CONTROL MODULE AND CHASSIS GROUND.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal (2AG) No. 4 — Chassis ground: (2AG) No. 3 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 13.	Repair the harness between the airbag control module and the chassis ground. Or replace the airbag main harness along with the bulkhead harness.
<b>13 CHECK POOR CONTACT IN CONNECTOR.</b>	Is there poor contact in the control module power supply, ground circuit and data link connector?	Repair the connector. (For airbag system connectors, do not repair but replace the entire harness.)	Replace the airbag control module only. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

## 2. WITHOUT DTC

### DETECTING CONDITION:

- Defective combination meter
- Open circuit in harness

### TROUBLE SYMPTOM:

- Airbag warning light remains on.
- “NO TROUBLE CODE” will be displayed on the Subaru Select Monitor.

For detailed operation procedures, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-39, Airbag Warning Light Failure.>

### NOTE:

- For detailed operation procedures, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-39, Airbag Warning Light Failure.>
- When the airbag warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is operating properly.

### **8. Read Diagnostic Trouble Code (DTC)**

#### **A: OPERATION**

For details concerning DTC reading procedure, refer to "Subaru Select Monitor". <Ref. to AB(diag)-30, Subaru Select Monitor.>

### **9. Inspection Mode**

#### **A: PROCEDURE**

Recreate the circumstance by referring to the conditions described in the checklist.

## 10. Clear Memory Mode

### A: OPERATION

- Clear the memory in the following steps after the malfunction is repaired.
- For details concerning DTC clear operation, refer to “Subaru Select Monitor”. <Ref. to AB(diag)-30, Subaru Select Monitor.>

# Airbag Warning Light Illumination Pattern

AIRBAG SYSTEM (DIAGNOSTICS)

---

## 11. Airbag Warning Light Illumination Pattern

### A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds then turns off afterwards.

- (1) Airbag warning light
- (2) Approx. 6 sec.
- (3) Ignition switch ON

## 12. Airbag Warning Light Failure

### A: AIRBAG WARNING LIGHT REMAINS ON

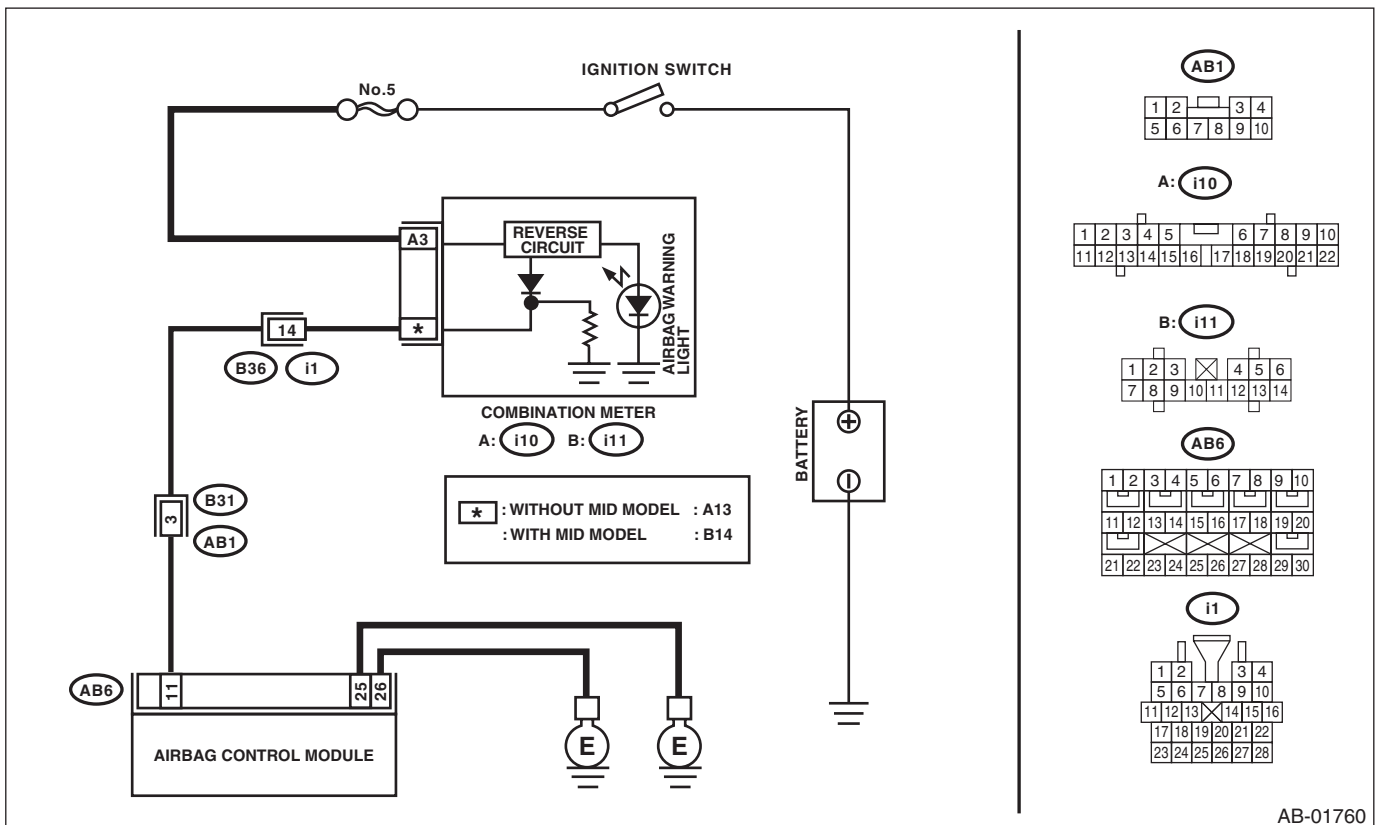

#### DETECTING CONDITION:

- Airbag warning light is faulty.
- Airbag control module to airbag warning light circuit is shorted or open.
- Grounding circuit is faulty.
- Airbag control module is faulty.
- Connection of (AB1) and (B31) is improper.
- Connection of (AB6) to airbag control module is improper.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from the battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

# Airbag Warning Light Failure

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 READ DTC.</b> Read the DTC. <Ref. to AB(diag)-30, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.
<b>2 CHECK POOR CONTACT.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Confirm that there is solid connection between the airbag control module and connector (AB6).	Is there poor contact in connector (AB6)?	If the poor contact of the connector is not fixed, replace the airbag main harness along with body harness or replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 3.
<b>3 CHECK AIRBAG MAIN HARNESS.</b> 1) Remove the instrument panel lower cover and disconnect the connectors (AB7) and (AB2). 2) Remove the instrument panel side cover on the passenger's side and disconnect the connectors (AB10) and (AB9). 3) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1AG) in the test harness AG. 4) Connect the battery ground terminal and turn the ignition switch to ON. 5) Connect the connectors (7AG) and (8AG) in the test harness AG. NOTE: After the fault has been cleared, disconnect the connectors (7AG) and (8AG).	Does the airbag warning light go off?	Go to step 4.	Go to step 5.
<b>4 CHECK GROUND CIRCUIT.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB6) from airbag control module. 3) Connect the connector (1AG) in the test harness AG to the chassis harness connector (AB6). 4) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(2AG) No. 4 — Chassis ground:</b> <b>(2AG) No. 3 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Repair the chassis ground circuit.
<b>5 CHECK AIRBAG MAIN HARNESS AND BULKHEAD HARNESS.</b> 1) Disconnect the connectors (7AG) and (8AG). 2) Remove the combination meter. 3) Measure the resistance between the combination meter connector and test harness AG connector (2AG). <b>Connector &amp; terminal</b> <b>Model without MID</b> <b>(2AG) No. 5 — (i10) No. 13:</b> <b>Model with MID</b> <b>(2AG) No. 5 — (i11) No. 14:</b>	Is the resistance less than 10 Ω?	Check the combination meter.	Go to step 6.

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>6</b> <b>CHECK POOR CONTACT OF CONNECTORS (AB1) AND (B31).</b> 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait 20 seconds or more. 2) Confirm that there is a firm contact between connectors (AB1) and (B31).	Is there poor contact in connectors (AB1) and (B31)?	Repair the bulk-head harness or replace the airbag main harness along with body harness.	Go to step 7.
<b>7</b> <b>CHECK AIRBAG MAIN HARNESS.</b> Check the airbag main harness for defect.	Is there any defect in the airbag main harness?	Replace the airbag main harness along with bulk-head harness.	Repair the bulk-head harness.

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

## B: AIRBAG WARNING LIGHT REMAINS OFF

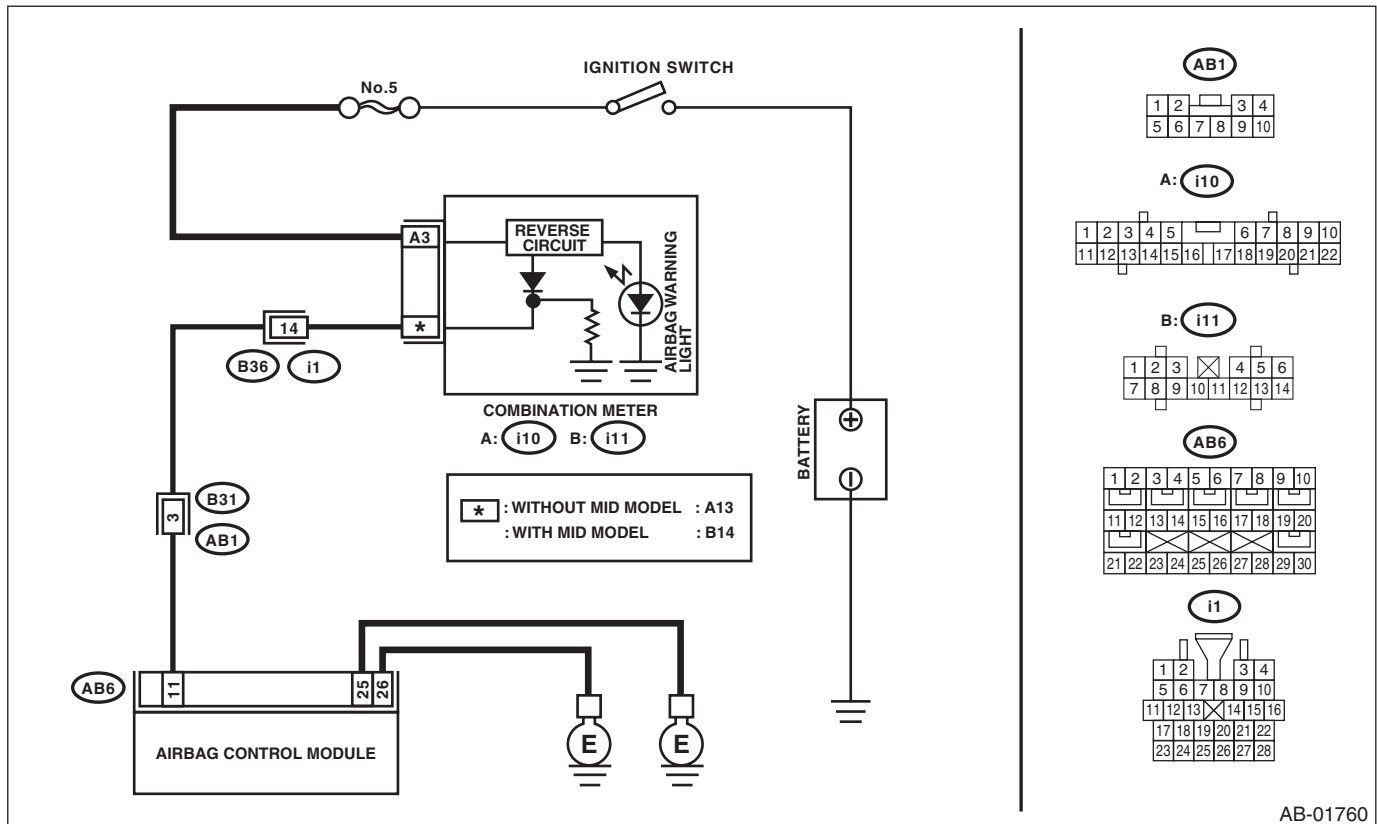

### DETECTING CONDITION:

- Fuse No. 5 (in fuse box) is brown out.
- Body harness circuit is open.
- Airbag warning light is faulty.
- Airbag main harness is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

AB-01760

# Airbag Warning Light Failure

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK COMBINATION METER.</b> Turn the ignition switch to ON, and confirm that warning light of combination meter illuminates.	Do warning lights except for airbag illuminate?	Go to step 2.	Check the combination meter.
<b>2 CHECK DTC.</b> Read the DTC. <Ref. to AB(diag)-30, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 3.
<b>3 CHECK FUSE NO. 5 (IN MAIN FUSE BOX).</b> Remove the fuse No. 5 and perform visual inspection.	Is the fuse No. 5 (in main fuse box) blown out?	Replace the fuse No. 5. If the fuse No. 5 is blown out again, go to step 4.	Go to step 4.
<b>4 CHECK AIRBAG WARNING LIGHT CIRCUIT (IN COMBINATION METER).</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connectors (AB1) and (B31). 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does airbag warning light illuminate?	Go to step 5.	Check the combination meter.
<b>5 CHECK AIRBAG MAIN HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Connect the connector (AB1) and (B31). 3) Disconnect the connector (AB6) from airbag control module. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does airbag warning light illuminate?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Replace the airbag main harness along with bulkhead harness.

## List of Diagnostic Trouble Code (DTC)

AIRBAG SYSTEM (DIAGNOSTICS)

### 13. List of Diagnostic Trouble Code (DTC)

#### A: LIST

DTC	Display	Diagnosis content	Reference
11	Driver's Airbag failure	<ul style="list-style-type: none"> <li>• Airbag main harness circuit is open, shorted or shorted to ground.</li> <li>• Airbag module harness (Driver's side) circuit is open, shorted or shorted to ground.</li> <li>• Roll connector circuit is open, shorted or shorted to ground.</li> <li>• Airbag control module is faulty.</li> <li>• Driver's airbag module is faulty.</li> </ul>	<Ref. to AB(diag)-52, DTC 11 DRIVER'S AIRBAG FAILURE, Diagnostic Chart with Trouble Code.>
12	Passenger's Airbag failure	<ul style="list-style-type: none"> <li>• Airbag main harness circuit is open, shorted or shorted to ground.</li> <li>• Airbag module harness (Passenger's side) circuit is open, shorted or shorted to ground.</li> <li>• Airbag control module is faulty.</li> <li>• Passenger's airbag module is faulty.</li> </ul>	<Ref. to AB(diag)-55, DTC 12 PASSENGER'S AIRBAG FAILURE, Diagnostic Chart with Trouble Code.>
15	Driver's Airbag failure	<ul style="list-style-type: none"> <li>• Airbag main harness circuit (Driver's side) is shorted to power supply.</li> <li>• Airbag module harness circuit (Driver's side) is shorted to power supply.</li> <li>• Roll connector is shorted to power supply.</li> <li>• Airbag control module is faulty.</li> <li>• Driver's airbag module is faulty.</li> </ul>	<Ref. to AB(diag)-58, DTC 15 DRIVER'S AIRBAG FAILURE, Diagnostic Chart with Trouble Code.>

AIRBAG SYSTEM (DIAGNOSTICS)

## 14. Diagnostic Chart with Trouble Code

### A: DTC 11 DRIVER'S AIRBAG FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Driver's side) circuit is open, shorted or shorted to ground.
- Roll connector circuit is open, shorted or shorted to ground.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from the battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

#### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
<b>2 CHECK DRIVER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (1N) in the test harness N to the connector (AB38). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>	Go to step 3.
<b>3 CHECK ROLL CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the roll connector. <Ref. to AB-24, Roll Connector.>	Go to step 4.
<b>4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel side cover on the passenger's side and disconnect the connectors (AB10) and (AB9). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. <b>Connector &amp; terminal</b> (3AG) No. 1 — (2P) No. 1: (3AG) No. 3 — (2P) No. 2: (3AG) No. 2 — (3P) No. 3: (3AG) No. 4 — (3P) No. 4:	Is the resistance less than 10 Ω?	Go to step 5.	Replace the airbag main harness along with body harness.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>5 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).</b> Measure the resistance between connector (3AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <i>(3AG) No. 1 — (3AG) No. 3:</i> <i>(3AG) No. 3 — Chassis ground:</i> <i>(3AG) No. 1 — Chassis ground:</i> <i>(3AG) No. 2 — (3AG) No. 4:</i> <i>(3AG) No. 2 — Chassis ground:</i> <i>(3AG) No. 4 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag main harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## B: DTC 12 PASSENGER'S AIRBAG FAILURE

### DTC DETECTING CONDITION:

- Airbag main harness circuit is open, shorted or shorted to ground.
- Airbag module harness (Passenger's side) circuit is open, shorted or shorted to ground.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from the battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
<b>2 CHECK PASSENGER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Remove the instrument panel side cover on the passenger's side and disconnect the connector (AB10) from (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the resistance between connector (3AG) in the test harness AG and connectors (2P) and (3P) in the test harness P. <b>Connector &amp; terminal</b> <b>(3AG) No. 9 — (2P) No. 1:</b> <b>(3AG) No. 7 — (2P) No. 2:</b> <b>(3AG) No. 8 — (3P) No. 3:</b> <b>(3AG) No. 6 — (3P) No. 4:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag main harness along with body harness.
<b>4 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> Measure the resistance between connectors (3AG) in the test harness AG, and between connector (3AG) and chassis ground. <b>Connector &amp; terminal</b> <b>(3AG) No. 9 — (3AG) No. 7:</b> <b>(3AG) No. 9 — Chassis ground:</b> <b>(3AG) No. 7 — Chassis ground:</b> <b>(3AG) No. 8 — (3AG) No. 6:</b> <b>(3AG) No. 8 — Chassis ground:</b> <b>(3AG) No. 6 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag main harness along with body harness.
<b>5 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 6.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
6	<b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### C: DTC 15 DRIVER'S AIRBAG FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness circuit (Driver's side) is shorted to power supply.
- Airbag module harness circuit (Driver's side) is shorted to power supply.
- Roll connector is shorted to power supply.
- Driver's airbag module is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from the battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

#### WIRING DIAGRAM:

AB-01761

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the driver's airbag module.	Is there poor contact?	Replace the airbag harness.	Go to step 2.
<b>2 CHECK DRIVER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Remove the driver's airbag module. 3) Connect the connector (AB38) to the connector (1N) in the test harness N. 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the connector (1Q) in the test harness Q to connector (AB37). 6) Connect the airbag resistor to the connector (2Q) in the test harness Q. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the driver's airbag module. <Ref. to AB-14, Driver's Airbag Module.>	Go to step 3.
<b>3 CHECK ROLL CONNECTOR.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the test harness N from connector (AB38). 3) Disconnect the test harness Q from connector (AB37). 4) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 5) Connect the connector (1P) in the test harness P to connector (AB2). 6) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 7) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the roll connector. <Ref. to AB-24, Roll Connector.>	Go to step 4.
<b>4 CHECK AIRBAG MAIN HARNESS (DRIVER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel side cover on the passenger's side and disconnect the connectors (AB10) and (AB9). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Connect the battery ground terminal and turn the ignition switch to ON. (engine OFF) 6) Measure the voltage between connector (3AG) in the test harness AG and chassis ground.  <b>Connector &amp; terminal</b> (3AG) No. 3 (+) — Chassis ground (-): (3AG) No. 1 (+) — Chassis ground (-): (3AG) No. 2 (+) — Chassis ground (-): (3AG) No. 4 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 5.	Replace the airbag main harness along with body harness.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## D: DTC 16 PASSENGER'S AIRBAG FAILURE

### DTC DETECTING CONDITION:

- Airbag main harness circuit (Passenger's side) is shorted to power supply.
- Airbag module harness circuit (Passenger's side) is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from the battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag harness along with chassis harness.	Go to step 2.
<b>2 CHECK PASSENGER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Remove the instrument panel side cover on the passenger's side and disconnect the connector (AB10) from (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Connect the battery ground terminal and turn the ignition switch to ON. (engine OFF) 6) Measure the voltage between connector (3AG) in the test harness AG and chassis ground.  <i>Connector &amp; terminal</i> (3AG) No. 9 (+) — Chassis ground (-): (3AG) No. 7 (+) — Chassis ground (-): (3AG) No. 8 (+) — Chassis ground (-): (3AG) No. 6 (+) — Chassis ground (-):	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag main harness along with body harness.
<b>4 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 5.
<b>5 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## E: DTC 21 AIRBAG ECM FAILURE

### DTC DETECTING CONDITION:

Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.

	Step	Check	Yes	No
1	<b>CHECK IF DTC 21 IS INDICATED.</b> Read the DTC. <Ref. to AB(diag)-30, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Does the Subaru Select Monitor display DTC21?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Perform the Clear Memory Mode. <Ref. to AB(diag)-31, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### F: DTC 22 FRONT AIRBAG FIRING OUTPUT

#### WIRING DIAGRAM:

AB-01763

This DTC is indicated when the front airbag module and the pretensioner are deployed.

Once this DTC is displayed, the memory cannot be cleared. Therefore replace the following parts.

- Airbag control module <Ref. to AB-20, Airbag Control Module.>
- Driver's airbag module <Ref. to AB-14, Driver's Airbag Module.>
- Passenger's airbag module <Ref. to AB-15, Passenger's Airbag Module.>
- Front sub sensor of both sides <Ref. to AB-25, Front Sub Sensor.>
- Front outer seat belt with pretensioner of both sides. <Ref. to SB-13, Front Seat Belt.>
- Steering roll connector <Ref. to AB-24, Roll Connector.>
- Occupant detection system (passenger's seat cushion & frame assembly) <Ref. to SE-9, Front Seat.>

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## G: DTC 26 PASSENGER'S AIRBAG INDICATOR FAILURE

### DTC DETECTING CONDITION:

- Passenger's airbag indicator is faulty.
- Airbag control module is faulty.
- Airbag main harness circuit is open.
- Body harness circuit is open.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Confirm that firm contact is secured for the connector between the airbag control module and map light.	Is there poor contact in any connector?	Replace the airbag harness connector.	Go to step 2.
<b>2</b> <b>CHECK AIRBAG MAIN HARNESS.</b> 1) Disconnect the connector (AB6) from airbag control module. 2) Connect the battery ground terminal and turn the ignition switch to ON. NOTE: Neither of ON/OFF illuminates when it is normal.	Does the passenger's airbag indicator illuminate?	Go to step 3.	Go to step 4.
<b>3</b> <b>CHECK AIRBAG MAIN HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Remove the map light and disconnect the connector (R150). 3) Connect the connector (1AG) in the test harness AG to the connector (AB6). 4) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(2AG) No. 9 — (2AG) No. 8:</i> <i>(2AG) No. 9 — Chassis ground:</i> <i>(2AG) No. 8 — Chassis ground:</i>	Is the resistance 1 M $\Omega$ or more?	Replace the map light. <Ref. to LI-32, REMOVAL, Spot Map Light.>	Repair the bulkhead harness. Or replace the airbag main harness along with body harness.
<b>4</b> <b>CHECK AIRBAG HARNESS.</b> 1) Connect the connectors (7AG) and (8AG) in the test harness AG. 2) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's airbag indicator illuminate?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 5.
<b>5</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connector (AB6). 3) Measure the resistance between connector (2AG) in the test harness AG and connector (R150). <i>Connector &amp; terminal</i> <i>(2AG) No. 9 — (R150) No. 7:</i> <i>(2AG) No. 8 — (R150) No. 8:</i>	Is the resistance less than 10 $\Omega$ ?	Go to step 6.	Repair the bulkhead harness. Or replace the airbag main harness along with body harness.
<b>6</b> <b>CHECK BODY HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (R150) and chassis ground. <i>Connector &amp; terminal</i> <i>(R150) No. 4 — Chassis ground:</i>	Is the voltage 10 V or more?	Replace the map light. <Ref. to LI-32, REMOVAL, Spot Map Light.>	Repair the map light power supply line.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## H: DTC 27 ODS COMMUNICATION ERROR

### DTC DETECTING CONDITION:

- Communication to the occupant detection control module is faulty.
- Airbag rear harness circuit is open, shorted, shorted to ground or shorted to power supply.
- Occupant detection harness (seat harness) is faulty.
- Occupant detection system is faulty.
- Airbag control module is faulty.

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the occupant detection control module.	Is there poor contact?	Reconnect the connector. If defective is not improved, replace the airbag rear harness along with the body harness or the occupant detection harness (seat harness).	Go to step 2.
<b>2</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB18) from airbag control module. 3) Disconnect the connectors (AB59) and (AB53) under the passenger's seat. 4) Connect the connector (1AG) in the test harness AG to the connector (AB18). 5) Connect the connector (1AB) in the test harness AB to the connector (AB53). 6) Measure the resistance between connector (6AG) in the test harness AG and connector (2AB) in the test harness AB.  <i><b>Connector &amp; terminal</b></i> <i><b>(6AG) No. 9 — (2AB) No. 1:</b></i> <i><b>(6AG) No. 11 — (2AB) No. 2:</b></i>	Is the resistance less than 10 Ω?	Go to step 3.	Replace the airbag rear harness along with body harness.
<b>3</b> <b>CHECK AIRBAG HARNESS.</b> Measure the resistance between connector (3U) in the test harness U and chassis ground.  <i><b>Connector &amp; terminal</b></i> <i><b>(6AG) No. 9 — Chassis ground:</b></i> <i><b>(6AG) No. 9 — (6AG) No. 11:</b></i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between connector (2AB) in the test harness AB and chassis ground.  <i><b>Connector &amp; terminal</b></i> <i><b>(2AB) No. 3 — chassis ground:</b></i>	Is the voltage 9 V or more?	Replace the occupant detection harness (seat harness). If defective is not improved, replace the occupant detection system (seat cushion & frame assembly), and then the airbag control module in this order.	Check the battery voltage and fuse. If there is no fault, replace the airbag rear harness along with body harness or replace the body harness.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

---

#### **I: DTC 29 ODS FAILURE**

**NOTE:**

Refer to “Occupant Detection System” for details on DTC 29. <Ref. to OD(diag)-26, DTC 29 ODS FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### **J: DTC 2A ODS CALIBRATION ERROR**

**NOTE:**

Refer to “Occupant Detection System” for details on DTC 2A. <Ref. to OD(diag)-23, DTC 2A ODS CALIBRATION ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### **K: DTC 2B ODS SYSTEM WRONG PARTS**

**NOTE:**

Refer to “Occupant Detection System” for details on DTC 2B. <Ref. to OD(diag)-23, DTC 2B ODS SYSTEM WRONG PARTS, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### **L: DTC 2C BELT TENSION SENSOR FAILURE**

**NOTE:**

Refer to “Occupant Detection System” for details on DTC 2C. <Ref. to OD(diag)-24, DTC 2C BELT TENSION SENSOR FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### **M: DTC 33 FRONT SUB SENSOR RH FAILURE**

**DTC DETECTING CONDITION:**

Front sub sensor (RH) is faulty.

If DTC 33 is displayed, the circuit within the front sub sensor (RH) is faulty.

Replace the front sub sensor (RH). <Ref. to AB-25, Front Sub Sensor.>

#### **N: DTC 34 FRONT SUB SENSOR LH FAILURE**

**DTC DETECTING CONDITION:**

Front sub sensor (LH) is faulty.

If DTC 34 is displayed, the circuit within the front sub sensor (LH) is faulty.

Replace the front sub sensor (LH). <Ref. to AB-25, Front Sub Sensor.>

#### **O: DTC 37 BUCKLE SWITCH RH FAILURE**

**NOTE:**

Refer to “Occupant Detection System” for details on DTC 37. <Ref. to OD(diag)-27, DTC 37 BUCKLE SWITCH RH FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostic Chart with Trouble Code

## P: DTC 39 SEAT BELT WARNING FAILURE

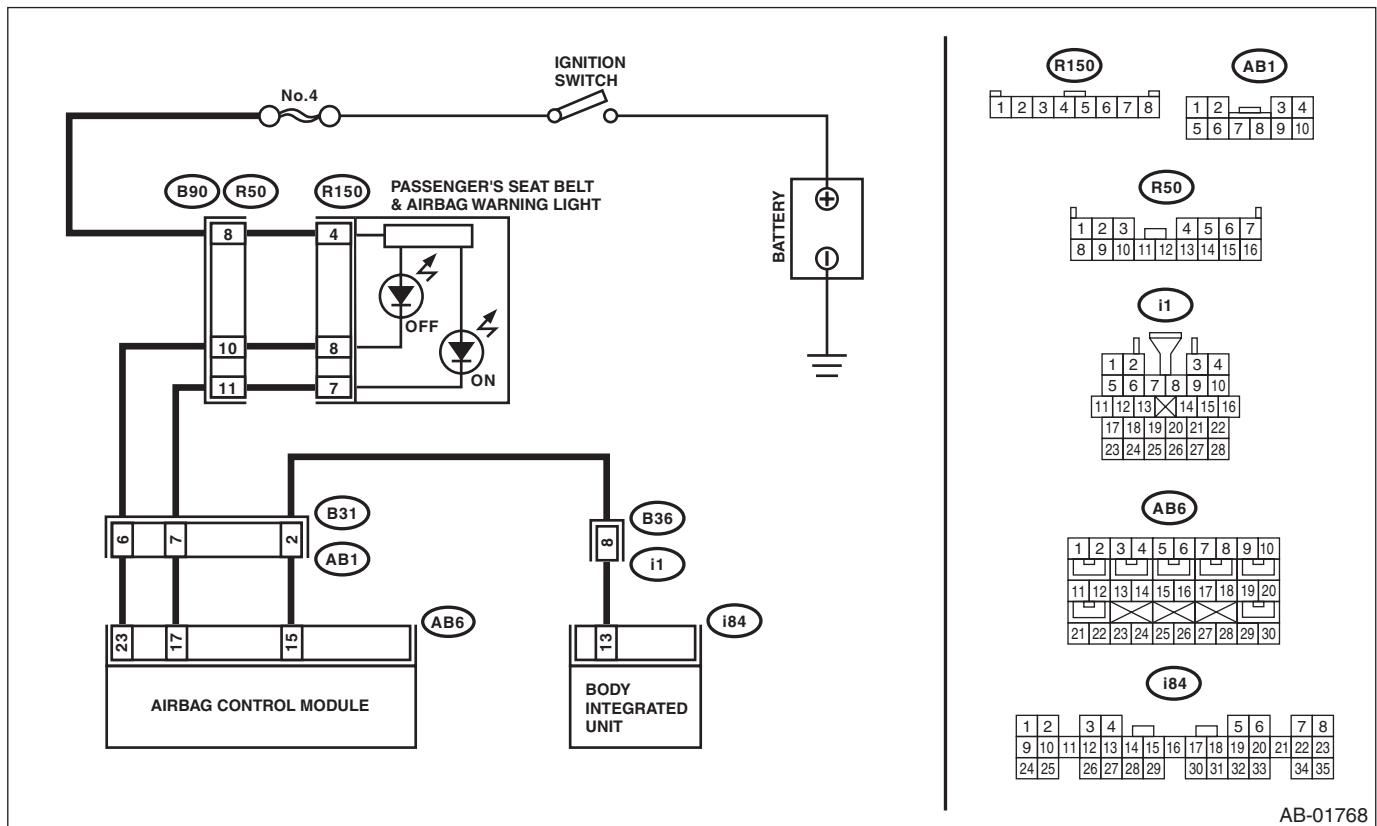

### DTC DETECTING CONDITION:

- Airbag control module is faulty.
- Body integrated unit is faulty.
- Harness circuits between body integrated unit and airbag control module are open, shorted or shorted to ground.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

AB-01768

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB6) from airbag control module. 3) Connect the battery ground terminal and turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds and go off?	Go to step 3.	Go to step 2.
<b>2</b> <b>CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF. 2) Connect the connector (1AG) in the test harness AG to the connector (AB6). 3) Measure the resistance between connector (2AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal (2AG) No. 10 — Chassis ground:</i>	Is the resistance 1 M $\Omega$ or more?	Replace the body integrated unit.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.
<b>3</b> <b>CHECK AIRBAG HARNESS.</b> 1) Connect the connectors (7AG) and (8AG) in the test harness AG in the condition of step 2. 2) Turn the ignition switch to ON.	Does the passenger's seat belt warning light blink for 6 seconds, then repeatedly light and go off?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 4.
<b>4</b> <b>CHECK AIRBAG HARNESS.</b> 1) Disconnect the connectors (7AG) and (8AG) in the test harness AG in the condition of step 3. 2) Measure the resistance between connector (2AG) in the test harness AG and connector (i84). <i>Connector &amp; terminal (2AG) No. 10 — (i84) No. 13:</i>	Is the resistance less than 10 $\Omega$ ?	Replace the body integrated unit.	Repair the bulk-head harness. Or replace the airbag main harness along with body harness.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## Q: DTC 41 SIDE AIRBAG RH FAILURE

### DTC DETECTING CONDITION:

- Side airbag harness (RH) is faulty.
- Side airbag module (RH) is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

Step	Check	Yes	No
1	<b>CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, side airbag module RH and the side airbag sensor RH.	Is there poor contact?  Replace the airbag rear harness along with body harness.	Go to step 2.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK SIDE AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connectors (AB25) and (AB24), and connect the connector (1F) in test harness F to connector (AB24). 3) Connect the airbag resistor to the connector (3F) of test harness F. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (RH). <Ref. to AB-16, REMOVAL, Side Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect the connector (AB33) from curtain airbag module (RH). 4) Disconnect the airbag resistor from test harness F. 5) Disconnect the connector (AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connector (AB18). 7) Measure the resistance between connector (5AG) in the test harness AG and connector (3F) in the test harness F. <i>Connector &amp; terminal</i> <i>(5AG) No. 5 — (3F) No. 4:</i> <i>(5AG) No. 7 — (3F) No. 3:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (5AG) terminals in the test harness AG. <i>Connector &amp; terminal</i> <i>(5AG) No. 5 — (5AG) No. 7:</i>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (5AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(5AG) No. 5 — Chassis ground:</i> <i>(5AG) No. 7 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

AIRBAG SYSTEM (DIAGNOSTICS)

## R: DTC 42 SIDE AIRBAG LH FAILURE

### DTC DETECTING CONDITION:

- Side airbag harness (LH) is faulty.
- Side airbag module (LH) is faulty.
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

Step	Check	Yes	No	
1	<b>CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, side airbag module LH and the side airbag sensor LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.

## Diagnostic Chart with Trouble Code

### AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>2 CHECK SIDE AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connectors (AB20) and (AB19), and connect the connector (1F) in test harness F to connector (AB19). 3) Connect the airbag resistor to the connector (3F) of test harness F. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the side airbag module (LH). <Ref. to AB-16, REMOVAL, Side Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Disconnect the connector (AB31) from curtain airbag module (LH). 4) Disconnect the airbag resistor from test harness. 5) Disconnect the connector (AB17) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connector (AB17). 7) Measure the resistance between connector (5AG) in the test harness AG and connector (3F) in the test harness F. <b>Connector &amp; terminal</b> <b>(5AG) No. 1 — (3F) No. 3:</b> <b>(5AG) No. 3 — (3F) No. 4:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).</b> Measure the resistance between connector (5AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <b>(5AG) No. 1 — (5AG) No. 3:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (SIDE AIRBAG MODULE HARNESS LH).</b> Measure the resistance between connector (5AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(5AG) No. 1 — Chassis ground:</b> <b>(5AG) No. 3 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 7.
<b>7 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

<b>3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG SENSOR HARNESS LH).</b> Measure the resistance between connector (5AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <i>(5AG) No. 8 — Chassis ground:</i> <i>(5AG) No. 10 — Chassis ground:</i>	Is the resistance 1 MΩ or more?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the curtain airbag sensor (LH). <Ref. to AB-22, Curtain Airbag Sensor.> Replace the airbag control module if not operating normally even after replacing the sensor. <Ref. to AB-20, Airbag Control Module.>	Go to step 5.
<b>5 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

## Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

---

### **AB:DTC 58 CURTAIN AIRBAG SENSOR RH FAILURE**

#### **DTC DETECTING CONDITION:**

Curtain airbag sensor (RH) is faulty.

If DTC 58 is displayed, the circuit within the curtain airbag sensor (RH) is faulty.

Replace the curtain airbag sensor (RH). <Ref. to AB-22, Curtain Airbag Sensor.>

### **AC:DTC 59 CURTAIN AIRBAG SENSOR LH FAILURE**

#### **DTC DETECTING CONDITION:**

Curtain airbag sensor (LH) is faulty.

If DTC 59 is displayed, the circuit within the curtain airbag sensor (LH) is faulty.

Replace the curtain airbag sensor (LH). <Ref. to AB-22, Curtain Airbag Sensor.>

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## AD:DTC 61 BELT PRETENSIONER RH FAILURE

### DTC DETECTING CONDITION:

- Seat belt pretensioner (RH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
<b>2 CHECK SEAT BELT PRETENSIONER.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Connect the connector (1N) in the test harness N to the connector (AB26). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner (RH). <Ref. to SB-13, Front Seat Belt.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from test harness. 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the connector (AB33) from curtain airbag module (RH). 5) Disconnect the connectors (AB17) and (AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connector (AB18). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. <b>Connector &amp; terminal</b> <b>(3AG) No. 18 — (2N) No. 1:</b> <b>(3AG) No. 20 — (2N) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).</b> Measure the resistance between connector (3AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <b>(3AG) No. 18 — (3AG) No. 20:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS RH).</b> Measure the resistance between connector (3AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(3AG) No. 18 — Chassis ground:</b> <b>(3AG) No. 20 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 7.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
7	<b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

## AIRBAG SYSTEM (DIAGNOSTICS)

### AE:DTC 62 BELT PRETENSIONER LH FAILURE

#### DTC DETECTING CONDITION:

- Seat belt pretensioner (LH) circuit is open, shorted or shorted to ground.
- Airbag control module is faulty.
- Pretensioner is faulty.
- Pretensioner harness is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the seat belt pretensioner LH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
<b>2 CHECK SEAT BELT PRETENSIONER.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connector (AB21) from seat belt pretensioner (LH). 3) Connect the connector (1N) in the test harness N to the connector (AB21). 4) Connect the airbag resistor to the connector (2N) of test harness N. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the seat belt pretensioner (LH). <Ref. to SB-13, Front Seat Belt.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from test harness. 3) Disconnect connector (AB19) from side airbag module (LH). 4) Disconnect the connector (AB31) from curtain airbag module (LH). 5) Disconnect the connectors (AB17) and (AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connector (AB17). 7) Measure the resistance between connector (3AG) in the test harness AG and connector (2N) in the test harness N. <b>Connector &amp; terminal</b> <b>(3AG) No. 12 — (2N) No. 1:</b> <b>(3AG) No. 10 — (2N) No. 2:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).</b> Measure the resistance between connector (3AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <b>(3AG) No. 10 — (3AG) No. 12:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (PRETENSIONER HARNESS LH).</b> Measure the resistance between connector (3AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(3AG) No. 10 — Chassis ground:</b> <b>(3AG) No. 12 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 7.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### AK:DTC 76 PASSENGER'S AIRBAG FAILURE

#### DTC DETECTING CONDITION:

- Airbag main harness circuit (Passenger's side) is shorted to power supply.
- Airbag module harness circuit (Passenger's side) is shorted to power supply.
- Passenger's airbag module is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from the battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### NOTE:

Prior to starting work, prepare two airbag resistors (98299PA040).

#### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module and the passenger's airbag module.	Is there poor contact?	Replace the airbag main harness along with body harness.	Go to step 2.
<b>2 CHECK PASSENGER'S AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Remove the instrument panel side cover on the passenger's side and disconnect the connector (AB10) from (AB9). 3) Connect the connector (1P) in the test harness P to connector (AB9). 4) Connect the airbag resistor to the connectors (2P) and (3P) of test harness P. 5) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the passenger's airbag module. <Ref. to AB-15, Passenger's Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG MAIN HARNESS (PASSENGER'S AIRBAG HARNESS).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the airbag resistor from the connectors (2P) and (3P) of test harness P. 3) Remove the instrument panel lower cover and disconnect the connector (AB7) from (AB2). 4) Disconnect the connector (AB6) from the airbag control module, and connect the connector (1AG) in the test harness AG. 5) Measure the voltage between connector (3AG) in the test harness AG and chassis ground. <i>Connector &amp; terminal</i> <i>(3AG) No. 9 (+) — Chassis ground (-):</i> <i>(3AG) No. 7 (+) — Chassis ground (-):</i> <i>(3AG) No. 8 (+) — Chassis ground (-):</i> <i>(3AG) No. 6 (+) — Chassis ground (-):</i>	Is the voltage less than 1 V?	Go to step 4.	Replace the airbag main harness along with body harness.
<b>4 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 5.
<b>5 CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

### AL:DTC 91 CURTAIN AIRBAG MODULE RH FAILURE

#### DTC DETECTING CONDITION:

- Curtain airbag harness (RH) is faulty.
- Curtain airbag module (RH) is faulty.
- Airbag control module is faulty.

#### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground terminal from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors of the driver's and passenger's seats for safety.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

#### WIRING DIAGRAM:

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the airbag control module, curtain airbag module RH and the curtain airbag sensor RH.	Is there poor contact?	Replace the airbag rear harness along with body harness.	Go to step 2.
<b>2 CHECK CURTAIN AIRBAG MODULE.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the connectors (AB33) and (AB40), and connect the connector (N) in test harness N to connector (AB33). 3) Connect the airbag resistor to the connector (2N) of test harness N. 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the curtain airbag module (RH). <Ref. to AB-18, Curtain Airbag Module.>	Go to step 3.
<b>3 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Disconnect the connector (AB26) from seat belt pretensioner (RH). 3) Disconnect connector (AB24) from side airbag module (RH). 4) Disconnect the airbag resistor from test harness N. 5) Disconnect the connector (AB18) from airbag control module. 6) Connect the connector (1AG) in the test harness AG to the connector (AB18). 7) Measure the resistance between connector (6AG) in the test harness AG and connector (2N) in the test harness N. <b>Connector &amp; terminal</b> <b>(6AG) No. 6 — (3F) No. 4:</b> <b>(6AG) No. 8 — (2N) No. 3:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Replace the airbag rear harness along with body harness.
<b>4 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (6AG) terminals in the test harness AG. <b>Connector &amp; terminal</b> <b>(6AG) No. 6 — (6AG) No. 8:</b>	Is the resistance 1 MΩ or more?	Go to step 5.	Replace the airbag rear harness along with body harness.
<b>5 CHECK AIRBAG REAR HARNESS (CURTAIN AIRBAG MODULE HARNESS RH).</b> Measure the resistance between connector (6AG) in the test harness AG and chassis ground. <b>Connector &amp; terminal</b> <b>(6AG) No. 6 — Chassis ground:</b> <b>(6AG) No. 8 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 6.	Replace the airbag rear harness along with body harness.
<b>6 CHECK AIRBAG CONTROL MODULE.</b> 1) Connect all connectors. 2) Erase the memory. 3) Perform the Inspection Mode. 4) Read the DTC.	Is the same DTC displayed?	Replace the airbag control module. <Ref. to AB-20, Airbag Control Module.>	Go to step 7.

# Diagnostic Chart with Trouble Code

## AIRBAG SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
7	<b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other DTC displayed?	Check DTC using "List of Diagnostic Trouble Code (DTC)". <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

# Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

## BA:DTC EE SIDE SENSOR BUS RH COMMUNICATION ERROR

### DTC DETECTING CONDITION:

- Open or short circuit in harness of side sensor bus (RH).
- Side A/B sensor (RH) or curtain airbag sensor (RH) is faulty
- Airbag control module is faulty.

### CAUTION:

- Before diagnosing the airbag system, be sure to turn the ignition switch to OFF, disconnect the ground cable from battery, and wait 20 seconds or more before starting to work.
- When replacing the airbag module, seat belt pretensioner, roll connector, control module and sensor, reconnect each part and check that the warning light operates properly.
- When inspecting the airbag main harness, disconnect the airbag module connectors and seat belt pretensioners of the driver's and passenger's seats for safety reasons.
- When inspecting the airbag rear harness, disconnect the side airbag module connector, curtain airbag module connector and seat belt pretensioner connector for safety reasons.

Satellite safing sensor is faulty.

Step	Check	Yes	No
1 <b>REPLACE SATELLITE SAFING SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-23, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

## BN:DTC 3D SATELLITE SENSOR FALSE INSTALLATION

### DTC DETECTING CONDITION:

Satellite safing sensor is misinstalled.

Step	Check	Yes	No
1 <b>REPLACE SATELLITE SAFING SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the satellite safing sensor with a genuine sensor. <Ref. to AB-23, REMOVAL, Satellite Safing Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

## Diagnostic Chart with Trouble Code

AIRBAG SYSTEM (DIAGNOSTICS)

### BO:DTC 5A SIDE AIRBAG SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Side A/B sensor RH is misinstalled.

	Step	Check	Yes	No
1	<b>REPLACE SIDE A/B SENSOR (RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the side A/B sensor (RH) with a genuine sensor. <Ref. to AB-21, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

### BP:DTC 5B SIDE AIRBAG SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Side A/B sensor LH is misinstalled.

	Step	Check	Yes	No
1	<b>REPLACE SIDE A/B SENSOR (LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the side A/B sensor (LH) with a genuine sensor. <Ref. to AB-21, REMOVAL, Side Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

### BQ:DTC 5C CURTAIN AIRBAG SENSOR RH FALSE INSTALLATION

DTC DETECTING CONDITION:

Curtain side A/B sensor RH is misinstalled.

	Step	Check	Yes	No
1	<b>REPLACE CURTAIN A/B SENSOR (RH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the curtain A/B sensor (RH) with a genuine sensor. <Ref. to AB-22, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

### BR:DTC 5D CURTAIN AIRBAG SENSOR LH FALSE INSTALLATION

DTC DETECTING CONDITION:

Curtain side A/B sensor LH is misinstalled.

	Step	Check	Yes	No
1	<b>REPLACE CURTAIN A/B SENSOR (LH).</b> 1) Turn the ignition switch to OFF, disconnect the ground cable from battery, and wait for 20 seconds or more. 2) Replace the curtain A/B sensor (LH) with a genuine sensor. <Ref. to AB-22, REMOVAL, Curtain Airbag Sensor.>	Does the warning light go off?	Finish the diagnosis.	Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.>

# Basic Diagnostic Procedure

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 1. Basic Diagnostic Procedure

#### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK WARNING LIGHT.</b> Check whether the airbag warning light in the combination meter is lit.	Does the airbag warning light illuminate?	Go to step 2.	Perform the diagnosis according to phenomenon of the problem.
2	<b>READ DTC.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to the data link connector. 3) Turn the ignition switch to ON and start up the Subaru Select Monitor. 4) Read the DTC. <Ref. to OD(diag)-17, OPERATION, Read Diagnostic Trouble Code (DTC).> NOTE: If the communication function of the Subaru Select Monitor cannot be executed normally, check the communication circuit. <Ref. to AB(diag)-32, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.> 5) Record all DTCs and freeze frame data.	Is DTC displayed?	Go to step 3.	Go to "Airbag Warning Light Failure". <Ref. to AB(diag)-39, Airbag Warning Light Failure.>
3	<b>PERFORM DIAGNOSIS.</b> 1) Determine the possible cause from "List of Diagnostic Trouble Code". <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).> 2) Inspect the DTC using "List of Diagnostic Trouble Code (DTC)". 3) Repair the trouble cause. 4) Perform the Clear Memory Mode. <Ref. to OD(diag)-19, Clear Memory Mode.> 5) Perform the Inspection Mode. <Ref. to OD(diag)-18, Inspection Mode.> 6) Read any other DTCs displayed.	Is DTC displayed?	Perform the procedure 1) to 5) in step 3.	Finish the diagnosis.

## Check List for Interview

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 2. Check List for Interview

#### A: CHECK

## General Description

### OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 3. General Description

#### A: CAUTION

1) If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper operation of the passenger detection system.

2) The passenger detection system (passenger seat only) control unit and the passenger detection sensor are fixed to the seat cushion frame. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

3) Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the passenger detection system may not operate properly.

4) If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

5) Never connect the battery in reverse polarity. Occupant detection system may be destroyed instantly.

6) Do not disconnect the battery terminals while the engine is running.

A large counter electromotive force will be generated in the generator, and this voltage may damage electronic parts such as occupant detection control module.

7) Before disconnecting the connectors of each sensor and control module, be sure to turn the ignition switch to OFF and wait for 20 seconds or more. Occupant detection control module may be damaged.

8) All passenger detection system parts are precision components. Do not drop them.

#### CAUTION:

- Do not use electrical test equipment on the airbag system wiring harness and connector circuit.
- Be careful not to damage the airbag system wiring harness when servicing the occupant detection system.
- Refer to “Airbag System” when repairing the occupant detection system. <Ref. to AB(diag)-4, CAUTION, General Description.>

#### B: INSPECTION

Measure the battery voltage and check electrolyte.

##### **Standard voltage:**

**12 V**

##### **Specific gravity:**

**1.260 or more**

##### **Fluid level:**

**Between the upper level and lower level**

# General Description

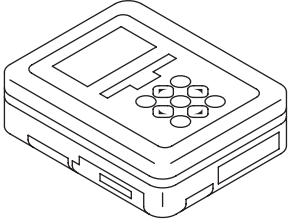

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

Circuit tester	Used for measuring resistance, voltage and current.

# Electrical Component Location

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 4. Electrical Component Location

### A: LOCATION

- |                                       |   |                              |
|---------------------------------------|---|------------------------------|
| (1) Occupant detection control module | (3) Airbag ON/OFF indicator light (Map light) | (5) Seat belt tension sensor |
| (2) Occupant detection sensor         | (4) Buckle switch (Passenger's seat)          |                              |

# Airbag Connector

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 5. Airbag Connector

#### A: PROCEDURE

##### 1. BUCKLE SWITCH

1) How to disconnect:

- (1) Move the slide lock (A) in the direction of arrow.
- (2) While holding the slide lock (A) in the moved position, disconnect the connector.

#### CAUTION:

**When pulling the slide lock or disconnecting connector, be sure to hold the connector, not the harness.**

2) How to connect:

Holding the connector (A), and push it in carefully until a clicking sound is heard.

#### CAUTION:

**Be sure to insert the connector in until it is locked. Then pull it gently to make sure that it is locked.**

## Control Module I/O Signal

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 6. Control Module I/O Signal

#### A: ELECTRICAL SPECIFICATION

##### CAUTION:

Never remove the occupant detection control module, occupant detection sensor or seat frame because they are integrated into one unit.

Terminal name	Terminal No.	Input/Output value	Remarks	
IG – power supply	9	9 — 16 V	When ignition switch ON	
Airbag control module communication (COM)	10	Open collector terminal	Communication line	
Airbag control module communication (GND)	5	0 V	Ground	
Belt tension sensor	(Vcc)	4	0 — 5 V	Belt tension sensor power supply
	(Vout)	16	0.5 — 4.5 V	Sensor output voltage
	(GND)	14	0 V	Sensor ground
Occupant detection sensor	(Vcc)	6	0 — 5 V	Pressure sensor power supply
	(Vout)	7	0.5 — 4.5 V	Sensor output voltage
	(GND)	15	0 V	Sensor ground
Buckle switch	1	0 — IG voltage	Ignition voltage when switch ON	
Buckle switch (GND)	2	0 V	Switch ground	

#### B: WIRING DIAGRAM

Refer to the electrical wiring diagram. <Ref. to WI-155, WIRING DIAGRAM, Occupant Detection System.>

# Subaru Select Monitor

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### 7. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

When malfunction of the airbag system and the occupant detection system occur, the DTC stored in airbag control module will be read out.

Refer to the DTC readout of the airbag system (diagnosis). <Ref. to AB(diag)-30, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

NOTE:

- For details concerning the operation procedure, refer to the PC Application Help for Subaru Select Monitor.
- For details concerning DTCs, refer to the “List of Diagnostic Trouble Code (Airbag system, Occupant detection system)”. <Ref. to AB(diag)-44, List of Diagnostic Trouble Code (DTC).> <Ref. to OD(diag)-22, List of Diagnostic Trouble Code (DTC).>

##### 2. DISPLAY OF STATUS INFORMATION

Check the operating condition of each sensor in the event of malfunction in the seat belt buckle switch and seat position sensor, or when the seat belt buckle switch and seat position sensor has been replaced.

1) Select {Each System Check} in «Main Menu».

2) On the «System Selection Menu» display screen, select the {Airbag System}.

3) On the «Airbag System» display screen, select the {Status Data}.

The following table is for support data.

Contents	Display Contents
Seat position sensor LH	—*5
Seat position sensor RH	—*5
Seat belt buckle switch LH	—*9
Seat belt buckle switch RH	Belted *6/Unbelted*7 /Other *8/Initial Setting *4 /—*9
Passenger's airbag control status	ON *10/OFF *11 /Initial Setting *4

\*1: The seat position is forward.

\*2: The seat position is rearward.

\*3: Displayed when data other than before and behind the seat, such as the breakdown etc, is input.

\*4: Displayed when it is initial.

\*5: Seat position sensor not supported

\*6: Seat belt fastened

\*7: Seat belt not fastened

\*8: Displayed when data other than belt fastened or not fastened, such as breakdowns is input.

\*9: Seat belt buckle switch not supported

\*10: Passenger's airbag operating state

\*11: Passenger's airbag non-operating state

NOTE:

For details concerning operation procedures, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.

### 3. CLEAR MEMORY MODE

Clear the DTC stored in the airbag control module after repairing the airbag system and occupant detection system. (After the breakdown is recovered, the breakdown code for completed recoveries are read out when the next breakdown occurs if the memory clear work is not performed.)

- 1) Select {Each System Check} in «Main Menu».
- 2) On the «System Selection Menu» display screen, select the {Airbag System}.
- 3) On the «Airbag System» display screen, select the {Clear Memory}.
- 4) When the “Clear Memory?” is shown on the screen, select the [OK].
- 5) When “Done” is displayed, terminate the Subaru Select Monitor and turn the ignition switch to OFF.

#### NOTE:

For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

### 4. SYSTEM CALIBRATION (REZEROING)

#### NOTE:

When replacing the occupant detection system, or removing and disassembling the passenger's seat, always perform the system calibration after installing a seat in the vehicle.

#### CAUTION:

**When the trouble occurs in the system during calibration process, “Occupant detection calibration failure” is detected in the DTC 2A of the airbag system and the airbag warning light lights. In this case, after turning the ignition switch to OFF once, redo the system calibration (Rezeroing), or after clearing the cause of the failure, perform the system calibration again.**

- 1) Park empty vehicle on a level surface.
- 2) Select {Each System Check} in «Main Menu».
- 3) On the «System Selection Menu» display screen, select the {Occupant Detection System}.
- 4) On the «Occupant Detection System» display screen, select the {Zero Point Adjustment}.

5) «See service manual. And check vehicle condition for successfully completing the rezeroing.» is displayed. Check the following to adjust the condition of the vehicle.

- Adjust the seat backrest to be fully upright. (For models with power seats, press the power seat button until the backrest comes to a stop.)
- Adjust the seat slide position all the way back. (For models with power seats, press the power seat button until the seat slide does not move any further.)
- Do not place anything on the top of the seat cushion.
- Sit on the seat cushion to smooth the seat surface.
- Check that the passenger's seat belt is not inserted into the buckle, not tense or not stuck.
- Check that ambient temperature is in a range from 0 to 40°C.

6) When the «Re-zeroing Adjust the passenger seat to the condition shown in service manual» is displayed, slide the passenger seat all the way to the back, check that the backrest is adjusted to all the way up, and select the [OK].

7) When the «Re-zeroing Unbuckle the Passenger seat belt Continue: OK, Quit: NO» is displayed, make sure the passenger's seat belt is disconnected from the buckle and select the [OK].

8) When the «Re-zeroing Empty the passenger seat Continue: OK, Quit: NO» is displayed, make sure that the passenger's seat is empty, the airbag OFF indicator illuminates and the airbag ON indicator does not illuminate, and select the [OK].

#### NOTE:

- After selecting the [OK], «Now processing... Wait for a while. Do not touch or give impact to vehicle and seat» is displayed. Do not touch or rock the vehicle while the message is displayed.
- During the system calibration process, if the «Re-zeroing is unsuccessful See service manual Press OK to END» is displayed, go to step 10).

# Subaru Select Monitor

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

9) When the re-zeroing is ended normally, the «Re-zeroing is successfully completed Press OK to END» is displayed. and then turn the ignition switch to OFF to finish the diagnosis.

10) During the system calibration process, if «Re-zeroing is unsuccessful See service manual Press OK to END» is displayed, turn the ignition switch to OFF once and turn it ON again, then read the DTC of the airbag system. <Ref. to AB(diag)-30, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

When DTC is input, fix the fault and then perform the system calibration. When DTC is not input, check the seat and vehicle status and then perform the system calibration again. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

### NOTE:

When the re-zeroing is unsuccessful, there could be occupant detection system failure or improper seat and vehicle status. When the airbag warning light illuminates, read the DTC of the airbag system, and perform the diagnosis while referring to “List of Diagnostic Trouble Code”. <Ref. to AB(diag)-30, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to AB(diag)-44, LIST, List of Diagnostic Trouble Code (DTC).>

## B: INSPECTION

### 1. COMMUNICATION FOR INITIALIZING IMPOSSIBLE

#### DETECTING CONDITION:

Defective harness connector

#### TROUBLE SYMPTOM:

Communication is impossible between the airbag control module and the Subaru Select Monitor.

Refer to “Initial Communication Impossible” in the DTC of the airbag system (diagnosis). <Ref. to AB(diag)-32, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, INSPECTION, Subaru Select Monitor.>

### 2. WITHOUT DTC

#### DETECTING CONDITION:

- Defective combination meter
- Open circuit of harness

#### TROUBLE SYMPTOM:

- Airbag warning light remains on.
- “NO TROUBLE CODE” will be displayed on the Subaru Select Monitor.

#### NOTE:

- For detailed operation procedures, refer to “Airbag Warning Light Failure”. <Ref. to AB(diag)-39, Airbag Warning Light Failure.>
- When the airbag warning light is OFF and “NO TROUBLE CODE” is displayed on Subaru Select Monitor, the system is operating properly.

## Read Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 8. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

For details on reading DTCs, refer to “Airbag System (Diagnosis) Subaru Select Monitor”. <Ref. to AB(diag)-30, Subaru Select Monitor.>

## Inspection Mode

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

### 9. Inspection Mode

#### A: PROCEDURE

Recreate the circumstance by referring to the conditions described in the checklist.

### 10. Clear Memory Mode

#### A: OPERATION

- Clear the memory in the following steps after the malfunction is repaired.
- For details to clear the DTC, refer to “Airbag System (Diagnosis) Subaru Select Monitor”. <Ref. to AB(diag)-30, Subaru Select Monitor.>

# Airbag Warning Light Illumination Pattern

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

---

## 11. Airbag Warning Light Illumination Pattern

### A: INSPECTION

Turn the ignition switch to ON, and confirm that the airbag warning light remains on for approx. 6 seconds and then goes off afterwards.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## 14. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC 2A ODS CALIBRATION ERROR

#### DTC DETECTING CONDITION:

System calibration (Rezeroing) was not completed properly.

	Step	Check	Yes	No
1	<b>PERFORM RE-ZEROING.</b> Perform system calibration using the Subaru Select Monitor. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>	Did the system calibration complete properly?	Finish the diagnosis.	Follow the system calibration procedures. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

### B: DTC 2B ODS SYSTEM WRONG PARTS

#### DTC DETECTING CONDITION:

- Wrong airbag control module is installed.
- Wrong occupant detection system is installed.

	Step	Check	Yes	No
1	<b>CHECK OCCUPANT DETECTION SYSTEM.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Replace the passenger's seat cushion pad and frame assembly. <Ref. to SE-9, REMOVAL, Front Seat.> <Ref. to SE-15, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.> 3) Connect the ground cable to the battery. 4) Connect Subaru Select Monitor to the vehicle and perform the system calibration. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>	Did the system calibration complete properly?	Finish the diagnosis.	Go to step 2.
2	<b>CHECK AIRBAG CONTROL SYSTEM.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Replace the airbag control module. <Ref. to AB-20, REMOVAL, Airbag Control Module.> 3) Connect the ground cable to the battery. 4) Connect Subaru Select Monitor to the vehicle and perform the system calibration. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>	Did the system calibration complete properly?	Finish the diagnosis.	Check between the occupant detection control module and airbag control module.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

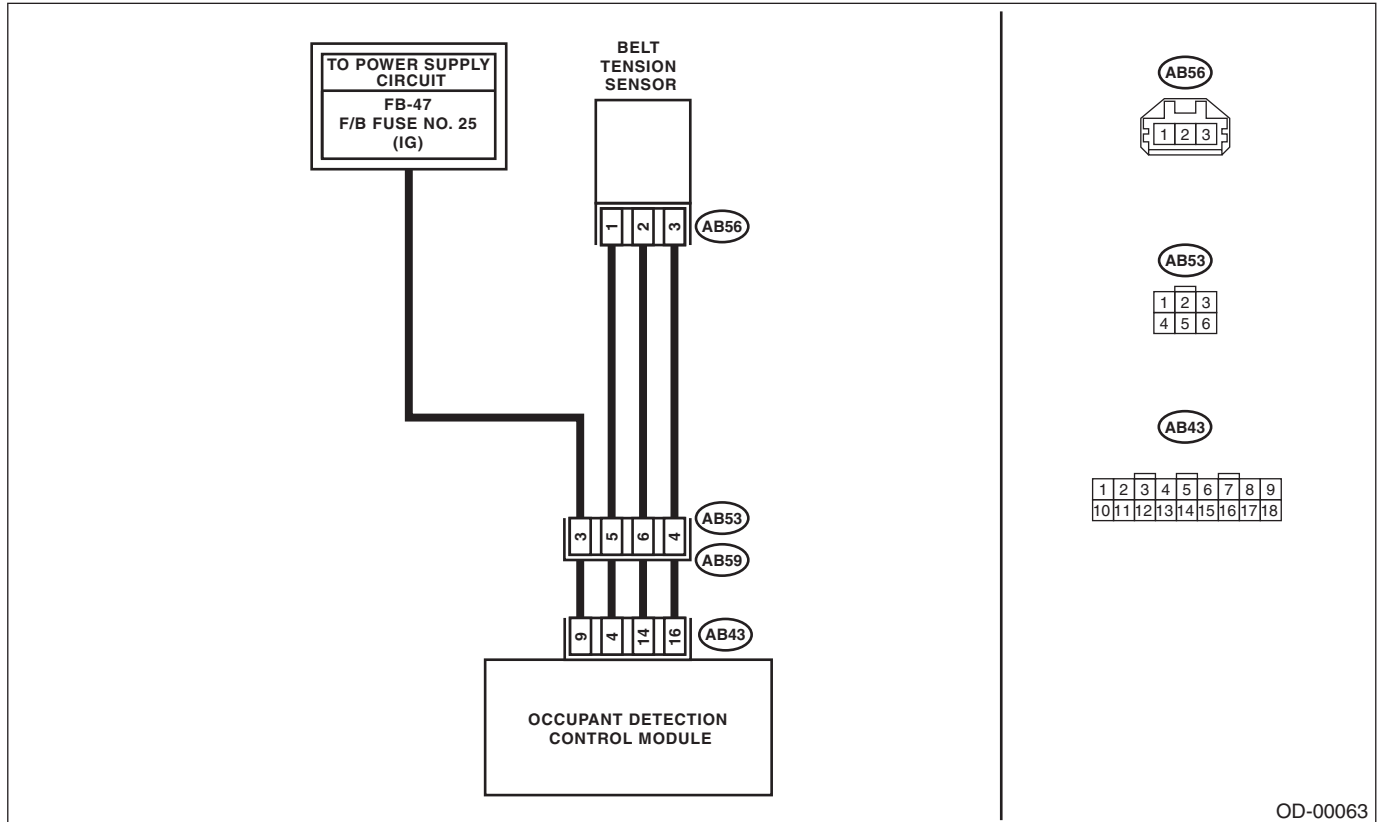

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### C: DTC 2C BELT TENSION SENSOR FAILURE

#### DTC DETECTING CONDITION:

- Passenger's seat belt tension sensor is faulty.
- Airbag main harness circuit is open or shorted.
- Occupant detection control module is faulty.

#### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the occupant detection control module and belt tension sensor.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
<b>2 CHECK THE BELT TENSION SENSOR.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the belt tension sensor connector (AB56) from the airbag harness. 3) Connect the test harness AC to the connector (AB56). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for approximately 6 seconds and go off?	Replace the seat belt outer. <Ref. to SB-13, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>	Go to step 3.
<b>3 CHECK AIRBAG HARNESS.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait for 20 seconds or more. 2) Disconnect the test harness AC from the belt tension sensor connector (AB56). 3) Connect the test harness AD (1AD) to the connector (AB56). 4) Disconnect the airbag harness connector (AB53), and connect connector (1AB) of test harness AB. 5) Measure the resistance between test harness terminals. <b>Connector &amp; terminal</b> <b>(2AB) No. 5 — (2AD) No. 1:</b> <b>(2AB) No. 4 — (2AD) No. 3:</b> <b>(2AB) No. 6 — (2AD) No. 2:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 4.	Replace the airbag harness along with chassis harness.
<b>4 CHECK AIRBAG HARNESS.</b> Measure the resistance between test harness terminals, and between test harness terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(2AB) No. 4 — (2AD) No. 1:</b> <b>(2AB) No. 4 — (2AD) No. 2:</b> <b>(2AB) No. 4 — chassis ground:</b> <b>(2AB) No. 5 — (2AD) No. 2:</b> <b>(2AB) No. 5 — chassis ground:</b>	Is the resistance 1 M $\Omega$ or more?	Go to step 5.	Replace the airbag harness along with chassis harness.
<b>5 CHECK AIRBAG HARNESS.</b> 1) Connect the battery ground terminal and turn the ignition switch to ON. 2) Measure the voltage between test harness and chassis ground. <b>Connector &amp; terminal</b> <b>(2AD) No. 1 — chassis ground:</b> <b>(2AD) No. 3 — chassis ground:</b>	Is the voltage 1 V or less?	Replace the airbag harness along with chassis harness.	Check the seat harness, and if any fault is found, replace the seat harness. If no fault is found in the seat harness, replace the seat cushion frame assembly. <Ref. to SE-15, DISASSEMBLY, Front Seat.>

### D: DTC 27 ODS COMMUNICATION ERROR

Perform the diagnosis following diagnostic procedures for the airbag system. <Ref. to AB(diag)-67, DTC 27 ODS COMMUNICATION ERROR, Diagnostic Chart with Trouble Code.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

### E: DTC 29 ODS FAILURE

#### DTC DETECTING CONDITION:

- Occupant detection sensor is faulty.
- Occupant detection control module is faulty.
- Occupant detection harness is faulty.
- Rear airbag harness is faulty.
- Fuse No. 25 (in joint box) is blown.

	Step	Check	Yes	No
1	<b>CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the occupant detection control module and airbag control module.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
2	<b>CHECK DIAGNOSTIC TROUBLE CODE (DTC).</b> Read diagnostic trouble code (DTC) for the airbag system.	Is "2C Belt Tension Sensor failure or 37 Buckle Switch failure" displayed in the diagnostics code?	Perform the diagnosis according to each DTC.	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system. <Ref. to SE-15, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

OCCUPANT DETECTION SYSTEM (DIAGNOSTICS)

## F: DTC 37 BUCKLE SWITCH RH FAILURE

### DTC DETECTING CONDITION:

- Passenger's buckle switch circuit is open, shorted or shorted to ground.
- Seat harness circuit is open, shorted or shorted to ground.
- Occupant detection control module is faulty.

### WIRING DIAGRAM:

OD-00064

Step	Check	Yes	No
<b>1</b> <b>CHECK POOR CONTACT IN CONNECTORS.</b> Check for poor contact of the connectors between the occupant detection control module and buckle switch.	Is there poor contact?	Reconnect the connector. If the fault is not fixed, replace the airbag harness.	Go to step 2.
<b>2</b> <b>CHECK THE BUCKLE SWITCH.</b> 1) Turn the ignition switch to OFF, disconnect the battery ground terminal, and wait for 20 seconds. 2) Disconnect the buckle switch connector (AB60). 3) Connect the test harness AE1 and test harness connector Y to the buckle switch connector (AB60). 4) Connect the battery ground terminal and turn the ignition switch to ON.	Does the airbag warning light illuminate for 6 seconds and go off?	Replace the buckle switch. <Ref. to SB-13, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>	Check the seat harness, and if any fault is found, replace the seat harness. If the fault is not fixed, replace the occupant detection system.

## B: CAUTION

- Before starting the work, turn the ignition switch to OFF, disconnect the battery ground cable and wait for 20 seconds or more.
- The pretensioner system has a backup power source. The pretensioner might deploy if you do not wait for 20 seconds or more before starting work.
- Do not drop or apply any impact to the pretensioner.
- If oil, grease or water gets on the pretensioner, wipe it off immediately with a dry cloth.
- Do not expose the pretensioner to high temperature or flame.
- Do not allow current to flow through or voltage to reach the pretensioner. Do not use a circuit tester to check resistance of the pretensioner.
- Do not disassemble or attempt to repair the pretensioner. If it is dented, cracked or deformed, replace it with a new part.
- Do not use the airbag or pretensioner parts from other vehicles. Always replace parts with new parts.
- When handling a seat belt with deployed pretensioner, wear gloves and goggles. Wash your hands afterwards.
- Do not reuse a seat belt with deployed pretensioner.
- If material from the airbag enters the eyes or contacts skin during deployment, wash it away with clean water, and then consult a doctor.

## C: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
TORX® T50	Used for removing and installing the inner seat belt assembly.

## 2. Pretensioner Connector

### A: PROCEDURE

Refer to airbag connectors in the airbag section.  
<Ref. to AB-8, PROCEDURE, Airbag Connector.>

## 3. Inspection Locations After a Collision

### A: INSPECTION

Check for the following, and replace with new parts if necessary.

- Center pillar lower trim is discolored or cracked.
- Wiring harness and connector are damaged.

# Seat Belt Warning System

## SEAT BELT SYSTEM

### 4. Seat Belt Warning System

#### A: WIRING DIAGRAM

<Ref. to WI-154, WIRING DIAGRAM, Seat Belt Warning System.>

#### B: INSPECTION

##### TROUBLE SYMPTOM:

- Driver's side seat belt warning light does not turn on or off.
- Warning buzzer does not beep.

	Step	Check	Yes	No
1	<b>CHECK BODY INTEGRATED UNIT.</b> 1) Sit on the driver's seat and passenger's seat. 2) Prepare the Subaru Select Monitor kit. 3) Turn the ignition switch to ON (engine OFF), and run the "PC application help for Subaru Select Monitor". 4) Read the data of ignition power supply voltage from Subaru Select Monitor. <Ref. to LAN(diag)-12, OPERATION, Subaru Select Monitor.>	Is the voltage 10 V or more?	Go to step 2.	Check the ignition switch circuit.
2	<b>CHECK BODY INTEGRATED UNIT.</b> Read the data of the belt warning switch. <Ref. to LAN(diag)-12, OPERATION, Subaru Select Monitor.>	Is the belt warning display ON?	Go to step 3.	Turn the belt warning ON with unit customization.
3	<b>CHECK BODY INTEGRATED UNIT.</b> 1) Read the data of the driver's seat belt switch. <Ref. to LAN(diag)-12, OPERATION, Subaru Select Monitor.> 2) Connect and disconnect the seat belt buckle.	Does the seat belt SW display turn ON ←→ OFF according to the operation?	Go to step 8.	Go to step 4.
4	<b>CHECK HARNESS.</b> 1) Disconnect the negative terminal from the battery, and wait for more than 20 seconds. 2) Measure the resistance between the body integrated unit and the seat belt buckle switch LH. <b>Connector &amp; terminal</b> <b>(i84) No. 4 — (R8) No. 3:</b>	Is the harness normal?	Go to step 5.	Repair the harness.
5	<b>CHECK HARNESS.</b> Check for short circuit to battery, open circuit and short circuit to ground between the seat belt buckle switch LH and chassis ground. <b>Connector &amp; terminal</b> <b>(R8) No. 1 — Chassis ground:</b>	Is the harness normal?	Go to step 6.	Repair the harness.
6	<b>CHECK SEAT BELT BUCKLE SWITCH LH.</b> 1) Insert the tongue plate to the driver's seat belt buckle. 2) Check for short circuit to battery and open circuit between the seat belt switch LH connectors (R8). <b>Connector &amp; terminal</b> <b>(R8) No. 1 — (R8) No. 3:</b>	Is the resistance less than 10 Ω?	Go to step 7.	Replace the inner belt assembly LH. <Ref. to SB-13, REMOVAL, Front Seat Belt.>

# Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
<p><b>7</b>     <b>CHECK SEAT BELT BUCKLE SWITCH LH.</b>            1) Disconnect the driver's seat belt buckle and the tongue plate.            2) Measure the resistance between the terminals of the seat belt switch LH connectors (R8).  <b>Connector &amp; terminal</b>  <b>(R8) No. 1 — (R8) No. 3:</b></p>	<p>Is the resistance 1 MΩ or more?</p>	<p>Replace the body integrated unit.            &lt;Ref. to SL-55, REMOVAL, Body Integrated Unit.&gt;</p>	<p>Replace the inner belt assembly LH.            &lt;Ref. to SB-13, REMOVAL, Front Seat Belt.&gt;</p>
<p><b>8</b>     <b>CHECK BODY INTEGRATED UNIT.</b>            1) Read the data of the passenger's seat belt switch. &lt;Ref. to LAN(diag)-12, OPERATION, Subaru Select Monitor.&gt;            2) Connect and disconnect the seat belt buckle.</p>	<p>Does the seat belt SW display turn ON ←→ OFF according to the operation?</p>	<p>Go to step 12.</p>	<p>Go to step 9.</p>
<p><b>9</b>     <b>CHECK HARNESS.</b>            1) Disconnect the negative terminal from the battery, and wait for more than 20 seconds.            2) Check for short circuit to battery, open circuit and short circuit to ground between the body integrated unit and the airbag control module.  <b>Connector &amp; terminal</b>  <b>(i84) No. 13 — (AB6) No. 15:</b></p>	<p>Is the harness normal?</p>	<p>Go to step 10.</p>	<p>Repair the harness.</p>
<p><b>10</b>    <b>CHECK HARNESS.</b>            Check short circuit to battery, open circuit and short circuit to ground between the airbag control module and the occupant detection control module, between the occupant detection control module and the seat belt buckle switch RH, and between the seat belt buckle switch RH and the chassis ground.  <b>Connector &amp; terminal</b>  <b>(AB18) No. 16 — (AB43) No. 10:</b>  <b>(AB18) No. 24 — (AB43) No. 5:</b>  <b>(AB43) No. 1 — (AB60) No. 1:</b>  <b>(AB43) No. 2 — (AB60) No. 2:</b>  <b>(AB60) No. 1 — Chassis ground:</b>  <b>(AB60) No. 2 — Chassis ground:</b></p>	<p>Is the harness normal?</p>	<p>Go to step 11.</p>	<p>Repair the harness.</p>

# Seat Belt Warning System

## SEAT BELT SYSTEM

Step	Check	Yes	No
<b>11 CHECK AIRBAG CONTROL MODULE, OCCUPANT DETECTION SENSOR AND SEAT BELT BUCKLE SWITCH RH.</b> Check the airbag control module, occupant detection sensor and seat belt buckle switch RH. <ul style="list-style-type: none"> <li>• Airbag control module: &lt;Ref. to AB(diag)-2, Basic Diagnostic Procedure.&gt;</li> <li>• Occupant detection sensor: &lt;Ref. to OD(diag)-2, Basic Diagnostic Procedure.&gt;</li> <li>• Seat belt buckle switch RH: Measure the resistance between the terminals of connectors (AB60).                          Switch ON (When connecting the seat belt) -                          The resistance is less than 10 Ω                          Switch OFF (When disconnecting the seat belt) -                          The resistance is 1 MΩ or more.</li> </ul>	Are airbag control module, occupant detection sensor and seat belt buckle switch RH normal?	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>	<ul style="list-style-type: none"> <li>• Airbag control module malfunction: Replace the airbag control module. &lt;Ref. to AB-20, REMOVAL, Airbag Control Module.&gt;</li> <li>• Occupant detection sensor malfunction: Replace the seat cushion pad &amp; frame assembly. &lt;Ref. to SE-15, PASSENGER'S SEAT, DISASSEMBLY, Front Seat.&gt;</li> <li>• Seat belt buckle switch RH malfunction: Replace the inner seat belt assembly RH. &lt;Ref. to SB-13, INNER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.&gt;</li> </ul>
<b>12 CHECK SEAT BELT WARNING LIGHT.</b> Turn the ignition switch to OFF, disconnect the seat belt of the driver's and passenger's seat.	Does the driver's seat belt warning light blink?	Go to step 15.	Go to step 13.
<b>13 CHECK HARNESS.</b> 1) Disconnect the negative terminal from the battery, and wait for more than 20 seconds. 2) Check for open circuit between the body integrated unit and the combination meter. <b>Connector &amp; terminal</b> <b>(i84) No. 20 — (i10) No. 9:</b>	Is the resistance less than 10 Ω?	Go to step 14.	Repair the harness.
<b>14 CHECK SEAT BELT WARNING LIGHT.</b> 1) Connect the ground cable to the battery. 2) Disconnect the connector from body integrated unit. 3) Short No. 20 of the body integrated unit connector (i84).	Does seat belt warning light illuminate?	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
<b>15 CHECK SEAT BELT WARNING LIGHT.</b> Check the passenger's seat belt warning light.	Does the passenger's seat belt warning light blink?	Go to step 19.	Go to step 16.
<b>16 CHECK HARNESS.</b> 1) Disconnect the negative terminal from the battery, and wait for more than 20 seconds. 2) Check for open circuit between the body integrated unit and the map light. <b>Connector &amp; terminal</b> <b>(B280) No. 27 — (R150) No. 5:</b>	Is the resistance less than 10 Ω?	Go to step 17.	Repair the harness.
<b>17 CHECK HARNESS.</b> 1) Connect the ground cable to the battery. 2) Measure the voltage between the map light connector and chassis ground. <b>Connector &amp; terminal</b> <b>(R150) No. 4 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 18.	Repair the harness.

# Seat Belt Warning System

SEAT BELT SYSTEM

Step	Check	Yes	No
<b>18 CHECK SEAT BELT WARNING LIGHT.</b> 1) Connect the ground cable to the battery. 2) Disconnect the connector from the map light. 3) Short No. 5 of the map light connector (R150).	Does seat belt warning light illuminate?	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>	Check the map light.
<b>19 CHECK BODY INTEGRATED UNIT.</b> Check if the warning buzzer sounds.	Does the warning buzzer sound?	Go to step 20.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
<b>20 CHECK SEAT BELT WARNING LIGHT.</b> 1) Connect the passenger's seat belt. 2) Wait until the warning buzzer stops sounding. 3) Start the engine, and set the vehicle speed to 15 km/h (9 MPH) or faster.	Does the driver's seat belt warning light blink and buzzer sound?	Go to step 24.	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
<b>21 CHECK BODY INTEGRATED UNIT.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC U1223 detected?	<ul style="list-style-type: none"> <li>• Check the LAN system. &lt;Ref. to LAN(diag)-67, DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).&gt;</li> <li>• Check VDC or ABS.</li> <li>• VDC &lt;Ref. to VDC(diag)-2, Basic Diagnostic Procedure.&gt;</li> <li>• ABS &lt;Ref. to ABS(diag)-2, Basic Diagnostic Procedure.&gt;</li> </ul>	Go to step 22.
<b>22 CHECK BODY INTEGRATED UNIT.</b> Read the data of the "front wheel speed" from the body integrated unit. <Ref. to LAN(diag)-12, OPERATION, Subaru Select Monitor.>	Is the data displayed as 999.9 km/h?	<ul style="list-style-type: none"> <li>• Check the LAN system. &lt;Ref. to LAN(diag)-67, DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).&gt;</li> <li>• Check VDC or ABS.</li> <li>• VDC &lt;Ref. to VDC(diag)-2, Basic Diagnostic Procedure.&gt;</li> <li>• ABS &lt;Ref. to ABS(diag)-2, Basic Diagnostic Procedure.&gt;</li> </ul>	Go to step 23.

# Seat Belt Warning System

## SEAT BELT SYSTEM

Step	Check	Yes	No
<b>23 CHECK BODY INTEGRATED UNIT.</b> Read the data of the "front wheel speed" from the body integrated unit. <Ref. to LAN(diag)-12, OPERATION, Subaru Select Monitor.>	Does the data indicate the normal vehicle speed?	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>	<ul style="list-style-type: none"> <li>• Check the LAN system. &lt;Ref. to LAN(diag)-67, DTC U1223 CANS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).&gt;</li> <li>• Check VDC or ABS.</li> <li>• VDC &lt;Ref. to VDC(diag)-2, Basic Diagnostic Procedure.&gt;</li> <li>• ABS &lt;Ref. to ABS(diag)-2, Basic Diagnostic Procedure.&gt;</li> </ul>
<b>24 CHECK WARNING LIGHT AND BUZZER.</b> Connect the driver's seat belt.	Does the driver's seat belt warning light go off and the buzzer stop sounding?	Go to step 25.	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
<b>25 CHECK WARNING LIGHT AND BUZZER.</b> Disconnect the passenger's seat belt.	Does the passenger's seat belt warning light blink and buzzer sound?	Go to step 26.	Go to step 21.
<b>26 CHECK WARNING LIGHT AND BUZZER.</b> Connect the passenger's seat belt.	Does the passenger's seat belt warning light go off and the buzzer stop sounding?	System is normal. Temporary poor contact.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>

## 5. Front Seat Belt

### A: REMOVAL

#### 1. OUTER SEAT BELT ASSEMBLY

- 1) Fold the backrest all the way forward, and then move the front seat all the way forward.
- 2) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait 20 seconds or more.
- 3) Remove the center pillar lower trim. <Ref. to EI-61, REMOVAL, Lower Inner Trim.>
- 4) Remove the center pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
- 5) Remove the bolt, then remove the center pillar inner protector lower.
- 6) Remove the bolt, and then remove the shoulder anchor.

- 7) Remove the bolt, and then remove the adjustable anchor assembly.

- 8) Disconnect the pretensioner connector (A), remove the bolt, and remove the seat belt retractor.

**NOTE:**

Disconnect the tension reducer connector (B) for the seat belt retractor with a tension reducer function.

- 9) Disconnect the connector of belt tension sensor on passenger's side.

**CAUTION:**

- Do not drop or subject the pretensioner to any impact.
- Since the pretensioner and bracket are integrated as a unit, do not disassemble them.

#### 2. INNER SEAT BELT ASSEMBLY

- 1) Turn the ignition switch to OFF, disconnect the battery ground cable, and wait 20 seconds or more.
- 2) Remove the four bolts in the slide rail LH and RH.
- 3) Disconnect the seat belt warning light connector under the seat.
- 4) Remove the harness clips from slide rail.
- 5) Remove the TORX® bolt, and then remove the inner seat belt assembly.

# Front Seat Belt

## SEAT BELT SYSTEM

### B: INSTALLATION

#### 1. OUTER SEAT BELT ASSEMBLY

Install in the reverse order of removal.

#### CAUTION:

- The parts of driver and passenger's sides are not the same. Before installation, make sure that the correct part is used.
- Be careful not to twist the seat belts during installation.

#### Tightening torque:

<Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

#### 2. INNER SEAT BELT ASSEMBLY

Install in the reverse order of removal.

#### CAUTION:

- After the passenger's inner seat belt assembly installation, check that the seat belt buckle switch operates normally using the Subaru Select Monitor in {Status Data} of "Airbag System". <Ref. to AB(diag)-31, DISPLAY OF STATUS INFORMATION, OPERATION, Subaru Select Monitor.> Improper buckle switch operation may cause airbag system malfunction.
- Inner seat belt assembly harness (1) must be routed securely as shown in the figure, as it can affect the performance of the occupant detection system.

- Driver's seat

- Passenger's seat

#### Tightening torque:

<Ref. to SB-2, FRONT SEAT BELT, COMPONENT, General Description.>

### C: INSPECTION

Check for the following, and replace with new parts if necessary.

- Pretensioner is cracked or deformed.
- The belt tension sensor is cracked. Or deformed.
- Seat belt is slackened, bent or worn. Seat belt is abnormally wound or extended.
- Inner seat belt assembly is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

## 6. Rear Seat Belt

### A: REMOVAL

#### 1. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

- 1) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the seat belt lower anchor bolt.

- 3) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 4) Remove the bolts, and then detach the outer seat belt assembly.

#### 2. SHOULDER SEAT BELT CENTER ASSEMBLY (SEDAN MODEL)

- 1) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the rear quarter trim. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>
- 3) Remove the rear shelf trim. <Ref. to EI-69, REMOVAL, Rear Shelf Trim.>
- 4) Remove the bolts, then remove the shoulder seat belt assembly.

#### 3. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (SEDAN MODEL)

- 1) Remove the rear seat cushion. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the bolts, then remove the center seat belt LH assembly.

#### 4. OUTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

- 1) Remove the luggage floor box. <Ref. to EI-73, REMOVAL, Luggage Floor Box.>
- 2) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-17, SEDAN MODEL, REMOVAL, Rear Seat.>
- 3) Remove the rear quarter lower trim. <Ref. to EI-64, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
- 4) Remove the bolt to remove outer seat belt retractor.

- 5) Remove the bolt to remove the outer seat belt guide.

# Rear Seat Belt

## SEAT BELT SYSTEM

### 5. SHOULDER SEAT BELT CENTER ASSEMBLY (WAGON MODEL)

- 1) Remove the quarter rear pillar trim. <Ref. to EI-64, WAGON MODEL, REMOVAL, Rear Quarter Trim.>
- 2) Remove the cover (A) from roof trim, and then insert it to the inside of roof trim.

- 3) Remove the clips, and then lower the roof trim end.

#### CAUTION:

When removing the roof trim clip, do not pull the roof trim end backward with excessive force, otherwise roof trim may be damaged.

- 4) Remove the bolt to remove the seat belt retractor.

### 6. CENTER SEAT BELT RH ASSEMBLY AND LH ASSEMBLY (WAGON MODEL)

- 1) Remove the rear seat cushion. <Ref. to SE-17, SEDAN MODEL, REMOVAL, Rear Seat.>
- 2) Remove the bolts, then remove the center seat belt assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- During installation, make sure that the seat belts are not twisted.
- During installation, make sure that the center seat belt assembly (RH & LH) are properly pulled out from the slit of seat cushions.
- After installation, make sure that the seat belts are smoothly extended and wound.
- If the vehicle is equipped with rear outer seat belts (wagon model), make sure that the seat belts are wound after installing the seat belt guide.

### C: INSPECTION

Check for the following, and replace with new parts if necessary.

- Seat belt is slackened, bent or worn. Seat belt is abnormally wound or extended.
- Inner seat belt assembly is deformed or damaged.
- Seat belt buckle cannot be engaged properly.

# General Description

## LIGHTING SYSTEM

### 1. General Description

#### A: SPECIFICATION

Headlight	Halogen type low beam		12 V — 55 W
	Halogen type high beam		12 V — 60 W
Front turn signal, parking, front side marker light			12 V — 27/8 W
Front fog light	OUTBACK		12 V — 51 W
	Except for OUTBACK		12 V — 55 W
Side turn signal light			12 V — 2.7 W (LED)
Rear combination light	Stop/tail light		12 V — 21/5 W
	Turn signal light		12 V — 21 W
	Wagon	Rear side marker light	12 V — 5 W
Back-up light	Sedan		12 V — 16 W
	Wagon		12 V — 16 W
License plate light			12 V — 5 W
High-mounted stop light	Sedan		12 V — 21 W
	Wagon		12 V — 1.3 W (LED)
Room light			12 V — 8 W
Spot map light			12 V — 8 W
Luggage room light			12 V — 13 W
Trunk room light			12 V — 5 W
Glove box light			12 V — 1.4 W
Door step light			12 V — 3 W

#### B: CAUTION

- Before removing or installing parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.
- The airbag system wiring harness is routed near electrical parts and switches. Airbag system wiring harnesses and connectors are yellow. Do not use the electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing electrical parts and switches.

#### C: PREPARATION TOOL

##### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

## 2. Headlight and Tail Light System

### A: WIRING DIAGRAM

#### 1. HALOGEN TYPE HEADLIGHT

<Ref. to WI-157, WIRING DIAGRAM, Headlight System.>

#### 2. CLEARANCE LIGHT AND ILLUMINATION LIGHT

<Ref. to WI-164, WIRING DIAGRAM, Clearance Light and Illumination Light System.>

### B: INSPECTION

#### 1. HEADLIGHT SWITCH

<Ref. to LI-11, INSPECTION, Combination Switch (Light).>

#### 2. HEADLIGHT RELAY

Measure the headlight relay resistance between terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

### 3. TAIL AND ILLUMINATION RELAY

Measure the resistance between the tail and illumination relay terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

# Day Time Running Light System

LIGHTING SYSTEM

## 3. Day Time Running Light System

### A: WIRING DIAGRAM

<Ref. to WI-157, WIRING DIAGRAM, Headlight System.>

### B: INSPECTION

#### 1. DAYTIME RUNNING LIGHT MODULE CHECK

Step	Check	Yes	No
<b>1 CHECK THE POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between the daytime running light module terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B96) No. 2 (+) — Chassis ground (-):</b> <b>(B242) No. 6 (+) — Chassis ground (-):</b>	Is the voltage battery voltage?	Go to step 2.	Check the fuse and the power supply circuit.
<b>2 CHECK THE GROUND CIRCUIT.</b> 1) Disconnect the daytime running light module connector. 2) Measure the resistance between the daytime running light module connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B242) No. 10 (+) — Chassis ground (-):</b>	Is the resistance less than 1 Ω?	Go to step 3.	Check the ground circuit.
<b>3 CHECK THE PARKING SIGNAL.</b> 1) Connect the daytime running light module connector. 2) Measure the resistance between the terminal and chassis ground when pulling parking brake lever and releasing. <b>Connector &amp; terminal</b> <b>(B96) No. 4 (+) — Chassis ground (-):</b>	Does the voltage change to 0⇔ battery voltage?	Go to step 4.	Check the parking brake switch circuit.
<b>4 CHECK THE STARTER SIGNAL.</b> Turn the ignition switch to ON ⇔ Starter and measure the voltage of terminal. <b>Connector &amp; terminal</b> <b>(B96) No. 7 (+) — Chassis ground (-):</b>	Does the voltage change to 0⇔ battery voltage?	Go to step 5.	Check the starter switch circuit.
<b>5 CHECK THE HEADLIGHT SWITCH SIGNAL.</b> Turn the headlight switch to LO ⇔ OFF and measure the voltage of terminal. <b>Connector &amp; terminal</b> <b>(B242) No. 2 (+) — Chassis ground (-):</b>	Does the voltage change to 0⇔ battery voltage?	Go to step 6.	Check the combination switch and the headlight LO circuit.
<b>6 CHECK THE HEADLIGHT SWITCH SIGNAL.</b> Turn the headlight switch to HI ⇔ OFF and measure the voltage of terminal. <b>Connector &amp; terminal</b> <b>(B96) No. 1 (+) — Chassis ground (-):</b>	Does the voltage change to 0⇔ battery voltage?	Go to step 7.	Check the combination switch and the headlight HI circuit.
<b>7 CHECK THE HEADLIGHT SIGNAL.</b> 1) Turn the ignition switch to ON. 2) Turn the headlight from HI to ON/OFF and measure the voltage of terminal. <b>Connector &amp; terminal</b> <b>(B242) No. 5 (+) — Chassis ground (-):</b>	Does the voltage change to 0⇔ battery voltage?	Go to step 8.	Check the headlight HI circuit.
<b>8 CHECK THE HEADLIGHT SIGNAL.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage of terminal on passing of headlight. <b>Connector &amp; terminal</b> <b>(B96) No. 3 (+) — Chassis ground (-):</b>	Does the voltage change to 0⇔ battery voltage?	If the above test is OK, replace the daytime running light module.	Check the headlight HI circuit.

## 2. LOW BEAM RELAY

Measure the resistance between the daytime running relay terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

## 4. Front Fog Light System

### A: WIRING DIAGRAM

#### 1. FRONT FOG LIGHT

<Ref. to WI-160, WIRING DIAGRAM, Front Fog Light System.>

### B: INSPECTION

#### 1. FRONT FOG LIGHT SWITCH

Measure the resistance between front fog light switch terminals.

<Ref. to LI-11, INSPECTION, Combination Switch (Light).>

#### 2. FRONT FOG LIGHT RELAY

Connect terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal, and measure the front fog light relay resistance between terminals.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 Ω
No		1 MΩ or more

## 5. Turn Signal Light and Hazard Light System

### A: WIRING DIAGRAM

#### 1. TURN SIGNAL LIGHT AND HAZARD LIGHT

<Ref. to WI-169, WIRING DIAGRAM, Turn Signal Light and Hazard Light System.>

### B: INSPECTION

#### 1. TURN SIGNAL SWITCH

<Ref. to LI-11, INSPECTION, Combination Switch (Light).>

#### 2. HAZARD SWITCH

Measure the resistance between hazard switch terminals.

Switch position	Terminal No.	Standard
OFF	2 and 3	1 MΩ or more
ON		Less than 1 Ω

#### 3. TURN SIGNAL AND HAZARD MODULE

Connect the battery and turn signal light bulb to the module. The module is properly functioning if it blinks when power is supplied to the circuit.

# Back-up Light System

LIGHTING SYSTEM

## 6. Back-up Light System

### A: WIRING DIAGRAM

#### 1. BACK-UP LIGHT

<Ref. to WI-161, WIRING DIAGRAM, Back-up Light System.>

### B: INSPECTION

#### 1. BACK-UP LIGHT SWITCH (MT MODEL)

Measure the resistance between the back-up light switch terminals.

Switch position	Terminal No.	Standard
When shift lever is set in reverse position	1 and 2	Less than 1 $\Omega$
Other positions		1 M $\Omega$ or more

#### 2. INHIBITOR SWITCH (4AT MODEL)

Measure the resistance between the inhibitor switch terminals.

Switch position	Terminal No.	Standard
When the selector lever is in the "R" range	1 and 2	Less than 1 $\Omega$
Other positions		1 M $\Omega$ or more

#### 3. BACK-UP LIGHT RELAY (5AT MODEL)

Measure the resistance between headlight relay terminals when connecting terminal No. 4 to the battery positive terminal and terminal No. 3 to the battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

#### NOTE:

Checks other than the back-up light relay. <Ref. to 4AT-47, INSPECTION, Inhibitor Switch.>

## 7. Stop Light System

### A: WIRING DIAGRAM

#### 1. STOP LIGHT

<Ref. to WI-163, WIRING DIAGRAM, Stop Light System.>

### B: INSPECTION

#### 1. STOP LIGHT SWITCH

Measure the resistance between stop light switch terminals.

- (1) Models without cruise control
- (2) Models with cruise control

Switch position	Terminal No.	Standard
When brake pedal is depressed	Models without cruise control: 1 and 2	Less than 1 $\Omega$
When brake pedal is released	Models with cruise control: 2 and 3	1 M $\Omega$ or more

# Room Light System

LIGHTING SYSTEM

## 8. Room Light System

### A: WIRING DIAGRAM

#### 1. ROOM LIGHT

<Ref. to WI-171, WIRING DIAGRAM, Interior Light System.>

### B: INSPECTION

#### 1. DOOR SWITCH

Measure the resistance between door switch terminals.

Switch position	Terminal No.	Standard
When door is opened	1 and 3	Less than 1 Ω
When door is closed		1 MΩ or more

#### 2. REAR GATE LATCH SWITCH

Measure the resistance between rear gate latch switch terminals.

Switch position	Terminal No.	Standard
When rear gate is opened	1 and 2	Less than 1 Ω
When rear gate is closed		1 MΩ or more

#### 3. TRUNK ROOM LIGHT SWITCH

Measure the resistance between the trunk room light switch terminals.

Switch position	Terminal No.	Standard
When trunk lid is opened	1 and 3	Less than 1 Ω
When trunk lid is closed		1 MΩ or more

## 9. Combination Switch (Light)

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the screws and remove the steering column covers (upper and lower).

- 3) Disconnect the connector from the combination switch.
- 4) Remove the screws which secure the switch, then remove the combination switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between combination switch terminals.

#### 1. LIGHTING SWITCH

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
Tail	14 and 16	Less than 1 Ω
Head	13, 14 and 16	Less than 1 Ω

#### 2. DIMMER & PASSING SWITCH

Switch position	Terminal No.	Standard
Passing	7, 8 and 16	Less than 1 Ω
Low beam	17 and 16	Less than 1 Ω
High beam	7 and 16	Less than 1 Ω

#### 3. TURN SIGNAL SWITCH

Switch position	Terminal No.	Standard
Left	1 and 2	Less than 1 Ω
Neutral	—	1 MΩ or more
Right	2 and 3	Less than 1 Ω

#### 4. FRONT FOG LIGHT

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
ON	11 and 16	Less than 1 Ω

# Combination Base Switch Assembly

LIGHTING SYSTEM

## 10. Combination Base Switch Assembly

### A: REMOVAL

- 1) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
- 2) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 3) Remove the screws and remove the steering column lower cover.

- 4) Remove the combination switch. <Ref. to LI-11, REMOVAL, Combination Switch (Light).> <Ref. to WW-7, REMOVAL, Combination Switch (Wiper).>
- 5) Remove the four screws and remove the roll connector.
- 6) Remove the three screws.

- 7) Disconnect the connector and remove the combination base switch assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Before installing the steering wheel, be sure to adjust the direction of roll connector with steering. <Ref. to AB-24, ADJUSTMENT, Roll Connector.>

### C: INSPECTION

#### 1. COMBINATION BASE SWITCH ASSEMBLY

Inspect the combination base switch assembly and roll connector for cracks or deformation. If any damage is found, replace with a new part.

#### 2. PARKING SWITCH

Measure the resistance between parking switch terminals.

Switch position	Terminal No.	Standard
OFF	2 and 4	Less than 1 $\Omega$
ON	1 and 4	Less than 1 $\Omega$

## 11. Headlight Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the air intake duct. (When removing the headlight RH)

- 3) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
- 4) Disconnect harness connectors.
- 5) Remove the 5 bolts, disengage 1 clip, then detach the headlight assembly.

### B: INSTALLATION

Install in the reverse order of removal.

### C: ADJUSTMENT

#### 1. HEADLIGHT BEAM ADJUSTMENT

**NOTE:**

The headlight can only be adjusted in the vertical direction but not the horizontal direction.

**CAUTION:**

**Turn off the light before adjusting the headlight beam level. If it is necessary to inspect the beam level, do not keep the light on for two minutes or more.**

**NOTE:**

Before checking the headlight beam level, be sure of the following:

- Check the area around the headlight for any scratches, damage or other types of deformation.
- Make sure that the vehicle is parked on a level surface.
- Make sure that the inflation pressure of tires are correct.
- Check that the vehicle fuel tank is full.

1) Bounce the vehicle several times to normalize the suspension.

2) Make certain that someone is seated in the driver's seat.

# Headlight Assembly

## LIGHTING SYSTEM

3) Turn the headlights on and then adjust the low beam pattern.

### NOTE:

Adjust the headlight beam level by turning the adjusting screw (A).

(A) Bulb center marking

(B) 3 m (10 ft)

(H) Height of the headlight LOW beam center

h mm (in) at 3 m (10 ft)
21 (0.83)

## 12. Headlight Bulb

### A: REMOVAL

#### 1. HIGH BEAM AND LOW BEAM

##### CAUTION:

- Because the halogen bulb operates at a high temperature, dirt and oil on the bulb surface reduces the bulb's service life. Hold the flange portion when replacing the bulb. Never touch the glass portion.

- Do not leave the headlight without a bulb for a long time. Dust, moisture, etc. entering the headlight may affect its performance.

- 1) Disconnect the ground cable from the battery.
- 2) Remove the air intake duct. (When removing the headlight bulb RH)

- 3) Remove the battery cover. (When removing the headlight bulb LH)
- 4) Tilt the washer tank filler neck. (When removing the headlight bulb LH)
- 5) Disconnect the harness connector.
- 6) Remove the bulb assembly (A) then remove the high beam. To remove the low beam, remove the back cover (B), and then go to Step 7.

- 7) Remove the light bulb retaining spring (A) to remove bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification.  
<Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

### 13. Front Turn Signal Light Bulb

#### A: REMOVAL

1) When removing the turn signal light bulb, fully turn the steering wheels to opposite direction from the turn signal light bulb to remove.

- (1) Turn the steering wheel fully.
- (2) Mud guard
- (3) Front turn signal light

2) Turn the mud guard inward.

3) Turn socket (A) from the wheel arch, and remove the front turn signal light bulb.

#### CAUTION:

**ON the 5AT model, the turn signal light bulb LH cannot be removed from the wheel arch. Remove the bulb from the engine compartment, by removing the battery.**

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification.  
<Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 14. Parking Light Bulb

### A: SPECIFICATION

The parking light bulb is integrated into the front turn signal light bulb as a unit; therefore, refer to "Front Turn Signal Light Bulb" for the removal procedure. <Ref. to LI-16, REMOVAL, Front Turn Signal Light Bulb.>

## Front Side Marker Light Bulb

LIGHTING SYSTEM

---

### 15. Front Side Marker Light Bulb

#### A: SPECIFICATION

The front side marker light bulb is integrated into the front turn signal light bulb as a unit; therefore, refer to "Front Turn Signal Light Bulb" for the removal procedures. <Ref. to LI-16, REMOVAL, Front Turn Signal Light Bulb.>

## 16. Front Fog Light Assembly

### A: REMOVAL

#### 1. EXCEPT FOR OUTBACK MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Disengage the two clips, and then turn over the lower mud guard.

- 3) Disconnect the harness connector.
- 4) Remove the mounting bolts and claw (A), and detach the fog light assembly by pulling it backward.

#### 2. OUTBACK MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Disengage the two clips, and then turn over the lower mud guard.

- 3) Disconnect the harness connector.
- 4) Remove the mounting nuts and clips, and detach the fog light assembly by pulling it out.

### B: INSTALLATION

Install in the reverse order of removal.

### C: ADJUSTMENT

#### 1. FOG LIGHT AIMING

##### NOTE:

Before checking the fog light beam level, be sure of the following:

- The area around the fog light has not sustained any accident, damage or other type of deformation.
- Vehicle is parked on a level surface.
- The inflation pressure of tires is correct.
- Vehicle's fuel tank is fully filled.

- 1) Bounce the vehicle several times to normalize the suspension.
- 2) Make certain that someone is seated in the driver's seat.
- 3) Measure the height of the center of fog light.
- 4) Loosen the screws and clips of the mud guard, and then turn over the front mud guard.

# Front Fog Light Assembly

## LIGHTING SYSTEM

5) Adjust the fog light pattern by inserting a Philips screwdriver to the aiming screw hole.

- Except for OUTBACK model

- OUTBACK model

(A) Vehicle center

(B) 3 m (10 ft)

(H) Height of fog light center

h mm (in) at 3 m (10 ft)
40 (1.58)

## 17. Front Fog Light Bulb

### A: REMOVAL

#### 1. EXCEPT FOR OUTBACK MODEL

- 1) Disconnect the ground cable from battery.
- 2) Disengage the two clips, and then turn over the lower mud guard.

- 3) Disconnect the harness connector.
- 4) Retain the bulb then detach the fog light bulb.

#### 2. OUTBACK MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Disengage the two clips, and then turn over the lower mud guard.

- 3) Disconnect the harness connector.
- 4) Remove the back cover.

- 5) Remove the spring retainer then detach the fog light bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 18. Side Turn Signal Light Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the scalp cap. <Ref. to GW-18, REPLACEMENT, Scalp Cap.>
- 3) Remove the mirror. <Ref. to GW-20, REPLACEMENT, Outer Mirror.>
- 4) Disconnect the harness connector, remove the 2 mounting screws and then remove the side turn signal light assembly.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Install the side turn signal light assembly and check that it blinks normally.
- 2) If it does not blink normally, replace the side turn signal light assembly with a new part.

#### NOTE:

Since LED (Light Emitting Diode) is used for the side turn signal light, replace the side turn signal light assembly if the LED burns out.

## 19. Rear Combination Light Assembly

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the trunk room side trim. <Ref. to EI-70, REMOVAL, Trunk Room Trim.>
- 3) Remove the four nuts, and then detach the rear combination light after disconnecting the connector.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the clip.

- 3) While pressing the section (A), insert your finger or a flat-tip screwdriver wrapped with tape into the clearance (B) to remove claws in the order of (C), (D), (E), and remove the rear combination cover.

- 4) Remove the two bolts, and then detach the rear combination light by pulling it to the rear side of vehicle.

- 5) After turning the sockets of the tail/stop light bulbs and rear turn signal light bulbs, remove the rear combination light.

### B: INSTALLATION

Install in the reverse order of removal.

## 20. Tail/Stop Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk side trim cover.
- 2) Turn the socket and remove the bulb.

#### 2. WAGON MODEL

- 1) Remove the rear combination light assembly. <Ref. to LI-23, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 21. Rear Turn Signal Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk side trim cover.
- 2) Turn the socket and remove the bulb.

#### 2. WAGON MODEL

- 1) Remove the rear combination light assembly.  
<Ref. to LI-23, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

# Rear Side Marker Light Bulb

LIGHTING SYSTEM

---

## 22.Rear Side Marker Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

The rear side marker light bulb is integrated into the tail/stop light bulb as a single unit. <Ref. to LI-24, SEDAN MODEL, REMOVAL, Tail/Stop Light Bulb.>

#### 2. WAGON MODEL

1) Remove the rear combination light assembly. <Ref. to LI-23, WAGON MODEL, REMOVAL, Rear Combination Light Assembly.>

2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 23. Back-up Light Assembly

### A: REMOVAL

#### 1. SEDAN MODEL

Remove the rear combination light. <Ref. to LI-23, REMOVAL, Rear Combination Light Assembly.>

#### 2. WAGON MODEL

1) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>

2) Disconnect the harness connector and remove the rear gate garnish. <Ref. to EI-75, REMOVAL, Rear Gate Garnish.>

3) Remove the attachment nuts and remove the back-up light assembly.

### B: INSTALLATION

Install in the reverse order of removal.

## 24. Back-up Light Bulb

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk side trim cover.
- 2) Turn the socket and remove the bulb.

#### 2. WAGON MODEL

- 1) Remove the bulb inspection cover of the rear gate trim.
- 2) Turn the socket and remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 25. License Plate Light Assembly

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk lid garnish. <Ref. to EI-74, REMOVAL, Trunk Lid Garnish.>
- 2) Remove the trunk lid trim. <Ref. to EI-70, TRUNK LID TRIM, REMOVAL, Trunk Room Trim.>
- 3) Turn and remove the bulb socket (A). Disengage clip (B) and remove the license plate light assembly.

### B: INSTALLATION

Install in the reverse order of removal.

## 26. License Plate Light

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Remove the trunk lid trim. <Ref. to EI-70, TRUNK LID TRIM, REMOVAL, Trunk Room Trim.>
- 2) Turn and remove the bulb socket (A).

- 3) Remove the bulb.

#### 2. WAGON MODEL

- 1) Remove the license plate light mounting screw (A) and then remove the lens (B).

- 2) Remove the bulb.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 27.High-mounted Stop Light

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from battery.
- 2) Push the high-mounted stop light towards the rear of the vehicle (1), raise the rear end (2) and remove the clips to remove the stop light.

- 3) Remove the harness from the clamp.

- (1) Harness
- (2) Clamp

- 4) Disengage two claws (A), pull out the high-mounted stop light from the cover and remove claw (B).

- 5) Disengage the three claws and remove lens (A).

- 6) Remove the bulb.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from battery.
- 2) Remove the roof spoiler. <Ref. to EI-41, REMOVAL, Roof Spoiler.>
- 3) Remove the nuts (A), then detach the high-mounted stop light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. SEDAN MODEL

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. WAGON MODEL

- 1) Install the high-mounted stop light to test if it illuminates normally.
- 2) If the high-mounted stop light does not illuminate, replace it with a new part.

#### NOTE:

Since LED (Light Emitting Diodes) is used for the high-mounted stop light of the wagon model, replace the high-mounted stop light as an assembly when the LED burns out.

# Spot Map Light

## LIGHTING SYSTEM

### 28. Spot Map Light

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lens (A) and spot map light mounting screws (B).

- Model with sunroof

- Model without sunroof

- 3) Disconnect the harness connectors and remove the spot map light.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

##### 1. SPOT MAP LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

##### 2. SPOT MAP LIGHT SWITCH

Measure the resistance between spot map light switch terminals.

Switch position	Terminal No.	Standard
OFF	—	1 M $\Omega$ or more
ON	1 and 2	18 $\pm$ 5.4 $\Omega$

## 29. Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the lens (A) and mounting screws (B).

- 3) Disconnect the harness connector and remove the room light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. ROOM LIGHT SWITCH

Measure the resistance between room light switch terminals.

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
ON	1 and 3	1.5±0.5 Ω
DOOR	2 and 3	1.5±0.5 Ω

## 30. Luggage Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the luggage room light body (A).

- 3) Disconnect the harness connector and remove the lens.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. LUGGAGE ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. LUGGAGE ROOM LIGHT SWITCH

Measure the resistance between luggage room light switch terminals.

Switch position	Terminal No.	Standard
OFF	—	1 M $\Omega$ or more
ON	1 and 2	1.5 $\pm$ 0.5 $\Omega$
DOOR	2 and 3	1.5 $\pm$ 0.5 $\Omega$

## 31. Trunk Room Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Turn the trunk room light counterclockwise 60° to remove it and disconnect the harness connector.

- 3) Remove bulb (A).

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. TRUNK ROOM LIGHT BULB

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification. <Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

#### 2. TRUNK LID SWITCH (TRUNK ROOM LIGHT SWITCH)

Measure the resistance between trunk lid switch terminals.

Trunk lid position	Terminal No.	Standard
Close	1 and 3	1 MΩ or more
Open		1.5±0.5 Ω

## 32. Glove Box Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the glove box. <Ref. to EI-52, REMOVAL, Glove Box.>
- 3) Disconnect the harness connector.
- 4) Remove the glove box light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification.  
<Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

## 33. Door Step Light

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove lens (A), and then remove the door step light bulb.

- 3) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 4) Disconnect the harness connector.
- 5) Remove the mounting screw from the rear side of trim and remove the door step light.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Visually check the bulb for blow out.
- 2) Check the bulb specification.  
<Ref. to LI-2, SPECIFICATION, General Description.>
- 3) If NG, replace the bulb with a new part.

# Ignition Switch Illumination

LIGHTING SYSTEM

## 34. Ignition Switch Illumination

### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the screws, and detach the upper column cover and lower column cover.

- 3) Disconnect the ignition switch illumination connector (A).
- 4) Turn the ignition switch illumination connector to the left and disconnect it.

- (A) Ignition switch illumination connector
- (B) Ignition switch illumination
- (C) Immobilizer antenna connector

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Step	Check	Yes	No
<b>1</b> <b>CHECK THE IGNITION SWITCH ILLUMINATION.</b> Make sure the ignition switch illumination illuminates when driver's side door is open.	Does the ignition switch illumination illuminate?	Ignition switch illumination is normal.	Go to step 2.
<b>2</b> <b>CHECK THE IGNITION SWITCH ILLUMINATION.</b> Make sure the ignition switch illumination blinks when the ignition switch is turned to ON.	Does the ignition switch illumination blink?	Check the function setting of body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the ignition switch illumination circuit. <Ref. to SL-21, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>

## 35. Day Time Running Light Unit

### A: REMOVAL

- 1) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 2) Remove the fuse box and disconnect the connector.
- 3) Remove the mounting nuts, and detach the day-time running light module.

### B: INSTALLATION

Install in the reverse order of removal.

## 36. Reflex Refractor

### A: REMOVAL

- 1) Remove the rear bumper. <Ref. to EI-37, REMOVAL, Rear Bumper.>
- 2) Remove the plastic nuts (A).
- 3) Remove the reflex refractor by pressing the claw (B) of the reflex refractor.

### B: INSTALLATION

Install in the reverse order of removal.

# General Description

## WIPER AND WASHER SYSTEMS

### 1. General Description

#### A: SPECIFICATION

Front wiper motor	Input	12 V — 72 W or less
Rear wiper motor	Input	12 V — 42 W or less
Front washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less
Rear washer motor	Pump type	Centrifugal
	Input	12 V — 36 W or less

#### B: COMPONENT

##### 1. FRONT WIPER

- |                      |                      |
|----------------------|----------------------|
| (1) Wiper rubber     | (4) Wiper link ASSY  |
| (2) Wiper blade ASSY | (5) Wiper motor ASSY |

| (2) Washer hose     | (6) Rear washer motor  |
| (3) Washer tank     | (7) Grommet            |
| (4) Washer tank cap | (8) Washer motor cover |

**Tightening torque: N·m (kgf·m, ft·lb)**

**T: 6.0 (0.61, 4.4)**

### C: CAUTION

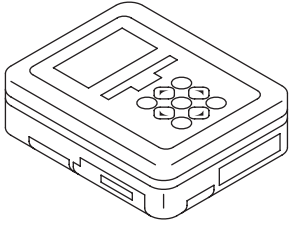

- Connect the connectors and hoses securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.
- Be careful with the airbag system wiring harness which passes near electrical parts and switches.
- All airbag system wiring harness and connectors are colored yellow. Do not use a tester equipment on these circuits.
- Care must be taken when connecting the hoses to pipes so that there are no bends or blockage.
- If even a small amount of silicon oil or grease enters tank and washer fluid passages, an oil film will be formed on the glass and will cause the wiper to chatter and judder. Make sure that no oil comes into contact with the system.

### 2. Wiper and Washer System

#### A: WIRING DIAGRAM

##### 1. WIPER AND WASHER (FRONT)

<Ref. to WI-175, WIRING DIAGRAM, Front Wiper and Washer System.>

##### 2. WIPER AND WASHER (REAR)

<Ref. to WI-176, WIRING DIAGRAM, Rear Wiper and Washer System.>

#### B: INSPECTION

Symptom	Repair order
Wiper and washers do not operate.	<ol style="list-style-type: none"><li>1. Wiper fuse (Front: F/B No. 30, Rear: F/B No. 23)</li><li>2. Combination switch</li><li>3. Wiper motor assembly</li><li>4. Wiring harness</li><li>5. Body integrated unit (rear wiper only)</li></ol>
Wipers do not operate in LO or HI.	<ol style="list-style-type: none"><li>1. Combination switch</li><li>2. Wiper motor assembly</li><li>3. Wiring harness</li></ol>
Wipers do not operate in INT.	<ol style="list-style-type: none"><li>1. Combination switch</li><li>2. Wiper motor assembly</li><li>3. Wiring harness</li><li>4. Body integrated unit (rear wiper only)</li></ol>
Washer motor does not operate.	<ol style="list-style-type: none"><li>1. Washer switch</li><li>2. Washer motor</li><li>3. Wiring harness</li></ol>
Wipers do not operate when washer switch is ON.	<ol style="list-style-type: none"><li>1. Wiper motor assembly</li><li>2. Wiring harness</li></ol>
Washer fluid spray does not operate properly.	<ol style="list-style-type: none"><li>1. Washer motor</li><li>2. Washer hose and nozzle</li></ol>

## 3. Combination Switch (Wiper)

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
- 3) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 4) Remove the screws and remove the steering column covers (upper & lower).

- 5) Disconnect the connector from the combination switch.

- 6) Remove the three screws, and pull out the combination base switch assembly toward you.

- 7) Remove the screws which secure the switch, then remove the combination switch.

### B: INSTALLATION

Install in the reverse order of removal.

## C: INSPECTION

### 1. COMBINATION SWITCH

- 1) Inspect the continuity between each connector terminal.

	Switch position	Terminal No.	Standard
Front	OFF	7 and 16	Less than 1 Ω
	INT	7 and 16	Less than 1 Ω
	LO	7 and 17	Less than 1 Ω
	HI	8 and 17	Less than 1 Ω
	Washer ON	2 and 11	Less than 1 Ω
Rear	Washer ON	2 and 12	Less than 1 Ω
	OFF	—	1 MΩ or more
	INT	2 and 13	Less than 1 Ω
	ON	2 and 10	Less than 1 Ω
	Washer ON	2 and 12 12 and 10 2 and 10	Less than 1 Ω

- 2) If continuity is not as specified, replace the switch.

# Combination Switch (Wiper)

## WIPER AND WASHER SYSTEMS

### 2. FRONT WIPER

#### 1) Check with Subaru Select Monitor

When the front wiper switch is operated, check the input signal using the Subaru Select Monitor.

(1) Prepare the Subaru Select Monitor kit. <Ref. to GW-7, PREPARATION TOOL, General Description.>

(2) Turn the ignition switch to ON (engine OFF) and run the “PC application help for Subaru Select Monitor”.

(3) On the “System Selection Menu” display screen, select the {Integ. unit mode}.

(4) Select the {Current Data Display & Save}.

(5) Check the input signal when the front wiper switch is set to LO or HI.

Check	Yes	No
Is the input signal normal?	Finish the diagnosis.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>

#### 2) Check the intermittent operation (inspection of the wiper switch alone)

(1) Set the voltage meter between connector terminal No. 7 (+) and No. 2 (-).

(2) Connect the battery to the connector. (Terminal No. 17 — (+), terminal No. 2 & 16 — (-))

(3) Turn the wiper switch to INT.

(4) Connect the battery (+) to the terminal No. 16 for 5 seconds.

(5) Connect the battery (-) to the terminal No. 16, and check the voltage between terminal No. 7 — No. 2 when performing the intermittent operation.

(6) Perform step 1) to 5) when intermittent control switch is in MIN or MAX. If operation is not as specified, replace the switch.

#### Intermittent stationary time

**MIN: Approx. 2 seconds**

**MAX: Approx. 16 seconds**

(A): Connect the battery (-) to the terminal No. 16.

S: Intermittent downtime (sec.)

### 3. REAR WIPER

#### 1) Check with Subaru Select Monitor

Step	Check	Yes	No
<b>1 CHECK INPUT OF REAR WIPER SWITCH.</b> Check the input from body integrated unit using the Subaru Select Monitor. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF) and run the “PC application help for Subaru Select Monitor”. 3) On the “System Selection Menu” display screen, select the {Integ. unit mode}. 4) Select the {Current Data Display & Save}. 5) Check the input of the rear wiper switch.	Is the input normal?	Go to step 2.	Check the rear wiper switch. <Ref. to WW-7, INSPECTION, Combination Switch (Wiper).>
<b>2 CHECK OUTPUT OF BODY INTEGRATED UNIT.</b> When the rear wiper switch is operated, check the output using the Subaru Select Monitor. 1) Turn the ignition switch to ON. 2) Operate the rear wiper switch and set to each position of ON and INT. 3) At this time, check the body integrated unit output.	When set to ON, is ON output continuous? When set to INT, is ON/OFF output repeated? (INT OFF time (when vehicle parked): 12 seconds)	Check the rear wiper motor. <Ref. to WW-17, INSPECTION, Rear Wiper Motor.>	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>

# Combination Switch (Wiper)

## 2) Check rear wiper motor circuit

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY CIRCUIT OF THE REAR WIPER MOTOR.</b> 1) Disconnect the harness connector of the rear wiper motor. 2) Turn the ignition switch to ACC. 3) Measure the voltage between the rear wiper motor harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(D43) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> <li>• Check the fuse (No. 23 in fuse &amp; relay box).</li> <li>• Check the fusible link (No. 6 in main fuse box).</li> </ul>
<b>2 CHECK GROUND CIRCUIT OF REAR WIPER MOTOR.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between the rear wiper motor harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(D43) No. 3 — Chassis ground:</b>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the open circuit of the rear wiper motor ground circuit.
<b>3 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND REAR WIPER MOTOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of the rear wiper motor. 4) Measure the resistance between the harness connector terminals of the body integrated unit and rear wiper motor. <b>Connector &amp; terminal</b> <b>(B280) No. 1 — (D43) No. 2:</b> <b>(B280) No. 8 — (D43) No. 4:</b>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the open circuit of the harness between body integrated unit and rear wiper motor.
<b>4 CHECK OPERATION OF REAR WIPER MOTOR.</b> 1) Remove the rear wiper motor. 2) Check the rear wiper motor. <Ref. to WW-17, INSPECTION, Rear Wiper Motor.>	Does the rear wiper motor rotate normally?	End.	Replace the rear wiper motor.

**NOTE:**

Rear wiper intermittent time (AT model only)

Select lever position (AT model only)	Vehicle speed (km/h (MPH))	Intermittent stopping time (sec.)
Rev.	—	Continuous operation
Except for reverse mode	80 — (50 — )	3
	50 — 80 (31 — 50)	6
	20 — 50 (12 — 31)	9
	0 — 20 (0 — 12)	12

## 4. Wiper Blade

### A: REMOVAL

**CAUTION:**

When replacing the wiper blade, if standing up the wiper arm, be sure to stand up the driver's side wiper arm first, and then passenger's side wiper arm next. Also, when putting the wiper arms back, be sure to start with passenger's side first, then driver's side next. Doing this in the reverse order may result in the driver's side wiper blade hitting the passenger's side wiper arm and causing damage.

#### 1. FRONT

While pushing the locking clip (A) up, pull out the blade to the direction of the arrow and remove it from the wiper arm.

#### 2. REAR

Turn the blade in the direction of arrow (A) and remove it from arm.

- (A) Turn the wiper blade.
- (1) Wiper arm
- (2) Wiper blade
- (3) Wiper blade attachment section

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Confirm that the clip is locked securely.

### C: DISASSEMBLY

#### 1. FRONT

Pull side (A) of the wiper rubber stopper and remove the rubber from the blade assembly.

#### 2. REAR

Pull the wiper rubber top slightly from stopper (A) and pull out completely.

## D: ASSEMBLY

### 1. FRONT

1) Insert the wiper rubber onto the blade so that the stopper is in the position shown in the figure.

2) Make sure the wiper rubber is securely fastened to the pull stopper (A).

### 2. REAR

1) Insert the wiper rubber into claw B.

2) Insert the wiper rubber until its top end protrudes approx. 20 mm (0.79 in) from stopper D.

3) Insert the wiper rubber into claw A.

## E: INSPECTION

1) When the wiper does not operate properly, inspect the following item.

- Make sure the movable part of wiper blade assembly moves smoothly.
- Make sure the wiper rubber is not deformed or damaged.

2) If damaged, replace with a new part.

# Washer Tank and Motor

## WIPER AND WASHER SYSTEMS

### 5. Washer Tank and Motor

#### A: REMOVAL

- 1) Open the front hood.
- 2) Disconnect the ground cable from the battery.
- 3) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
- 4) Remove the clip holding washer water supply tap.

- 5) Remove the two bolts and one nut, hose, connector and washer motor cover, and then remove the washer tank.

#### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

**6.0 N·m (0.61 kgf-m, 4.4 ft-lb)**

#### C: DISASSEMBLY

Pull out the washer motor from the tank.

#### D: ASSEMBLY

- 1) Assemble in the reverse order of disassembly.
- 2) Confirm that water does not leak from installation area of motor.

#### E: INSPECTION

Apply battery voltage to the connector terminal of the washer motor and make sure the motor operates.

## 6. Front Wiper Arm

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the cap.
- 3) Remove the nut and remove the wiper arm.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the wiper once.
- 3) Align the wiper blade to ceramic print point mark (A) of front window panel.

#### **Tightening torque:**

Refer to "COMPONENT" of "General Description".

<Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

### C: ADJUSTMENT

Operate the wiper once. Align the wiper blade to ceramic print point mark (A) of front window panel.

# Front Wiper Motor and Link

## WIPER AND WASHER SYSTEMS

### 7. Front Wiper Motor and Link

#### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the cowl panel. <Ref. to EI-40, REMOVAL, Cowl Panel.>
- 3) Disconnect the connector of wiper motor assembly.
- 4) Remove the bolt, and then remove the wiper assembly.

#### NOTE:

The wiper motor and wiper link is an assembly part and is not to be disassembled.

#### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description".

<Ref. to WW-2, FRONT WIPER, COMPONENT, General Description.>

#### C: INSPECTION

- 1) When the battery is connected to the terminal of connectors, confirm that the wiper motor operates at low speed.

- 2) When the battery is connected to the terminal of connectors, confirm that the wiper motor operates at high speed.

- 3) Connect the battery to the terminals to the connector, then run the wiper motor at low speed and disconnect the terminal in mid motion.

- 4) Connect the battery and confirm that the wiper motor stops at the automatic stop position after the wiper motor operates at low speed again.

## 8. Front Washer Nozzle

### A: REMOVAL

- 1) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
- 2) Hold the claw (A) of the washer nozzle towards the direction of the arrow, and remove the washer nozzle.

- 3) Remove the washer hose from the washer nozzle.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the washer nozzle position.

### C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.
- While the vehicle is at a standstill and the wiper switch is turned OFF, make sure that the washer injection position is as shown in the figure.

#### **Spray position:**

**A: 250 mm (9.84 in)**

**B: 535 mm (21.06 in)**

- (1) Nozzle
- (2) Spray area (shaded area)

### 9. Rear Wiper Arm

#### A: REMOVAL

- 1) Detach the wiper arm cover (A).
- 2) Remove the nut (B) to remove the wiper arm.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Operate the rear wiper once.
- 3) Align the blade with the marking (A) of the glass.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description".**

**<Ref. to WW-3, REAR WIPER (WAGON MODEL), COMPONENT, General Description.>**

#### C: ADJUSTMENT

- 1) Operate the rear wiper once.
- 2) Align the blade with the marking (A) of the glass.

## 10.Rear Wiper Motor

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear wiper arm. <Ref. to WW-16, REMOVAL, Rear Wiper Arm.>
- 3) Remove the rear gate lower trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 4) Disconnect the harness connector of wiper motor assembly.
- 5) Remove the bolts to remove wiper motor assembly (A).

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Be sure that the pivot cap with the arrow mark facing up, as shown in the figure.

#### Tightening torque:

Refer to "COMPONENT" of "General Description".

<Ref. to WW-3, REAR WIPER (WAGON MODEL), COMPONENT, General Description.>

### C: INSPECTION

- 1) Connect the battery to the wiper motor connector and confirm that wiper motor operates.

- 2) Connect the battery to the terminals to the connector, then run the wiper motor at low speed and disconnect the terminal in mid motion.

- 3) Connect the battery and confirm that the wiper motor stops at the automatic stop position after the wiper motor operates at low speed again.

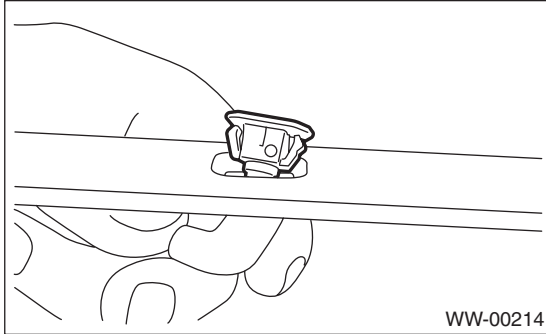

### 11.Rear Washer

#### A: REMOVAL

- 1) Remove the roof spoiler. <Ref. to EI-41, REMOVAL, Roof Spoiler.>
- 2) Remove the washer hose from washer nozzle.
- 3) Push the claw of the nozzle from the reverse side of roof spoiler with a flat tip screwdriver or equivalent, and remove the washer nozzle.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

- Make sure the nozzle and hose are not clogged.
- Make sure the hose is not bent.
- While the vehicle is at a standstill, make sure that the washer injection position is as shown in the figure.

#### NOTE:

Washer injection position can not be adjusted.

- (1) Nozzle
- (A) 70 mm (2.76 in)
- (B) 70°

# General Description

ENTERTAINMENT

---

## 1. General Description

### A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

### B: PREPARATION TOOL

#### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Conductive silver composition (DUPONT No. 4817 or equivalent)	Used for repairing antenna wire.

## 2. Audio System

### A: WIRING DIAGRAM

<Ref. to WI-178, WIRING DIAGRAM, Audio System.>

### B: INSPECTION

Symptom	Repair order
No power coming in. (No display and no sound from speakers)	<ol style="list-style-type: none"> <li>1. Check the fuse and power supply for audio.</li> <li>2. Check the audio ground.</li> <li>3. Remove the audio and repair them.</li> </ol>
A specific speaker does not operate.	<ol style="list-style-type: none"> <li>1. Check the speaker.</li> <li>2. Check the output circuit between audio and speaker.</li> </ol>
Audio generates noise with engine is running.	<ol style="list-style-type: none"> <li>1. Check the audio ground.</li> <li>2. Check the generator.</li> <li>3. Check the ignition coil.</li> <li>4. Remove the audio and repair them.</li> </ol>
Volume is low in AM and FM modes or interference noise occurs.	<ol style="list-style-type: none"> <li>1. Check the antenna.</li> <li>2. Check the antenna amplifier.</li> <li>3. Check the noise suppressor.</li> <li>4. Check the audio ground.</li> <li>5. Remove the audio and repair them.</li> </ol>

## 3. Audio

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 3) Remove the console front panel (A). <Ref. to EI-55, REMOVAL, Center Console.>
- 4) Remove the console side garnish (B). <Ref. to EI-55, REMOVAL, Center Console.>

- 5) Remove the screws, and partially pull the audio out from center console.

- 6) Disconnect the harness connector and antenna feeder cord, and then remove the audio.

### B: INSTALLATION

Install in the reverse order of removal.

## C: INSPECTION

ET-00266

- |                              |                       |                   |
|------------------------------|-----------------------|-------------------|
| (1) SEEK / SCAN UP switch    | (7) AUDIO switch      | (13) AUX switch   |
| (2) SEEK / SCAN DOWN switch  | (8) PUSH/POWER switch | (14) BAL switch   |
| (3) TUNE / TRACK UP switch   | (9) VOLUME            | (15) VDF display  |
| (4) TUNE / TRACK DOWN switch | (10) Presets 1 — 6    | (16) LOAD switch  |
| (5) RPT switch               | (11) CD switch        | (17) EJECT switch |
| (6) TEXT switch              | (12) FM/AM switch     | (18) SAT switch   |

### NOTE:

- For self diagnosis of the audio system, there is a communications check (communication condition between the audio and the control panel) and a switch check. Perform a communications check first and make sure it is operating normally before proceeding to the inspection of switches.
- Complete operations from when the self diagnosis mode of step 1 operates and the buzzer sounds, to pressing the preset 1 switch in 4., within 15 seconds. If 15 seconds or more pass, a communications error will be displayed.
- During the diagnosis, do not press the POWER (8), FM/AM (12), CD (11), AUX (13), SAT (18) switches. Pressing these switches will disengage the self diagnosis mode. For the CD, AUX switch, the self diagnosis mode will be disengaged if the disc load and unit are connected.

# Audio

ENTERTAINMENT

## 1. SELF DIAGNOSIS OF THE CONTROL PANEL AND AUDIO

Step	Check	Yes	No
<b>1 SETTING THE SELF-DIAGNOSIS MODE BY OPERATING THE CONTROL PANEL.</b> 1) Turn the audio system OFF with the ignition switch ACC or ON. 2) With the TUNE/TRACK UP switch and the SEEK/SCAN DOWN switch held down, hold the RPT switch down for 2 seconds or more. 3) A buzzer will sound and all the VFD display will illuminate, and then the unit will enter the diagnosis mode.	Does the self diagnosis mode of the control panel operate?	Go to step 3.	Go to step 2.
<b>2 CHECK BUZZER.</b>	Did the buzzer sound when going into the diagnosis mode?	Go to step 3.	Check the connection of harness connector, and if there are no problems found, repair or replace the audio unit and control panel. <Ref. to ET-4, REMOVAL, Audio.>
<b>3 CHECK THE VFD DISPLAY.</b>	Did all the VFD display illuminate?	Go to step 4.	<Ref. to ET-4, REMOVAL, Audio.>
<b>4 CHECK THE COMMUNICATION STATUS.</b> Press the preset 1 switch, and confirm the VFD display section of the control panel.	Is the «Main Check!» or «Sub Check!» displayed on the VFD display?	Repair or replace the audio unit. <Ref. to ET-4, REMOVAL, Audio.>	Go to step 5.
<b>5 CHECK SWITCH.</b> Operate the switches in the following list, and check the display content on the VFD display.	Does the switch check list and the operated switches match? <Ref. to ET-6, SWITCH CHECK LIST, INSPECTION, Audio.>	The self-diagnosis of the audio unit is normal.	Repair or replace the audio unit. <Ref. to ET-4, REMOVAL, Audio.>

## 2. SWITCH CHECK LIST

Switch	Display
TUNE/TRACK $\wedge$	 UP OK

## 4. Front Speaker

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the front speaker mounting screws.

- 4) Disconnect the harness connector and remove the front speaker.

### B: INSTALLATION

Install in the reverse order of removal.

## 5. Tweeter

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the tweeter mounting screws.

- 4) Disconnect the harness connector and remove the tweeter.

### B: INSTALLATION

Install in the reverse order of removal.

## 6. Rear Speaker

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the rear speaker mounting screws.

- 4) Disconnect the harness connector and remove the rear speaker.

### B: INSTALLATION

Install in the reverse order of removal.

## 7. Antenna

### A: INSPECTION

Measure the resistance between the antenna terminal and each antenna wire.

If an antenna wire is OK, resistance will be less than  $1\ \Omega$ . If an antenna wire is broken, resistance will be more than  $1\ M\Omega$ .

#### NOTE:

When checking the continuity, wind a piece of aluminum foil around the tip of tester probe and press foil against the antenna wire with your finger.

- (A) Tester probe
- (B) Aluminum foil
- (C) Antenna wire

To locate the broken point, move the probe along antenna wire.

### B: REPAIR

- 1) Clean the antenna wire and surrounding area with a cloth dampened by alcohol.
- 2) Paste a thin masking film on the glass along broken wire.
- 3) Apply the conductive silver composition (DU-PONT No. 4817) on the broken portion with a drawing pen.

- (A) Broken portion
- (B) Masking film
- (C) Conductive silver composition

- 4) Dry out the deposited portion.
- 5) After repair has been completed, measure the resistance in repaired wire.

## 8. Antenna Amplifier

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Disconnect the harness connectors and terminals.
- 4) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
- 5) Remove the screws and detach the antenna amplifier.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the harness connectors and terminals.
- 4) Remove the screws and detach the antenna amplifier.

### C: INSPECTION

Measure the resistance of antenna amplifier.

#### • SEDAN MODEL

#### • WAGON MODEL

Terminal No.	Standard
(1)-a and Amplifier body	10 kΩ or more
(1)-b and Amplifier body	10 kΩ or more
(2)-b and Amplifier body	10 kΩ or more
(3)-a and Amplifier body	10 kΩ or more

### B: INSTALLATION

Install in the reverse order of removal.

## 9. Noise Suppressor

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Remove the curtain airbag module. <Ref. to AB-18, REMOVAL, Curtain Airbag Module.>
- 4) Disconnect harness connector from the noise suppressor.
- 5) Remove the harness clip.
- 6) Remove the screws and detach the noise suppressor.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 3) Disconnect harness connector from the noise suppressor.
- 4) Remove the screws and detach the noise suppressor.

### B: INSTALLATION

Install in the reverse order of removal.

## 10. Navigation System

### A: WIRING DIAGRAM

<Ref. to WI-182, WIRING DIAGRAM, Navigation System.>

### B: INSPECTION

#### 1. CHECK THE OPERATION OF THE NAVIGATION

Start the engine, and then inspect that the opening screen is displayed.

Standard value: The opening screen should be displayed.

OK: Normal

NG: When not displayed, check the signal line connector and the audio connector. If there are no problems in the connecting lines or the lines were repaired, check that the opening screen is displayed.

At this point, if the display is not viewable, the unit is defective.

#### 2. CHECK THE DVD-ROM

An opening screen is displayed, then it switches to the map screen after a while.

When a screen other than the opening screen is displayed, press the «MAP» key.

Standard value: The map screen should be displayed.

OK: Normal

NG: If the map screen is not displayed, check whether the DVD-ROM is set in the navigation system, whether the correct side is set, type of the DVD-ROM, the existence of any scratches, etc. If there are no problems on the DVD-ROM, the main body is defective.

#### 3. CHECK EACH CONNECTION

If there are no problems in the inspections of 1 and 2 above, use "<Ref. to WI-182, WIRING DIAGRAM, Navigation System.>" of the navigation device to perform inspection.

#### 4. SWITCHING TO CONNECTION INSPECTION MODE

1) Press the menu key.

2) Select the navigation setup from the menu screen.

3) Select the navigation information from the navigation setup screen.

4) Select the vehicle signal from the navigation information screen.

5) The display will switch to the vehicle signal (for connection inspection) screen.

6) Check that the display changes according to each operation

ON: Normal

NG: Check the circuit when the display does not change.

#### 5. CHECK THE GPS ANTENNA

NOTE:

When checking the GPS antenna, perform the check operation outdoors to improve the receiver sensitivity.

Make sure that a value other than "zero" is displayed in the GPS item.

OK: Normal

NG: If "No positioning" is displayed, check the GPS antenna connection.

If the GPS display is red, the main unit could be faulty.

#### 6. CHECK THE BACK SENSOR

NOTE:

Before starting inspections, inspect the safety around the rear end of the vehicle.

1) Turn the ignition switch to ON.

2) Pull the parking brake and depress the brake, then put the gear in reverse.

3) Make sure that "On" is lit in the back sensor item.

Standard Value: "On" should be lit.

OK: Normal

NG: If "On" does not light, check the signal line connection. If there are no problems, the unit could be faulty.

### **7. CHECK THE ILLUMINATION**

1) Turn the lighting switch to level 1.

**NOTE:**

Make sure that the bright switch is not turned ON at this time.

2) Make sure that "On" lights in the illumination item, then the screen fades out.

Standard Value: "On" should be lit.

OK: Normal

NG: If "On" does not light, check the signal line connection. If there are no problems, the unit could be faulty.

### **8. CHECK THE PARKING SIGNAL**

**NOTE:**

The side brake signal is normally "OFF", so operating it will produce no change.

### **9. CHECK SPEED SENSOR**

**NOTE:**

- Before starting inspections, inspect the safety around the vehicle.

- Lift up the vehicle as necessary.

- When the diagnostic trouble code is input in the VDCCM, perform the Clear Memory operation.

1) Move the vehicle 2 to 3 meters (6.6 to 9.8 ft).

2) Check that the numbers from the speed sensor are displayed.

Standard value: Vehicle speed is to be shown in numbers.

OK: Normal

NG: If vehicle speed is not displayed, check the signal line connection. If there are no problems, the unit could be faulty.

## 11. Navigation Display

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the clip, and remove the center upper panel.

- 3) Remove the display mounting screws.

- 4) Disconnect the harness connector and remove the navigation display.

### B: INSTALLATION

Install in the reverse order of removal.

## 12. GPS Antenna

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
- 3) Remove the GPS antenna mounting screws to remove the GPS antenna.

- 4) Remove the audio. <Ref. to ET-4, REMOVAL, Audio.>
- 5) Remove the GPS antenna cord connector from the steering support beam stay (on the driver's side).

### B: INSTALLATION

Install in the reverse order of removal.

## 13. Navigation Body

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Slide the driver's seat to the forward position.
- 3) Disconnect the connector.
- 4) Remove the bolts and then remove the navigation unit.

### B: INSTALLATION

Install in the reverse order of removal.

## 14.AUX Input Terminal

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 3) Disconnect the harness connector, and remove the AUX input terminal from the console box.

### B: INSTALLATION

Install in the reverse order of removal.

## 15. Front Accessory Power Supply Socket

### A: WIRING DIAGRAM

<Ref. to WI-180, WIRING DIAGRAM, Front Accessory Power Supply Socket System.>

### B: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the console front panel. <Ref. to EI-55, REMOVAL, Center Console.>
- 3) Disconnect the harness connector, and remove the accessory power supply socket.

### C: INSTALLATION

Install in the reverse order of removal.

# Rear Accessory Power Supply Socket

ENTERTAINMENT

---

## 16. Rear Accessory Power Supply Socket

### A: WIRING DIAGRAM

<Ref. to WI-181, WIRING DIAGRAM, Rear Accessory Power Supply Socket System.>

### B: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 3) Disconnect the harness connector, and remove the accessory power supply socket.

### C: INSTALLATION

Install in the reverse order of removal.

## 17. Steering Satellite Switch

### A: REMOVAL

**WARNING:**

Before servicing, be sure to read the notes in the “AB” section for proper handling of the driver’s airbag module. <Ref. to AB-4, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts which secure the driver’s airbag module.

- 5) Disconnect the airbag module connector on back of the airbag module. <Ref. to AB-8, PROCEDURE, Airbag Connector.>
- 6) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 7) Remove the screws to remove the lower cover from steering wheel.

- 8) Loosen the screws on the backside of the steering wheel and remove the satellite switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between satellite switch connector terminals.

Switch	Position	Terminal No.	Standard value
Mute Volume (+) Volume (-) Mode Seek (∧) Seek (∨)	All OFF	4 and 5	Approx. 4.7 kΩ
Mute	ON	4 and 5	Approx. 22 Ω
Volume (+)	ON	4 and 5	Approx. 90 Ω
Volume (-)	ON	4 and 5	Approx. 200 Ω
Mode	ON	4 and 5	Approx. 360 Ω
Seek (∧)	ON	4 and 5	Approx. 690 Ω
Seek (∨)	ON	4 and 5	Approx. 1.15 kΩ

If NG, replace the cruise control command switch.

# Steering Satellite Switch

ENTERTAINMENT

---

### 1. General Description

#### A: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control module and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable. Otherwise, the memory is cleared.
- Reassemble the parts in the reverse order of disassembly procedure unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely during reassembly.
- After reassembly, make sure functional parts operate smoothly.

#### B: PREPARATION TOOL

##### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® bit T30	Used for removing/installing driver's airbag module.

## 2. Horn System

### A: WIRING DIAGRAM

#### 1. HORN

<Ref. to WI-185, WIRING DIAGRAM, Horn System.>

### B: INSPECTION

#### 1. HORN RELAY

Measure the security horn relay resistance between terminals (indicated in the table below) when connecting terminal No. 4 to battery positive terminal and terminal No. 3 to battery ground terminal.

Continuity	Terminal No.	Standard
Yes	1 and 2	Less than 1 $\Omega$
No		1 M $\Omega$ or more

### 3. Horn

#### A: REMOVAL

- 1) Disconnect the ground cable from battery.
- 2) Remove the three clips and peel the right side lower mud guard upward.

- 3) Remove the horn bracket mounting bolt (A).
- 4) Disconnect the harness connector and remove the horn assembly (B).

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

With 12 V direct current supplied between horn terminals, check that the horn sounds properly.

## 4. Horn Switch

### A: REMOVAL

**CAUTION:**

Before servicing, be sure to read the notes in the AB section for proper handling of the driver's airbag module. <Ref. to AB-4, CAUTION, General Description.>

**NOTE:**

Horn switch is a unit with the driver's airbag module.

- 1) Disconnect the ground cable from battery.
- 2) Remove the driver's airbag module. <Ref. to AB-14, REMOVAL, Driver's Airbag Module.>

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the resistance between horn switch terminal and airbag module bracket.

- (1) Airbag module bracket
- (2) Horn switch terminal

Switch position	Terminal No.	Resistance
When horn switch is pushed.	Horn switch terminal and airbag module bracket	Less than 1 Ω
When horn switch is not pushed.		1 MΩ or more

# Horn Switch

**T1: 1.9 (0.19, 1.4)**

**T2: 4.5 (0.46, 3.3)**

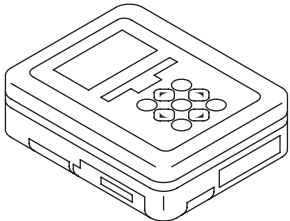

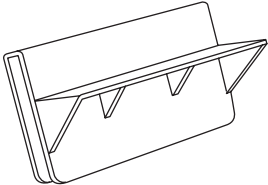

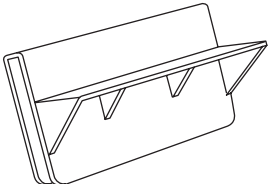

### B: CAUTION

- When electrical connectors are disconnected, always conduct an operational check after connecting them again.
- Avoid impact and damage to the glass.

## C: PREPARATION TOOL

### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B021XU0	1B021XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and troubleshooting for electrical system.
 ST61299AE000	61299AE000	SPACER	Used for adjusting the upper end position of the front door glass. (Glass thickness: 5 mm (0.197 in))
 ST61299AE010	61299AE010	SPACER	Used for adjusting the upper end position of rear door glass. (Glass thickness: 4 mm (0.157 in))

### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for checking voltage and continuity.
Piano wire	Used for removing the window glass.
Windshield glass knife	Used for removing the window glass.
TORX® T20	Used for removing and installing the rearview mirror.

# Power Window System

GLASS/WINDOWS/MIRRORS

---

## 2. Power Window System

### A: WIRING DIAGRAM

<Ref. to WI-186, Power Window System.>

### B: INSPECTION

Symptom	Repair order
All power windows do not operate.	<ol style="list-style-type: none"><li>1. Fuse (SBF-4)</li><li>2. Power window circuit breaker</li><li>3. Power window relay</li><li>4. Wiring harness</li><li>5. Body integrated unit</li></ol>
Particular window does not operate.	<ol style="list-style-type: none"><li>1. Power window main switch</li><li>2. Power window sub-switch</li><li>3. Power window motor</li><li>4. Wiring harness</li></ol>
"Window Lock" does not operate.	Power window main switch

## 3. Power Window Control Switch

### A: REMOVAL

#### 1. MAIN SWITCH

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim.  
<Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Disconnect the harness connector.
- 4) Remove the screws from the reverse side of the front door trim to remove the power window main switch.

#### 2. SUB-SWITCH

- 1) Disconnect the ground cable from the battery.
- 2) Remove the door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Disconnect the connector.
- 4) Remove the screws from the reverse side of door trim to remove the power window sub-switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. MAIN SWITCH

Measure the switch resistance.

	Switch position	Terminal No.	Standard
Driver's side	UP	10 and 2 7 and 1	Less than 1 Ω
	OFF	2 and 7 1 and 2	Less than 1 Ω
	DOWN	10 and 1 7 and 2	Less than 1 Ω
	AUTO DOWN	10 and 1 7 and 2	Less than 1 Ω
Passenger's side	UP	10 and 14 7 and 11	Less than 1 Ω
	OFF	7 and 14 7 and 11	Less than 1 Ω
	DOWN	10 and 11 7 and 14	Less than 1 Ω
Rear RH seat	UP	10 and 13 7 and 12	Less than 1 Ω
	OFF	7 and 13 7 and 12	Less than 1 Ω
	DOWN	10 and 12 7 and 13	Less than 1 Ω
Rear LH seat	UP	10 and 8 7 and 9	Less than 1 Ω
	OFF	7 and 8 7 and 9	Less than 1 Ω
	DOWN	9 and 10 7 and 8	Less than 1 Ω

Replace the main switch if faulty.

# Power Window Control Switch

GLASS/WINDOWS/MIRRORS

---

## 2. SUB-SWITCH

Measure the switch resistance.

	Switch position	Terminal No.	Standard
Passenger's side and rear seat	UP	2 and 3 4 and 5	Less than 1 $\Omega$
	OFF	1 and 2 4 and 5	Less than 1 $\Omega$
	DOWN	1 and 2 3 and 4	Less than 1 $\Omega$

Replace the sub-switch if faulty.

## 4. Front Door Glass

### A: REMOVAL

- 1) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-19, REMOVAL, Front Sealing Cover.>
- 3) Remove the outer mirror assembly. <Ref. to GW-19, REMOVAL, Outer Mirror Assembly.>
- 4) Remove clip (A), and remove the front end of the weather strip.

- 5) Remove the gusset.

- 6) Remove the stabilizers.

- 7) Remove clips (A), and remove the rear end of the weather strip.

- 8) Remove screw (A) from the rear end of the weather strip outer, to remove the weather strip outer.

- 9) Operate the power window switch to move the glass to the position shown in the figure, then remove the two nuts through the service holes.

# Front Door Glass

## GLASS/WINDOWS/MIRRORS

10) Remove the door glass.

### CAUTION:

- Since the gear may be disengaged, do not turn regulator in the closing direction after removing glass.
- Avoid impact and damage to the glass.

## B: INSTALLATION

1) Install in the reverse order of removal.

### CAUTION:

Make sure that the glass stay is placed securely in sash.

2) Adjust the front door glass. <Ref. to GW-12, ADJUSTMENT, Front Door Glass.>

### Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>

## C: ADJUSTMENT

### NOTE:

Before adjustment, ensure that all adjusting bolts of stabilizer, upper stopper and sash are loose and door glass rises until it makes contact with the weather strip.

1) Temporarily tighten the adjusting bolt on one side of the rear sash, at the midpoint of the slotted hole in the inner panel.

2) Temporarily tighten the regulator B channel at the top position of slotted hole.

3) Lower the door glass 10 — 15 mm (0.39 — 0.59 in) from fully closed position. While applying an outward pressure (F) of  $45.0 \pm 5.0$  N ( $4.5 \pm 0.5$  kgf,  $9.9 \pm 1.1$  lb) to the upper edge of the glass above the midpoint of the two outer stabilizers, press the inner stabilizer to the glass at a pressure of  $25 \pm 5$  N ( $2.5 \pm 0.5$  kgf,  $5.5 \pm 1.1$  lb) to secure it.

- (1) Fully closed position
- (2) Stabilizer
- (3) 10 — 15 mm (0.39 — 0.59 in)

4) To adjust the clearance between front glass and center pillar cover, loosen nuts (A), and move the glass sash back and forth until the clearance becomes the value shown.

- (1) Adjust the lines parallel
- (2) Sash
- (3) Inner panel

- (1) 11 mm (0.433 in)

5) To adjust the upper end and lower end of the center pillar, loosen the stopper bolt (A) or nut (B) securing the door sash (front, rear), and move the stopper position until the clearance between center pillar cover is equal.

**CAUTION:**  
Measure the clearance between center pillar at 50 mm (1.969 in) from upper end of window glass.

- (1) Glass
- (2) Center pillar cover
- (3) Check point
- (4) 50 mm (1.969 in)
- (5) 11 mm (0.433 in)

6) Adjust so that the upper and lower ends of the center pillar are the same size.

- (A) Glass tilts too far rearward
- (B) Glass tilts too far forward
- (1) Narrow
- (2) Wide
- (3) Stopper adjusting direction

# Front Door Glass

## GLASS/WINDOWS/MIRRORS

7) After adjusting the clearance between the center pillar, raise and lower the glass several times to check glass contact to the stopper when the glass is fully closed. Adjust the centerpillar clearance to contact the front and rear stopper simultaneously.

- (1) Narrow
- (2) Wide
- (3) When the stopper of the door sash (front) contacts first
- (4) When the stopper of the door sash (rear) contacts first
- (5) Raise B channel
- (6) Lower B channel

8) For glass stroke adjustment, attach special tool to the glass, close door, and raise the glass to the top edge using regulator until positional relationship between glass and weather strip becomes as shown. And secure the glass so that the upper stopper touches the glass holder without fail.

ST 61299AE000 SPACER

(Glass thickness: 5 mm (0.197 in) for front door glass)

- (1) 3.2 — 4.8 mm (0.126 — 0.189 in)
- (2) When re-using weather strip: 5.5 mm (0.217 in)  
When replacing the weather strip: 3 mm (0.118 in)
- (3) ST

For preventing wind noise, adjust the glass at the position where the tip of the gusset is raised up slightly.

- (A) 0 — 1.5 mm (0 — 0.059 in)

9) After stabilizer adjustment, carry out glass cohesion adjustment. First, visually ensure the positional relationship between the retainer & molding and the glass of the roof side, then start the rear sash adjustment. Attach the ST to the glass and adjust two adjusting bolts alternately step by step, to obtain dimensions shown below (cross-section A).

### NOTE:

If two nuts are loosened at the same time, the sash moves back and forth. Therefore, when one nut is adjusted, secure the other.

10) Make the same adjustment of two adjusting bolts of rear sash.

ST 61299AE000 SPACER

(Glass thickness: 5 mm (0.197 in) for front door glass)

- (1) 3.2 — 4.8 mm (0.126 — 0.189 in)
- (2) When re-using weather strip: 5.5 mm (0.217 in)  
When replacing the weather strip: 3 mm (0.118 in)
- (3) ST

**NOTE:**

Do not tilt the sash bracket to inner panel during adjustment. If tilting, the regulator does not operate smoothly.

- (1) Sash bracket
- (2) Rear sash
- (3) Adjust the lines parallel
- (4) Inner panel

11) Make adjustment of front sash in the same manner as that of rear sash.

**NOTE:**

Although front and rear sashes must, as a rule, be adjusted in the same manner, in some door installation, the adjustment in a different manner may be required. However, adjustment of one sash to the maximum amount and the other to the minimum amount is not permitted. Such adjustment may result in applying excessive load against regulator.

12) After adjustments, tighten the nuts.

13) After adjustment of the glass, close the door. If there is a gap between outer lip of gusset and glass surface, adjust the gap by adjusting bolt (A) at the attachment hardware at the lower side of the gusset to prevent generation of wind noise.

14) During adjustment, loosen the other three clamping bolts.

15) After adjustment, tighten the bolts and nuts.

# Front Regulator and Motor Assembly

GLASS/WINDOWS/MIRRORS

## 5. Front Regulator and Motor Assembly

### A: REMOVAL

- 1) Remove the door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 2) Disconnect the motor connector.
- 3) Remove the four bolts and two nuts to remove regulator assembly.

- 4) Remove the screws to remove motor assembly.

#### NOTE:

When removing the motor assembly, secure the arm correctly. Otherwise the regulator arm moves with the force of balancing spring.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the front door glass. <Ref. to GW-12, ADJUSTMENT, Front Door Glass.>

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to GW-4, FRONT DOOR GLASS, COMPONENT, General Description.>**

### C: INSPECTION

- 1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
- 2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

## 6. Remote Control Mirror System

### A: WIRING DIAGRAM

<Ref. to WI-190, Remote Control Mirror System.>

### B: INSPECTION

Symptom	Repair order
All function does not operate.	<ol style="list-style-type: none"> <li>1. Fuse (F/B No. 6)</li> <li>2. Mirror switch</li> <li>3. Wiring harness</li> </ol>
One side of the mirror motor does not operate.	<ol style="list-style-type: none"> <li>1. Mirror switch</li> <li>2. Mirror motor</li> <li>3. Wiring harness</li> </ol>
Mirror heater does not operate.	<ol style="list-style-type: none"> <li>1. Mirror switch</li> <li>2. Mirror heater</li> <li>3. Wiring harness</li> </ol>

# Scalp Cap

GLASS/WINDOWS/MIRRORS

## 7. Scalp Cap

### A: REPLACEMENT

#### 1. MODEL WITH SIDE TURN SIGNAL LIGHT

- 1) Remove the outer mirror. <Ref. to GW-20, REPLACEMENT, Outer Mirror.>
- 2) Press-in the upper side clips (A) from inside of outer mirror.

- 3) Pull the scalp cap frontward of outer mirror, remove the upper side clips (A), and then remove the scalp cap.

- 4) Install the scalp cap securely.

#### CAUTION:

Do not remove the scalp cap forcibly. The lower hooks may be damaged.

#### 2. MODEL WITHOUT SIDE TURN SIGNAL LIGHT

- 1) Remove the mirror. <Ref. to GW-20, REPLACEMENT, Outer Mirror.>
- 2) Press-in the clips (A) from inside of outer mirror.

- 3) Pull the scalp cap towards the front of the outer mirror, then remove the scalp cap.

- 4) Align clip (A) on the reverse side of the scalp cap and the clip attachment hole of the outer mirror, and push the scalp cap in.

- 5) Install the scalp cap securely.

## 8. Outer Mirror Assembly

### A: REMOVAL

1) Remove the mirror gusset cover.

(1) Hook

- 2) Remove the door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Disconnect the outer mirror connector.
- 4) Remove the screws to remove outer mirror assembly.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Check that the rearview mirror moves properly when the battery voltage is applied to terminals.

- Model with side turn signal light

Switch position	Terminal No.
OFF	—
UP	6 (+) and 3 (-)
DOWN	3 (+) and 6 (-)
LEFT	7 (+) and 3 (-)
RIGHT	3 (+) and 7 (-)

- Model without side turn signal light

Switch position	Terminal No.
OFF	—
UP	4 (+) and 2 (-)
DOWN	2 (+) and 4 (-)
LEFT	5 (+) and 2 (-)
RIGHT	2 (+) and 5 (-)

Replace the outer mirror assembly if defective.

## 9. Outer Mirror

### A: REPLACEMENT

- 1) Face the mirror upward.
- 2) Use a flat tip screwdriver to remove clip (A).
- 3) Lift the lower mirror up to remove hooks (B).

- 4) Disconnect the mirror heater connector from side of the mirror. (Model with mirror heater)

- 5) Catch the hooks (B) and install clips (A).

#### CAUTION:

- When removing the mirror, be careful not to damage the back surface of mirror with a flat tip screwdriver.
- When installing the mirror, insert the hook and clip securely.

## 10. Remote Control Mirror Switch

### A: REMOVAL

- 1) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 2) Disconnect the connector.

- 3) Remove the remote control mirror switch from instrument panel lower cover.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. REMOTE CONTROL MIRROR SWITCH

Move the remote control mirror switch to each position and check continuity between terminals.

- Change over switch R

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
UP	10 and 12 15 and 14	Less than 1 Ω
DOWN	10 and 15 12 and 14	Less than 1 Ω
LEFT	10 and 11 15 and 14	Less than 1 Ω
RIGHT	10 and 15 11 and 14	Less than 1 Ω

- Change over switch L

Switch position	Terminal No.	Standard
OFF	—	1 MΩ or more
UP	10 and 8 15 and 14	Less than 1 Ω
DOWN	10 and 15 8 and 14	Less than 1 Ω
LEFT	10 and 9 15 and 14	Less than 1 Ω
RIGHT	10 and 15 9 and 14	Less than 1 Ω

Replace the remote control mirror switch if defective.

# Rear Door Glass

GLASS/WINDOWS/MIRRORS

## 11. Rear Door Glass

### A: REMOVAL

- 1) Remove the rear door trim.  
<Ref. to EI-49, REMOVAL, Door Trim.>
- 2) Remove the sealing cover. <Ref. to EB-23, REMOVAL, Rear Sealing Cover.>
- 3) Remove the stabilizers.

- 4) Remove clips (A), and remove the front end and rear end of the weather strip.

- 5) Remove the two screws to remove the weather strip outer.

- 6) Operate the power window switch to move the glass to the position shown in the figure, then remove the two nuts through the service holes.

- 7) Remove the rear sash retaining nuts (A) and move the rear sash (B) rearward.

- 8) Remove the door glass.

### CAUTION:

- Since the gear may be disengaged, do not turn regulator in the closing direction after removing glass.
- Avoid impact and damage to the glass.

### B: INSTALLATION

- 1) Install in the reverse order of removal.

### CAUTION:

Make sure that the glass stay is placed securely in sash.

- 2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

## C: ADJUSTMENT

**NOTE:**

The rear door glass, as a rule, should be adjusted in the same manner as the front door glass, although they are different in dimension. <Ref. to GW-12, ADJUSTMENT, Front Door Glass.>

1) Adjust the glass position using the dimensions in the figure as a guide.

(1) 11 mm (0.433 in)

**NOTE:**

- If dimensions are smaller than the given dimensions, glass may get caught in weather strip during lifting/lowering operation and may not be fully open.
- After adjustment, move the glass up and down to check whether it is caught.

2) Attach the special tool to the glass, and adjust the glass adhesion until the dimensional value becomes as shown below.

ST 61299AE010 SPACER

(Glass thickness: 4 mm (0.157 in) for rear door glass)

(1) 3.2 — 4.8 mm (0.126 — 0.189 in)

(2) When re-using the weather strip: 5.5 mm (0.217 in)  
When replacing the weather strip: 5.0 mm (0.179 in)

(3) ST

**NOTE:**

- If rear glass adhesion is higher than necessary, glass may get caught in weather strip of center pillar corner, resulting in early wear of weather strip. Be careful when adjusting.
- After adjustment, move the glass up and down to check whether it is caught.

# Rear Regulator and Motor Assembly

GLASS/WINDOWS/MIRRORS

## 12. Rear Regulator and Motor Assembly

### A: REMOVAL

- 1) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
- 2) Remove the nut (A) to remove the front sash.

- 3) Disconnect the motor connector.
- 4) Remove the four bolts and two nuts to remove regulator assembly.

- 5) Remove the screws to remove motor assembly.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Adjust the rear door glass. <Ref. to GW-23, ADJUSTMENT, Rear Door Glass.>

#### Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to GW-5, REAR DOOR GLASS, COMPONENT, General Description.>

### C: INSPECTION

- 1) Make sure that the power window motor rotates properly when the battery voltage is applied to the terminals of motor connector.
- 2) Change polarity of battery connection to terminals to ensure that the motor rotates in reverse direction.

## 13. Windshield Glass

### A: REMOVAL

#### 1. USING WINDSHIELD GLASS KNIFE

- 1) Remove the cowl panel.  
<Ref. to EI-40, REMOVAL, Cowl Panel.>
- 2) Remove the molding.
- 3) Tape the body side of the circumference of windshield glass for protection.
- 4) Apply sufficient amount of soapy water to the adhesive part.
- 5) Insert the windshield glass knife into the adhesive.
- 6) While holding the knife edge and windshield glass edge at a right angle, move the windshield glass knife in parallel to the windshield glass edge along the surface and edge of windshield glass to cut the adhesive part.

#### NOTE:

- Do not twist the windshield glass knife.
- Cutting of adhesive part shall be started with wider gap between windshield glass and body.

- (1) Windshield glass knife
- (2) Tape for protection
- (3) Locating pin

- The locating pins are bonded to the corners of glass. Use piano wire to disconnect the pins.

- (1) Locating pin
- (2) Body panel
- (3) Windshield glass

#### 2. USING PIANO WIRE

- 1) Remove the cowl panel.  
<Ref. to EI-40, REMOVAL, Cowl Panel.>
- 2) Remove the molding.
- 3) Tape the body side of the circumference of windshield glass for protection.
- 4) Make a hole in the adhesive part using drill or knife.
- 5) Pass the piano wire through the hole, and attach both the wire ends securely to pieces of wood.

- 6) Pull the wire ends alternately to cut off the adhesive part.

#### CAUTION:

- Do not tightly pull the piano wire against the windshield glass edge.
- Be careful not to damage interior and exterior parts.
- When removal is made with area close to instrument panel, place a protection plate over it. Pay particular attention to the removal.
- Do not cross piano wires. Otherwise they may be cut.

# Windshield Glass

GLASS/WINDOWS/MIRRORS

## B: INSTALLATION

- 1) Clean the external circumference of windshield glass with alcohol or white gasoline.
- 2) Remove the adhesive layer on the body using cutter knife to obtain smooth face of 2 mm (0.08 in) thick.

### CAUTION:

Be careful not to damage the body and paint surface.

- (1) Adhesive
- (2) 2 mm (0.08 in)
- (3) Dam rubber
- (4) Glass

- 3) Clean the body with alcohol or white gasoline to eliminate cutting powder, dust and dirt completely from body.

- 4) Install the dam rubber.

- (1) Locating pin (adhered)
- (2) Dam rubber
- (3) 11 mm (0.433 in)
- (4) 11 mm (0.433 in)
- (5) 9 mm (0.354 in)

- 5) Fit the mark (B) on molding to the notch (A) of glass side, and install the molding to entire perimeter of glass.

6) Apply two types of primers to the adhesive layer of glass using sponge.

**Glass primer:**

**Dow Automotive  
ESSEX U-401, U-402**

7) Apply the primer to the adhesive layer of body.

**Painted surface primer:**

**Dow Automotive  
ESSEX U-413**

**NOTE:**

- Primer once attached to the painted surface of the body and internal trim is hard to wipe off. Mask the circumference of such area.
- Let primer dry for about ten minutes before installing the glass.
- Do not touch the surface coated with primer.

- (1) Application of primer
- (2) Glass side
- (3) Body side

8) Cut off the cartridge nozzle tip as shown and set it in sealant gun.

- (1) 10 mm (0.39 in)
- (2) 15 mm (0.59 in)

9) Apply adhesive to the glass end surface as shown.

**Adhesive:**

**Dow Automotive  
ESSEX U-400HV or equivalent**

- (1) 9 — 12 mm (0.35 — 0.47 in)

10) Fit the locating pins, and install windshield glass using suction rubber cup.

- 11) Lightly press the windshield glass for tight fit.
- 12) Make flush the adhesive surface juttred out using spatula.
- 13) After completion of all work, allow the vehicle to stand for about 24 hours.

**NOTE:**

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

14) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

**NOTE:**

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

15) Install the cowl panel.

<Ref. to EI-40, INSTALLATION, Cowl Panel.>

## 14.Rear Gate Glass

### A: REMOVAL

- 1) Remove the rear wiper motor.  
<Ref. to WW-17, REMOVAL, Rear Wiper Motor.>
- 2) Disconnect the electrical connectors from rear defogger terminal.
- 3) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

### B: INSTALLATION

- 1) Apply adhesive in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>
- 2) Insert the glass clip pin into rear gate hole, push on the area around the clip pin to secure it, and then push lightly all around the area to seal it.
- 3) About one hour after installation, conduct a leak test.

- 4) After completion of all work, allow the vehicle to stand for about 24 hours.

#### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
  - Move the vehicle slowly.
  - For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.
  - When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.
- 5) Connect the rear defogger terminals.
  - 6) Install the rear wiper.  
<Ref. to WW-17, INSTALLATION, Rear Wiper Motor.>

- (1) Upside
- (2) Molding
- (3) Glass
- (4) Adhesive
- (5) Downside
- (6) Glass
- (7) Molding
- (8) Adhesive

## 15. Rear Window Glass

### A: REMOVAL

1) Disconnect the electrical connectors from rear defogger terminal.

2) Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

### B: INSTALLATION

1) Adhere the dam rubber.

- (1) Locating pin (adhered)
- (2) Dam rubber
- (3) 11 mm (0.433 in)
- (4) 4 mm (0.157 in)
- (5) Rear window glass
- (6) 40 mm (1.575 in)

2) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>

3) Connect the rear defogger and antenna terminal connectors.

4) After completion of all work, allow the vehicle to stand for about 24 hours.

#### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

5) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

#### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

# Rear Window Defogger System

GLASS/WINDOWS/MIRRORS

---

## 16.Rear Window Defogger System

### A: WIRING DIAGRAM

<Ref. to WI-191, Rear Defogger System.>

### B: INSPECTION

Symptom	Repair order
Rear window defogger does not operate.	<ol style="list-style-type: none"><li>1. Fuse (M/B No. 10) (F/B No. 22)</li><li>2. Rear defogger relay</li><li>3. Defogger switch</li><li>4. Rear defogger condenser</li><li>5. Defogger wire</li><li>6. Wiring harness</li><li>7. Body integrated unit</li></ol>

#### NOTE:

Rear window defogger system can be customized on the Subaru Select Monitor.

System name	Initial setting	Customize setting
Rear window defogger timer	OFF after 15 min.	Repeat 15 min. operation and 2 min. stop.

## 17. Rear Window Defogger

### A: INSPECTION

#### 1. CHECK WITH SUBARU SELECT MONITOR

**CAUTION:**

Check that the rear window defogger timer is in initial setting or customize setting before performing inspection.

1) Check the input signal when the rear window defogger switch is operated using Subaru Select Monitor.

(1) Prepare the Subaru Select Monitor kit. <Ref. to GW-7, PREPARATION TOOL, General Description.>

(2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".

(3) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.

(4) Select the {Current Data Display & Save}.

(5) Display the data of rear window defogger switch.

2) After rear defogger switch is set to ON, check whether it turns to OFF in 15 minutes or repeats 15 minutes operation and 2 minutes stop?

3) When it becomes OFF on above 2), it is normal. When it repeats 15 minutes operation and 2 minutes stop, replace body integrated unit.

#### 2. HEAT WIRE INSPECTION

**CAUTION:**

Use a dry and soft cloth when wiping dirt off the glass. Move the cloth along the heat wire to avoid damaging it.

1) Turn the ignition switch to ON.

2) Turn the defogger switch to ON.

3) Wrap the tips of tester probe with aluminum foil to avoid damage to heat wire.

- (1) Tester probe
- (2) Aluminum foil
- (3) Heat wire
- (4) Press

4) Measure the voltage at heat wire center with DC voltmeter.

**Standard voltage:**

**Approx. 6 V**

(1) Center of heat wire

Voltage	Criteria
Approx. 6 V	Normal operation
Approx. 12 V or 0 V	Open

**NOTE:**

- If the measured value is 12 V, heat wire is open between heat wire center and positive (+) terminal of tester probe.

- If it is 0 V, the circuit is open between heat wire center and ground.

5) Connect the tester probe of positive lead of voltmeter to positive terminal of heat wire and move tester probe of negative lead along the heat wire up to the negative terminal end. If voltage changes from zero to several volts during movement of tester probe, heat wire is open at the voltage change point.

## Rear Window Defogger

GLASS/WINDOWS/MIRRORS

---

### B: REPAIR

- 1) Clean the broken portion with alcohol or white gasoline.
- 2) Mask both side of wire with thin film.
- 3) Apply the conductive silver composition (DUPONT No. 4817) to the broken portion.

- (1) Broken portion
- (2) Thin film
- (3) Broken wire
- (4) Conductive silver composition (DUPONT No. 4817)

- 4) After repair, check the wire.

## 18.Rear Quarter Glass

### A: REMOVAL

Remove the glass in the same procedure as for windshield glass. <Ref. to GW-25, REMOVAL, Windshield Glass.>

- (1) Locating pin
- (2) Dam rubber

### B: INSTALLATION

1) Install the dam rubber.

- (1) Dam rubber
- (2) Molding
- (3) 10.5 mm (0.413 in) (constant)
- (4) Ceramic terminal

2) Cut out the nozzle head and apply adhesive to the glass end surface as shown.

- (1) Locating pin
- (2) Dam rubber
- (3) Adhesive
- (4) Molding
- (5) 8 — 10 mm (0.31 — 0.39 in)
- (6) 15 mm (0.59 in)
- (7) 10 mm (0.39 in)

3) Install the glass in the same procedure as for windshield glass. <Ref. to GW-26, INSTALLATION, Windshield Glass.>

4) After completion of all work, allow the vehicle to stand for about 24 hours.

#### NOTE:

- When door is opened/closed after glass is bonded, always lower the door glass first, and then open/close it carefully.
- Move the vehicle slowly.
- For minimum drying time and vehicle standing time before driving after bonding, follow instructions or instruction manual from the adhesive manufacturer.

5) After curing of adhesive, pour the water on external surface of vehicle to check that there are no water leaks.

#### NOTE:

When a vehicle is returned to the user, tell him or her that the vehicle should not be subjected to heavy impact for at least three days.

### 19.Sunroof Glass

#### A: PROCEDURE

For sunroof glass removal, installation and adjustment, refer section of sunroof.

- Removal <Ref. to SR-6, REMOVAL, Glass Lid.>
- Installation <Ref. to SR-7, INSTALLATION, Glass Lid.>
- Adjustment <Ref. to SR-7, ADJUSTMENT, Glass Lid.>

## 20. Rearview Mirror

### A: REMOVAL

- 1) Remove the TORX<sup>®</sup> screw (1).
- 2) Slide the rearview mirror (2) to the upper side (A) of the windshield glass (3), and remove the rearview mirror from the button (4).

#### CAUTION:

- Be careful not to damage the mirror surface.
- Be careful not to damage the windshield glass.

### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to “**COMPONENT**” of “*General Description*”. <Ref. to GW-6, **MIRROR, COMPONENT, General Description.**>

#### CAUTION:

When tightening the mounting TORX<sup>®</sup> screw, be sure to observe the tightening torque. Otherwise, the mount may be damaged in over-torque conditions.

### C: INSPECTION

- Check that the mirror is not damaged.
- Check that the spring is not damaged.

# Wiper Deicer System

GLASS/WINDOWS/MIRRORS

---

## 21. Wiper Deicer System

### A: WIRING DIAGRAM

<Ref. to WI-177, Wiper Deicer System.>

### B: INSPECTION

Symptom	Repair order
Wiper deicer does not operate.	<ol style="list-style-type: none"><li>1. Fuse (F/B No. 4, 9)</li><li>2. Wiper deicer relay</li><li>3. Wiper deicer switch</li><li>4. Wiring harness</li><li>5. Body integrated unit</li></ol>

Refer to “Rear Window Defogger” for inspection.  
<Ref. to GW-31, INSPECTION, Rear Window Defogger.>

#### NOTE:

Wiper deicer system can be customized on the Subaru Select Monitor.

System name	Initial setting	Customize setting
Wiper deicer timer	OFF after 15 min.	Continuous operation*

\*: When one of the following conditions occurs, continuous operation is suspended and turned off after 15 min.

- Ambient temperature at 5°C (41°F) or more continues for 10 seconds
- Malfunction occurs on ambient sensor.
- Vehicle speed below 15 km/h (9 MPH) continues 15 min.
- Malfunction occurs in CAN communication.

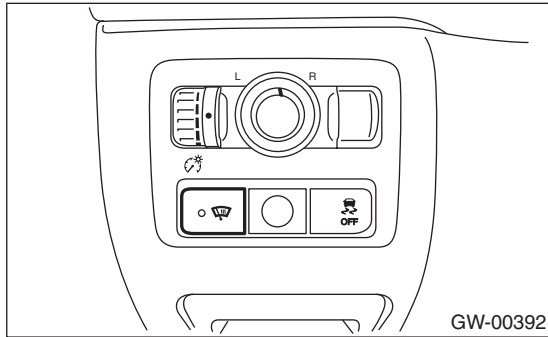

### C: REPAIR

Refer to “Rear Window Defogger” for repair.  
<Ref. to GW-32, REPAIR, Rear Window Defogger.>

## 22. Wiper Deicer Switch

### A: REMOVAL

- 1) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 2) Disconnect the harness connector and remove wiper deicer switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. CHECK WITH SUBARU SELECT MONITOR

##### CAUTION:

**Check whether the wiper deicer timer is in initial setting or customize setting before performing inspection.**

- 1) Check the input signal when the wiper deicer switch is operated using Subaru Select Monitor.
  - (1) Prepare the Subaru Select Monitor kit. <Ref. to GW-7, PREPARATION TOOL, General Description.>
  - (2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".
  - (3) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
  - (4) Select the {Current Data Display & Save}.
  - (5) Display the data of wiper deicer switch.
- 2) After the wiper deicer switch is set to ON, check whether it turns OFF in 15 minutes or operates continuously.
- 3) When it becomes OFF on above 2), it is normal. When it operates continuously, replace the body integrated unit.

#### 2. CHECK SWITCH.

Remove the wiper deicer switch, and measure the switch resistance.

Switch position	Terminal No.	Standard
OFF	1 and 2	1 MΩ or more
ON		Less than 1 Ω

Replace the wiper deicer switch if faulty.

## B: CAUTION

- Be careful not to damage the meters and instrument panel.
- Be careful not to damage the meter glass.
- Make sure the electrical connector is connected securely.
- After installation, make sure that each meter operates normally.
- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Do not apply an excessive force on the printed circuit.
- Do not drop or otherwise apply impact.
- When the combination meter of model with immobilizer has been replaced, be sure to perform the registration of immobilizer.

## C: PREPARATION TOOL

### 1. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

## 2. Combination Meter System

### A: WIRING DIAGRAM

#### 1. COMBINATION METER

<Ref. to WI-192, WIRING DIAGRAM, Combination Meter System.>

### B: INSPECTION

#### 1. SELF-DIAGNOSIS

The self-diagnosis (checking of each meter, warning light, indicator, illumination, LCD, buzzer sound) of combination meter can be performed in the following procedure.

- 1) Turn the ignition switch to ON while turning the small light to OFF.
- 2) Turn the small light switch to ON within 3 seconds after step 1), then press the odo/tripmeter knob three times.
- 3) Turn the small light switch to OFF, and press the odo/trip meter knob three times.
- 4) Turn the small light switch to ON, and press the odo/trip meter knob three times.

#### NOTE:

- Perform the steps described in 2) to 4) within 10 seconds after the ignition switch is turned to ON.
- When the self-diagnosis function operates, the warning light, indicator, and LCD display checks are performed. After this, operation checks are performed in the order of meter, illumination, and buzzer for each press of the odo/trip meter knob button. Normal meter <Ref. to IDI-5, LIST OF SELF-DIAGNOSIS MODE OPERATION, INSPECTION, Combination Meter System.> Meter with multi-information display <Ref. to IDI-7, LIST OF SELF-DIAGNOSIS MODE OPERATION, INSPECTION, Combination Meter System.> Turn the ignition switch to OFF to cancel the self-diagnosis function.
- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once the vehicle starts driving, the self-diagnosis function is deactivated automatically for safety.
- When pressing the odo/trip meter knob four times, the display changes to DTC display mode (ECM, TCM, ABSCM/VDCCM). <Ref. to IDI-16, DTC DISPLAY MODE, INSPECTION, Combination Meter System.>

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

## 2. LIST OF SELF-DIAGNOSIS MODE OPERATION

### Normal meter

Speedometer, tachometer, fuel gauge, engine coolant temperature gauge	Microcomputer running type warning light, indicator light	AT select lever position indicator light	Odo/Trip indicator	SPORT shift indicator	Illumination (indicator needle, plate, ring, LCD)	Buzzer (SPORT shift buzzer)
Step 0. Processing to self-diagnosis function						
Operating initial operation	Initial illuminating	Normal	Normal	Initial illuminating	Initial illuminating	Not beep.
Step 1-1. Check each indication after initial operation						
Repeat the sweep operation (After holding on lowest position for one second, reaches to highest position within 5 seconds, and after holding on highest position for one second, reaches to lowest position within 5 seconds).	Light ON	With the highest brightness, illuminate the position sequentially at a cycle of 1.5 seconds. For the illumination order, refer to the illumination order table.	Perform the segment check. For the illumination order, refer to the illumination order table.	Perform the segment check. For the illumination order, refer to the illumination order table.	Illuminate at the highest brightness.	Not beep.
Step 1-2. Press the trip knob (trip knob input is not accepted till the meter indicator needle reaches the highest position): sweep complete, AT select lever position indicator display is set						
After completing sweep in step 1-1, back to lowest position.	Light ON	Keep the position indicated when the trip knob is pressed.	Underbar “_” is displayed.	“1” is displayed.	Illuminate at the highest brightness.	Not beep.
Step 2-1. Press the trip knob, and hold it: Check each meter						
All meters are moved simultaneously in every 0.5 sec. from the lowest position to highest position. Speedometer/ Tachometer: Approx. 5 degrees at every movement. Engine coolant temperature / Fuel gauge: Moves approx. 2 degrees at a time.	Light OFF	Keep the position indicated that set in step 1-2.	Display the current meter directing angle on odometer. Ex.) When the speedometer/ tachometer: 135 degrees and engine coolant temperature gauge/fuel gauge: 54 degrees, displays “135054”.	“▼2” is displayed.	Illuminate at the highest brightness.	Not beep.
Step 2-2. Release the trip knob: Specifying the meter directing position						
Stop at directing position when the trip knob is released.	Light OFF	Keep the position indicated that set in step 1-2.	Display the current meter directing angle on odometer.	“2” is displayed.	Illuminate at the highest brightness.	Not beep.

# Combination Meter System

## INSTRUMENTATION/DRIVER INFO

Speedometer, tachometer, fuel gauge, engine coolant temperature gauge	Microcomputer running type warning light, indicator light	AT select lever position indicator light	Odo/Trip indicator	SPORT shift indicator	Illumination (indicator needle, plate, ring, LCD)	Buzzer (SPORT shift buzzer)
<b>Step 3-1. Press the trip knob, and hold it: Check illumination</b>						
Keep the position that specified at step 2-2.	Light OFF	Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.	Illumination brightness is displayed. (From ILL6 to ILL1)	"▼ 3" is displayed.	Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.	Not beep.
<b>Step 3-2. Release the trip knob: Specifying the illumination brightness</b>						
Keep the position that specified at step 2-2.	Light OFF	Keep the brightness at the time when the trip knob is released.	Displays the brightness level at the time when the trip knob was released.	"3" is displayed.	Keep the brightness at the time when the trip knob is released.	Not beep.
<b>Step 4-1. Press the trip knob: Check the beeping of SPORT shift buzzer (For AT model)</b>						
All meter indicator needle returns to lowest position.	Light OFF	Illuminate at the highest brightness. Keep the position indicated that set in step 1-2.	Illumination brightness is displayed.	"▲▼ 8" is displayed. Blinks with buzzer.	Illuminate at the highest brightness.	SPORT shift buzzer beeps.
<b>Step 4-2. Press the trip knob: Check the VDC indicator light (Model with VDC)</b>						
All meter indicator needle returns to lowest position.	VDC warning light and VDC operation indicator light blink.	Illuminate at the highest brightness. Keep the position indicated that set in step 1-2.	Illumination brightness is displayed.	"4" is displayed.	Illuminate at the highest brightness.	VDC buzzer beeps.
<b>Step 5. Press the trip knob: Complete the self-diagnosis 1 cycle</b>						
All meter indicator needle returns to lowest position, and go back to step 1 after completion.

## 3. LIST OF SELF-DIAGNOSIS MODE OPERATION

### Meter with multi information display

Speedometer, tachometer, fuel gauge, engine coolant temperature gauge, ECO gauge	Microcomputer running type warning light, indicator light	AT select lever position indicator light	Multi information display	Illumination (indicator needle, plate, ring, LCD)	Buzzer (SPORT shift buzzer, VDC buzzer, speed warning)
Step 0. Processing to self-diagnosis function					
Operating initial operation	Initial illuminating	Normal	TRIP: Normal ODO: Normal	Initial illuminating	Not beep.
Step 1-1. Check each indication after initial operation					
Repeat the sweep operation (After holding on lowest position for one second, reaches to highest position within 5 seconds, and after holding on highest position for one second, reaches to lowest position within 5 seconds).	Light ON	Perform the segment check. For the illumination order, refer to the table 1 of illumination order tables.	STEP 1 is displayed. White illumination: 6 seconds. Yellow illumination: 6 seconds.	Illuminate at the highest brightness.	Not beep.
Step 1-2. Press the trip knob: sweep completes, AT select lever position indicator display is set					
After quitting sweep in step 1-1, back to lowest position. (Until back to lowest position, ignore trip input.)	Light ON	Keep the position indicated when the trip knob is released.	Keep the illumination color indicated when the trip knob is released.	Illuminate at the highest brightness.	Not beep.
Step 2-1. Press the trip knob, and hold it: Check each meter					
Perform the indicator needle check. For the illumination order, refer to the table 2 of illumination order tables.	Light OFF (Low fuel warning light follows the table 2 of tables.)	For the illumination order, refer to the table 2 of illumination order tables.	STEP 2 is displayed. White illumination: 12.5 seconds. Yellow illumination: 12.5 seconds.	Illuminate at the highest brightness.	Not beep.
Step 2-2. Release the trip knob: Specifying the meter directing position					
Stop at directing position when the trip knob is released. (Indicator needle stops moving after movement is completed.)	Light OFF	Keep the position indicated when the trip knob is released.	Keep the illumination color at the time when the trip knob is released.	Illuminate at the highest brightness.	Not beep.
Step 3-1. Press the trip knob, and hold it: Check illumination					
Keep the position that specified at step 2-2.	Light OFF	Keep the position that specified at step 2-2.	STEP 3 is displayed, and illumination brightness is displayed. (from ILL6 to ILL1)	Varying from the highest brightness (ILL6) to the lowest luminescence (ILL1) every second. After reaching at ILL1, repeat it from ILL6.	Not beep.
Step 3-2. Release the trip knob: Specifying the illumination brightness

INSTRUMENTATION/DRIVER INFO

## 6. CHECK ABSCM OR VDCCM

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK VEHICLE SPEED SIGNAL.</b></p> <p>1) Lift up the vehicle and support it with rigid racks.</p> <p>2) Drive the vehicle faster than 10 km/h (6 MPH).</p> <p><b>WARNING:</b> <b>Be careful not to be dragged in by the rotating wheel.</b></p> <p>3) Measure the voltage between combination meter connector and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(i10) No. 19 (+) — Chassis ground (-):</b></p>	<p>Is the voltage less than 1 V ←→ 5 V or more?</p>	<p>Replace the meter case assembly.</p>	<p>Go to step 2.</p>
<p><b>2</b></p> <p><b>CHECK HARNESS BETWEEN ABSCM OR VDCCM AND COMBINATION METER.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connector from ABSCM or VDCCM and combination meter.</p> <p>3) Measure the resistance between ABSCM or VDCCM harness connectors and the combination meter harness connector.</p> <p><b>Connector &amp; terminal</b> <b>Model without VDC</b> <b>(B301) No. 23 — (i10) No. 19:</b> <b>Model with VDC</b> <b>(B310) No. 33 — (i10) No. 19:</b></p>	<p>Is resistance less than 10 Ω?</p>	<p>Model without VDC: Check the ABSCM. &lt;Ref. to ABS(diag)-2, Basic Diagnostic Procedure.&gt;</p> <p>Model with VDC: Check the VDCCM. &lt;Ref. to VDC(diag)-2, Basic Diagnostic Procedure.&gt;</p>	<p>Repair the wiring harness.</p>

## 7. CHECK ENGINE CONTROL MODULE (ECM)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK ECM SIGNAL.</b></p> <p>1) Start the engine.</p> <p>2) Measure the voltage between ECM connector and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(B136) No. 22 (+) — Chassis ground (-):</b></p>	<p>Is the voltage 0 ←→ 14 V or more?</p>	<p>Go to step 2.</p>	<p>Inspect the ECM. &lt;Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.&gt; &lt;Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.&gt; &lt;Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.&gt;</p>
<p><b>2</b></p> <p><b>CHECK HARNESS BETWEEN COMBINATION METER AND ECM.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Disconnect the connector from ECM and combination meter.</p> <p>3) Measure the resistance between ECM harness connector and combination meter harness connector.</p> <p><b>Connector &amp; terminal</b> <b>(B136) No. 22 — (i10) No. 20:</b></p>	<p>Is resistance less than 10 Ω?</p>	<p>Replace the meter case assembly.</p>	<p>Repair the wiring harness.</p>

# Combination Meter System

INSTRUMENTATION/DRIVER INFO

## 8. CHECK FUEL LEVEL SENSOR

	Step	Check	Yes	No
1	<p><b>CHECK COMMUNICATION ERROR DISPLAY.</b></p> <p>1) Turn the ignition switch to ON.</p> <p>2) Check that the error code is displayed in odo/trip meter. (Except for meter with MID)</p>	<p>Is the error code "Er xx" displayed on odo/trip meter? (Except for meter with MID) Or is the DTC of low speed LAN system detected?</p>	<p>Check the communication circuit. &lt;Ref. to IDI-15, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.&gt;</p>	<p>Go to step 2.</p>
2	<p><b>CHECK COMBINATION METER.</b></p> <p>1) Remove the fuel sub level sensor. &lt;Ref. to FU(H4SO)-56, REMOVAL, Fuel Sub Level Sensor.&gt; &lt;Ref. to FU(H4DOTC)-66, REMOVAL, Fuel Sub Level Sensor.&gt; &lt;Ref. to FU(H6DO)-57, REMOVAL, Fuel Sub Level Sensor.&gt;</p> <p>2) Short the fuel sub level sensor connector terminal to the chassis ground using a suitable lead line wire with 2 — 6 Ω resistance connected between connector terminal and chassis ground.</p> <p>3) Turn the ignition switch to ON.</p> <p><b>Terminals</b> <b>(R59) No. 1 — Chassis ground:</b></p>	<p>Is the fuel gauge display in combination meter changed to FULL?</p>	<p>Go to step 3.</p>	<p>Check harness for open or short circuits, and if normal, replace the meter case assembly.</p>
3	<p><b>CHECK FUEL LEVEL SENSOR.</b></p> <p>1) Remove the fuel level sensor. &lt;Ref. to FU(H4SO)-55, REMOVAL, Fuel Level Sensor.&gt; &lt;Ref. to FU(H4DOTC)-65, REMOVAL, Fuel Level Sensor.&gt; &lt;Ref. to FU(H6DO)-56, REMOVAL, Fuel Level Sensor.&gt;</p> <p>2) Measure the resistance between fuel level sensor terminals when the float is in FULL or EMPTY position.</p> <p><b>Terminals</b> <b>(R58) No. 1 — No. 4:</b></p>	<p>Is the resistance 1.0 to 3.0 Ω (FULL) and 31 to 33 Ω (EMPTY)?</p>	<p>Go to step 4.</p>	<p>Replace the fuel level sensor.</p>
4	<p><b>CHECK FUEL SUB LEVEL SENSOR.</b></p> <p>1) Remove the fuel sub level sensor. &lt;Ref. to FU(H4SO)-56, REMOVAL, Fuel Sub Level Sensor.&gt; &lt;Ref. to FU(H4DOTC)-66, REMOVAL, Fuel Sub Level Sensor.&gt; &lt;Ref. to FU(H6DO)-57, REMOVAL, Fuel Sub Level Sensor.&gt;</p> <p>2) Measure the resistance between fuel sub level sensor terminals when the float is in FULL or EMPTY position.</p> <p><b>Terminals</b> <b>(R59) No. 1 — No. 2:</b></p>	<p>Is the resistance 1.0 to 3.0 Ω (FULL) and 61 to 63 Ω (EMPTY)?</p>	<p>Go to step 5.</p>	<p>Replace the fuel sub level sensor.</p>
5	<p><b>CHECK HARNESS BETWEEN FUEL SUB-LEVEL SENSOR AND BODY INTEGRATED UNIT.</b></p> <p>1) Disconnect the connector from body integrated unit.</p> <p>2) Check harness for open or short circuits between fuel sub level sensor harness connector terminal and body integrated unit harness connector terminal.</p> <p><b>Connector &amp; terminal</b> <b>(R59) No. 1 — (B281) No. 19:</b></p>	<p>Is harness normal?</p>	<p>Go to step 6.</p>	<p>Repair the wiring harness.</p>

# Combination Meter System

## INSTRUMENTATION/DRIVER INFO

Step	Check	Yes	No
<b>6 CHECK HARNESS BETWEEN FUEL LEVEL SENSOR AND FUEL SUB LEVEL SENSOR.</b> Check harness for open or short circuits between fuel level sensor harness connector terminal and fuel sub level sensor harness connector terminal. <i>Connector &amp; terminal (R58) No. 1 — (R59) No. 2:</i>	Is harness normal?	Go to step 7.	Repair the wiring harness.
<b>7 CHECK FUEL LEVEL SENSOR GROUND CIRCUIT.</b> Check harness for open or short circuits between fuel level sensor harness connector terminal and chassis ground harness connector terminal. <i>Connector &amp; terminal (R58) No. 4 — Chassis ground:</i>	Is harness normal?	Replace the meter case assembly.	Repair the wiring harness.

## 9. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Step	Check	Yes	No
<b>1 CHECK COMMUNICATION ERROR DISPLAY.</b> 1) Turn the ignition switch to ON. 2) Check that the error code is displayed in odo/trip meter. (Except for meter with MID)	Is the error code "Er xx" displayed on odo/trip meter? (Except for meter with MID) Or is the DTC of low speed LAN system detected?	Check the communication circuit. <Ref. to IDI-15, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>	Go to step 2.
<b>2 CHECK ENGINE COOLANT TEMPERATURE SENSOR.</b> Check the engine coolant temperature sensor. <Ref. to EN(H4SO)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H4DOTC)(diag)-2, Basic Diagnostic Procedure.> <Ref. to EN(H6DO)(diag)-2, Basic Diagnostic Procedure.>	Is the engine coolant temperature sensor OK?	Replace the meter case assembly.	Replace the engine coolant temperature sensor.

## 10.COMMUNICATION ERROR DISPLAY

**NOTE:**

Communication error display is not displayed on the meter with multi information display.

When the following error code is displayed in the odo/trip meter, inspect the communication circuit since the communication failure is generated between each control module. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

Error code	Remarks
Er IU	Malfunction in integrated module
Er —	Simultaneous malfunction of high/low speed CAN communication
Er HC	High speed CAN communication failure
Er LC	Low-speed CAN communication failure
Er EG	EGI Communication failure
Er TC	TCM Communication failure
Er Ab	ABSCM/VDCCM communication failure
Er SP	ABSCM/VDCCM DTC information and vehicle speed pulse malfunction
Er SS	Wheel speed data malfunction

# Combination Meter System

## INSTRUMENTATION/DRIVER INFO

### 11.DTC DISPLAY MODE

Display of DTC can be easily performed in odo/trip meter by performing the following procedures.

- 1) Within 3 seconds after turning the ignition switch to ON, set the lighting switch to tail light or headlight position.
- 2) Press the odo/tripmeter knob four times.
- 3) Turn the lighting switch to OFF, and press the odo/trip meter knob four times.
- 4) Set the lighting switch to tail light or headlight position again, and press the odo/tripmeter knob four times.

#### NOTE:

- Perform the steps described in 2) and 4) within 10 seconds.
- Perform checking DTC with the Subaru Select Monitor basically because malfunction history is displayed with a meter.
- When the engine starts during diagnosis, the self-diagnosis function is not cancelled, however, once turning the ignition switch to OFF or the vehicle starts driving, DTC display mode is cancelled automatically for safety.
- When the DTC display mode operates, {ECM}, {TCM}, {ABS/VDC} is displayed cyclically in this order for every three seconds or every press of the trip knob. DTC is displayed in the following table according to type of control module, receiving DTC, DTC detected, No DTC.
- Meter without multi information display

Control module	Condition	Display
ECM	Receiving DTC	Trip "A" + "P (Blink)"
	DTC detected	Trip "A" + "P xxxx"
	No DTC	Trip "A" + "P ----"
TCM	Receiving DTC	Trip "B" + "P (Blink)"
	DTC detected	Trip "B" + "P xxxx"
	No DTC	Trip "B" + "P ----"
ABS/VDCCM	Receiving DTC	Trip "A" + "C (Blink)"
	DTC detected	Trip "A" + "C xxxx"
	No DTC	Trip "A" + "C ----"
When CAN communication error is occurred	—	" ---- "

- Meter without multi information display

Control module	Condition	Display
ECM	Receiving DTC	Trip "A" + "P (Blink)"
	DTC detected	Trip "A" + "P xxxx"
	No DTC	Trip "A" + "P ----"
TCM	Receiving DTC	Trip "B" + "P (Blink)"
	DTC detected	Trip "B" + "P xxxx"
	No DTC	Trip "B" + "P ----"
ABS/VDCCM	Receiving DTC	Trip "A" + "C (Blink)"
	DTC detected	Trip "A" + "C xxxx"
	No DTC	Trip "A" + "C ----"

#### 1. SYMPTOM CHART

Symptom	Repair order	Reference
No display is shown.	1. Power supply 2. Clock body	<Ref. to IDI-17, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Clock System.>
Illumination does not illuminate.	1. Illumination power supply 2. Clock body	<Ref. to IDI-18, CHECK ILLUMINATION CIRCUIT, INSPECTION, Clock System.>
“Acc” or “ign” is displayed.	ACC or ignition power supply	<Ref. to IDI-18, CHECK ACC OR IGNITION POWER SUPPLY, INSPECTION, Clock System.>
“Err” is displayed in all items.	1. Communication circuit between combination meter and clock 2. Clock body	<Ref. to IDI-18, CHECK COMMUNICATION CIRCUIT, INSPECTION, Clock System.>
“Err” is displayed when a particular item is selected.	Communication circuit between combination meter and individual control modules	<Ref. to IDI-15, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>

#### 2. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
<b>1 CHECK CLOCK POWER SUPPLY.</b> 1) Disconnect the clock harness connector. 2) Measure the voltage between the clock harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i59) No. 10 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for a open or short between the fuse and clock.
<b>2 CHECK CLOCK GROUND CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Measure the resistance between the clock harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i59) No. 6 — Chassis ground:</b>	Is resistance less than 10 Ω?	Replace the clock body.	Repair the wiring harness.

# Clock System

## INSTRUMENTATION/DRIVER INFO

### 3. CHECK ILLUMINATION CIRCUIT

Step	Check	Yes	No
<b>1 CHECK ILLUMINATION CIRCUIT POWER SUPPLY.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the clock harness connector. 3) Turn the ignition switch and lighting switch to ON. 4) Measure the voltage between the clock harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>Normal meter:</b> <i>(i59) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the clock body.	Check the harness for a open or short between the fuse and clock.

### 4. CHECK ACC OR IGNITION POWER SUPPLY

Step	Check	Yes	No
<b>1 CHECK ACC POWER SUPPLY.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the clock harness connector. 3) Turn the ignition switch to ACC. 4) Measure the voltage between the clock harness connector and chassis ground. <b>Connector &amp; terminal</b> <i>(i59) No. 9 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check for open circuits in the harness between the fuse and the clock.
<b>2 CHECK THE IGNITION POWER SUPPLY.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between the clock harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>Normal meter:</b> <i>(i59) No. 8 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the clock body.	Check for open circuits in the harness between the fuse and the clock.

### 5. CHECK COMMUNICATION CIRCUIT

Step	Check	Yes	No
<b>1 CHECK THE HARNESS BETWEEN CLOCK AND COMBINATION METER.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of the clock and the combination meter. 3) Measure the resistance between the harness connector of the clock and the combination meter. <b>Connector &amp; terminal</b> <b>Normal meter:</b> <i>(i59) No. 5 — (i10) No. 18:</i> <b>Multi meter:</b> <i>(i59) No. 1 — (i10) No. 13:</i>	Is resistance less than 10 $\Omega$ ?	Go to step 2.	Repair the wiring harness.
<b>2 CHECK COMMUNICATION ERROR DISPLAY.</b> 1) Connect all the disconnected connectors. 2) Turn the ignition switch to ON. 3) Check that the error code is displayed in odo/trip meter.	Is the error code "Er xx" displayed on odo/trip meter? (Except for meter with MID)	Check the communication circuit. <Ref. to IDI-15, COMMUNICATION ERROR DISPLAY, INSPECTION, Combination Meter System.>	Replace the clock body.

## 4. Combination Meter

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Set the tilt steering at the lowest position.
- 3) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 4) Remove the screws of the combination meter (one on the upper side, two on lower side) and pull while tilting the meter towards yourself.

- 5) Disconnect the connector in the rear side of combination meter to remove meter.

#### CAUTION:

- Be careful not to damage the meter or instrument panel.
- Pay particular attention to avoid damaging the meter glass.

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

- Make sure the electrical connector is connected securely.
- Make sure that each meter operates normally.
- When the combination meter of model with immobilizer has been replaced, be sure to perform the registration of immobilizer.

# Combination Meter

INSTRUMENTATION/DRIVER INFO

## C: DISASSEMBLY

### CAUTION:

- Use gloves to avoid damage and getting fingerprints on the glass surface and meter surfaces.
- Be careful not to apply excessive force to the trip knob.
- Be sure not to touch the meter indicator needle.

Disengage claw (A), and remove the meter glass assembly (B) and meter panel assembly (C).

IDI00233

## 1. BULB REPLACEMENT

LEDs are used for all of warning lights and indicator lights of combination meters, replace the meter case assembly if faulty.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

## 5. Speedometer

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the speedometer alone. (Do not remove the cover on the back surface.)

## 6. Tachometer

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the tachometer alone. (Do not remove the cover on the back surface.)

## 7. Fuel Gauge

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the fuel gauge alone. (Do not remove the cover on the back surface.)

# Engine Coolant Temperature Gauge

INSTRUMENTATION/DRIVER INFO

---

## 8. Engine Coolant Temperature Gauge

### A: SPECIFICATION

Since the meter case assembly cannot be disassembled, do not remove or inspect the engine coolant temperature gauge alone. (Do not remove the cover on the back surface.)

## 9. Clock

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the center air vent grille. <Ref. to AC-46, REMOVAL, Air Vent Grille.>
- 3) Loosen the screws, and remove clock (B) from center air vent grille (A).

### B: INSTALLATION

Install in the reverse order of removal.

# Multi-information Display Selector

INSTRUMENTATION/DRIVER INFO

## 10. Multi-information Display Selector

### A: REMOVAL

- 1) Remove the airbag module from steering wheel.  
<Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
- 2) Disconnect the roll connector and steering switch connector, and remove the bolts.

- 3) Remove the multi-information display selector.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

- 1) Remove the airbag module from steering wheel.  
<Ref. to AB-14, REMOVAL, Driver's Airbag Module.>
- 2) Connect tester as shown in the figure, and measure the resistance between the terminals when pressing each switch.

Switch	Resistance value
Not pressed.	1 M $\Omega$ or more
Press ▲.	10 $\Omega$ or less
Press i/SET.	Approx. 1 k $\Omega$
Press ▼.	Approx. 3.67 k $\Omega$

- 3) Replace for faulty switch when the internal resistance is not in the above table. <Ref. to IDI-26, REMOVAL, Multi-information Display Selector.>

# General Description

## SEATS

---

### B: CAUTION

- If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper operation of the passenger detection system.

- The passenger detection system (passenger seat only) control unit and the passenger detection sensor are fixed to the seat cushion frame. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

- Do not replace the seat cushion pad by itself. Always replace the seat cushion pad and frame assembly as a set. The seat cushion pad and cushion frame are adjusted as a set at the time of manufacture. If cushion pads and cushion frames are combined from those of other vehicles or other sets, the passenger detection system may not operate properly.

- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

- When removing the front seat from a side airbag loaded vehicle, follow cautions given in the airbag section. <Ref. to AB-4, CAUTION, General Description.>

### C: PREPARATION TOOL

#### 1. GENERAL TOOL

TOOL NAME	REMARKS
Long nose plier	Used for removing the hog ring.
Hog ring pliers	Used for installing the hog ring.
TORX® T50	Used for removing and installing the inner seat belt assembly.
Circuit tester	Used for checking voltage and continuity.

## 2. Front Seat

### A: REMOVAL

#### CAUTION:

The airbag system is fitted with a backup power source. After disconnecting the battery ground cable, the airbag may deploy if you do not wait for 20 seconds before starting the service of airbag system.

#### NOTE:

- When removing the front seat of memory-equipped power seats, always perform the initialize operation on the memory function after installing the seat to the vehicle. <Ref. to SE-38, ADJUSTMENT, Power Seat System.>
- Failure to do so may cause the abnormal operation of the memory function.

### 1. DRIVER'S SEAT

- 1) Remove the headrest.
- 2) Tilt the backrest forward, and move the seat forward.
- 3) Remove the rear bolt cover, and remove the two bolts at the rear side of the slide rail.
- 4) Move the seat towards the rear, and remove the two bolts at the front side of the slide rail.
- 5) Disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.
- 6) Disconnect the connector under the seat.
  - Seat belt buckle switch connector
  - Side airbag connector
  - Seat heater connector (model with seat heater)
  - Power seat connector (model with power seats)
- 7) Remove the seat from vehicle.

### 2. PASSENGER'S SEAT

#### CAUTION:

Refer to "CAUTION" of "General Description" before starting the work. <Ref. to SE-8, CAUTION, General Description.>

- 1) Remove the headrest.
- 2) Tilt the backrest forward, and move the seat forward.
- 3) Remove the rear bolt cover, and then remove the rear side of slide rail.
- 4) Move the seat backward, remove the front bolt cover, and then remove the bolt at the front side of slide rail.
- 5) Disconnect the ground cable from battery, and wait for 20 seconds or more before starting work.

- 6) Disconnect all the connectors of connector holder in the backside of seat cushion.
  - Harness connector of occupant detection control module
  - Side airbag connector
  - Power seat connector (model with power seats)
  - Seat heater connector (model with seat heater)
- 7) Remove the seat from vehicle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Tighten the slide rail installing bolt gradually in several steps to the specified torque in the order as shown in the figure.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, COMPONENT, General Description.>

### C: DISASSEMBLY

### 1. DRIVER'S SEAT

#### MANUAL SEAT

- 1) Remove the seat from vehicle. <Ref. to SE-9, REMOVAL, Front Seat.>
- 2) Remove the seat lifter cover using a flat tip screwdriver and loosen the inner bolt to remove the seat lifter lever.

# Front Seat

## SEATS

3) Remove hook (A) and detach the reclining lever cover.

4) Remove screws (A) and clips (B), and then detach the seat side cover outside.

5) Loosen the screws to detach the seat side cover inside.

6) Remove the TORX® bolt, and then remove the inner seat belt assembly.

7) Remove the two bolts from the reclining hinge on each left and right side.

8) Remove the clips and hooks, and then detach the backrest back cover.

9) Remove the lock clip, and then remove the lumbar support lever.

10) Remove the hooks and hog rings at the rear side of backrest.

11) Remove the headrest lock bushing.

NOTE:

Push outside to remove it from the inside of seat.

12) Remove the hog rings.

13) Remove the cover frame (A).

14) Pull out the backrest frame assembly.

15) Remove the side airbag module.

16) Remove the hog rings (A) on the surface side of backrest, and then remove the backrest cover from backrest.

17) Remove the bolt (A) and hook (B) on left and right side, and then remove the seat cushion frame from slide rail assembly.

18) Remove the hooks (A), and then remove the seat cushion from seat cushion frame.

# Front Seat

## SEATS

19) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.

20) Remove the bolt of the sliding adjustment bar and connecting wire.

21) Remove the bolts, then remove the slide rail.

## POWER SEAT

1) Remove the seat from vehicle. <Ref. to SE-9, DRIVER'S SEAT, REMOVAL, Front Seat.>

2) Remove the clip (A) and straps (B) on the back of seat cushion.

3) Disconnect the following connectors from the backside of seat cushion.

- Side airbag
- Seat heater
- Power seat
- Seat belt

4) Remove the screw (A) and clips (B), and then disconnect the seat switch connector to remove seat side cover outside.

5) Remove the TORX® bolt, and then remove the inner seat belt assembly.

6) Remove the screw (A) and clip (B), and then remove the seat side cover inside.

7) Remove the two bolts from the reclining hinge on each left and right side.

8) Remove the clips and hooks, and then detach the backrest back cover.

9) Remove the lock clip, and then remove the lumbar support lever.

10) Remove the hooks and hog rings at the rear side of backrest.

11) Remove the headrest lock bushing.

**NOTE:**  
Push outside to remove it from the inside of seat.

12) Remove the hog rings.

# Front Seat

## SEATS

13) Remove the cover frame (A).

14) Pull out the backrest frame assembly.

15) Remove the side airbag module.

16) Remove the two bolts on each left and right side, and then remove the reclining motor assembly.

17) Remove the hog rings (A) on the surface side of backrest, and then remove the backrest cover from backrest.

18) Remove the bolt (A) and hook (B) on left and right side, and then remove the seat cushion frame from slide rail assembly.

19) Remove the hooks (A), and then remove the seat cushion from seat cushion frame.

20) Remove the hog rings (A), and then remove the seat cushion cover from seat cushion pad.

## 2. PASSENGER'S SEAT

### CAUTION:

- If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper activation of passenger's airbag.

- The passenger detection system (passenger seat only) control unit, passenger detection sensor, seat cushion pad and seat cushion frame are considered as a single seat cushion pad and frame assembly. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.
- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

- 1) Remove the seat from vehicle. <Ref. to SE-9, PASSENGER'S SEAT, REMOVAL, Front Seat.>
- 2) Refer to the disassembly procedures for the driver's seat.

### NOTE:

The back side of the seat cushion is affixed by a hook (A) and hog ring (B).

## D: ASSEMBLY

### CAUTION:

When the backrest cover is not installed securely, the side airbag module may not be deployed properly, therefore keep strictly to the following procedure.

- Be careful not to stain or damage the backrest cover during assembly.
- The backrest cover of the side airbag module are to be tightened and fixed together with the attachment nuts for the side airbag module assembly.
- Always use new hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on backrest cover.

### 1. DRIVER'S SEAT

#### NOTE:

- When installing the inner seat belt assembly, follow the procedure described in the seat belt section. <Ref. to SB-14, INNER SEAT BELT ASSEMBLY, INSTALLATION, Front Seat Belt.>

- Install the backrest assembly and seat cushion assembly in the following procedure.

- 1) Temporarily tighten the four reclining hinge bolts.
- 2) Place the backrest in the most upright position.
- 3) Tighten the reclining hinge bolts in the order of (1) through (4), in two or three steps by gradually increasing the torque until they reach the specified torque.

- (A) Vehicle inside
- (B) Vehicle outside

- 4) Assemble in the reverse order of disassembly.

# Front Seat

## SEATS

### 2. PASSENGER'S SEAT

#### CAUTION:

Make sure to adhere to the following rules when assembling the passenger seat. Improper work procedures can cause the passenger detection system to not operate properly.

- If the seat cushion cover is removed or replaced, make sure to perform passenger detection system adjustment after installing the seat to the vehicle. <Ref. to OD(diag)-15, SYSTEM CALIBRATION (REZEROING), OPERATION, Subaru Select Monitor.>

Failure to do so may cause improper activation of passenger's airbag.

- The passenger detection system (passenger seat only) control unit, passenger detection sensor, seat cushion pad and seat cushion frame are considered as a single seat cushion pad and frame assembly. Never remove the passenger detection control unit or the pressure sensor from the seat cushion frame.

- If the seat cushion cover is removed, make sure to replace the hang wire on the seat cushion side with a new wire.

- Make sure to install the hog rings/clips to the specified locations. Do not reuse hog rings.

Assemble in the reverse order of disassembly.

1) Assemble the seat cushion in the reverse order of disassembly.

2) Assemble the backrest in the reverse order of disassembly.

3) When installing the backrest assembly to the seat cushion assembly, fill the gap in the front side of slide rail LH and in the rear side of slide rail RH with cloth etc. in order to stabilize the seat cushion assembly.

4) Temporarily tighten the reclining hinge bolts in the order of (1) through (4) to an extent that the seat backrest assembly is not held securely.

(A) Vehicle inside

(B) Vehicle outside

5) Use the reclining lever to place the backrest in the most upright position, and check the first lock position of recliner.

6) Hold the seat cushion assembly securely, and tighten the reclining hinge bolts in the order described above until they reach the specified torque.

#### CAUTION:

Do not touch the backrest assembly when tightening the reclining hinge bolts.

7) Assemble each harness, inner belt assembly and each cover in the reverse order of removal.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, COMPONENT, General Description.>

### E: INSPECTION

Check that no tear or fray on the backrest cover and seat cushion cover.

#### NOTE:

If the door side of the backrest cover is torn or frayed, the side airbag may not be deployed properly. In this case, replace the backrest cover.

## 3. Rear Seat

### A: REMOVAL

#### 1. SEDAN MODEL

1) Remove the two hooks while lifting up the rear seat cushion.

2) Remove the hook (A) by pushing it back while lifting the front side of the seat cushion, and remove the seat cushion.

3) Tilt the backrest forward, remove the plastic fastener at the rear mat.

4) Remove the hinge assembly center bolts.

5) Push the entire seat to the direction of arrow and remove backrest assembly LH from the hinge assembly.

**NOTE:**

The backrest cannot be detached while the cutout on hinge assembly side and the pin on the backrest side are not aligned.

6) Similarly, remove the backrest assembly RH by performing the above step 5).

7) Remove the backrest shoulders (left and right) by performing the following procedures.

(1) Remove the bolt.

(2) Moving the lower side of backrest shoulder to the direction of arrow, and remove it from the stud bolt.

(3) Lift to remove the backrest shoulder.

8) Remove the two bolts at front side of the hinge assembly center.

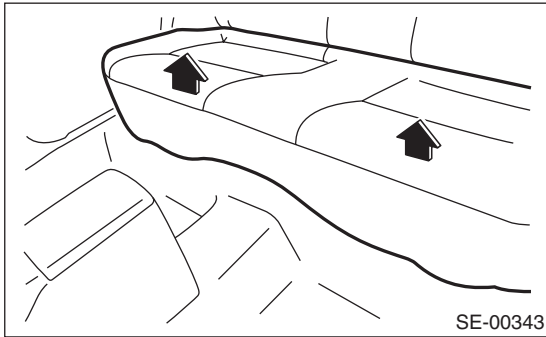

# Rear Seat

## SEATS

### 2. WAGON MODEL

1) Remove the two hooks while lifting up the rear seat cushion.

2) Remove the hook (A) by pushing it back while lifting the front side of the seat cushion, and remove the seat cushion.

3) Remove the headrest, and then tilt the backrest forward.

4) Remove the luggage floor box. <Ref. to EI-73, REMOVAL, Luggage Floor Box.>

5) Peel the plastic fastener of rear face mat and remove the hinge assembly center bolts.

6) Remove the backrest assembly LH from hinge assembly LH.

#### NOTE:

The backrest cannot be detached while the hinge assembly side and the backrest pin are not aligned.

7) Similarly, remove the backrest assembly RH by performing the above step 8).

8) Remove the hinge assembly center bolts.

9) Remove the lower anchor bolt (A) of the outer seat belt and backrest shoulder bolt (B).

10) Remove the backrest shoulder with lifting it up.

11) Remove the belt cover (A) from the backrest shoulder, then pull the seat belt out.

## B: INSTALLATION

Install in the reverse order of removal.

### NOTE:

- After installing the backrest, make sure that each seat belt operates normally.
- Make sure that they are properly secured on each hook on the vehicle side.

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to SE-2, COMPONENT, General Description.>

## C: DISASSEMBLY

### 1. SEDAN MODEL

- 1) Remove the rear seat. <Ref. to SE-17, SEDAN MODEL, REMOVAL, Rear Seat.>
- 2) Remove the headrest.
- 3) Remove the hinge assembly center bolts.

4) Remove the screws and detach the cover.

5) Remove tree clips and peel the back cover.

6) Turn over the backrest cover to remove hog rings (A) and hooks (B).

7) Remove the headrest bushing.

8) Remove the button cover.

### CAUTION:

The front and side faces of button cover have claws. Forceful removal can cause damage.

- 9) Remove the plate of shoulder section (A).
- 10) Remove the hog rings (B) on the front side of backrest, and then remove the backrest cover.

11) Remove the seat frame assembly from the backrest pad.

12) Disassemble the backrest assembly LH by referring to above procedures.

# Rear Seat

## SEATS

13) Remove the armrest hinge covers on both sides in direction of black arrow, and loosen the screws to remove the armrests.

14) Remove the hinge assembly center from trunk through backboard.

15) Remove the hook, and then detach the center through cover.

16) Remove the hook, and then remove the armrest cover.

17) Remove the hook and hog ring, and then remove the headrest cover.

18) Remove the hog rings (A) on the rear side of the seat cushion.

19) Remove the hog rings (A), then remove the seat cushion cover.

## 2. WAGON MODEL

1) Remove the rear seat. <Ref. to SE-18, WAGON MODEL, REMOVAL, Rear Seat.>

2) Remove the hooks at the bottom of backrest assembly LH, and then turn over the backrest cover to remove the hog rings (A) and hooks (B).

3) Remove the headrest bushing.

4) Remove the hog rings (A) on the front side of backrest, and then remove the backrest cover.

5) Remove the bolts, and then remove the backrest latch.

6) Loosen the screws to remove the armrest from backrest assembly RH.

**NOTE:**

The armrests cannot be detached while the backrest assembly RH and armrest side pin positions are not aligned.

7) Disassemble the backrest assembly RH by referring to above procedures.

8) Remove the hook, and then remove the armrest cover.

9) Remove the hook and hog ring, and then remove the headrest cover.

10) Remove the hog rings (A) on the rear side of the seat cushion.

11) Remove the hog rings (A), then remove the seat cushion cover.

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

**CAUTION:**

- Always use new hog rings.
- Secure the hog ring using hog ring pliers.
- Install the hog rings to the specified points securely and make sure that no wrinkle or twisting on backrest cover.

**NOTE:**

- Do not contaminate or damage the cover.
- While installing the hog rings, prevent the seat from getting wrinkled.

## E: INSPECTION

Check that no tear or fray on the seat cover.

# Seat Heater System

SEATS

## 4. Seat Heater System

### A: REMOVAL

#### 1. SEAT HEATER UNIT

- 1) Remove the front seats. <Ref. to SE-9, REMOVAL, Front Seat.>
- 2) Remove the backrest cover of front seat and seat cushion cover. <Ref. to SE-9, DISASSEMBLY, Front Seat.>
- 3) Remove the hog rings, and then remove the seat heater unit.

#### 2. SEAT HEATER SWITCH

- 1) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 2) Remove the seat heater switch from the console box.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

#### 1. WIRING DIAGRAM

<Ref. to WI-147, WIRING DIAGRAM, Power Seat System.>

#### 2. SEAT HEATER UNIT

Disconnect the seat heater unit connector, and check the continuity between terminals of connector.

#### Connector & terminal

**No. 1 — No. 3:**

**No. 1 — No. 4:**

**No. 3 — No. 4:**

If no continuity exists, replace the seat heater unit with a new part.

## 3. SEAT HEATER SWITCH

### • CHECK THERMISTOR OUTPUT VOLTAGE

1) Connect the battery to the connector.

#### *With SI-DRIVE*

**Connector terminals No. 12 (+):**

#### *Without SI-DRIVE*

**Connector terminals No. 11 (+):**

2) Measure the voltage between connector and chassis ground.

#### **Connector & terminal:**

#### *With SI-DRIVE*

##### *LHD side seat*

**(C2) No. 8 (+) — Chassis ground (-):**

##### *RHD side seat*

**(C2) No. 6 (+) — Chassis ground (-):**

#### *Without SI-DRIVE*

##### *LHD side seat*

**(C2) No. 2 (+) — Chassis ground (-):**

##### *RHD side seat*

**(C2) No. 4 (+) — Chassis ground (-):**

If voltage is not 1.5 V or more, replace the seat heater switch.

### • CHECK SWITCH OUTPUT VOLTAGE

1) Connect the battery to the connector.

#### *With SI-DRIVE*

**Connector terminals No. 12 (+):**

#### *Without SI-DRIVE*

**Connector terminals No. 11 (+):**

2) Measure the voltage between connector and chassis ground when turning the switch to other than OFF position.

#### **Connector & terminal:**

#### *With SI-DRIVE*

##### *LHD side seat*

**(C2) No. 11 (+) — Chassis ground (-):**

##### *RHD side seat*

**(C2) No. 10 (+) — Chassis ground (-):**

#### *Without SI-DRIVE*

##### *LHD side seat*

**(C2) No. 10 (+) — Chassis ground (-):**

##### *RHD side seat*

**(C2) No. 5 (+) — Chassis ground (-):**

If voltage does not change from 10 V or more to zero, replace the seat heater switch.

## 5. Power Seat System

### A: REMOVAL

#### CAUTION:

When it is necessary to remove the front seat, disconnect the ground cable from battery and wait for 20 seconds before disconnecting the side airbag module harness connector.

#### 1. POWER SEAT SWITCH

1) Detach the connectors and remove the seat side cover outside. <Ref. to SE-9, DISASSEMBLY, Front Seat.>

2) Remove the screws to remove the power seat switch assembly.

#### NOTE:

Perform the same procedure when removing the memory switch of memory-equipped seat.

#### 2. MEMORY MODULE (MEMORY-EQUIPPED SEAT)

1) Lift the seat cushion by operating the switch.

2) Remove the front seat from the vehicle.

3) Remove the nut and then remove the memory module.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- For the memory-equipped seat, always perform the initialize operation after the installation. <Ref. to SE-38, ADJUSTMENT, Power Seat System.>

- Check the following items after replacing the memory-equipped seat or the memory module.

- AT model

1. Memory feature is restored after turning the ignition switch to ON and shifting to P range.

2. Memory feature is not restored after turning the ignition switch to ON and shifting to other than P range.

- MT model

1. Memory feature is restored after turning ignition switch to ON and pulling parking brake lever.

2. Memory feature is not restored after turning the ignition switch to ON and pushing parking brake lever.

## C: INSPECTION

### 1. WIRING DIAGRAM

<Ref. to WI-147, WIRING DIAGRAM, Power Seat System.>

### 2. TROUBLE SYMPTOM

- Driver's seat (without memory)

Symptom	Criteria
All function fails to operate. <Ref. to SE-27, ALL FUNCTION FAILS TO OPERATE (DRIVER'S SEAT, WITHOUT MEMORY), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat switch</li> <li>• Power seat harness</li> <li>• Body harness</li> </ul>
A part of function does not operate. <Ref. to SE-27, SOME OF THE MOTORS DO NOT OPERATE (DRIVER'S SEAT, WITHOUT MEMORY), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat switch</li> <li>• Power seat harness</li> <li>• Relevant motor</li> </ul>

- Driver's seat (memory-equipped)

Symptom	Criteria
Does not operate by manual operation. <Ref. to SE-30, DOES NOT OPERATE IN MANUAL OPERATION (DRIVER'S SEAT, MEMORY-EQUIPPED), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat switch</li> <li>• Power seat harness</li> <li>• Body harness</li> <li>• Relevant motor and encoder</li> </ul>
A part of function does not operate. <Ref. to SE-31, SOME OF THE MOTORS DO NOT OPERATE. (DRIVER'S SEAT, WITH MEMORY), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat switch</li> <li>• Power seat harness</li> <li>• Relevant motor and encoder</li> <li>• Memory module</li> </ul>
Fails to store the location to the memory <Ref. to SE-35, FAILS TO STORE THE LOCATION TO THE MEMORY (DRIVER'S SEAT, WITH MEMORY), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Memory switch</li> <li>• Power seat harness</li> <li>• Memory module</li> </ul>
Restoring operation is impossible <Ref. to SE-36, FAILS TO PERFORM THE REPLAY OPERATION (DRIVER'S SEAT, WITH MEMORY), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Memory switch</li> <li>• Memory module</li> <li>• Motor and encoder</li> </ul>
Initial setting is impossible <Ref. to SE-36, INITIALIZATION IS IMPOSSIBLE., INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat harness</li> <li>• Memory module</li> </ul>

- Passenger's seat

Symptom	Criteria
All function fails to operate. <Ref. to SE-37, ALL FUNCTION FAILS TO OPERATE. (PASSENGER'S SEAT), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat switch</li> <li>• Power seat harness</li> <li>• Body harness</li> </ul>
A part of function does not operate. <Ref. to SE-37, SOME OF THE MOTORS DO NOT OPERATE. (PASSENGER'S SEAT), INSPECTION, Power Seat System.>	<ul style="list-style-type: none"> <li>• Power seat switch</li> <li>• Power seat harness</li> <li>• Relevant motor</li> </ul>

# Power Seat System

SEATS

## 3. CHECK POWER SEAT SWITCH

Move each switch and measure the resistance between connector terminals.

- Driver's seat (without memory)

Switch position	Terminal No.	Standard
Slide forward	7 and 14 8 and 13	Less than 10 Ω
Slide backward	7 and 13 8 and 14	Less than 10 Ω
Tilt up	7 and 2 8 and 1	Less than 10 Ω
Tilt down	7 and 1 8 and 2	Less than 10 Ω
Lifter up	7 and 5 8 and 6	Less than 10 Ω
Lifter down	7 and 6 8 and 5	Less than 10 Ω
Reclining forward	7 and 3 8 and 4	Less than 10 Ω
Reclining backward	7 and 4 8 and 3	Less than 10 Ω

- Driver's seat (memory-equipped)

Switch position	Terminal No.	Standard
Slide forward	13 and 7	Less than 10 Ω
Slide backward	14 and 7	Less than 10 Ω
Tilt up	5 and 7	Less than 10 Ω
Tilt down	6 and 7	Less than 10 Ω
Lifter up	2 and 7	Less than 10 Ω
Lifter down	1 and 7	Less than 10 Ω
Reclining forward	4 and 7	Less than 10 Ω
Reclining backward	3 and 7	Less than 10 Ω

- Passenger's seat

Switch position	Terminal No.	Standard
Slide forward	7 and 13 8 and 14	Less than 10 Ω
Slide backward	7 and 14 8 and 13	Less than 10 Ω
Reclining forward	7 and 4 8 and 3	Less than 10 Ω
Reclining backward	7 and 3 8 and 4	Less than 10 Ω

## 4. CHECK MEMORY SWITCH (MEMORY-EQUIPPED)

Move each switch and measure the resistance between connector terminals.

Switch position	Terminal No.	Standard
Memory 1	3 and 1	Less than 10 Ω
Memory 2	2 and 1	Less than 10 Ω
Set	8 and 1	Less than 10 Ω

## 5. ALL FUNCTION FAILS TO OPERATE (DRIVER'S SEAT, WITHOUT MEMORY)

Step	Check	Yes	No
<b>1</b> <b>CHECK SEAT FUNCTION.</b> Operate each power seat switch and check that each power seat function operates normally.	Does all function fails to operate?	Go to step 2.	Check the motor which does not operate. <Ref. to SE-27, SOME OF THE MOTORS DO NOT OPERATE (DRIVER'S SEAT, WITHOUT MEMORY), INSPECTION, Power Seat System.>
<b>2</b> <b>CHECK FUSE.</b> Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step 3.
<b>3</b> <b>CHECK POWER SUPPLY CIRCUIT.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the voltage between harness connector and chassis ground. <i>Connector &amp; terminal</i> <i>(R190) No. 7 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Check body harness.
<b>4</b> <b>CHECK POWER SUPPLY CIRCUIT.</b> Measure the resistance between power seat switch harness connector and chassis ground. <i>Connector &amp; terminal</i> <i>(R190) No. 8 — Chassis ground:</i>	Is resistance less than 10 Ω?	Replace the power seat switch assembly.	Check body harness.

## 6. SOME OF THE MOTORS DO NOT OPERATE (DRIVER'S SEAT, WITHOUT MEMORY)

- Malfunction of slide operation

Step	Check	Yes	No
<b>1</b> <b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 2.	Replace the power seat switch assembly.
<b>2</b> <b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between the power seat switch connector and slide motor connector. <i>Connector &amp; terminal</i> <i>(R192) No. 1 — (R190) No. 14:</i> <i>(R192) No. 2 — (R190) No. 13:</i>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
<b>3</b> <b>CHECK SLIDE MOTOR.</b> 1) Connect the power seat switch connector and slide motor connector. 2) Apply 12 V voltage to the slide motor and check the motor rotation. <i>Connector &amp; terminal</i> <i>(R190) No. 14 (+) — (R190) No. 13 (-):</i> <i>(R190) No. 13 (+) — (R190) No. 14 (-):</i>	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in slide rail.	Slide motor problem. Replace the slide rail assembly.

# Power Seat System

## SEATS

- Malfunction of tilt operation

	Step	Check	Yes	No
1	<b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 2.	Replace the power seat switch assembly.
2	<b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and tilt motor connector. 2) Measure the resistance between power seat switch connector and tilt motor connector. <b>Connector &amp; terminal</b> <b>(R197) No. 2 — (R190) No. 2:</b> <b>(R197) No. 3 — (R190) No. 1:</b>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3	<b>CHECK TILT MOTOR.</b> 1) Connect the power seat switch connector and tilt motor connector. 2) Apply 12 V voltage to the tilt motor and check the motor rotation. <b>Connector &amp; terminal</b> <b>(R190) No. 2 (+) — (R190) No. 1 (-):</b> <b>(R190) No. 1 (+) — (R190) No. 2 (-):</b>	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in tilt mechanism.	Tilt motor problem. Replace the slide rail assembly.

- Malfunction of lifter operation

	Step	Check	Yes	No
1	<b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 2.	Replace the power seat switch assembly.
2	<b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and lifter motor connector. 2) Measure the resistance between the power seat switch connector and lifter motor connector. <b>Connector &amp; terminal</b> <b>(R194) No. 4 — (R190) No. 5:</b> <b>(R194) No. 3 — (R190) No. 6:</b>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3	<b>CHECK LIFTER MOTOR.</b> 1) Connect the power seat switch connector and lifter motor connector. 2) Apply 12 V voltage to the lifter motor and check the motor rotation. <b>Connector &amp; terminal</b> <b>(R190) No. 5 (+) — (R190) No. 6 (-):</b> <b>(R190) No. 6 (+) — (R190) No. 5 (-):</b>	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in lifter mechanism.	Lifter motor problem. Replace the slide rail assembly.

• Malfunction of reclining operation

Step	Check	Yes	No
<b>1</b> <b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the power seat switch assembly.
<b>2</b> <b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between the power seat switch connector and reclining motor connector. <i><b>Connector &amp; terminal</b></i> <i><b>(R191) No. 2 — (R190) No. 3:</b></i> <i><b>(R191) No. 1 — (R190) No. 4:</b></i>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
<b>3</b> <b>CHECK RECLINING MOTOR.</b> 1) Connect the power seat switch connector and reclining motor connector. 2) Apply 12 V voltage to the reclining motor and check the motor rotation. <i><b>Connector &amp; terminal</b></i> <i><b>(R190) No. 3 (+) — (R190) No. 4 (-):</b></i> <i><b>(R190) No. 4 (+) — (R190) No. 3 (-):</b></i>	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in reclining hinge.	Reclining motor problem. Replace the reclining motor assembly.

# Power Seat System

SEATS

## 7. DOES NOT OPERATE IN MANUAL OPERATION (DRIVER'S SEAT, MEMORY-EQUIPPED)

	Step	Check	Yes	No
1	<b>CHECK SEAT FUNCTION.</b> Operate each power seat switch and check that each power seat function operates normally.	Does all function fails to operate?	Go to step 2.	Check the motor which does not operate. <Ref. to SE-31, SOME OF THE MOTORS DO NOT OPERATE. (DRIVER'S SEAT, WITH MEMORY), INSPECTION, Power Seat System.>
2	<b>CHECK FUSE.</b> Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step 3.
3	<b>CHECK POWER SUPPLY CIRCUIT.</b> 1) Disconnect the memory module connector. 2) Measure the voltage between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(R195) No. 10 (+) — Chassis ground (-):</b> <b>(R196) No. 8 (+) — Chassis ground (-):</b> <b>(R196) No. 3 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 4.	Check body harness.
4	<b>CHECK POWER SUPPLY CIRCUIT.</b> Measure the resistance between memory module harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(R196) No. 14 — Chassis ground:</b> <b>(R196) No. 12 — Chassis ground:</b>	Is resistance less than 10 Ω?	Go to step 5.	Check body harness.
5	<b>CHECK IGNITION CIRCUIT.</b> Measure the voltage between harness connector and chassis ground while turning the ignition switch to ON. <b>Connector &amp; terminal</b> <b>(R195) No. 11 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 6.	Check body harness.
6	<b>CHECK TRANSMISSION CIRCUIT.</b> Measure the resistance between harness connector and chassis ground in the following condition. <ul style="list-style-type: none"> <li>• AT model: Select lever shifted to P position.</li> <li>• MT model: Parking brake lever pulled.</li> </ul> <b>Connector &amp; terminal</b> <b>(R195) No. 12 — Chassis ground:</b>	Is resistance less than 10 Ω?	Go to step 7.	Check body harness.
7	<b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Replace the memory module.	Replace the power seat switch assembly.

## 8. SOME OF THE MOTORS DO NOT OPERATE. (DRIVER'S SEAT, WITH MEMORY)

- Malfunction of slide operation

Step	Check	Yes	No
<b>1</b> <b>CHECK OPERATION.</b> Check the slide motor rotation while moving the switch to slide forward and slide backward.	Does the motor rotate for one second or more when operating the switch?	Go to step 2.	Encoder defec-tion. Replace the slide rail assembly.
<b>2</b> <b>CHECK SWITCH.</b> 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPEC-TION, Power Seat System.>	Is the inspection result correct?	Go to step 3.	Replace the power seat switch assembly.
<b>3</b> <b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between the mem-ory module connector and power seat switch connector.  <i><b>Connector &amp; terminal</b></i> <i><b>(R195) No. 7 — (R190) No. 13:</b></i> <i><b>(R195) No. 6 — (R190) No. 14:</b></i>	Is resistance less than 10 Ω?	Go to step 4.	Check power seat harness.
<b>4</b> <b>CHECK HARNESS.</b> 1) Disconnect the slide motor connector. 2) Measure the resistance between the mem-ory module connector and slide motor connec-tor.  <i><b>Connector &amp; terminal</b></i> <i><b>(R196) No. 16 — (R206) No. 1:</b></i> <i><b>(R196) No. 15 — (R206) No. 2:</b></i>	Is resistance less than 10 Ω?	Go to step 5.	Check power seat harness.
<b>5</b> <b>CHECK SLIDE MOTOR.</b> Apply battery voltage to the memory module connector and check the motor rotation.  <i><b>Connector &amp; terminal</b></i> <i><b>(R196) No. 16 (+) — (R196) No. 15 (-):</b></i> <i><b>(R196) No. 15 (+) — (R196) No. 16 (-):</b></i>	Does the motor rotate nor-mally?	Replace the mem-ory module.	Slide motor prob-lem. Replace the slide rail assembly.

# Power Seat System

## SEATS

- Malfunction of tilt operation

	Step	Check	Yes	No
1	<b>CHECK OPERATION.</b> Check the tilt motor rotation while moving the switch to tilt up and tilt down.	Does the motor rotate for one second or more when operating the switch?	Go to step 2.	Encoder defec-tion. Replace the slide rail assembly.
2	<b>CHECK SWITCH.</b> 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to tilt up and tilt down. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 3.	Replace the power seat switch assem-bly.
3	<b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and tilt motor connector. 2) Measure the resistance between the mem-ory module connector and power seat switch connector. <b>Connector &amp; terminal</b> <b>(R195) No. 3 — (R190) No. 5:</b> <b>(R195) No. 2 — (R190) No. 6:</b>	Is resistance less than 10 Ω?	Go to step 4.	Check power seat harness.
4	<b>CHECK HARNESS.</b> 1) Disconnect the tilt motor connector. 2) Measure the resistance between the mem-ory module connector and tilt motor connector. <b>Connector &amp; terminal</b> <b>(R196) No. 4 — (R197) No. 3:</b> <b>(R196) No. 5 — (R197) No. 2:</b>	Is resistance less than 10 Ω?	Go to step 5.	Check power seat harness.
5	<b>CHECK TILT MOTOR.</b> Apply battery voltage to the memory module connector and check the motor rotation. <b>Connector &amp; terminal</b> <b>(R196) No. 4 (+) — (R196) No. 5 (-):</b> <b>(R196) No. 5 (+) — (R196) No. 4 (-):</b>	Does the motor rotate nor-mally?	Replace the mem-ory module.	Tilt motor problem. Replace the slide rail assembly.

• Malfunction of lifter operation

Step	Check	Yes	No
<b>1</b> <b>CHECK OPERATION.</b> Check the lifter motor rotation while turning the switch to lifter up and lifter down.	Does the motor rotate for one second or more when operating the switch?	Go to step 2.	Encoder defec-tion. Replace the slide rail assembly.
<b>2</b> <b>CHECK SWITCH.</b> 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to lifter up and lifter down. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 3.	Replace the power seat switch assembly.
<b>3</b> <b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and lifter motor connector. 2) Measure the resistance between the mem-ory module connector and power seat switch connector. <i>Connector &amp; terminal</i> <i>(R195) No. 5 — (R190) No. 2:</i> <i>(R195) No. 4 — (R190) No. 1:</i>	Is resistance less than 10 Ω?	Go to step 4.	Check power seat harness.
<b>4</b> <b>CHECK HARNESS.</b> 1) Disconnect the lifter motor connector. 2) Measure the resistance between the mem-ory module connector and lifter motor connec-tor. <i>Connector &amp; terminal</i> <i>(R196) No. 1 — (R194) No. 4:</i> <i>(R196) No. 2 — (R194) No. 3:</i>	Is resistance less than 10 Ω?	Go to step 5.	Check power seat harness.
<b>5</b> <b>CHECK LIFTER MOTOR.</b> Apply battery voltage to the memory module connector and check the motor rotation. <i>Connector &amp; terminal</i> <i>(R196) No. 1 (+) — (R196) No. 2 (-):</i> <i>(R196) No. 2 (+) — (R196) No. 1 (-):</i>	Does the motor rotate nor-mally?	Replace the mem-ory module.	Lifter motor prob-lem. Replace the slide rail assembly.

# Power Seat System

## SEATS

- Malfunction of reclining operation

Step	Check	Yes	No
<b>1</b> <b>CHECK OPERATION.</b> Check the reclining motor rotation while moving the switch to reclining forward and reclining backward.	Does the motor rotate for one second or more when operating the switch?	Go to step 2.	Encoder defec-tion. Replace the reclining motor assembly.
<b>2</b> <b>CHECK SWITCH.</b> 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPEC-TION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 3.	Replace the power seat switch assem-bly.
<b>3</b> <b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between the mem-ory module connector and power seat switch connector. <i>Connector &amp; terminal</i> <i>(R195) No. 9 — (R190) No. 4:</i> <i>(R195) No. 8 — (R190) No. 3:</i>	Is resistance less than 10 Ω?	Go to step 4.	Check power seat harness.
<b>4</b> <b>CHECK HARNESS.</b> 1) Disconnect the slide motor connector. 2) Measure the resistance between the mem-ory module connector and reclining motor con-necter. <i>Connector &amp; terminal</i> <i>(R196) No. 6 — (R191) No. 1:</i> <i>(R196) No. 7 — (R191) No. 2:</i>	Is resistance less than 10 Ω?	Go to step 5.	Check power seat harness.
<b>5</b> <b>CHECK RECLINING MOTOR.</b> Apply battery voltage to the memory module connector and check the motor rotation. <i>Connector &amp; terminal</i> <i>(R196) No. 6 (+) — (R196) No. 7 (-):</i> <i>(R196) No. 7 (+) — (R196) No. 6 (-):</i>	Does the motor rotate nor-mally?	Replace the mem-ory module.	Reclining motor problem. Replace the reclining motor assembly.

## 9. FAILS TO STORE THE LOCATION TO THE MEMORY (DRIVER'S SEAT, WITH MEMORY)

Step	Check	Yes	No
<b>1</b> <b>CHECK SWITCH.</b> 1) Disconnect the harness connector of memory switch assembly. 2) Perform the memory switch inspection. <Ref. to SE-26, CHECK MEMORY SWITCH (MEMORY-EQUIPPED), INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 2.	Replace the memory switch assembly.
<b>2</b> <b>CHECK HARNESS.</b> Measure the resistance between the memory switch connector and memory module connector. <i>Connector &amp; terminal</i> <i>(R195) No. 13 — (R198) No. 3:</i> <i>(R195) No. 14 — (R198) No. 2:</i> <i>(R195) No. 15 — (R198) No. 8:</i>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
<b>3</b> <b>CHECK COMBINATION METER.</b> Turn the ignition switch to ON and check the indicator inside the meter while the select lever is in P position.	Does the indicator display P?	Go to step 4.	Check the combination meter. <Ref. to IDI-4, INSPECTION, Combination Meter System.>
<b>4</b> <b>SYSTEM INITIALIZATION.</b> Perform the memory seat system initialization. <Ref. to SE-38, ADJUSTMENT, Power Seat System.>	Is the initialization completed successfully?	Replace the memory module.	<Ref. to SE-36, INITIALIZATION IS IMPOSSIBLE., INSPECTION, Power Seat System.>

# Power Seat System

SEATS

## 10. FAILS TO PERFORM THE REPLAY OPERATION (DRIVER'S SEAT, WITH MEMORY)

Step	Check	Yes	No
<b>1 CHECK MEMORY FUNCTION.</b> Perform the memory operation of the seat position.	Is the seat position correctly memorized?	Go to step 2.	<Ref. to SE-35, FAILS TO STORE THE LOCATION TO THE MEMORY (DRIVER'S SEAT, WITH MEMORY), INSPECTION, Power Seat System.>
<b>2 CHECK SWITCH.</b> 1) Disconnect the harness connector of memory switch assembly. 2) Perform the memory switch inspection. <Ref. to SE-26, CHECK MEMORY SWITCH (MEMORY-EQUIPPED), INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 3.	Replace the memory switch assembly.
<b>3 CHECK HARNESS.</b> Measure the resistance between the memory switch connector and memory module connector. <i>Connector &amp; terminal</i> <i>(R195) No. 13 — (R198) No. 3:</i> <i>(R195) No. 14 — (R198) No. 2:</i> <i>(R195) No. 15 — (R198) No. 8:</i>	Is resistance less than 10 Ω?	Go to step 4.	Check power seat harness.
<b>4 CHECK COMBINATION METER.</b> Turn the ignition switch to ON and check the indicator light inside the meter. <ul style="list-style-type: none"> <li>• AT model: when the select lever is in P position</li> <li>• MT model: when the parking brake lever is pulled</li> </ul>	Is indicator light displayed?	Go to step 5.	Check the combination meter. <Ref. to IDI-4, INSPECTION, Combination Meter System.>
<b>5 CHECK OPERATION.</b> Check the rotation of each motor when performing all the power seat switch operation.	Does each motor rotate for one second or more when operating each switch?	Replace the memory module.	Encoder deflection. Replace the appropriate motor.

## 11. INITIALIZATION IS IMPOSSIBLE

Step	Check	Yes	No
<b>1 CHECK OPERATION.</b> Check the rotation of each motor when performing all the power seat switch operation.	Does each motor rotate for one second or more when operating each switch?	Go to step 2.	Encoder deflection. Replace the appropriate motor.
<b>2 CHECK SWITCH.</b> 1) Disconnect the harness connector of power seat switch assembly. 2) Measure the resistance between all the connector terminals of power seat switch assembly. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Replace the memory module.	Replace the power seat switch assembly.

## 12.ALL FUNCTION FAILS TO OPERATE (PASSENGER'S SEAT)

Step	Check	Yes	No
<b>1</b> <b>CHECK SEAT FUNCTION.</b> Operate each power seat switch and check that each power seat function operates normally.	Does all function fails to operate?	Go to step 2.	Check the motor which does not operate. <Ref. to SE-37, SOME OF THE MOTORS DO NOT OPERATE. (PASSENGER'S SEAT), INSPECTION, Power Seat System.>
<b>2</b> <b>CHECK FUSE.</b> Check the power seat fuse inside the fuse box.	Is the fuse blown out?	Replace the appropriate fuse.	Go to step 3.
<b>3</b> <b>CHECK POWER SUPPLY CIRCUIT.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the voltage between harness connector and chassis ground. <i>Connector &amp; terminal</i> <i>(R200) No. 7 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Check body harness.
<b>4</b> <b>CHECK POWER SUPPLY CIRCUIT.</b> Measure the resistance between power seat switch harness connector and chassis ground. <i>Connector &amp; terminal</i> <i>(R200) No. 8 — Chassis ground:</i>	Is resistance less than 10 Ω?	Replace the power seat switch assembly.	Check body harness.

## 13.SOME OF THE MOTORS DO NOT OPERATE (PASSENGER'S SEAT)

- Malfunction of slide operation

Step	Check	Yes	No
<b>1</b> <b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to slide forward and slide backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is the inspection result correct?	Go to step 2.	Replace the power seat switch assembly.
<b>2</b> <b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and slide motor connector. 2) Measure the resistance between the power seat switch connector and slide motor connector. <i>Connector &amp; terminal</i> <i>(R202) No. 1 — (R200) No. 13:</i> <i>(R202) No. 2 — (R200) No. 14:</i>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
<b>3</b> <b>CHECK SLIDE MOTOR.</b> 1) Connect the power seat switch connector and slide motor connector. 2) Apply 12 V voltage to the slide motor and check the motor rotation. <i>Connector &amp; terminal</i> <i>(R200) No. 14 (+) — (R200) No. 13 (-):</i> <i>(R200) No. 13 (+) — (R200) No. 14 (-):</i>	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in slide rail.	Slide motor problem. Replace the slide motor assembly.

# Power Seat System

## SEATS

- Malfunction of reclining operation

	Step	Check	Yes	No
1	<b>CHECK SWITCH.</b> 1) Disconnect the connector of power seat switch assembly. 2) Measure the resistance between connector terminals when moving the switch to reclining forward and reclining backward. <Ref. to SE-26, CHECK POWER SEAT SWITCH, INSPECTION, Power Seat System.>	Is there any problem on the inspection result?	Go to step 2.	Replace the power seat switch assembly.
2	<b>CHECK HARNESS.</b> 1) Disconnect the power seat switch connector and reclining motor connector. 2) Measure the resistance between the power seat switch connector and reclining motor connector.  <b>Connector &amp; terminal</b> <b>(R201) No. 2 — (R200) No. 4:</b> <b>(R201) No. 1 — (R200) No. 3:</b>	Is resistance less than 10 Ω?	Go to step 3.	Check power seat harness.
3	<b>CHECK RECLINING MOTOR.</b> 1) Connect the power seat switch connector and reclining motor connector. 2) Apply 12 V voltage to the reclining motor and check the motor rotation.  <b>Connector &amp; terminal</b> <b>(R200) No. 3 (+) — (R200) No. 4 (-):</b> <b>(R200) No. 4 (+) — (R200) No. 3 (-):</b>	Does the motor rotate normally?	Check for temporary poor contact or mechanical trouble in reclining hinge.	Reclining motor problem. Replace the reclining motor assembly.

## D: ADJUSTMENT

### NOTE:

The calibration procedures apply only to the memory-equipped seat on the driver's side.

### 1. INITIALIZATING CONDITIONS

Perform the initializing operation to the memory module when the following conditions are met.

- When the seat was removed from vehicle.
- When the memory module was replaced.
- When the slide rail assembly or reclining motor assembly was removed or replaced.
- When the pulse generated while the seat is moving differs from the actual distance. (When memory replay operation is not normally carried out)

### 2. INITIALIZATION PROCEDURE

#### NOTE:

- Initialize the records inside the module by performing all the following steps regardless the item order.
- Buzzer sounds once when keeping the switch operation for three seconds with each seat in lock\* status.
- After the completion of all items for initialization process, the buzzer sounds three times when finishing the final operation and turning the switch from ON to OFF.

1) Move the seat backward using slide switch, and keep the seat lock\* status for three seconds or more.

2) Move the seat downward using tilt switch, and keep the seat lock\* status for three seconds or more.

3) Move the seat downward using lifter switch, and keep the seat lock\* status for three seconds or more.

4) Incline the seat forward using reclining switch, and keep the seat lock\* status for three seconds or more.

\* :Seat lock is the status that there is no pulse output from the encoder within the specified period of time although the switch is being operated.

#### NOTE:

When the following conditions are met, the initializing operation is cancelled even though the procedure is carried out halfway.

- Any operation interval between each initialization procedures from 1) to 4) exceeded 10 second.
- All operations throughout initialization procedure 1) to 4) was not performed.
- During initialization procedure, power supply was cut off, or the voltage to the memory module exceeded the range of operating voltage.

# General Description

## SECURITY AND LOCKS

### B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, these contents are erased upon disconnection.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust the parts to the specifications described in this manual if so designated.
- Connect the connectors securely during reassembly.
- After reassembly, make sure all the functional parts operate smoothly.
- The airbag system wiring harness is routed near electrical parts and switches.
- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness when servicing the ignition key cylinder.

### C: PREPARATION TOOL

#### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 <p>ST1B021XU0</p>	1B021XU0	SUBARU SELECT MONITOR III KIT	Used for setting of each function and troubleshooting for electrical system.
 <p>ST-925580000</p>	925580000	PULLER	Used for removing trim clip

#### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
Drill	Used for replacing ignition key lock.
Clip remover	Used for removing trim.
Clip clamp pliers	Used for removal of various clips and clamps.

## 2. Door Lock Control System

### A: WIRING DIAGRAM

#### 1. DOOR LOCK CONTROL

<Ref. to WI-216, WIRING DIAGRAM, Keyless Entry System.>

### B: INSPECTION

#### 1. SYMPTOM CHART

Symptom	Repair order	Reference
The door lock control system does not operate.	1. Remove and visually check the fuse No. 3 (in the fuse & relay box) and No. 7 (in the fuse & relay box).	If the fuse is blown out, replace the fuse with a new part. Check the power supply and ground circuit, if the fuse has no abnormality. <Ref. to SL-7, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	2. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-7, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the door lock switch and the circuit.	<Ref. to SL-8, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
	4. Check the door lock actuator and the circuit.	<Ref. to SL-9, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>
The door lock switch does not operate.	Check the door lock switch.	<Ref. to SL-8, CHECK DOOR LOCK SWITCH, INSPECTION, Door Lock Control System.>
A specific door lock actuator does not operate.	Check the door lock actuator and circuit.	<Ref. to SL-9, CHECK DOOR LOCK ACTUATOR AND CIRCUIT, INSPECTION, Door Lock Control System.>

#### 2. CHECK POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the voltage between harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(i84) No. 34 (+) — Chassis ground (-):</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short circuit between body integrated unit and fuse.
<b>2 CHECK GROUND CIRCUIT.</b> Measure the resistance between harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 22 — Chassis ground:</i> <i>(B281) No. 8 — Chassis ground:</i> <i>(B281) No. 9 — Chassis ground:</i>	Is the resistance less than 10 Ω?	The power supply and ground circuit are OK.	Repair the harness.

# Door Lock Control System

## SECURITY AND LOCKS

### 3. CHECK DOOR LOCK SWITCH

Step	Check	Yes	No
<p><b>1 CHECK DOOR LOCK SWITCH.</b> Check the input from door lock switch to body integrated unit using Subaru Select Monitor. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select the {Current Data Display &amp; Save}. 5) Check the input to body integrated unit by operating the door lock switch.</p>	Is the normal input signal displayed when the door lock switch is moved to LOCK/UNLOCK?	The door lock switch is OK.	Go to step 2.
<p><b>2 CHECK DOOR LOCK SWITCH CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between the harness connector terminal and chassis ground when moving the door lock switch to LOCK. <b>Connector &amp; terminal</b> <b>(i84) No. 15 — Chassis ground:</b></p>	Is the resistance less than 10 Ω?	Go to step 3.	Go to step 4.
<p><b>3 CHECK DOOR LOCK SWITCH CIRCUIT.</b> Measure the resistance between the harness connector terminal and chassis ground when the door lock switch is moved to UNLOCK. <b>Connector &amp; terminal</b> <b>(i84) No. 29 — Chassis ground:</b></p>	Is the resistance less than 10 Ω?	The door lock switch is OK.	Go to step 4.
<p><b>4 CHECK DOOR LOCK SWITCH.</b> 1) Disconnect the door lock switch harness connector. 2) Measure the resistance between the door lock switch terminals when moving the door lock switch to LOCK. <b>Connector &amp; terminal</b> <b>Driver's side:</b> <b>(D7) No. 4 — No. 7:</b> <b>Passenger's side:</b> <b>(D125) No. 4 — No. 3:</b></p>	Is the resistance less than 1 Ω?	Go to step 5.	Replace the door lock switch.
<p><b>5 CHECK DOOR LOCK SWITCH.</b> Measure the resistance between the door lock switch terminals when moving the door lock switch to UNLOCK. <b>Connector &amp; terminal</b> <b>Driver's side:</b> <b>(D7) No. 5 — No. 7:</b> <b>Passenger's side:</b> <b>(D125) No. 1 — No. 3:</b></p>	Is the resistance less than 1 Ω?	Check the harness for open circuits or shorts between the body integrated unit and the door lock switch.	Replace the door lock switch.

## 4. CHECK DOOR LOCK ACTUATOR AND CIRCUIT

Step	Check	Yes	No
<b>1 CHECK OUTPUT SIGNAL.</b> Measure the voltage between the harness connector terminal of body integrated unit and chassis ground when moving the door lock switch to LOCK. <i><b>Connector &amp; terminal</b></i> <i><b>(i84) No. 7 (+) — Chassis ground (-):</b></i>	Is the voltage 10 V or more?	Go to step 2.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
<b>2 CHECK OUTPUT SIGNAL.</b> Measure the voltage between the harness connector terminal of body integrated unit and chassis ground when moving the door lock switch to UNLOCK. <i><b>Connector &amp; terminal</b></i> <i><b>Driver's side:</b></i> <i><b>(i84) No. 23 (+) — Chassis ground (-):</b></i> <i><b>Except for driver's side:</b></i> <i><b>(i84) No. 8 (+) — Chassis ground (-):</b></i>	Is the voltage 10 V or more?	Go to step 3.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
<b>3 CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL.</b> Measure the voltage between the harness connector terminal of the power window main switch and chassis ground when moving the door lock switch to LOCK. <i><b>Connector &amp; terminal</b></i> <i><b>(D7) No. 4 (+) — Chassis ground (-):</b></i>	Is the voltage 10 V or more?	Go to step 4.	Replace the power window main switch. <Ref. to GW-9, Power Window Control Switch.>
<b>4 CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL.</b> Measure the voltage between the harness connector terminal of power window main switch and chassis ground when moving the door lock switch to UNLOCK. <i><b>Connector &amp; terminal</b></i> <i><b>(D7) No. 5 (+) — Chassis ground (-):</b></i>	Is the voltage 10 V or more?	Go to step 5.	Replace the power window main switch. <Ref. to GW-9, Power Window Control Switch.>
<b>5 CHECK DOOR LOCK ACTUATOR.</b> Check the door lock actuator. <ul style="list-style-type: none"> <li>• Front door lock actuator &lt;Ref. to SL-36, Front Door Lock Actuator.&gt;</li> <li>• Rear door lock actuator &lt;Ref. to SL-40, Rear Door Lock Actuator.&gt;</li> <li>• Rear gate latch lock actuator &lt;Ref. to SL-42, Rear Gate Latch Assembly.&gt;</li> </ul>	Is the door lock actuator OK?	Check the harness for open or short circuits between body integrated unit and door lock actuator.	Replace the door lock actuator.

# Keyless Entry System

SECURITY AND LOCKS

## 3. Keyless Entry System

### A: WIRING DIAGRAM

#### 1. KEYLESS ENTRY

<Ref. to WI-216, WIRING DIAGRAM, Keyless Entry System.>

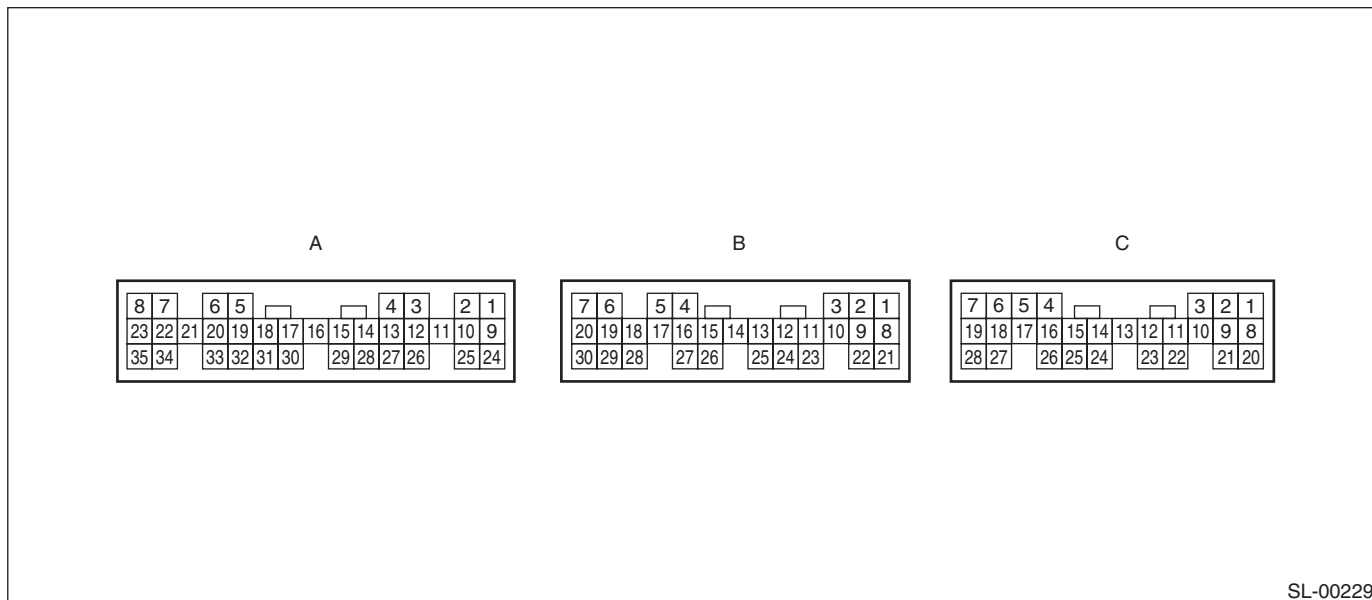

### B: ELECTRICAL SPECIFICATION

#### 1. KEYLESS ENTRY CONTROL MODULE

Remarks	Terminal No.	Measuring condition
-	1	-
-	2	-
Body integrated unit	3 (OUTPUT)	Battery voltage cannot be measured because of digital signal.
Power supply (Backup)	4	Battery voltage is constantly present.
-	5	-
-	6	-
Ground	7	0 V is constantly present.

## 2. BODY INTEGRATED UNIT

SL-00229

Remarks	Terminal No.	Measuring condition
Ignition switch (ON)	A1 (INPUT)	Battery voltage is present when ignition switch is turned to ON.
Keyless buzzer	A6 (INPUT)	0 V is present when pressing the LOCK or UNLOCK button of transmitter.
Driver's side front door lock actuator	A7 (OUTPUT)	Battery voltage is present when pressing the transmitter LOCK button.
Door and rear gate lock actuator	A8 (OUTPUT)	Battery voltage is present when pressing the transmitter UNLOCK button.
Keyless entry control module	A9 (INPUT)	Communication line (Cannot be measured because of digital signal)
Trunk lid switch or rear gate latch switch	A17 (INPUT)	0 V is present when opening the trunk lid or rear gate.
Rear door switch RH	A18 (INPUT)	0 V is present when opening the rear door RH.
Front door switch RH	A19 (INPUT)	0 V is present when opening the front door RH.
Ground	A21	0 V is constantly present.
Trunk lid actuator	A22 (OUTPUT)	Battery voltage is present when pressing the TRUNK button of the transmitter.
Driver's side front door lock actuator	A23 (OUTPUT)	Battery voltage is present when pressing the transmitter UNLOCK button.
Driver's side power window main switch (door lock switch)	A15	0 V is present when pressing the door lock switch to the LOCK side.
Passenger's side door lock switch	A29	0 V is present when pressing the door lock switch to the UNLOCK side.
Rear door switch LH	A31 (INPUT)	0 V is present when opening the rear door LH.
Front door switch LH	A32 (INPUT)	0 V is present when opening the front door LH.
Power supply	A34	Battery voltage is constantly present.
Room light	B3 (INPUT)	<ul style="list-style-type: none"> <li>• 0 V is present when pressing the UNLOCK button of keyless transmitter.</li> <li>• 0 V is present when opening the door.</li> </ul>
Power supply	B7	Battery voltage is constantly present.
Horn circuit	B11 (INPUT)	0 V is present when pressing the panic button of transmitter
Turn signal & hazard circuit	B12 (OUTPUT)	0 V is present when pressing the LOCK or UNLOCK button of transmitter.
Ground	B22	0 V is constantly present.
Power supply	C1	Battery voltage is constantly present.
Power supply	C2	Battery voltage is constantly present.
Key warning switch	C7 (INPUT)	Battery voltage is present when inserting the key into ignition switch.
Ground	C8	0 V is constantly present.
Ground	C9	0 V is constantly present.

# Keyless Entry System

## SECURITY AND LOCKS

### C: INSPECTION

#### 1. SYMPTOM CHART

Symptom	Repair order	Reference
None of the functions of the keyless entry system operate.	1. Check the transmitter battery.	<Ref. to SL-14, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Remove and visually check the fuse No. 2 (in the fuse & relay box) and No. 7 (in the fuse & relay box).	If the fuse is blown out, replace the fuse with a new part. Check the power supply and ground circuit, if the fuse has no abnormality. <Ref. to SL-7, CHECK POWER SUPPLY AND GROUND CIRCUIT, INSPECTION, Door Lock Control System.>
	3. Check the keyless entry control module.	<Ref. to SL-15, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	4. Check the power supply and ground circuit for body integrated unit.	<Ref. to SL-15, CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT., INSPECTION, Keyless Entry System.>
	5. Check the key warning switch.	<Ref. to SL-17, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	6. Check the door switch.	<Ref. to SL-16, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	7. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
The keyless transmitter cannot be registered.	1. Check the key warning switch.	<Ref. to SL-17, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	2. Check the door lock switch signal.	<Ref. to SL-20, CHECK DOOR LOCK SWITCH, INSPECTION, Keyless Entry System.>
	3. Check the ignition switch.	<Ref. to SL-23, CHECK IGNITION SWITCH., INSPECTION, Keyless Entry System.>
	4. Check the door switch.	<Ref. to SL-16, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

# Keyless Entry System

## SECURITY AND LOCKS

Symptom	Repair order	Reference
Door lock or unlock does not operate. <b>NOTE:</b> If the door lock control system does not operate when using the door lock switch, check the door lock control system. <Ref. to SL-7, INSPECTION, Door Lock Control System.>	1. Check the transmitter battery.	<Ref. to SL-14, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the keyless entry control module.	<Ref. to SL-15, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	3. Check the key warning switch.	<Ref. to SL-17, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the door switch.	<Ref. to SL-16, CHECK DOOR SWITCH, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
The panic alarm does not operate.	1. Check the keyless transmitter battery and function.	<Ref. to SL-14, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the horn operation.	<Ref. to SL-21, CHECK HORN OPERATION, INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Trunk lid unlock does not operate. (Sedan model)	1. Check the transmitter battery.	<Ref. to SL-14, CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION, INSPECTION, Keyless Entry System.>
	2. Check the keyless entry control module.	<Ref. to SL-15, CHECK KEYLESS ENTRY CONTROL MODULE, INSPECTION, Keyless Entry System.>
	3. Check the key warning switch.	<Ref. to SL-17, CHECK KEY WARNING SWITCH, INSPECTION, Keyless Entry System.>
	4. Check the trunk lid lock actuator.	<Ref. to SL-19, CHECK TRUNK LID LOCK ACTUATOR, INSPECTION, Keyless Entry System.>
	5. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Buzzer and hazard light do not operate.	1. Check the buzzer operation.	<Ref. to SL-22, CHECK KEYLESS BUZZER, INSPECTION, Keyless Entry System.>
	2. Check the hazard light operation.	<Ref. to SL-18, CHECK HAZARD LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	3. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
Room light does not operate.	1. Check the room light operation.	<Ref. to SL-17, CHECK ROOM LIGHT OPERATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

# Keyless Entry System

## SECURITY AND LOCKS

Symptom	Repair order	Reference
Ignition switch illumination does not operate.	1. Check the ignition switch illumination.	<Ref. to SL-21, CHECK IGNITION SWITCH ILLUMINATION, INSPECTION, Keyless Entry System.>
	2. Check the body integrated unit.	<Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

## 2. CHECK KEYLESS TRANSMITTER BATTERY AND FUNCTION

	Step	Check	Yes	No
1	<b>CHECK KEYLESS TRANSMITTER BATTERY.</b> 1) Remove the battery from the transmitter. <Ref. to SL-56, REMOVAL, Transmitter.> 2) Check the battery voltage. <Ref. to SL-56, INSPECTION, Transmitter.>	Is the voltage 2.5 V or more?	Go to step 2.	Replace the transmitter battery. <Ref. to SL-56, Transmitter.>
2	<b>CHECK KEYLESS TRANSMITTER.</b> Register the keyless transmitter which operates normally on other vehicles to the inspection target vehicle. <Ref. to SL-57, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.> 1) Close all the doors and rear gate of inspection target vehicle. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle.	Does the inspection target vehicle operate lock and unlock normally?	Go to step 3.	Due to vehicle malfunction, continue the keyless entry system diagnosis.
3	<b>CHECK KEYLESS TRANSMITTER.</b> Register the keyless transmitter of inspection target vehicle to the another vehicle which the keyless system operates normally. <Ref. to SL-57, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>	Is the keyless transmitter registered correctly?	Go to step 4.	Replace the keyless transmitter. <Ref. to SL-57, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>
4	<b>CHECK KEYLESS TRANSMITTER.</b> Check the registered keyless transmitter. 1) Close all the doors and rear gate of the vehicle which operates keyless system normally. 2) Using the keyless transmitter, lock and unlock the doors and rear gate of vehicle.	Does the vehicle operate lock and unlock normally?	The keyless transmitter is OK.	Replace the keyless transmitter. <Ref. to SL-57, REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR, REPLACEMENT, Transmitter.>

### CAUTION:

Be sure to reset the keyless transmitter of other vehicle which is registered to the inspection target vehicle, and the vehicle to which the keyless transmitter is registered for inspection, to the condition before performing the inspection. (Register the keyless transmitter again.)

## 3. CHECK KEYLESS ENTRY CONTROL MODULE

Step	Check	Yes	No
<b>1 CHECK DIAGNOSTIC TROUBLE CODE (DTC).</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select the {Diagnostic Trouble Code}. 5) Check if the DTC is displayed.	Is DTC B1500 "Keyless UART com. Malfunction" displayed?	Go to step 2.	Keyless entry control module is normal.
<b>2 CHECK POWER SUPPLY.</b> 1) Disconnect the keyless entry control module harness connector. 2) Measure the voltage between harness connector terminal and chassis ground. <i>Connector &amp; terminal (i96) No. 4 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open circuits and shorts between the keyless entry control module and fuse.
<b>3 CHECK GROUND CIRCUIT.</b> Measure the resistance between harness connector terminal and chassis ground. <i>Connector &amp; terminal (i96) No. 7 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the harness.
<b>4 CHECK KEYLESS ENTRY CONTROL MODULE CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. <i>Connector &amp; terminal (i84) No. 9 — (i96) No. 3:</i>	Is the resistance less than 10 Ω?	Replace the keyless entry control module. <Ref. to SL-53, Keyless Entry Control Module.>	Repair the harness.

## 4. CHECK BODY INTEGRATED UNIT POWER SUPPLY AND GROUND CIRCUIT

Step	Check	Yes	No
<b>1 CHECK POWER SUPPLY OF BODY INTEGRATED UNIT.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select the {Current Data Display}. 5) Check the following data display.	Is the data display 10 V or more (BATT voltage (Control), BATT voltage (BACKUP), IG power supply voltage and ACC voltage)?	Go to step 2.	Keyless entry control module is normal.
<b>2 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminal and chassis ground. <i>Connector &amp; terminal (B280) No. 22 — Chassis ground: (B281) No. 8 — Chassis ground: (B281) No. 9 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair the harness.

# Keyless Entry System

## SECURITY AND LOCKS

### 5. CHECK DOOR SWITCH

	Step	Check	Yes	No
1	<p><b>CHECK DOOR SWITCH CIRCUIT.</b></p> <p>1) Prepare the Subaru Select Monitor kit.</p> <p>2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".</p> <p>3) On the «System Selection Menu», select the {Integ. Unit mode}.</p> <p>4) Select the {Current Data Display}.</p> <p>5) Read the display of data (driver's door, passenger's door, rear right door, rear left door, rear gate switch) when each door is opened/closed.</p>	Is the data displayed ON (opened)/OFF (closed) when each door or rear gate is opened/closed?	The door switch circuit is OK.	Go to step 2.
2	<p><b>CHECK DOOR SWITCH CIRCUIT.</b></p> <p>Measure the voltage between the body integrated unit harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b></p> <p><b>Front door RH:</b> (i84) No. 32 (+) — Chassis ground (-):</p> <p><b>Front door LH:</b> (i84) No. 19 (+) — Chassis ground (-):</p> <p><b>Rear door RH:</b> (i84) No. 18 (+) — Chassis ground (-):</p> <p><b>Rear door LH:</b> (i84) No. 31 (+) — Chassis ground (-):</p> <p><b>Rear gate or trunk lid:</b> (i84) No. 17 (+) — Chassis ground (-):</p>	Is the voltage 10 V or more when each door, rear gate or trunk lid is closed?	The door switch is OK.	Go to step 3.
3	<p><b>CHECK DOOR SWITCH.</b></p> <p>1) Disconnect the door switch harness connector.</p> <p>2) Measure the resistance between door switch terminals.</p> <p><b>Connector &amp; terminal</b></p> <p><b>(R12) Front RH door switch:</b></p> <p><b>(R9) Front LH door switch:</b></p> <p><b>(R16) Rear RH door switch:</b></p> <p><b>(R22) Rear LH door switch:</b></p> <p><b>No. 1 — No. 3:</b></p> <p><b>Rear gate latch switch (Wagon model):</b> (D46) No. 1 — No. 2:</p> <p><b>Trunk lid switch (Sedan model):</b> (R186) No. 1 — No. 3:</p>	Is the resistance 1 M $\Omega$ or more when door switch is pushed?	Go to step 4.	Replace the door switch.
4	<p><b>CHECK DOOR SWITCH.</b></p> <p>Measure the resistance between door switch terminals.</p> <p><b>Connector &amp; terminal</b></p> <p><b>(R12) Front RH door switch:</b></p> <p><b>(R9) Front LH door switch:</b></p> <p><b>(R16) Rear RH door switch:</b></p> <p><b>(R22) Rear LH door switch:</b></p> <p><b>No. 1 — No. 3:</b></p> <p><b>Rear gate latch switch (Wagon model):</b> (D46) No. 1 — No. 2:</p> <p><b>Trunk lid switch (Sedan model):</b> (R186) No. 1 — No. 3:</p>	Is the resistance less than 1 $\Omega$ when door switch is released?	Check the harness for open or short between body integrated unit and door switch.	Replace the door switch.

## 6. CHECK KEY WARNING SWITCH

Step	Check	Yes	No
<b>1 CHECK FUSE.</b> Remove and visually check the fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 2.
<b>2 CHECK KEY WARNING SWITCH CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the voltage between harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B281) No. 7 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Go to step 4.
<b>3 CHECK KEY WARNING SWITCH CIRCUIT.</b> 1) Remove the key from ignition switch. 2) Measure the voltage between harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B281) No. 7 (+) — Chassis ground (-):</i>	Is the voltage 0 V?	The key warning switch is OK.	Go to step 4.
<b>4 CHECK KEY WARNING SWITCH.</b> 1) Disconnect the key warning switch harness connector. 2) Insert the key into ignition switch. (LOCK position) 3) Measure the resistance between key warning switch terminals. <i>Connector &amp; terminal</i> <i>(B350) No. 3 — No. 4:</i>	Is the resistance less than 1 $\Omega$ ?	Go to step 5.	Replace the key warning switch.
<b>5 CHECK KEY WARNING SWITCH.</b> 1) Remove the key from ignition switch. 2) Measure the resistance between key warning switch terminals. <i>Connector &amp; terminal</i> <i>(B350) No. 3 — No. 4:</i>	Is the resistance 1 M $\Omega$ or more?	Check the following: • Harness for open circuits and shorts between the key warning switch and fuse • Harness for open or short between the body integrated unit and key warning switch	Replace the key warning switch.

## 7. CHECK ROOM LIGHT OPERATION

Step	Check	Yes	No
<b>1 CHECK ROOM LIGHT OPERATION.</b> Make sure the room light illuminates when the room light switch is turned to ON.	Does the room light illuminate?	Go to step 2.	Check the room light circuit.
<b>2 CHECK HARNESS BETWEEN ROOM LIGHT AND BODY INTEGRATED UNIT.</b> 1) Disconnect the body integrated unit harness connector and room light harness connector. 2) Measure the resistance between the body integrated unit harness connector terminal and room light harness connector terminal. <i>Connector &amp; terminal</i> <i>(B280) No. 3 — (R52) No. 2:</i>	Is the resistance less than 10 $\Omega$ ?	The room light operation circuit is OK.	Check the harness for open or short between body integrated unit and room light.

# Keyless Entry System

## SECURITY AND LOCKS

### 8. CHECK HAZARD LIGHT OPERATION

	Step	Check	Yes	No
1	<b>CHECK HAZARD LIGHT OPERATION.</b> Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step 2.	Check the hazard light circuit.
2	<b>CHECK OUTPUT TO HAZARD LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Prepare the Subaru Select Monitor kit. 4) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 5) On the «System Selection Menu», select the {Integ. Unit mode}. 6) Select {ECM customizing}. 7) Check {Hazard answer-back setup}, and then switch to ON setting if necessary. 8) Select the {Current Data Display & Save}. 9) When operate the LOCK/UNLOCK button of transmitter, check the hazard output signal of body integrated unit.	Is output signal is present when operating the transmitter LOCK/UNLOCK button?	Go to step 3.	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
3	<b>CHECK CIRCUIT OF HAZARD LIGHT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the turn signal and hazard unit harness connector. 3) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 12 — (B32) No. 8:</b>	Is the resistance less than 10 Ω?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair the harness.

## 9. CHECK TRUNK LID LOCK ACTUATOR

Step	Check	Yes	No
<b>1 CHECK TRUNK LID LOCK ACTUATOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Prepare the Subaru Select Monitor kit. 4) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 5) On the «System Selection Menu», select the {Integ. Unit mode}. 6) Select the {Current Data Display & Save}. 7) When operating the TRUNK button of the transmitter, check the trunk unlock output signal of the body integrated unit.	Is an output signal present when operating the transmitter TRUNK button?	Go to step 2.	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
<b>2 CHECK THE CIRCUIT OF TRUNK LID ACTUATOR.</b> 1) Disconnect the harness connector of body integrated unit. 2) Disconnect the trunk lid actuator harness connector. 3) Measure the resistance between harness connectors. <i><b>Connector &amp; terminal</b></i> <i><b>(i84) No. 22 — (R186) No. 2:</b></i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the harness.
<b>3 CHECK THE GROUND CIRCUIT OF TRUNK LID ACTUATOR.</b> 1) Disconnect the trunk lid actuator harness connector. 2) Measure the resistance between harness connector terminal and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(R186) No. 1 — Chassis ground:</b></i>	Is the resistance less than 10 Ω?	Check the trunk lid lock actuator. <Ref. to SL-43, Trunk Lid Lock Assembly.>	Repair the harness.

## SECURITY AND LOCKS

### 10.CHECK DOOR LOCK SWITCH

	Step	Check	Yes	No
1	<p><b>CHECK DOOR LOCK SWITCH.</b> Check the input signal from door lock switch to body integrated unit using Subaru Select Monitor. 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select the {Current Data Display &amp; Save}. 5) Check the input signal to body integrated unit by operating the door lock switch.</p>	Is the normal input signal displayed when the door lock switch is moved to LOCK/UNLOCK?	The door lock switch is OK.	Go to step 2.
2	<p><b>CHECK DOOR LOCK SWITCH CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between the harness connector terminal and chassis ground when moving the door lock switch to LOCK. <b>Connector &amp; terminal</b> <b>(i84) No. 15 — Chassis ground:</b></p>	Is the resistance less than 10 Ω?	Go to step 3.	Go to step 4.
3	<p><b>CHECK DOOR LOCK SWITCH CIRCUIT.</b> Measure the resistance between the harness connector terminal and chassis ground when the door lock switch is moved to UNLOCK. <b>Connector &amp; terminal</b> <b>(i84) No. 29 — Chassis ground:</b></p>	Is the resistance less than 10 Ω?	The door lock switch is OK.	Go to step 4.
4	<p><b>CHECK DOOR LOCK SWITCH.</b> 1) Disconnect the door lock switch harness connector. 2) Measure the resistance between the door lock switch terminals when moving the door lock switch to LOCK. <b>Connector &amp; terminal</b> <b>Driver's side:</b> <b>(D7) No. 4 — No. 7:</b> <b>Passenger's side:</b> <b>(D125) No. 4 — No. 3:</b></p>	Is the resistance less than 1 Ω?	Go to step 5.	Replace the door lock switch.
5	<p><b>CHECK DOOR LOCK SWITCH.</b> Measure the resistance between the door lock switch terminals when moving the door lock switch to UNLOCK. <b>Connector &amp; terminal</b> <b>Driver's side:</b> <b>(D7) No. 5 — No. 7:</b> <b>Passenger's side:</b> <b>(D125) No. 1 — No. 3:</b></p>	Is the resistance less than 1 Ω?	Check the harness for open circuits or shorts between the body integrated unit and the door lock switch.	Replace the door lock switch.

## 11. CHECK IGNITION SWITCH ILLUMINATION

	Step	Check	Yes	No
1	<b>CHECK FUSE.</b> Remove and visually check the fuse No. 14 (in the main fuse box).	Is the fuse blown out?	Replace the fuse with a new part.	Go to step 2.
2	<b>CHECK POWER SUPPLY.</b> 1) Disconnect the ignition switch illumination harness connector. 2) Measure the voltage between harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B224) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open circuits and shorts between the ignition switch illumination and fuse.
3	<b>CHECK IGNITION SWITCH ILLUMINATION CIRCUIT.</b> 1) Disconnect the harness connector of body integrated unit and ignition switch illumination harness connector. 2) Measure the resistance between body integrated unit harness connector terminal and ignition switch illumination harness connector terminal. <i>Connector &amp; terminal</i> <i>(B280) No. 4 — (B224) No. 1:</i>	Is the resistance less than 10 $\Omega$ ?	Replace the ignition switch illumination bulb with a new part. <Ref. to LI-38, REMOVAL, Ignition Switch Illumination.>	Check the harness for open circuits and shorts between the body integrated unit and ignition switch illumination.

## 12. CHECK HORN OPERATION

	Step	Check	Yes	No
1	<b>CHECK HORN OPERATION.</b> Make sure the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step 2.	Check the horn circuit.
2	<b>CHECK HORN OPERATION.</b> 1) Disconnect the harness connector of body integrated unit. 2) Connect the harness connector terminal to ground using a suitable lead wire. <i>Connector &amp; terminal</i> <i>(B280) No. 11 (+) — Chassis ground (-):</i>	Does the horn sound?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open circuits and/or shorts between the body integrated unit and horn relay.

# Keyless Entry System

## SECURITY AND LOCKS

### 13.CHECK KEYLESS BUZZER

	Step	Check	Yes	No
1	<b>CHECK KEYLESS BUZZER SOUND.</b> 1) Using the Subaru Select Monitor, set the keyless buzzer sound to ON. 2) Operate the LOCK/UNLOCK button of the transmitter and check whether the keyless buzzer sounds or not.	Does the keyless buzzer sound?	Keyless buzzer is normal.	Go to step 2.
2	<b>CHECK FOR POWER SUPPLY OF KEYLESS BUZZER.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the keyless buzzer harness connector. 3) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(F102) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open circuits and shorts between the keyless buzzer and fuse.
3	<b>CHECK FOR GROUND CIRCUIT OF KEYLESS BUZZER.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(i84) No. 6 — (F102) No. 1:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 4.	Repair the harness.
4	<b>CHECK KEYLESS BUZZER.</b> 1) Remove the keyless buzzer. 2) Install the keyless buzzer to another vehicle which operates keyless buzzer normally, check the buzzer sounds.	Does the keyless buzzer sound?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.> <Ref. to GW-9, Power Window Control Switch.>	Replace the keyless buzzer.

## 14. CHECK IGNITION SWITCH

Step	Check	Yes	No
<b>1 CHECK FUSIBLE LINK.</b> Remove the fusible link main SBF and SBF-6 (in main fuse box), and visually check.	Is the fusible link blown out?	Replace the fusible link main SBF or SBF-6. If the replaced fusible link has blown out easily, repair the short circuit between the fusible link and the ignition switch.	Go to step 2.
<b>2 CHECK FOR POWER SUPPLY OF IGNITION SWITCH.</b> 1) Disconnect the ignition switch harness connector. 2) Measure the voltage between harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B72) No. 3 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open circuits and shorts between the ignition switch and fusible link.
<b>3 CHECK IGNITION SWITCH.</b> 1) Insert the ignition key into ignition switch, and turn the each position. 2) Measure the resistance between ignition switch terminals. <i>Connector &amp; terminal</i> <i>No. 3 — No. 5: (ACC position)</i> <i>No. 3 — No. 5 — No. 1 — No. 4 (ON position)</i> <i>No. 3 — No. 1 — No. 4 — No. 2 (ST position)</i>	Is the resistance less than 1 $\Omega$ when turning the ignition key to each position?	Ignition switch is normal.	Replace the ignition switch with a new part. <Ref. to SL-48, REPLACEMENT, Ignition Key Lock.>

**CAUTION:**

**When the ignition key lock is replaced, all ignition keys also must be registered. (Refer to the “IMMOBILIZER TEACHING OPERATION MANUAL”.)**

# Security System

## SECURITY AND LOCKS

### 4. Security System

#### A: WIRING DIAGRAM

<Ref. to WI-212, WIRING DIAGRAM, Security System.>

#### B: ELECTRICAL SPECIFICATION

Remarks	Terminal No.	Measuring condition
Ignition switch	A1 (INPUT)	Battery voltage is present when ignition switch is turned to ON.
Door key cylinder switch	A3	0 V is present when door key cylinder is moved to the LOCK side.
Keyless entry control module	A9 (INPUT)	Communication line (Cannot be measured because of digital signal)
Door key cylinder switch	A12	0 V is present when door key cylinder is moved to UNLOCK side.
Trunk lid switch or rear gate latch switch	A17 (INPUT)	0 V is present when opening the trunk lid or rear gate.
Rear door switch RH	A18 (INPUT)	0 V is present when opening the rear door RH.
Front door switch LH	A19 (INPUT)	0 V is present when opening the front door LH.
Rear door switch LH	A31 (INPUT)	0 V is present when opening the rear door LH.
Front door switch RH	A32 (INPUT)	0 V is present when opening the front door RH.
Security indicator light	A33 (INPUT)	Battery voltage is present when the alarm operation is activated.
Horn relay	B11 (OUTPUT)	Battery voltage is present when the alarm operation is activated.
Turn signal & hazard circuit	B12 (OUTPUT)	Battery voltage is present when the alarm operation is activated.
Ground	B22	0 V is constantly present.
Power supply	C2	Battery voltage is constantly present.
Impact sensor	C5	When not applying vibration to the impact sensor, it repeats displaying the 0 V and battery voltage in every 45 milliseconds.
Ground	C8	0 V is constantly present.
Ground	C9	0 V is constantly present.

## C: INSPECTION

### 1. BASIC DIAGNOSTIC PROCEDURE

Step	Check	Yes	No
<b>1 INITIAL CHECK.</b> Check keyless entry system.	Does the keyless entry system operate normally?	Go to step 2.	Check keyless entry system. <Ref. to SL-12, INSPECTION, Keyless Entry System.>
<b>2 CHECK SECURITY ON/OFF SETTING.</b> 1) Remove the key from ignition switch, and then close all doors. 2) Press the UNLOCK button of the keyless transmitter. 3) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? •Model with immobilizer: Blinks in every 3 seconds	Go to step 3.	Check the security indicator light circuit. <Ref. to SL-30, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Security System.>
<b>3 CHECK SECURITY ON/OFF SETTING.</b> 1) Press the LOCK button of the transmitter. 2) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? •When monitoring lag is set to 0 seconds: Blinks twice within 0.5 seconds at 2 second intervals. •When monitoring lag is set to 30 seconds: Blinks three times within 1 second at 0.4 second intervals.	Go to step 6.	Go to step 4.
<b>4 CHANGE THE SETTING OF SECURITY SYSTEM.</b> Change the setting of security system to ON. <Ref. to SL-27, SECURITY SYSTEM ON/OFF SETTING, INSPECTION, Security System.>	Is setting change completed correctly?	Go to step 5.	<ul style="list-style-type: none"> <li>• Check the ignition switch circuit. &lt;Ref. to SL-31, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.&gt;</li> <li>• Check the door lock switch circuit. &lt;Ref. to SL-20, CHECK DOOR LOCK SWITCH, INSPECTION, Keyless Entry System.&gt;</li> </ul>
<b>5 CHECK THE SETTING CHANGE OF SECURITY SYSTEM.</b> 1) Remove the key from ignition switch, and then close all doors. 2) Press the LOCK button of the transmitter. 3) Check the security indicator light blinking patterns.	Is the security indicator light blinking patterns as follows? •When monitoring lag is set to 0 seconds: Blinks twice within 0.5 seconds at 2 second intervals. •When monitoring lag is set to 30 seconds: Blinks three times within 1 second at 0.4 second intervals.	Go to step 6.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
<b>6 CHECK SECURITY SYSTEM OPERATION.</b> Press the LOCK button of keyless transmitter, and wait for 30 seconds.	Is the blinking pattern of security indicator light blink twice within 0.5 seconds in 2 second cycles?	Go to step 7.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>

# Security System

## SECURITY AND LOCKS

Step	Check	Yes	No
<b>7 CHECK SECURITY SYSTEM CANCEL OPERATION.</b> Insert the key to the door key cylinder to unlock.	Is the security indicator light blinking patterns as follows? •Model with immobilizer: Blinks in every 3 seconds	Press the LOCK button of keyless transmitter, and wait for 30 seconds. Go to step 8.	Check the door key cylinder circuit. <Ref. to SL-32, CHECK DOOR KEY CYLINDER SWITCH AND CIRCUIT, INSPECTION, Security System.>
<b>8 CHECK SECURITY ALARM OPERATION.</b> 1) Unlock all doors using the door lock switch on driver's door. 2) Open any door, trunk or rear gate.	Does the security alarm operate when opening any door, trunk or rear gate?	Go to step 9.	<ul style="list-style-type: none"> <li>• Check the door switch. &lt;Ref. to SL-28, CHECK DOOR SWITCH, INSPECTION, Security System.&gt;</li> <li>• Check the trunk lid switch or rear gate latch switch. &lt;Ref. to SL-29, CHECK TRUNK LID SWITCH (SEDAN) OR REAR GATE LATCH SWITCH (WAGON), INSPECTION, Security System.&gt;</li> </ul>
<b>9 CHECK SECURITY ALARM OPERATION.</b> Check the security alarm operation.	Does all security alarm operate? •Horn sounds •Hazard light blinks •Security indicator light illuminates	Go to step 10.	<ul style="list-style-type: none"> <li>• Check the horn. &lt;Ref. to SL-30, CHECK HORN, INSPECTION, Security System.&gt;</li> <li>• Check the hazard light. &lt;Ref. to SL-31, CHECK HAZARD LIGHT OPERATION, INSPECTION, Security System.&gt;</li> </ul>
<b>10 CHECK SECURITY ALARM CANCEL OPERATION.</b> Press any button of transmitter while operating security alarm. Or turn the ignition switch to OFF → ON three times.	Does all security alarm stop? •Horn •Hazard light	Go to step 11.	Check the ignition switch circuit. <Ref. to SL-31, CHECK IGNITION SWITCH CIRCUIT, INSPECTION, Security System.>
<b>11 CHECK SECURITY SYSTEM CONDITION MEMORY.</b> Check that the system function properly when the battery is not connected temporarily. <Ref. to SL-27, CHECK SECURITY SYSTEM CONDITION MEMORY, INSPECTION, Security System.>	Does the system function properly when the battery is not connected temporarily?	Go to step 12.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
<b>12 CHECK IMPACT SENSOR.</b> Check the sensitivity of impact sensor. <Ref. to SL-51, CHECK IMPACT SENSOR, ADJUSTMENT, Impact Sensor.>	Is the sensibility set properly?	Press the UNLOCK button of keyless transmitter, and finish the diagnosis.	Adjust the sensibility. <Ref. to SL-52, IMPACT SENSITIVITY ADJUSTMENT, ADJUSTMENT, Impact Sensor.>

**NOTE:**

Check the function setting of body integrated unit if any of the following symptoms appear. <Ref. to LAN(di-ag)-2, Basic Diagnostic Procedure.>

- The horn does not sound even when the security system operates. (Siren YES/NO)
- The horn sounds when setting the security to ON using the keyless transmitter. (Impact sensor YES/NO)

## **2. CHECK SECURITY SYSTEM CONDITION MEMORY**

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Open the front hood.
- 4) Press the LOCK button of transmitter, and then wait until the security indicator light flashes twice for 0.5 sec. at intervals of 2 seconds.
- 5) Disconnect the ground cable from the battery.
- 6) Connect the ground cable to the battery.
- 7) Check that the security indicator light blinks twice within 0.5 seconds at 2 second intervals. When it does not blink, replace the body integrated unit.

## **3. SECURITY SYSTEM ON/OFF SETTING**

- 1) Close all doors, trunk lid and rear gate, and sit down on the driver seat. Press the UNLOCK button of the keyless transmitter.
- 2) Turn the ignition switch to ON.
- 3) Push the centralized door unlock switch down and open the driver's side door at the same time, and hold in this condition for 10 seconds.
- 4) If the security system is ON, it will turn OFF. If OFF, it will turn ON.

# Security System

## SECURITY AND LOCKS

### 4. CHECK DOOR SWITCH

Step	Check	Yes	No
<b>1 CHECK INPUT FROM EACH DOOR SWITCH.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select the {Current Data Display & Save}. 5) Check the door switch input to the body integrated unit when opening the each door (front RH and LH, rear RH and LH).	Is the input signal detected when opening the each door (front RH and LH, rear RH and LH)?	The door switch circuit is OK.	When the input signal cannot be detected in some door switch, Go to step 2.
<b>2 CHECK DOOR SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the harness connector of faulty door switch. 4) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <i>(i84) No. 19 — (R9) No. 1: (front door LH)</i> <i>(i84) No. 32 — (R12) No. 1: (front door RH)</i> <i>(i84) No. 31 — (R22) No. 1: (rear door LH)</i> <i>(i84) No. 18 — (R16) No. 1: (rear door RH)</i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the harness.
<b>3 CHECK GROUND CIRCUIT OF DOOR SWITCH.</b> 1) Disconnect the harness connector of faulty door switch. 2) Measure the resistance of harness connector and chassis ground. <b>Connector &amp; terminal</b> <i>(R9) No. 3 — Chassis ground: (front door LH)</i> <i>(R12) No. 3 — Chassis ground: (front door RH)</i> <i>(R22) No. 3 — Chassis ground: (rear door LH)</i> <i>(R16) No. 3 — Chassis ground: (rear door RH)</i>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the harness.
<b>4 CHECK DOOR SWITCH.</b> 1) Disconnect the harness connector of faulty door switch. 2) Measure the resistance between door switch terminals. <b>Terminals</b> <b>No. 1 — No. 3:</b>	Is the resistance 1 MΩ or more when door switch is pushed?	Go to step 5.	Replace the door switch.
<b>5 CHECK DOOR SWITCH.</b> Measure the resistance between door switch terminals. <b>Terminals</b> <b>No. 1 — No. 3:</b>	Is the resistance less than 1 Ω when door switch is released?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the door switch.

## 5. CHECK TRUNK LID SWITCH (SEDAN) OR REAR GATE LATCH SWITCH (WAGON)

Step	Check	Yes	No
<p><b>1</b></p> <p><b>CHECK INPUT FROM TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b></p> <p>1) Prepare the Subaru Select Monitor kit.                      2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".                      3) On the «System Selection Menu», select the {Integ. Unit mode}.                      4) Select the {Current Data Display &amp; Save}.                      5) Check the input signal to the body integrated unit when opening the trunk lid or rear gate.</p>	<p>Is the input signal present when opening the trunk lid or rear gate?</p>	<p>The trunk lid switch or rear gate latch switch circuit is OK.</p>	<p>Go to step 2.</p>
<p><b>2</b></p> <p><b>CHECK CIRCUIT FOR TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b></p> <p>1) Turn the ignition switch to OFF.                      2) Disconnect the harness connector of body integrated unit.                      3) Disconnect the harness connector of the trunk lid switch or the rear gate latch switch.                      4) Measure the resistance between harness connector terminals.</p> <p><b>Connector &amp; terminal</b>  <i>(i84) No. 17 — (D46) No. 2: (Wagon model)</i>  <i>(i84) No. 17 — (R186) No. 3: (Sedan model)</i></p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 3.</p>	<p>Repair the harness.</p>
<p><b>3</b></p> <p><b>CHECK GROUND CIRCUIT OF TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b></p> <p>1) Disconnect the harness connector of the trunk lid switch or the rear gate latch switch.                      2) Measure the resistance between harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b>  <i>(D46) No. 1 — Chassis ground: (Wagon model)</i>  <i>(R186) No. 1 — Chassis ground: (Sedan model)</i></p>	<p>Is the resistance less than 10 Ω?</p>	<p>Go to step 4.</p>	<p>Repair the harness.</p>
<p><b>4</b></p> <p><b>CHECK TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b></p> <p>1) Disconnect the harness connector of the trunk lid switch or the rear gate latch switch.                      2) Measure the resistance between switch terminals.</p> <p><b>Terminals</b>  <i>No. 1 — No. 2: (Wagon model)</i>  <i>No. 1 — No. 3: (Sedan model)</i></p>	<p>Is the resistance 1 MΩ or more when switch is pushed?</p>	<p>Go to step 5.</p>	<p>Replace the trunk lid switch or the rear gate latch switch.</p>
<p><b>5</b></p> <p><b>CHECK TRUNK LID SWITCH OR REAR GATE LATCH SWITCH.</b></p> <p>Measure the resistance between switch terminals.</p> <p><b>Terminals</b>  <i>No. 1 — No. 2: (Wagon model)</i>  <i>No. 1 — No. 3: (Sedan model)</i></p>	<p>Is the resistance less than 1 Ω when switch is released?</p>	<p>Check the body integrated unit.                      &lt;Ref. to LAN(diag)-2, Basic Diagnostic Procedure.&gt;</p>	<p>Replace the trunk lid switch or the rear gate latch switch.</p>

# Security System

## SECURITY AND LOCKS

### 6. CHECK SECURITY INDICATOR LIGHT CIRCUIT

Step	Check	Yes	No
<b>1 CHECK SECURITY INDICATOR LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Connect the resistor (100 Ω) between body integrated unit harness connector terminal (i84) No. 33 and chassis ground. <b>Connector &amp; terminal</b> <b>(i84) No. 33 — Chassis ground:</b>	Does the security indicator light illuminate?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Go to step 2.
<b>2 CHECK POWER SUPPLY FOR SECURITY INDICATOR LIGHT.</b> 1) Disconnect the connector from the combination meter. 2) Measure the voltage between the combination meter harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(i10) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuits between combination meter and fuse.
<b>3 CHECK SECURITY INDICATOR LIGHT CIRCUIT.</b> Measure the resistance between the combination meter harness connector terminal and the security control unit harness connector terminal. <b>Connector &amp; terminal</b> <b>(i10) No. 17 — (i84) No. 33:</b>	Is the resistance less than 10 Ω?	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>	Check the harness for open or short circuits between the combination meter and body integrated unit.

### 7. CHECK HORN

Step	Check	Yes	No
<b>1 CHECK HORN OPERATION.</b> Check the horn sounds when the horn switch is pushed.	Does the horn sound?	Go to step 2.	Check the horn circuit.
<b>2 CHECK OUTPUT TO HORN RELAY.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select {Function Check}. 5) Select {Horn Output} and execute	Does the horn sound?	Horn circuit is OK.	Go to step 3.
<b>3 CHECK HORN RELAY CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the main fuse box harness connector (B186). 4) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 11 — (B186) No. 1:</b>	Is the resistance less than 10 Ω?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair the harness.

## 8. CHECK HAZARD LIGHT OPERATION

Step	Check	Yes	No
<b>1</b> <b>CHECK HAZARD LIGHT OPERATION.</b> Make sure the hazard light blinks when hazard switch is turned to ON.	Does the hazard light blink?	Go to step 2.	Check the hazard light circuit.
<b>2</b> <b>CHECK OUTPUT TO HAZARD LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the key warning switch harness connector. 3) Prepare the Subaru Select Monitor kit. 4) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 5) On the «System Selection Menu», select the {Integ. Unit mode}. 6) Select {ECM customizing}. 7) Check the {Hazard answer-back setup}, and then switch to ON setting. 8) Select the {Current Data Display & Save}. 9) Check the hazard output signal of body integrated unit when operating the LOCK/UNLOCK button of transmitter.	Is output signal is present when operating the transmitter LOCK/UNLOCK button?	Go to step 3.	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
<b>3</b> <b>CHECK CIRCUIT OF HAZARD LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Disconnect the turn signal and hazard unit harness connector. 4) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 12 — (B32) No. 8:</b>	Is the resistance less than 10 Ω?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Repair the harness.

## 9. CHECK IGNITION SWITCH CIRCUIT

Step	Check	Yes	No
<b>1</b> <b>CHECK IGNITION SWITCH VOLTAGE.</b> 1) Prepare the Subaru Select Monitor kit. 2) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor". 3) On the «System Selection Menu», select the {Integ. Unit mode}. 4) Select the {Current Data Display & Save}. 5) Check the {BATT voltage} and {IG power supply}.	Is the {IG power supply} within ±1 V against {BATT voltage}?	The ignition switch input circuit is OK.	Go to step 2.
<b>2</b> <b>CHECK IGNITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of body integrated unit. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(i84) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Check the body integrated unit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the harness for open or short circuit between the body integrated unit and fuse.

# Security System

## SECURITY AND LOCKS

### 10.CHECK DOOR KEY CYLINDER SWITCH AND CIRCUIT

	Step	Check	Yes	No
1	<b>CHECK DOOR KEY CYLINDER SWITCH CIRCUIT.</b> Measure the resistance between the harness connector terminal and chassis ground when moving the door key cylinder switch to UNLOCK. <b>Connector &amp; terminal</b> <b>(i84) No. 12 — Chassis ground:</b>	Is the resistance less than 10 $\Omega$ ?	Door key cylinder switch is OK.	Go to step 2.
2	<b>CHECK DOOR KEY CYLINDER SWITCH.</b> 1) Disconnect the door key cylinder switch harness connector. 2) Measure the resistance between door key cylinder switch terminals when turning the door key cylinder switch to LOCK. <b>Terminals</b> <b>No. 1 — No. 2:</b>	Is the resistance less than 1 $\Omega$ ?	Check the harness for open or short circuits between the body integrated unit and the door key cylinder switch.	Replace the door key cylinder switch.

## 5. Front Inner Remote

### A: REMOVAL

- 1) Remove the door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 2) Remove the back cover (1) of inner remote.
- 3) Remove the cable (2).
- 4) Remove the cable end ball (3).
- 5) Remove the screws (4), and remove the inner remote.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the inner remote works correctly after installation.

### C: INSPECTION

- 1) Check the cable of the door opener and door lock for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch and door lock actuator assembly.
- 2) Check the handle and cable for smooth operation.

### 6. Front Outer Handle

#### A: REMOVAL

- 1) Raise the front door glass to the top position.
- 2) Remove the door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the cable from the front inner remote. <Ref. to SL-33, REMOVAL, Front Inner Remote.>
- 4) Remove the sealing cover. <Ref. to EB-19, REMOVAL, Front Sealing Cover.>
- 5) Remove the rod clamps (1).
- 6) Remove bolts (2), then remove the front outer handle.

#### CAUTION:

Do not apply excessive force to remove the handle from the door panel. The door panel may become deformed.

#### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>*

#### NOTE:

Make sure that the outer handle works correctly after installation.

#### C: INSPECTION

- 1) Check the rod for deformation.
- 2) Check the lever and rod for smooth operation.

## 7. Front Door Latch and Door Lock Actuator Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the cable from the front inner remote. <Ref. to SL-33, REMOVAL, Front Inner Remote.>
- 4) Remove the sealing cover. <Ref. to EB-19, REMOVAL, Front Sealing Cover.>
- 5) Remove the front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 6) Remove the rear sash. <Ref. to GW-16, REMOVAL, Front Regulator and Motor Assembly.>
- 7) Open the handle rod cover of the latch assembly.
- 8) Remove the three screws.

- 9) Remove the front door latch & door lock actuator assembly, and disconnect the connector.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>**

#### **NOTE:**

Make sure the lock works correctly after installation.

### C: INSPECTION

- 1) Check the rod and cable for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the front door latch and door lock actuator assembly.
- 2) Check the lever, rod and cable for smooth operation.

## 8. Front Door Lock Actuator

### A: REMOVAL

- 1) Remove the front door latch and door lock actuator assembly. <Ref. to SL-35, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 2) Remove the claw of front door latch security cover, and then remove the cover.
- 3) Remove the screw from front door latch and door lock actuator, and then remove the door lock actuator.

(1) Front door lock actuator

### B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**

Make sure the lock works correctly after installation.

### C: INSPECTION

- 1) Disconnect the door lock actuator harness connector.
  - 2) Connect the battery to door lock actuator terminals.
- If defective, replace the door lock actuator.

Terminal No.	Actuator operation
No. 2 (+) and No. 1 (-)	Unlock → Lock
No. 1 (+) and No. 2 (-)	Lock → Unlock

## 9. Rear Inner Remote

### A: REMOVAL

- 1) Remove the rear door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 2) Remove the back cover (1) of inner remote.
- 3) Remove the cable (2).
- 4) Remove the cable end ball (3).
- 5) Remove screws (4), and remove the inner remote handle.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Make sure the inner remote works correctly after installation.

### C: INSPECTION

- 1) Check the cable of the door opener and door lock for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch and door lock actuator assembly.
- 2) Check the handle and cable for smooth operation.
- 3) Check the child safety lock for correct operations.

### 10.Rear Outer Handle

#### A: REMOVAL

- 1) Raise the rear door glass to the top position.
- 2) Remove the rear door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the sealing cover. <Ref. to EB-23, REMOVAL, Rear Sealing Cover.>
- 4) Remove the rear door latch assembly. <Ref. to SL-39, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 5) Pull out the cable from the cable clamp (1) of the outer handle.
- 6) Remove two bolts.

- 7) Remove the rear outer handle.

#### CAUTION:

Do not apply excessive force to remove the handle from the door panel. The door panel may become deformed.

#### B: INSTALLATION

Install in the reverse order of removal.

#### Tightening torque:

Refer to “COMPONENT” of “General Description”. <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>

#### NOTE:

Make sure that the outer handle works correctly after installation.

#### C: INSPECTION

- 1) Check the cable for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch and door lock actuator assembly.
- 2) Check the handle and cable for smooth operation.

## 11. Rear Door Latch and Door Lock Actuator Assembly

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the cable from rear inner remote. <Ref. to SL-37, REMOVAL, Rear Inner Remote.>
- 4) Remove the sealing cover. <Ref. to EB-23, REMOVAL, Rear Sealing Cover.>
- 5) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
- 6) Remove the rear sash. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
- 7) Pull out the cable from the cable clamp of the outer handle.
- 8) Remove the three screws.

- 9) Disconnect the connectors, and then remove the rear door latch and door lock actuator assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to SL-2, DOOR LOCK ASSEMBLY, COMPONENT, General Description.>**

#### **NOTE:**

Make sure the lock works correctly after installation.

### C: INSPECTION

- 1) Check the cable for deformation. When it is deformed, straighten it because failure operations may occur. When it is unrepairable, replace the rear door latch and door lock actuator assembly.
- 2) Check that the lever and cable operates smoothly.

## 12.Rear Door Lock Actuator

### A: REMOVAL

- 1) Remove the rear door latch and door lock actuator assembly. <Ref. to SL-39, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 2) Remove the claw of rear door latch security cover, and then remove the cover.
- 3) Remove the screw from the rear door latch and door lock actuator, and then remove the door lock actuator.

(1) Rear door lock actuator

### B: INSTALLATION

Install in the reverse order of removal.

**NOTE:**

Make sure the lock works correctly after installation.

### C: INSPECTION

- 1) Disconnect the door lock actuator harness connector.
- 2) Connect the battery to door lock actuator terminals. If defective, replace the door lock actuator.

Terminal No.	Actuator operation
No. 2 (+) and No. 1 (-)	Unlock → Lock
No. 1 (+) and No. 2 (-)	Lock → Unlock

## 13. Rear Gate Outer Handle

### A: REMOVAL

- 1) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 2) Remove the rear gate garnish. <Ref. to EI-75, REMOVAL, Rear Gate Garnish.>
- 3) Remove the two nuts, and take out the rear gate outer handle.
- 4) Remove cable (1) of the rear gate handle.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to “COMPONENT” of  
“General Description”. <Ref. to SL-3, TRUNK  
LID AND REAR GATE LOCK, COMPONENT,  
General Description.>**

#### **NOTE:**

Make sure that the outer handle works correctly after installation.

### C: INSPECTION

- 1) Check the cable of the rear gate handle for deformation.
- 2) Check the rear gate outer handle and cable of the rear gate handle for smooth operation.

# Rear Gate Latch Assembly

## SECURITY AND LOCKS

### 14. Rear Gate Latch Assembly

#### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 3) Remove the two screws.

- 4) Disconnect connectors and cables of the rear gate handle.

- (1) Cable
- (2) Rear gate lock actuator connector
- (3) Rear gate latch switch connector

- 5) Remove the rear gate latch assembly.

#### B: INSTALLATION

Install in the reverse order of removal.

##### **Tightening torque:**

**Refer to "COMPONENT" of "General Description". <Ref. to SL-3, TRUNK LID AND REAR GATE LOCK, COMPONENT, General Description.>**

##### **NOTE:**

Make sure the lock works correctly after installation.

#### C: INSPECTION

- 1) Disconnect the rear gate lock actuator harness connector.
- 2) Connect the battery to rear gate lock actuator terminals.

Terminal No.	Actuator operation
No. 2 (+) and No. 1 (-)	Unlock → Lock
No. 1 (+) and No. 2 (-)	Lock → Unlock

Replace the rear gate latch assembly if faulty.

- 3) Check the cable of the rear gate handle for deformation.
- 4) Check the lever and cable of the rear gate handle for smooth operation.

## 15. Trunk Lid Lock Assembly

### A: REMOVAL

- 1) Remove the trunk lid release handle. <Ref. to SL-44, REMOVAL, Trunk Lid Release Handle.>
- 2) Disconnect the connectors and remove the cable of the trunk opener.
- 3) Remove the two bolts to remove the trunk lid lock assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to “COMPONENT” of “General Description”. <Ref. to SL-3, TRUNK LID AND REAR GATE LOCK, COMPONENT, General Description.>**

#### **NOTE:**

- Apply grease to the movable part.
- Make sure the lock works correctly after installation.

### C: INSPECTION

- 1) Disconnect the trunk lid actuator harness connector.
- 2) Connect the battery to the trunk lid actuator terminals.

Terminal No.	Actuator operation
No. 2 (+) and No. 1 (-)	Lock → Unlock

If defective, replace the trunk lid actuator.

- 3) Check the striker for deformation or abnormal wear.
- 4) Check the safety lever for improper movement.
- 5) Check other levers and springs for rust formation or unsmooth movement.
- 6) Check the cable of the trunk opener for smooth operation.

### 16. Trunk Lid Release Handle

#### A: REMOVAL

1) Remove the cover (A).

2) Remove the trunk lid trim. <Ref. to EI-70, REMOVAL, Trunk Room Trim.>

3) Remove the four clips to remove the trunk lid release handle.

#### B: INSTALLATION

Install in the reverse order of removal.

#### C: INSPECTION

Make sure the lever works smoothly.

## 17. Front Hood Lock Assembly

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the bolts, and then detach the front hood lock assembly.
- 3) Remove the cable from lock assembly.

### B: INSTALLATION

Install in the reverse order of removal.

#### *Tightening torque:*

*Refer to "COMPONENT" of "General Description". <Ref. to SL-4, FRONT HOOD LOCK AND REMOTE OPENERS, COMPONENT, General Description.>*

#### NOTE:

- Apply grease to the movable part.
- Make sure the cable works correctly after installation.

### C: ADJUSTMENT

Loosen the bolt, and adjust the lock assembly while moving it up and down.

### D: INSPECTION

- 1) Check the striker for deformation or abnormal wear.
- 2) Check the safety lever for improper movement.
- 3) Check other levers and springs for rust formation or unsmooth movement.

## 18. Remote Openers

### A: REMOVAL

#### 1. FRONT HOOD OPENER

- 1) Remove the cable from the front hood lock.
- 2) Remove the bolt, and then detach the opener lever.

#### 2. TRUNK LID OPENER

- 1) Remove the rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the center pillar lower trim, side sill cover, rear pillar lower trim and floor mat on the driver's side. Remove the clip holding the cable.
- 3) Remove the opener lever (1) and rear cover (2).
- 4) Remove the pin (3) and remove front cover (4).
- 5) Remove the bolt and nut, and remove the pull handle assembly (5).

- (1) Opener lever
- (2) Rear cover
- (3) Pin
- (4) Front cover
- (5) Pull handle ASSY
- (6) Cable
- (7) Clamp
- (8) Key cylinder

- 6) Remove the cable from the pull handle assembly (5).
- 7) Remove clamp (7) to remove the key cylinder (8).

**CAUTION:**

- Remove the key cylinder in the UNLOCK position.**
- 8) Remove the trunk lid lock assembly from the trunk lid.

9) Remove the cable from the trunk lid lock assembly.

- (1) Trunk lid lock ASSY
- (2) Cable

### 3. FUEL FILLER FLAP LID OPENER

#### Sedan model

Check the trunk lid opener. <Ref. to SL-46, TRUNK LID OPENER, REMOVAL, Remote Openers.>

#### Wagon model

- 1) Remove the rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 2) Remove the center pillar lower trim, side sill cover, rear pillar lower trim and floor mat on the driver's side. Remove the clip holding the cable.
- 3) Remove the bolt and nut, and then detach the pull handle assembly.

- (1) Cover
- (2) Pull handle ASSY
- (3) Cable

- 4) Remove the cable from pull handle assembly.
- 5) Remove the rear quarter trim RH. <Ref. to EI-63, REMOVAL, Rear Quarter Trim.>

6) Rotate the fuel lock inside the quarter panel to 90° and remove. (Either right or left turn)

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

Install the key cylinder to the trunk lid in the UNLOCK position.

### C: INSPECTION

Make sure the front hood, trunk lid and fuel filler flap lid open and close smoothly.

# Ignition Key Lock

## SECURITY AND LOCKS

### 19. Ignition Key Lock

#### A: REPLACEMENT

- 1) Disconnect the ground cable from the battery.
- 2) Remove the steering column. <Ref. to PS-17, REMOVAL, Tilt Steering Column.>
- 3) Secure the steering column in a vise. Remove the bolt with a drill.

- 4) Remove the ignition key lock.
- 5) Using a new bolt, tighten the bolts all the way.

#### B: INSPECTION

- 1) Remove the instrument panel lower panel.
- 2) Remove the lower column cover.
- 3) Unfasten the fixing clip which secures harness, and then disconnect the connector of the ignition switch from body harness.
- 4) Turn the ignition key plate to each position and check the continuity between terminals of ignition connector.

Switch position	Terminal No.	Standard
LOCK	—	—
ACC	No. 3 and No. 5	Less than 1 $\Omega$
ON	No. 3 and No. 5 No. 3 and No. 1 No. 3 and No. 4	Less than 1 $\Omega$
ST	No. 3 and No. 1 No. 3 and No. 4 No. 3 and No. 2	Less than 1 $\Omega$

If NG, replace the ignition switch.

## 20.Key Lock Cylinders

### A: REPLACEMENT

- 1) Raise the front door glass to the top position.
- 2) Remove the door trim. <Ref. to EI-49, REMOV-AL, Door Trim.>
- 3) Remove the sealing cover.
- 4) Remove the rod clamp and the bolt, then replace the key cylinder (1).

### 21. Security Control Unit

#### A: NOTE

The control of security system is carried out in body integrated unit. Refer to the section of body integrated unit for work.

- Removal <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
- Installation <Ref. to SL-55, INSTALLATION, Body Integrated Unit.>

## 22. Impact Sensor

### A: REMOVAL

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Press the UNLOCK button of the keyless transmitter.
- 4) Change the setting of impact sensor using Subaru Select Monitor.
- 5) Disconnect the ground cable from the battery.
- 6) Remove the impact sensor.

### B: INSTALLATION

- 1) Remove the key from ignition switch.
- 2) Close all the doors, trunk lid and rear gate.
- 3) Press the UNLOCK button of the keyless transmitter.
- 4) Disconnect the ground cable from the battery.
- 5) Install the impact sensor.
- 6) Connect the ground cable to the battery.
- 7) Change the setting of impact sensor using Subaru Select Monitor.

### C: OPERATION

#### 1. IMPACT SENSOR SETTING USING SUBARU SELECT MONITOR

- 1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

- 2) Prepare PC with Subaru Select Monitor installed.
- 3) Connect USB cable to SDI (Subaru Diagnostic Interface) and PC USB port (Subaru Select Monitor dedicated port).

#### NOTE:

Subaru Select Monitor dedicated port indicates USB port used when installing Subaru Select Monitor.

- 4) Connect the diagnosis cable to SDI.

- 5) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

#### CAUTION:

**Do not connect scan tools other than the Subaru Select Monitor.**

- 6) Start a PC.
- 7) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".
- 8) On the System Selection Menu, select the {Integ. Unit mode}.
- 9) Select {ECM customizing}.
- 10) Make a impact monitor setting.
  - When installing: ON
  - When removing: OFF
- 11) Make a impact monitor ON/OFF setting.
  - When installing: ON
  - When removing: OFF
- 12) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

### D: ADJUSTMENT

#### 1. CHECK IMPACT SENSOR

- 1) Remove the key from ignition switch.
- 2) Close all the windows.
- 3) Close all the doors, trunk lid and rear gate. Leave open the front hood.
- 4) Press the LOCK button of the keyless transmitter from outside of vehicle.
- 5) Check that the security indicator light blinks twice within 0.5 seconds in 2 second cycles after 30 seconds.
- 6) Hit the windshield with your palm continuously and check the security alarm operates. Lift up the front hood approx. 12 cm (4.7 in) or more, and then drop it off to check the operation of security alarm.
- 7) If NG, adjust the impact sensitivity.

# Impact Sensor

## SECURITY AND LOCKS

### 2. IMPACT SENSITIVITY ADJUSTMENT

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

2) Prepare PC with Subaru Select Monitor installed.  
3) Connect USB cable to SDI (Subaru Diagnostic Interface) and PC USB port (Subaru Select Monitor dedicated port).

#### NOTE:

Subaru Select Monitor dedicated port indicates USB port used when installing Subaru Select Monitor.

4) Connect the diagnosis cable to SDI.  
5) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

#### CAUTION:

**Do not connect scan tools other than the Subaru Select Monitor.**

6) Start a PC.  
7) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".  
8) On the System Selection Menu, select the {Impact Sensor}.  
9) Make a {Sensitivity Adjustment Mode}.

- Sensitivity can be adjusted in 11 levels (0 to 10).
- Initial setting is 5.
- Smaller number means more sensitive.
- Larger number means less sensitive.

10) Turn the ignition switch to OFF, and then remove the Subaru Select Monitor.

#### NOTE:

- Set the sensor so as not to let the alarm on normal vibration (reclining to the door, hit the ball and etc.).
- Set the sensor to operate the alarm with hitting the door or window glass, etc. continuously like a mayhem by robbery.
- Ask the customer about parking situation for setting, because the alarm operate when the vibration not only the burglar but also the construction etc.

## 23. Keyless Entry Control Module

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the glove box. <Ref. to EI-52, REMOVAL, Glove Box.>
- 3) Remove the screw, disconnect the connector and remove the keyless entry control module.

### B: INSTALLATION

Install in the reverse order of removal.

## 24. Keyless Buzzer

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front bumper. <Ref. to EI-30, REMOVAL, Front Bumper.>
- 3) Remove the keyless buzzer installed to the back side of the horn bracket.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Install the keyless buzzer to another vehicle which operates keyless buzzer normally, check the buzzer sounds. If NG, replace the keyless buzzer.

## 25. Body Integrated Unit

### A: REMOVAL

NOTE:

- When replacing the body integrated unit, check the current setting and note it. <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

- When replacing the body integrated unit, all immobilizer keys also must be replaced and registered again.

- 1) Disconnect the ground cable from the battery.
- 2) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 3) Disconnect the connector of body integrated unit.

**CAUTION:**

**Be careful to keep water and other foreign materials away from body integrated unit.**

- 4) Remove two mounting nuts for body integrated unit bracket, and remove the body integrated unit.

### B: INSTALLATION

Install in the reverse order of removal.

NOTE:

- When the same body integrated unit is reinstalled in the same vehicle, it is not necessary to register the immobilizer again.

- When replacing a body integrated unit, perform the registration of immobilizer for the model with immobilizer. For detailed procedures, refer to "IMMOBILIZER TEACHING OPERATION MANUAL".

- Make sure that there are no differences from the contents of the current settings after installation. <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

## 26. Transmitter

### A: REMOVAL

#### 1. TRANSMITTER BATTERY

1) Disassemble the keyless transmitter, and take out the transmitter case (1).

2) Remove the claw, and open the transmitter case.

3) Remove the battery (1) from the transmitter.

#### NOTE:

To prevent static electricity damage to the transmitter printed circuit board, touch the steel area of building with hand to discharge static electricity carried on body or clothes before disassembling the transmitter.

### B: INSTALLATION

#### 1. TRANSMITTER BATTERY

Install in the reverse order of removal.

### C: INSPECTION

#### 1. TRANSMITTER BATTERY

Measure the voltage between the keyless transmitter battery (+) terminal and (-) terminal.

#### NOTE:

Battery discharge occurs during the measurement. Complete the measurement within 5 seconds.

(A) Resistance (47 Ω)

Tester connection		Standard
(+)	(-)	
Battery Positive terminal	Battery Ground terminal	2.5 — 3.0 V

If NG, replace the battery. (Use CR1620 or equivalent.)

## D: REPLACEMENT

### 1. REGISTRATION OF KEYLESS TRANSMITTER WITH SUBARU SELECT MONITOR

**NOTE:**

- A maximum of four keyless transmitter can be registered for each individual vehicle.
- When replacing or adding the keyless transmitter, new registration of transmitter is necessary.

1) Prepare the Subaru Select Monitor kit. <Ref. to EN(H6DO)(diag)-7, PREPARATION TOOL, General Description.>

2) Prepare PC with Subaru Select Monitor installed.  
3) Connect USB cable to SDI (Subaru Diagnostic Interface) and PC USB port (Subaru Select Monitor dedicated port).

**NOTE:**

Subaru Select Monitor dedicated port indicates USB port used when installing Subaru Select Monitor.

4) Connect the diagnosis cable to SDI.  
5) Connect SDI to data link connector located in the lower portion of the instrument panel (on the driver's side).

**CAUTION:**

**Do not connect scan tools other than the Subaru Select Monitor.**

6) Start PC.  
7) Turn the ignition switch to ON (engine OFF), and start "PC application help for Subaru Select Monitor".  
8) On the «Main Menu» of the Subaru Select Monitor, select the "Each System Check" → "Integ. unit mode" → "Keyless transmitter ID registration".

9) Input the 8-digit ID number attached to the plastic bag of the keyless transmitter or inside the transmitter, from left to right. Press the [OK] key.

10) The ID number you have entered will be shown. Make sure that the ID number shown is the same as that of plastic bag or inside of transmitter.

11) Press the [OK] key if the ID number is correct. Press the [END] key if incorrect, to return to the step 3) and try again.

12) «ID registration in process...» is displayed and registration starts.

13) «ID registration done » will be displayed when the registration process is done.

14) To exit, select «END: NO» to return to {8. Keyless transmitter ID registration}. If there are additional keyless transmitters to be registered, select «Next registration: OK» to return to the step 4).

**NOTE:**

- If the registration fails, «ID registration failed. Try again.» will be shown. Select the [OK] key to return to the {8. Transmitter ID registration}. And retry from the step 3).

- «END: NO» is shown on the Subaru Select Monitor when fourth keyless transmitter has been registered. Select the [NO] key to return to {8. Keyless transmitter ID registration}.

### 27. Immobilizer Control Module

#### A: NOTE

The control of immobilizer system is carried out in body integrated unit. Refer to the section of body integrated unit for work.

- Removal <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
- Installation <Ref. to SL-55, INSTALLATION, Body Integrated Unit.>

## 28. Immobilizer Antenna

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the screws, and detach the upper column cover and lower column cover.

- 3) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 4) Disconnect the immobilizer antenna connector (A) and ignition switch lighting connector (B).
- 5) Loosen the screw and release the lock (D) at opposite side using flat-tip screwdriver (1), and then detach the immobilizer antenna (C).

### CAUTION:

Do not apply excessive force to remove the immobilizer antenna and lock. Otherwise they may be broken because those parts are the products made of a plastic.

### B: INSTALLATION

Install in the reverse order of removal.

# Immobilizer Antenna

### SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

---

#### **B: CAUTION**

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When replacing the audio, control unit, and other parts provided with memory functions, record the memory contents before disconnecting the battery ground cable in order to prevent memory deletion.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust parts to the given specifications.
- Connect the connectors securely for reassembly.
- After reassembly, make sure functional parts operate smoothly.

#### **C: PREPARATION TOOL**

##### **1. GENERAL TOOL**

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.
TORX® T20	Used for removing and installing the sunroof motor, glass lid and sunshade. (Sedan model)

# Sunroof Control System

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 2. Sunroof Control System

### A: WIRING DIAGRAM

#### 1. SUNROOF

<Ref. to WI-210, WIRING DIAGRAM, Sunroof Control System.>

### B: INSPECTION

Symptom	Inspection order
Water leakage	<ol style="list-style-type: none"><li>1. Check roof panel and glass lid for improper or poor sealing.</li><li>2. Check drain tube for clogging.</li><li>3. Check sunroof frame seal and body for improper fit.</li></ol>
Booming noise, wind noise and other noise	<ol style="list-style-type: none"><li>1. Check glass lid and roof panel for improper clearance.</li><li>2. Check sunshade and roof trim for improper clearance.</li></ol>
Abnormal motor noise	<ol style="list-style-type: none"><li>1. Check installing part of motor for looseness.</li><li>2. Check gears and bearings for wear.</li><li>3. Check cable for wear.</li><li>4. Check cable pipe for deformities.</li></ol>
Failure of sunroof (Motor operates properly.)	<ol style="list-style-type: none"><li>1. Check guide rail for foreign particles.</li><li>2. Check guide rail for improper installation.</li><li>3. Check parts for mutual interference.</li><li>4. Check cable slider for improper clinching.</li><li>5. Check cable for improper installation.</li></ol>
Motor does not rotate or rotate improperly.	<ol style="list-style-type: none"><li>1. Check fuse for blown out.</li><li>2. Check switch for improper function.</li><li>3. Check motor for incorrect terminal voltage.</li><li>4. Check the relay for improper operation.</li><li>5. Check poor grounding system.</li><li>6. Check harness for open or short and terminals for poor connections.</li></ol>
Failure turn of glass lid	Check guide rail for foreign particles.

- Failure turn of glass lid while driving rough road.

Glass lid has auto-reverse function. When applied above specified force to the glass lid, the lid turns back and stops. When operating the glass lid (open or close) while driving the rough road, the lid judges vibration as a force and may causes failure turns. When the failure turn is occurred, need to perform the initialize operation with following procedure.

#### 1. INITIALIZE OPERATION (SEDAN MODEL)

- 1) Tilt up the glass lid.
- 2) Release the switch once, and press the tilt up switch again for 15 seconds.
- 3) When the glass lid is raised a little and returned to tilt up position, release the switch for the moment. (Initialization of position detecting function)
- 4) Keep pressing the tilt up switch within 5 seconds from releasing the switch. The glass lid will tilt down → slides open → slides close automatically. (When 5 seconds pass, the position detecting function is cancelled.)
- 5) Initialize operation is completed.

#### 2. INITIALIZE OPERATION (WAGON MODEL)

- 1) Apply force to the glass lid in the opening direction while the glass lid (rear) is closing, and make it reverse five times in a row.

However, in the following situation, the initialize operation is canceled.

- When the lid is fully closed once during one of the auto-reverse operations five times in a row.
  - When the interval between the auto-reverse operations was 30 seconds or more even once.
- 2) When the operation of glass lid shifts to inching operation\*, fully close the lid by switch operation.
  - 3) Initialize operation is completed.

\* Inching operation: A condition where the glass lid only operates for only at the moment when the switch is pressed, even when the switch is held down.

# Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 3. Glass Lid

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Completely close the glass lid, and then open the sunshade.
- 2) Remove the cover (A), and then remove the TORX® bolts (B).

#### CAUTION:

The thread locker is applied to the TORX® bolts, so use the new parts once they are removed.

- 3) Remove the glass lid carefully.

#### 2. WAGON MODEL (FRONT)

- 1) Open the sunshade.
- 2) Pull out the cover (A) towards the arrow mark, and remove the nuts (B).

- 3) Remove the glass lid (front) carefully.

#### 3. WAGON MODEL (REAR)

- 1) Tilt the glass lid (front) up, then open the sunshade.
- 2) Remove the cover (A), then remove the nuts (B).

- 3) Remove the glass lid carefully.

# Glass Lid

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## B: INSTALLATION

Install in the reverse order of removal.

## C: ADJUSTMENT

### 1. SEDAN MODEL

Loosen the glass lid mounting TORX® bolts (A), and then adjust the height with moving the lid.

**Difference in height between glass lid and roof panel L:**

$2.0 \pm 1.0 \text{ mm (} 0.079 \pm 0.039 \text{ in)}$

### 2. WAGON MODEL

Loosen the glass lid installation nuts, and adjust the height by adding (max: four pieces) or extracting (min: zero piece) shims (B) (standard: two pieces) between the glass lid (A) and body.

**Difference in height between glass lid and roof panel L:**

$2.0 \pm 1.0 \text{ mm (} 0.079 \pm 0.039 \text{ in)}$

# Glass Lid

## SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

### D: FORCED DRIVE

If glass lid does not operate or is not supplied with power, move the glass lid using the hexagon wrench.

Sedan model: bolt width 4 mm (0.16 in)

Wagon model: bolt width 5 mm (0.20 in)

#### 1. SEDAN MODEL

1) Remove the spot map light. <Ref. to LI-32, REMOVAL, Spot Map Light.>

2) Insert the hexagon wrench securely until it touches the motor shaft end.

3) Turn the hexagon wrench, and move the glass lid.

- Turning right, the glass lid open.
- Turning left, the glass lid close.

#### 2. WAGON MODEL

1) Slide the slider (A) towards the rear of the vehicle (C), and remove the sun shade from the slider by raising the rod (B).

#### CAUTION:

Be careful not to damage the adjacent parts with the rod end when moving the glass lid with the hexagon wrench.

2) Slide the sunshade forward.

3) Remove the plug to the rear of the roof trim.

4) Insert the hexagon wrench securely until it touches the motor shaft end.

5) Turn the wrench to right, and close the glass lid (front and rear).

#### CAUTION:

After a forced operation, make sure to perform an initialize operation. <Ref. to SR-5, INSPECTION, Sunroof Control System.>

# Sunroof Assembly

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 4. Sunroof Assembly

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the roof trim. <Ref. to EI-67, SEDAN MODEL, REMOVAL, Roof Trim.>
- 3) Disconnect the harness connector of sunroof motor.
- 4) Remove the glass lid. <Ref. to SR-6, SEDAN MODEL, REMOVAL, Glass Lid.>
- 5) Remove the drain tube from frame assembly.
- 6) Remove the assist rail bracket (front) (A) and sunroof bracket (rear) (B).

- 7) Remove the nuts, and then remove the frame assembly.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the roof trim. <Ref. to EI-67, WAGON MODEL, REMOVAL, Roof Trim.>
- 3) Disconnect the harness connector of the motor assembly.

- 4) Remove the front and rear glass lid. <Ref. to SR-6, WAGON MODEL (FRONT), REMOVAL, Glass Lid.> <Ref. to SR-6, WAGON MODEL (REAR), REMOVAL, Glass Lid.>
- 5) Remove the attachment bolts (A) on the rear frame bracket of the frame assembly.

- 6) Remove the drain tube from frame assembly.
- 7) Remove the frame bracket (A).

# Sunroof Assembly

## SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

8) Remove bolts (B) and nuts (C), then remove the frame assembly.

SR-00127

## C: DISASSEMBLY

- 1) Remove the sunroof motor. <Ref. to SR-11, REMOVAL, Sunroof Motor.>
- 2) Remove the sunshade. <Ref. to SR-14, REMOVAL, Sunshade.>

## D: ASSEMBLY

Assemble in the reverse order of disassembly.

## B: INSTALLATION

Install in the reverse order of removal.

### CAUTION:

**Be careful not to snag the harness.**

### NOTE:

- Be sure to connect the harness connector.
- When installing the drain tube, insert it securely into drain pipe.

### Length A:

**15 mm (0.59 in) or more**

SR-00005

# Sunroof Motor

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 5. Sunroof Motor

### A: REMOVAL

#### CAUTION:

- When removing the clip, use great care not to damage the roof trim.
- Never rotate the sunroof motor assembly after removing it.

#### 1. SEDAN MODEL

- 1) Completely close the glass lid.
- 2) Disconnect the ground cable from the battery.
- 3) Remove the spot map light. <Ref. to LI-32, REMOVAL, Spot Map Light.>
- 4) Disconnect the harness connector and remove the TORX® bolts, and then remove the motor assembly.

#### CAUTION:

When removing the motor assembly, secure the cable wires to prevent moves.

#### 2. WAGON MODEL

- 1) Fully close the glass lid (front) and glass lid (rear).
- 2) Disconnect the ground cable from the battery.
- 3) Remove the luggage room light. <Ref. to LI-34, ROOM LIGHT SWITCH, REMOVAL, Luggage Room Light.>
- 4) Remove the roof trim. <Ref. to EI-67, WAGON MODEL, REMOVAL, Roof Trim.>
- 5) Pass the seat belt tongue located on the center of the rear seat through the hole, and then pull it out to the opposite side of the trim.

- (A) Tongue  
(B) Cover

- 6) Remove the clips, and let the rear end of the roof trim hang.

- 7) Disconnect the harness connector (A), and then remove the motor assembly mounting bolts (B) and nut (C).

### B: INSTALLATION

#### CAUTION:

When installing the motor assembly, be careful not to move the sunroof cable.

#### 1. SEDAN MODEL

- 1) Align the coulisse assembly and link assembly in the same position.

- (1) Front  
(2) Coulisse ASSY  
(3) Link ASSY  
(4) 4.7 mm (0.185 in)

# Sunroof Motor

## SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

- 2) Install the motor assembly.
- 3) Connect the harness connector of motor assembly, and then connect the battery ground cable to battery.
- 4) Perform the initialize operation of motor.
  - (1) Tilt up the glass lid.
  - (2) Release the switch once, and press the tilt up switch again for 15 seconds.
  - (3) When the glass lid is raised a little and on tilt up position, release the switch for the moment.
  - (4) Keep pressing the tilt up switch within 5 seconds from releasing the switch, glass lid automatically performs the tilts down → slides open → slides close operation, then the initialize operation is completed.
- 5) Check the operation of sunroof with following table.

Operation	Switch position
(1) Glass lid closes completely.	Close
(2) Glass lid tilt up to the top position.	Tilt up
(3) Glass lid closes completely.	Tilt down
(4) Glass lid opens completely.	Open
(5) Glass lid closes 150 mm (5.91 in) away from the completely closed position.	Close
(6) Glass lid closes completely.	Close

- 6) Install the trim in the reverse order of removal.

## 2. WAGON MODEL

Check that the wedge of the glass lid (front) bracket is in contact at the vehicle forward direction end. At this time, the lid is at the fully open position.

- (1) Front
- (2) Wedge
- (3) Glass lid (Front)
- (4) Glass lid (Rear)

- 1) Install the motor assembly.
- 2) After the installation of the motor assembly, check again that the wedge of glass lid (front) bracket part is in contact at the vehicle forward direction end.
- 3) Connect the harness connector of motor assembly, and then connect the battery ground cable to battery.

- 4) Perform the initialize operation of motor.
  - When replacing the motor, fully close the glass once and perform position initialization, because the movement of the glass lid will shift to inching operation.
  - When reusing the motor, operate the auto-reverse function five times in a row to shift to the inching operation, then perform the initialization of position.
- 5) Check the operation of sunroof with following table.

Operation	Switch position
(1) Glass lid (front) and glass lid (rear) closes completely.	Close
(2) Glass lid (front) tilts up to the ventilating position.	Open
(3) Glass lid (front) tilts up to top position, and glass lid (rear) opens to just before the completely open position.	Open
(4) Glass lid (rear) opens completely.	Open
(5) Glass lid (rear) closes at a position 150 mm (5.91 in) from rear end of the tilted up glass lid (front).	Close
(6) Glass lid (rear) closes completely, and glass lid (front) stops in the ventilating position.	Close
(7) Glass lid (front) lowers, and then glass lid (front) and glass lid (rear) closes completely.	Close

- 6) Install the trim in the reverse order of removal.

# Sunroof Switch

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 6. Sunroof Switch

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the spot map light lens (A) and sunroof switch mounting screws (B).

- 3) Disconnect the harness connector, and then re-remove the sunroof switch.

### B: INSTALLATION

Install in the reverse order of removal.

## C: INSPECTION

### 1. SEDAN MODEL

Measure the sunroof switch resistance.

Switch position	Terminal No.	Standard	Connector No.
Open	1 and 3	Less than 1 $\Omega$	R128
Close	3 and 4	Less than 1 $\Omega$	
Tilt up	1 and 3	Less than 1 $\Omega$	R187
Tilt down	3 and 4	Less than 1 $\Omega$	

### 2. WAGON MODEL

Measure the sunroof switch resistance.

Switch position	Terminal No.	Standard
Open	1 and 3	Less than 1 $\Omega$
Close	3 and 4	Less than 1 $\Omega$

#### NOTE:

If glass lid does not operate or is not supplied with power, move the glass lid using the hexagon wrench. <Ref. to SR-8, FORCED DRIVE, Glass Lid.>

# Sunshade

SUNROOF/T-TOP/CONVERTIBLE TOP (SUNROOF)

## 7. Sunshade

### A: REMOVAL

#### 1. SEDAN MODEL

1) Remove the glass lid. <Ref. to SR-6, SEDAN MODEL, REMOVAL, Glass Lid.>

2) Loosen the TORX® bolt to remove the front sunshade bracket.

3) Pull the sunshade until the rear sunshade bracket comes into the sight, then loosen the TORX® bolts to remove the sunshade.

#### 2. WAGON MODEL

1) Remove the frame assembly.

2) Remove the shade stopper (A) of the sunshade.

3) Pull out the sunshade (A) from the sunroof frame.

## B: INSTALLATION

Install in the reverse order of removal.

## C: INSPECTION

### 1. CHECK FOR MOVING LOAD OF SUNSHADE

1) Attach a spring scale to sunshade edge using a cloth.

2) Pull the spring scale to measure moving load of the sunshade.

#### ***Moving load of sunshade:***

##### ***Standard***

***18.0±5.0 N (1.8±0.5 kgf, 13±3.7 lbf)***

#### **NOTE:**

Moving load is larger at the beginning of pulling a spring scale, so take a spring scale reading while sunshade sliding smoothly.

3) If moving load exceeds specifications, check the glass lid, sunshade and frame assembly for improper installation.

EI-01441

- |                               |  |                                      |
|-------------------------------|--|--------------------------------------|
| (1) Front pillar upper trim   | (8) Rear outside scuff plate                   | (14) Curtain airbag guide center     |
| (2) Front pillar lower trim   | (9) Bolt cover                                 | (15) Curtain airbag guide rear       |
| (3) Front outside scuff plate | (10) Seat belt shoulder anchor adjuster button | (16) Curtain airbag module protector |
| (4) Front inside scuff plate  | (11) Center pillar inner protector upper       | (17) Rear quarter front pillar trim  |
| (5) Center pillar upper trim  | (12) Center pillar inner protector lower       | (18) Rear quarter rear pillar trim   |
| (6) Center pillar lower trim  | (13) Curtain airbag guide front                | (19) Rear quarter lower trim         |
| (7) Rear inside scuff plate   |  |                                      |

## 22. REAR GATE TRIM

EI-00808

(1) Rear gate panel upper trim

(2) Rear gate panel pillar trim

(3) Rear gate panel lower trim

## 23. ROOF TRIM (SEDAN MODEL)

EI-00755

# General Description

EXTERIOR/INTERIOR TRIM

## 24. ROOF TRIM (WAGON MODEL)

EI-01062

## 25. TRUNK ROOM TRIM

EI-01750

- (1) Trunk lid trim
- (2) Trunk lid arm cover
- (3) Trunk room mat

- (4) Trunk side trim
- (5) Combination light cover
- (6) Trunk room end cover

- (7) Spacer trunk

## 26.LUGGAGE FLOOR MAT

EI-01064

- (1) Front floor mat
- (2) Floor box (RH)
- (3) Floor box (LH)

- (4) Center floor mat
- (5) Side floor mat (RH)

- (6) Side floor mat (LH)
- (7) Luggage floor end cover

# General Description

EXTERIOR/INTERIOR TRIM

## 27.ROOM INNER PARTS

- (1) Room mirror
- (2) Sun visor
- (3) Assist grip

**Tightening torque:N-m (kgf-m, ft-lb)**

**T1: 2.0 (0.2, 1.48)**

**T2: 7.5 (0.77, 5.53)**

## 28.HEAT SHIELD COVER

EI-00798

- (1) Front heat shield cover  
(4AT model and MT model)
- (2) Front heat shield cover  
(5AT model)

- (3) Center heat shield cover  
(Turbo model)
- (4) Center heat shield cover  
(Non-turbo model)

- (5) Rear heat shield cover RH
- (6) Rear heat shield cover LH

## B: PREPARATION TOOL

TOOL NAME	REMARKS
Clip remover	Used for removing trim.
Clip clamp pliers	Used for removal of various clips and clamps.

## 2. Front Grille

### A: REMOVAL

- 1) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 2) Remove the screws from the reverse side of the bumper face to remove the front grille assembly.

- 3) Remove the hexagon cap nut from the reverse side of the front hood to remove the upper grille. (OUTBACK model)

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**4.5 N·m (0.46 kgf·m, 3.32 ft·lb)**

## 3. Front Hood Grille

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
- 3) Remove screws (A) and clip (B), and remove the front hood duct.

- 4) Loosen the nuts (A), remove the clip (B), and then remove the front hood grille.

### B: INSTALLATION

- 1) Fit the clip (B) of the front hood grille, and install the front hood grille using nuts (A).

#### Tightening torque:

**4.5 N·m (0.46 kgf-m, 3.32 ft-lb)**

- 2) Insert the hooks (B) of the front hood duct into holes (A) of the front hood.

- 3) Install the front hood duct with screws (A) and clip (B).

# Front Under Cover

EXTERIOR/INTERIOR TRIM

## 4. Front Under Cover

### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove clips (A) in front fender and bolts (B), then remove the front under cover.

- Large type

- Small type

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**18 N·m (1.84 kgf·m, 13.3 ft·lb)**

## 5. Floor Under Protector

### A: REMOVAL

1) Lift up the vehicle.

NOTE:

A plate type lift cannot be used.

2) Remove the push turn clips (A) and bolts (B), and remove the floor under protector.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

Refer to "COMPONENT" of  
 "General Description". <Ref. to EI-3, UNDER  
 PROTECTOR, COMPONENT, General  
 Description.>

# Fuel Tank Protector

EXTERIOR/INTERIOR TRIM

## 6. Fuel Tank Protector

### A: REMOVAL

- 1) Lift up the vehicle.
- 2) Remove the bolts (A) and nuts (B), and then remove the fuel tank protector.

### B: INSTALLATION

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to "COMPONENT" of  
"General Description". <Ref. to EI-3, UNDER  
PROTECTOR, COMPONENT, General  
Description.>**

## 7. Mud Guard

### A: REMOVAL

#### 1. FRONT MUD GUARD

- 1) Jack-up the vehicle.
- 2) Remove the front wheels.
- 3) Loosen the screws and clips to remove mud guard.

#### 2. REAR MUD GUARD

- 1) Jack-up the vehicle.
- 2) Remove the rear wheels.
- 3) Loosen the screws and clips to remove the mud guard.

### B: INSTALLATION

Install in the reverse order of removal.

# Front Bumper

EXTERIOR/INTERIOR TRIM

## 8. Front Bumper

### A: REMOVAL

#### 1. FRONT BUMPER FACE

- 1) Disconnect the ground cable from the battery.
- 2) Turn over the front mud guard, and remove the clips connecting the fender and bumper.

- 3) Remove the clips at the lower side of bumper.

#### NOTE:

Remove the under cover to facilitate the work.  
<Ref. to EI-26, REMOVAL, Front Under Cover.>

- 4) Turn over the mud guard, and disconnect the fog light connector. (Model with fog light)

- 5) For OUTBACK model, remove the side garnish of the front fender.

#### NOTE:

For removing the claw (A) of side garnish from the bumper face.

- 6) Detach the flange sections of the bumper face side from the guide bracket (A).

#### CAUTION:

**Do not pull forcibly. It may damage the flange sections of the bumper face side.**

#### NOTE:

It is easier to detach them from the fender side in the order from (1) to (3), while pulling up the bumper face to the direction of arrow (B) (upward).

- 7) Remove the bumper face from vehicle body.
- 8) Remove the fog light from bumper face. <Ref. to LI-19, REMOVAL, Front Fog Light Assembly.>
- 9) Remove the front grille assembly from bumper face. <Ref. to EI-24, REMOVAL, Front Grille.>

## 2. FRONT BUMPER BEAM ASSEMBLY

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front bumper face. <Ref. to EI-30, FRONT BUMPER FACE, REMOVAL, Front Bumper.>
- 3) Remove the energy absorber foam from bumper beam.
- 4) Remove the headlight assembly. <Ref. to LI-13, REMOVAL, Headlight Assembly.>
- 5) Remove the bolts, and remove the bumper beam assembly from vehicle body.

**NOTE:**

- After all bolts are removed, raise the whole bumper beam a little to remove it from vehicle body.
- 6) Remove the bolts and nuts, and disassemble the bumper beam.

- 7) Remove the under cover.
- 8) Remove the bolts and clips, and remove the radiator guide.

## B: INSTALLATION

### 1. FRONT BUMPER FACE

- 1) Install in the reverse order of removal.
- 2) Fit the bumper face to the gap (B) between the guide bracket (A) and fender securely.

- 3) Replace the double-sided tape with new one, and install it to the side garnish.

### 2. FRONT BUMPER BEAM ASSEMBLY

Install in the reverse order of removal.

**Tightening torque:**

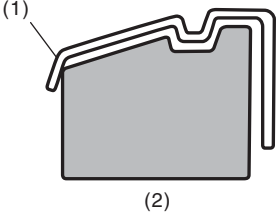

Refer to “COMPONENT” of “General Description”. <Ref. to EI-5, FRONT BUMPER, COMPONENT, General Description.>

# Front Bumper

EXTERIOR/INTERIOR TRIM

## C: REPAIR

### 1. COATING METHOD FOR PP BUMPER

Process No.	Process name	Job contents	
1	Bumper installation	Place the bumper on a paint worktable as required. Use the paint worktable conforming to inner shape of bumper if possible.	 <p>(1) Bumper (2) Set bumper section</p> <p>EI-00234</p>
2	Masking	Mask specified part (black base) with masking tape. Use masking tape for PP (example, Nichiban No. 533, etc.).	
3	Degreasing/cleaning	Clean all parts to be painted with white gasoline, normal alcohol, etc. to remove dirt, oil, fat, etc.	
4	Primer paint	Apply primer to all parts to be painted, using spray gun. Use primer (clear).	
5	Drying	Dry at normal temperature [10 — 15 min. at 20°C (68°F)]. In half-dried condition, PP primer paint is dissolved by solvent, e.g. thinner, etc. Therefore, if dust or dirt must be removed, use ordinary alcohol etc.	
6	Top coat paint (I)	Non-colored	Metallic paint
		Use section (block) paint for top coat. • Paint to be used (for each color): Solid paint Hardener PB Thinner T-301 • Mixture ratio: Main agent : Hardener = 4 : 1 • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 35 — 45 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm <sup>2</sup> , 36 — 50 psi)	Use section (block) paint for top coat. • Paint to be used (for each color): Metallic paint Hardener PB Thinner T-306 • Mixture ratio: Main agent : Hardener = 10 : 1 • Viscosity: 10 — 13 sec./20°C (68°F) • Film thickness: 15 — 20 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm <sup>2</sup> , 36 — 50 psi)
7	Drying	Not required.	Dry at normal temperature [at least 10 min. at 20°C (68°F)]. In half-dried condition, avoid dust, dirt.
8	Top coat paint (II)	Not required.	Apply a clear coat to parts with top coat paint (I), three times at 5 — 7 minutes intervals. • Paint to be used: Metallic paint Hardener PB Thinner T-301 • Mixture ratio: Clear coat : Hardener = 6 : 1 • Viscosity: 14 — 16 sec./20°C (68°F) • Film thickness: 25 — 30 μ • Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm <sup>2</sup> , 36 — 50 psi)
9	Drying	60°C (140°F), 60 min. or 80°C (176°F), 30 min. If higher than 80°C (176°F), PP may become be deformed. Keep maximum temperature 80°C (176°F) or less.	
10	Inspection	Check paint.	
11	Removal of mask- ing	Remove the masking tape applied in procedure 2.	

## 2. REPAIR INSTRUCTIONS FOR COLORED PP BUMPER

**NOTE:**

All PP bumpers are provided with a grained surface, and if the surface is damaged, it cannot normally be restored to its former condition. Damages limited to the shallow scratches that cause only a change in the luster of the base material or coating, can be almost fully restored. Before repairing a damaged area, explain this point to the customer and obtain an understanding about the matter. Repair methods are outlined below, based on a classification of the extent of damage.

1) Minor damage causing only a change in the luster of the bumper due to a light touch  
Almost restorable.

Process No.	Process name	Job contents	
1	Cleaning	Clean the area to be repaired using water.	
2	Sanding	Grind the repairing area with #500 sand paper in a "feathering" motion.	
3	Finish	Resin section	Coated section
		Repeatedly apply wax to the affected area using soft cloth (such as flannel). Recommended wax: NITTO KASEI Soft 99 TIRE WAX BLACK, or equivalent.	Perform either the same process as for the resin section or process No. 18 and subsequent in the 3) section, depending on the degree and nature of damage.
		Polish the waxed area with clean cloth after 5 — 10 minutes.	

2) Deep damage caused by scratching with fences etc.  
A dent cannot be repaired but a whitened or swelled part can be removed.

Process No.	Process name	Job contents	
1	Cleaning	Clean the damaged area with water.	
2	Removal of damaged area	Cut off protruding area, if any, due to collision, using a putty knife.	
3	Sanding	Grind the affected area with #100 — #500 sand paper.	
4	Finish	Resin section	Coated section
		Same as step 3 in the "1)" section.	Perform step 12 and subsequent operations in the "3)" section.

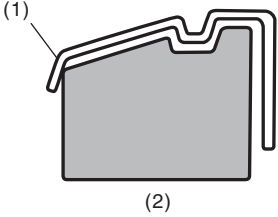

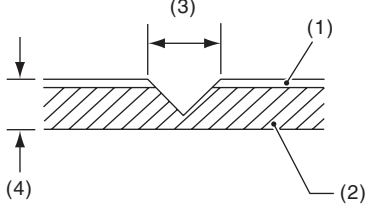

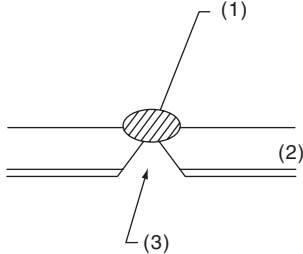

# Front Bumper

## EXTERIOR/INTERIOR TRIM

3) Deep damage such as a break or hole that requires filling

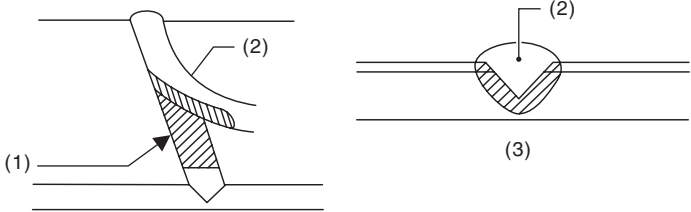

Much of the peripheral grained surface must be sacrificed for repair. The degree of restoration is not really worth the expense. (The surface, however, will become almost flush with adjacent areas.)

Recommended repair kit: PP Part Repair Kit (NRM)

Process No.	Process name	Job contents
1	Bumper removal	Remove the bumper as required.
2	Removal of parts	Remove the parts built into bumper as required.
3	Bumper placement	<p>Place the bumper on a paint worktable as required. It is recommended to use the paint worktable conforming to internal shape of bumper.</p>  <p style="text-align: right;">EI-00234</p> <p>(1) Bumper (2) Set bumper section</p>
4	Surface preparation	Remove dust, oil, etc. from areas to be repaired and surrounding areas, using a suitable solvent (NRM No. 900 Precleno, white gasoline, or alcohol, etc.).
5	Cutting	<p>If the damage is a crack or a hole, cut a guide slit of 20 to 30 mm (0.79 to 1.18 in) in length along the crack or hole up to the bumper base surface. Next, use a knife or grinder to carve a V-shaped groove in the area for repair.</p>  <p style="text-align: right;">EI-00235</p> <p>(1) Paint surface (2) PP base surface (3) 20 — 30 mm (0.79 — 1.18 in) (4) 3 mm (0.12 in)</p>
6	Sanding (I)	Grind beveled surface with sand paper (#40 — #60) to smooth finish.
7	Cleaning	Clean the sanded surface with the same solvent as used in Procedure 4.
8	Temporary welding	<p>Grind the side just opposite the beveled area with sand paper (#40 — #60) and clean using a solvent. Temporarily spot-weld the side, using PP welding rod and heater gun.</p>  <p style="text-align: right;">EI-00236</p> <p>(1) Welded point (Use heater gun and PP welding rod) (2) PP base surface (3) Beveled section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• Do not melt welding rod until it flows out. This results in reduced strength.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul>

# Front Bumper

EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents
9	Welding	<p>Using a heater gun and PP welding rod, weld the beveled spot while melting both the rod and damaged area.</p>  <p>(1) Welding rod (2) Melt hatched area (3) Section</p> <p>NOTE:</p> <ul style="list-style-type: none"> <li>• Melt the sections indicated by hatched area.</li> <li>• Do not melt the welding rod until it flows out, in order to provide strength.</li> <li>• Always keep the heater gun 1 to 2 cm (0.4 to 0.8 in) away from the welding spot.</li> <li>• Leave the welded spot unattended until it cools completely.</li> </ul> <p style="text-align: right;">EI-00237</p>
10	Sanding (II)	<p>Remove excess part of weld with a putty knife. If a drill or disc wheel is used instead of the knife, operate it at a rate lower than 1,500 rpm and grind the excess part little by little. A higher rpm will cause the PP substrate to melt from the heat.</p>  <p style="text-align: right;">EI-00042</p> <p>Sand the welded spot smooth with #240 sand paper.</p>
11	Masking	<p>Mask the black substrate section using masking tape. Recommended masking tape: Nichiban No. 533 or equivalent</p>
12	Cleaning/degreasing	<p>Completely clean the entire coated area, using solvent similar to that used in Procedure 4.</p>
13	Primer coating	<p>Apply a coat of primer to the repaired surface and its surrounding areas. Mask these areas, if necessary. Recommended primer: Mp/ 364 PP Primer</p> <p>NOTE: Be sure to apply a coat of primer using a spray gun at a pressure of 245 — 343 kPa (2.5 — 3.5 kg/cm<sup>2</sup>, 36 — 50 psi).</p>
14	Leave unattended	<p>Leave the repaired area unattended at 20°C (68°F) for 10 to 15 minutes until primer is half-dry.</p> <p>NOTE: If dirt or dust comes in contact with the coated area, wipe it off with a cloth dampened with alcohol. (Do not use thinner since the coated area tends to melt.)</p>
15	Primer surfacer coating	<p>Apply primer surfacer to the repaired area two or three times at an interval of 3 — 5 minutes.</p> <ul style="list-style-type: none"> <li>• Recommended surfacer: UPS 300 Flex Primer No. 303 UPS 300 Exclusive hardener NPS 725 Exclusive Reducer (thinner)</li> <li>• Mixture ratio: 2 : 1 (UPS 300 : No. 303)</li> <li>• Viscosity: 12 — 14 sec./20°C (68°F)</li> <li>• Coating film thickness: 40 — 50 μ</li> </ul>
16	Drying	<p>Allow the coated surface to dry for 20 minutes at 20°C (68°F) [or 30 minutes at 60°C (140°F)].</p>
17	Sanding (III)	<p>Sand the coated surface and its surrounding areas using #400 sand paper and water.</p>

# Front Bumper

## EXTERIOR/INTERIOR TRIM

Process No.	Process name	Job contents	
18	Cleaning/degreasing	Same as Process No. 12.	
19	Top coat (I)	Non-colored	Metallic paint
		Use a "block" coating method. <ul style="list-style-type: none"> <li>Recommended paint: Suncryl (SC) No. 307 Flex Hardener SC Reducer (thinner)</li> <li>Mixture ratio: Suncryl (SC) : No. 307 Flex Hardener = 3 : 1</li> <li>Viscosity: 11 — 13 sec./20°C (68°F)</li> <li>Coating film thickness: 40 — 50 μ</li> <li>Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm<sup>2</sup>, 36 — 50 psi)</li> </ul>	Use a "block" coating method. <ul style="list-style-type: none"> <li>Recommended paint: Suncryl (SC) No. 307 Flex Hardener SC Reducer (thinner)</li> <li>Mixture ratio: Suncryl (SC) : No. 307 Flex Hardener = 3 : 1</li> <li>Viscosity: 11 — 13 sec./20°C (68°F)</li> <li>Coating film thickness: 20 — 30 μ</li> <li>Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm<sup>2</sup>, 36 — 50 psi)</li> </ul>
20	Leave unattended	Not required.	Leave unattended at 20°C (68°F) for at least 10 minutes until the topcoated area is half-dry. <b>NOTE:</b> Be careful to keep dust or dirt from coming in contact with the affected area.
21	Top coat (II)	Not required.	Apply a clear coat three times at an interval of 3 to 5 minutes. <ul style="list-style-type: none"> <li>Recommended paint: SC710 Overlay Clear No. 307 Flex Hardener SC Reducer (thinner)</li> <li>Mixture ratio: Suncryl (SC) : No. 307 Flex Hardener = 3 : 1</li> <li>Viscosity: 10 — 13 sec./20°C (68°F)</li> <li>Coating film thickness: 20 — 30 μ</li> <li>Spraying pressure: 245 — 343 kPa (2.5 — 3.5 kg/cm<sup>2</sup>, 36 — 50 psi)</li> </ul>
22	Drying	Allow the coated surface to dry for two hours at 20°C (68°F) or 30 minutes at 60°C (140°F). <b>NOTE:</b> Do not allow the temperature to exceed 80°C (176°F) since this will deform the PP substrate.	
23	Inspection	Carefully check the condition of the repaired area.	
24	Removal of masking	Remove the masking tape applied in Process No. 11 and 13.	
25	Parts installation	Install parts on the bumper in reverse order of removal.	
26	Bumper installation	Install the bumper.	

## 9. Rear Bumper

### A: REMOVAL

#### 1. REAR BUMPER FACE (SEDAN MODEL)

- 1) Disconnect the ground cable from the battery.
- 2) Turn over the mud guard, and remove the bolt (A) inside wheel house, and the clips (B) on the lower side of the bumper.

- 3) Remove the clips on the lower side of rear bumper.

- 4) Remove the service hole cover, and remove the bolt.

- 5) Remove the bumper face from the vehicle body in the order from (a) to (e).

- (1) Detach the engaged section from the corner bracket of the rear combination light RH and LH.
- (2) Detach the engaged section of the bumper face center from one end to the another.

#### NOTE:

Do not pull with an excessive force. Otherwise the bumper face flange sections may be damaged.

#### 2. REAR BUMPER FACE (WAGON MODEL)

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear combination light assembly. <Ref. to LI-23, REMOVAL, Rear Combination Light Assembly.>
- 3) Remove the two clips.

- 4) For OUTBACK model, remove the side garnish of the rear fender.

#### NOTE:

For removing the claw (A) of side garnish from the bumper face.

# Rear Bumper

## EXTERIOR/INTERIOR TRIM

5) Turn over the mud guard, and remove the bolt (A) inside wheel house, and the clips (B) on the lower side of the bumper.

6) Remove the clips on the lower side of rear bumper.

7) Remove the service hole cover, and remove the bolt.

### NOTE:

For models with woofers, remove the woofer cover.

8) Remove the rear bumper from vehicle body.

### NOTE:

- Do not pull with an excessive force. Otherwise the bracket installation area may be damaged.
- To facilitate the removal of bracket, detach the engaged sections between bumper face and bracket from one end to the other.

## 3. REAR BUMPER BRACKET

Remove the rear bumper face from vehicle body, and remove each bumper bracket.

- Upper bracket

- Corner bracket
  - Sedan model

- Wagon model

- Lower bracket
  - Sedan model

- Wagon model

## 4. REAR BUMPER BEAM ASSEMBLY

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear bumper face. <Ref. to EI-37, REAR BUMPER FACE (SEDAN MODEL), REMOVAL, Rear Bumper.>
- 3) Remove the energy absorber foam.
- 4) Remove the nuts, and remove the beam main reinforcement from the vehicle body.

- 5) Remove the nuts, and remove the bumper beam bracket and beam upper rear from the vehicle body.

## B: INSTALLATION

Install in the reverse order of removal.

### NOTE:

- When the side garnish is removed, replace the double-sided tape with new one.
- If the bumper face comes off easily from the beam upper rear, adjust the hook of the bracket side.

### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EI-6, REAR BUMPER (SEDAN MODEL), COMPONENT, General Description.> <Ref. to EI-7, REAR BUMPER (WAGON MODEL), COMPONENT, General Description.>

## C: REPAIR

Refer to front bumper repair. <Ref. to EI-32, REPAIR, Front Bumper.>

# Cowl Panel

EXTERIOR/INTERIOR TRIM

## 10.Cowl Panel

### A: REMOVAL

- 1) Open the front hood.
- 2) Remove the wiper arm. <Ref. to WW-13, REMOVAL, Front Wiper Arm.>
- 3) Remove the weather strip clips, and remove the weather strip.

#### NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use a clip remover to remove.

- 4) Remove the clip, and remove the cover cowl panel.

- 5) Remove the cowl panel side and clip (A).

- 6) Remove the clips (A), and remove the cowl panel.

### B: INSTALLATION

Install in the reverse order of removal.

## 11. Roof Spoiler

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 3) Disconnect the connector of high-mounted stop light and the washer hose of rear washer.
- 4) Remove the nut and plastic caps.

- 5) Remove the clips, and remove the roof spoiler.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**4.5 N·m (0.46 kgf·m, 3.32 ft·lb)**

# Side Sill Spoiler

EXTERIOR/INTERIOR TRIM

## 12.Side Sill Spoiler

### A: REMOVAL

Remove the clips (two in the front fender arch, six for side sill spoiler lower area), and remove the side spoiler.

- |                       |                |                |
|-----------------------|----------------|----------------|
| (A) Yellow clip       | (B) Green clip | (C) Black clip |
| (1) Side sill spoiler | (3) End cover  | (4) Clip       |
| (2) Double-sided tape |                |                |

#### NOTE:

When peeling the double sided tape, refer to removal procedures for the side protector. <Ref. to EI-44, REMOVAL, Side Protector.>

## B: INSTALLATION

Install in the reverse order of removal.

### NOTE:

For the rearmost clip securing the side sill spoiler, install through the end cover.

- (1) Vehicle body
- (2) End cover
- (3) Side sill spoiler

# Side Protector

EXTERIOR/INTERIOR TRIM

## 13.Side Protector

### A: REMOVAL

- (A) White clip
- (1) Front door protector
- (2) Rear door protector

1) Slide in a thin thread (A) of 0.8 mm (0.031 in) diameter or less (fishing line etc.) between the body and the protector, and cut the double-sided tape. Pull the protector, and remove the clip using the clip remover.

#### NOTE:

- To optimize the effect of solvent, slide the thread along body without removing the double-sided tape on the surface of body and spoiler.
- If it is difficult to remove the double-sided tape, warm it up to approx. 40°C (104°F).

- If the double-sided tape remains thick on the surface due to interfacial peeling, apply solvent after slicing off the double-sided tape using a cutter.

- (A) Panel
- (B) Side protector
- (C) Double-sided tape

- 2) Apply masking tape around the double-sided tape remaining on the surface of body or spoiler.
- 3) Apply solvent uniformly on the double-sided tape using a brush.

#### CAUTION:

- Do not use solvent to the body which has been repaired with lacquer paint.
- Wipe off immediately when the solvent is attached on surface of the body or spoiler.

#### Solvent:

*3M 8907 or equivalent*

4) Cover the area where solvent is applied using plastic wrap (A), and then heat the double-sided tape for 5 to 10 minutes in 40 — 60°C (104 — 140°F) using a heat light (B).

**CAUTION:**

**Do not heat the double-sided tape until the surface becomes white and excessively dried.**

5) Remove the double-sided tape using a plastic spatula.

6) After completely removing the double-sided tape, detach the masking tape and clean the surface using a cotton cloth dampened with white gasoline.

**B: INSTALLATION**

1) Apply primer to the protector surface where the double-sided tape is to be adhered, and then adhere the double-sided tape as shown in the figure.

(1) Double-sided tape: thickness 1.2 mm (0.047 in), width 5 mm (0.197 in)

**Primer:**

**3M K-500 or equivalent**

**Double-sided tape:**

**3M 5531-5 or equivalent**

2) Heat the adhering part using a heat light.

Body side: 40 — 60°C (104 — 140°F)

Protector side: 20 — 30°C (68 — 86°F)

3) Peel off the backing sheet of double-sided tape, align the clip position, and then adhere the tape to the body while taking care to avoid air entering.

**CAUTION:**

**To keep the adhesion, do not wash the vehicle within 24 hours from installation.**

## Side Garnish

EXTERIOR/INTERIOR TRIM

### 14.Side Garnish

#### A: REMOVAL

EI-01755

(A) Black clip

(B) White clip

(C) Pink clip

(D) Gray clip

(E) Green clip

1) Remove the side sill spoilers. <Ref. to EI-42, REMOVAL, Side Sill Spoiler.>

2) For removal of the side garnish, refer to the removal procedure of "Side Protector". <Ref. to EI-44, REMOVAL, Side Protector.>

#### B: INSTALLATION

Check the color of the clip, and install in the reverse order of removal.

## 15.Rear Quarter Protector

### A: REMOVAL

1) Remove the side sill spoilers. <Ref. to EI-42, REMOVAL, Side Sill Spoiler.>

2) Remove clips (A) by rotating it rearward using the fender arch as a fulcrum, and then remove the rear quarter protector.

### B: INSTALLATION

Install in the reverse order of removal.

# Roof Rail

EXTERIOR/INTERIOR TRIM

## 16. Roof Rail

### A: REMOVAL

- 1) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
- 2) Remove the six nuts.

EI-01086

#### NOTE:

Perform the removal procedures by referring to above illustration. (OUTBACK model)

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

When removing or installing the roof rail, be careful not to scratch the body panel with the stud bolt of roof rail.

#### Tightening torque:

7.5 N-m (0.77 kgf-m, 5.53 ft-lb)

## 17. Door Trim

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the cover (A) at the inner remote area.

- 3) Push the root of hand grip upward, and remove the hand grip cover by twisting it towards the front of the vehicle.

LH side: Counterclockwise  
RH side: Clockwise

#### NOTE:

If it does not come off using the procedures above, apply protective tape to the tip of a flat tip screwdriver and the door trim, and pry out the upper side of the hand grip cover.

- 4) Loosen the screws.

- 5) Remove the clips, and disconnect all connectors and wire cables to remove the door trim.

- Front door trim

- Rear door trim

# Door Trim

EXTERIOR/INTERIOR TRIM

## B: INSTALLATION

Install in the reverse order of removal.

### NOTE:

Be careful not to install the hand grip cover and plate clip of the hand grip in the wrong direction.

- Hand grip cover (front and rear door)  
The side with the protrusion is the upper side.

- Bottom clip of the front door faces the opposite direction

- Lower side of the hand grip cover for the front door has a claw.

- The bottom clip of the rear door faces the opposite direction

## 18. Instrument Panel Lower Cover

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door inside scuff plate (A) and front pillar lower trim (B) on the driver's side. <Ref. to EI-61, REMOVAL, Lower Inner Trim.>

- 3) Remove the clips, and remove the instrument panel lower cover under.

- 4) Loosen the screw (A), disconnect the connectors, and remove the instrument panel lower cover upper.

(B) Clip

### B: INSTALLATION

Install in the reverse order of removal.

## 19. Glove Box

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 3) Remove the console front panel.

(A) Hook

#### NOTE:

For the AT model, remove the ring indicator.  
For the MT model, remove the shift knob.

- 4) Remove the console side garnish.

(A) Hook

- 5) Remove the front inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-61, REMOVAL, Lower Inner Trim.>

- 6) Remove the clips, and remove the glove box lower cover.

- 7) Remove the console side panel.

- 8) Remove the instrument panel side cover, and remove the clip.

(A) Clip

- 9) Remove the strap of the glove box damper.
- 10) Remove the backside of stopper on one side, and remove the glove box lid.

11) Remove the harness holder and connector holder.

12) Remove the screws and upper clip to remove the glove box.

## **B: INSTALLATION**

Install in the reverse order of removal.

## 20. Console Box

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the parking brake lever cover.

- 3) Remove the bolts and clips.

- 4) Disconnect the connector, and remove the console box.

### B: INSTALLATION

Install in the reverse order of removal.

## 21.Center Console

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 3) Remove the console front panel.

(A) Hook

#### NOTE:

For the AT model, remove the ring indicator.  
For the MT model, remove the shift knob.

- 4) Loosen the screw, remove the hook, and remove the console side garnish.

(A) Hook

- 5) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>

- 6) Remove the clip at the tip of the console side panel.

- 7) Remove the passenger's side front inside scuff plate (A) and front pillar lower trim (B). <Ref. to EI-61, REMOVAL, Lower Inner Trim.>

- 8) Remove the clips, and remove the glove box lower cover.

## Center Console

### EXTERIOR/INTERIOR TRIM

---

9) Remove the screws, and remove the console side panel.

10) Loosen the screws and pull out the audio unit assembly, and disconnect the connector for removal.

#### NOTE:

The audio unit assembly can be removed without removing the console side panel.

### **B: INSTALLATION**

Install in the reverse order of removal.

## 22. Instrument Panel Assembly

### A: REMOVAL

#### 1. INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM)

**CAUTION:**

Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
- 3) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 4) Remove the center console. <Ref. to EI-55, REMOVAL, Center Console.>
- 5) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>
- 6) Remove the glove box. <Ref. to EI-52, REMOVAL, Glove Box.>
- 7) Remove the combination meter assembly. <Ref. to IDI-19, REMOVAL, Combination Meter.>
- 8) Remove the screws.

- 9) Remove the driver's side instrument panel side cover, and remove the screws.

- 10) Remove the screw at the side of the center console.

- 11) Remove the center air vent grille of the instrument panel. <Ref. to AC-46, CENTER GRILLE, REMOVAL, Air Vent Grille.>
- 12) Remove the screws.

- 13) Remove the screws at the side of the passenger's side instrument panel.

- 14) Remove the bolts securing the passenger's side airbag module to the steering support beam.

# Instrument Panel Assembly

## EXTERIOR/INTERIOR TRIM

15) Disconnect the connectors, and remove the instrument panel from vehicle body.

### NOTE:

- If necessary, make alignment marks for easy re-assembly.
- When storing the removed instrument panel, be sure to prepare a table or the like to place the instrument panel, in order to prevent scratches or other damage to the panel.

16) Remove the side air vent grille. <Ref. to AC-46, REMOVAL, Air Vent Grille.>

17) Remove the heater vent duct. <Ref. to AC-48, REMOVAL, Heater Vent Duct.>

18) Loosen the screws to remove the center console frame.

19) Loosen the screws to remove the meter bracket.

20) Loosen the screws to remove the instrument panel matching pins.

21) Loosen the screws to remove the glove box striker.

22) Remove the claw, and remove the passenger's airbag module.

## 2. STEERING SUPPORT BEAM

1) Remove the instrument panel. <Ref. to EI-57, INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM), REMOVAL, Instrument Panel Assembly.>

2) Remove the steering shaft assembly. <Ref. to PS-17, REMOVAL, Tilt Steering Column.>

3) Remove all harness clips, and remove the harness from the steering support beam.

**NOTE:**

If necessary, make alignment marks for easy reassembly.

4) Remove the bolts and remove the steering support beam.

5) Remove the steering support beam bracket.

## 3. INSTRUMENT PANEL ASSEMBLY (INCLUDING STEERING SUPPORT BEAM)

**CAUTION:**

**Be careful not to damage the airbag system harness when servicing the instrument panel. Damage may cause the system to malfunction.**

1) Remove the front pillar upper trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>

2) Remove the center console. <Ref. to EI-55, REMOVAL, Center Console.>

3) Remove the instrument panel lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.>

4) Remove the glove box. <Ref. to EI-52, REMOVAL, Glove Box.>

5) Remove the steering shaft assembly. <Ref. to PS-17, REMOVAL, Tilt Steering Column.>

6) Remove the driver's side instrument panel side cover, and remove the bolts.

7) Remove the bolts at the side of the passenger's side instrument panel.

8) Loosen the bolts on the center console side.

9) Disconnect the connectors, and remove the instrument panel assembly.

**NOTE:**

If necessary, make alignment marks for easy reassembly.

# Instrument Panel Assembly

EXTERIOR/INTERIOR TRIM

## B: INSTALLATION

### 1. INSTRUMENT PANEL (EXCLUDING STEERING SUPPORT BEAM)

1) Insert the matching pins (three places) on the instrument panel tip into the grommet (A) and (B) on the body panel side.

- 2) Check that the matching pins are inserted securely, and then route the harness.
- 3) Tighten the instrument panel with screws, and recheck the installation condition of instrument panel and harness routing.
- 4) Install in the reverse order of removal.

#### NOTE:

How to install insulator and pad;

- Adhesive

Use polyurethane adhesive. When assembling the instrument panel assembly, wait until the adhesive has evaporated to prevent filling of the smell in the compartment.

- Double-sided tape

Use commercial double-sided tape. (Use strong double-sided adhesive tape.)

- Locations

(1) 10 mm

(2) 40 mm

Apply at a position spaced by 10 mm from the instrument panel front end, and 40 mm from the ends on both sides.

### 2. STEERING SUPPORT BEAM

- 1) Temporarily tighten the steering support beam with bolts, and then route the harness.
- 2) Make sure that there is no mutual interference in each pedal, and then tighten each bolt.

#### Tightening torque:

**25 N·m (25.5 kgf·m, 18 ft·lb)**

- 3) Install in the reverse order of removal.

### 3. INSTRUMENT PANEL ASSEMBLY (INCLUDING STEERING SUPPORT BEAM)

1) Insert the matching pins (three places) on the instrument panel tip into the grommet (A) and (B) on the body panel side.

- 2) Check that the matching pins are inserted securely, and then route the harness.
- 3) Temporarily tighten the steering support beam with bolts, and then route the harness.
- 4) Make sure that there is no mutual interference in each pedal, and then tighten each bolt.

#### Tightening torque:

**25 N·m (25.5 kgf·m, 18 ft·lb)**

- 5) Install in the reverse order of removal.

## 23. Lower Inner Trim

### A: REMOVAL

1) Remove the hook, and remove the inside scuff plate.

(A) Hook

2) Remove the door molding (A), and remove the outside scuff plate.

(B) Clip

3) Remove clip (A), and remove the front pillar lower trim.

4) Remove the rear seat cushion. <Ref. to SE-17, REMOVAL, Rear Seat.>

5) Remove clip (A), and remove the inside scuff plate.

(B) Hook

6) Remove door molding (A) and door catcher cover (B), then remove the outside scuff plate.

(C) Hook with plate clip

(D) Clip

7) Remove the clips of the center pillar lower trim.

### B: INSTALLATION

Install in the reverse order of removal.

# Upper Inner Trim

EXTERIOR/INTERIOR TRIM

## 24. Upper Inner Trim

### A: REMOVAL

1) From the top side of the trim, remove the metal clip using a flat tip screwdriver.

**CAUTION:**  
When the metal clip comes off or becomes damaged, replace both trim and metal clips with new parts.

2) Remove the front pillar upper trim.

3) Remove the front inside scuff plate, rear inside scuff plate and center pillar lower trim. <Ref. to EI-61, REMOVAL, Lower Inner Trim.>

4) Remove the cap on the upper side of the pillar trim, and remove the bolt inside.

5) Remove the center pillar upper trim.

6) Remove the seat belt lower anchor bolt at the center pillar lower port. (Driver's seat)

7) Refer to the removal procedure of "Front Seat Belt" for the passenger's seat. <Ref. to SB-13, OUTER SEAT BELT ASSEMBLY, REMOVAL, Front Seat Belt.>

### B: INSTALLATION

Install in the reverse order of removal.

## 25.Rear Quarter Trim

### A: REMOVAL

#### 1. SEDAN MODEL

1) Remove the rear seat. <Ref. to SE-17, SEDAN MODEL, REMOVAL, Rear Seat.>

2) Turn over the trim, and remove the quarter trim rear by pressing the claw (A) of the metal clip using a flat screwdriver, etc.

(B) Hook

#### CAUTION:

**When the metal clip comes off or becomes damaged, replace both trim and metal clips with new parts.**

3) Remove the cap on the upper side of the trim, and remove the bolt inside.

4) Remove the bolts (A), and remove the quarter trim (front).

EI-00839

EI-00562

# Rear Quarter Trim

## EXTERIOR/INTERIOR TRIM

### 2. WAGON MODEL

1) Remove the rear seat cushion and backrest shoulder. <Ref. to SE-18, WAGON MODEL, REMOVAL, Rear Seat.>

2) Remove the cap on the upper side of the pillar trim, and remove the bolt inside.

3) Remove the clip, and remove the quarter front pillar trim.

4) Remove the quarter rear pillar trim.

5) Remove the luggage floor box. <Ref. to EI-73, REMOVAL, Luggage Floor Box.>

6) Remove the luggage floor end cover.

7) Remove the woofer cover. (Model with woofer)

8) Remove the screws (A) and bolts (B), and remove the quarter lower trim.

#### NOTE:

- Remove the screw cover on the tonneau cover installation area.
- Pull out the shopping bag hook, and remove the screw on the far end.

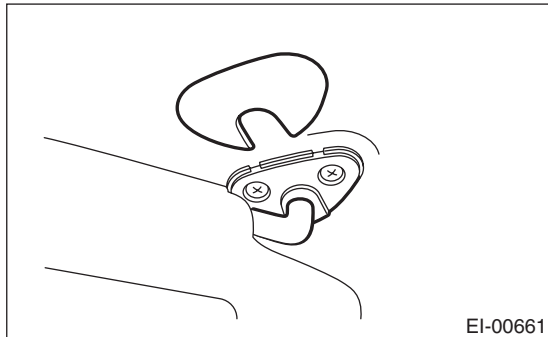

#### B: INSTALLATION

Install in the reverse order of removal.

## 26.Sun Visor

### A: REMOVAL

1) Remove the cover, loosen the mounting screws, and remove the sun visor.

2) Disconnect the connector. (Model with vanity mirror light)

3) While pressing the (A) on the both side using flat tip screwdriver, pull the sun visor hook to remove it.

### B: INSTALLATION

Install in the reverse order of removal.

## 27. Assist Grip

### A: REMOVAL

- 1) Remove the screw cover, and remove the screw inside.
- 2) Pull the left side of assist grip, and rotate the right side of it counterclockwise to remove.

- 3) Remove the roof trim. <Ref. to EI-67, REMOVAL, Roof Trim.>
- 4) Remove the bolts, and remove the assist grip bracket.

(A) Grommet

### B: INSTALLATION

Install in the reverse order of removal.

#### CAUTION:

**Be sure to install the grommet to assist grip bracket.**

**When the assist grip is installed with no grommet, it will cause the grip to not return properly.**

## 28. Roof Trim

### A: REMOVAL

#### 1. SEDAN MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front seats. <Ref. to SE-9, REMOVAL, Front Seat.>
- 3) Remove the rear seat. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 4) Remove the console box. <Ref. to EI-54, REMOVAL, Console Box.>
- 5) Remove the center console. <Ref. to EI-55, REMOVAL, Center Console.>
- 6) Remove the select lever. (AT model) <Ref. to CS-23, REMOVAL, Select Lever.>
- 7) Remove the spot map light. <Ref. to LI-32, REMOVAL, Spot Map Light.>
- 8) Remove the room light. <Ref. to LI-33, REMOVAL, Room Light.>
- 9) Remove the sun visor. <Ref. to EI-65, REMOVAL, Sun Visor.>
- 10) Remove the assist grip. <Ref. to EI-66, REMOVAL, Assist Grip.>
- 11) Remove the upper inner trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
- 12) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 13) Remove the sunroof opening trim. (Model with sunroof)

- 14) Remove the clips and harnesses, and remove the roof trim.
- 15) Pull out the roof trim from the vehicle.

#### 2. WAGON MODEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the spot map light. <Ref. to LI-32, REMOVAL, Spot Map Light.>
- 3) Remove the room light. <Ref. to LI-33, REMOVAL, Room Light.>
- 4) Remove the luggage room light. <Ref. to LI-34, REMOVAL, Luggage Room Light.>
- 5) Remove the sun visor. <Ref. to EI-65, REMOVAL, Sun Visor.>
- 6) Remove the assist grip. <Ref. to EI-66, REMOVAL, Assist Grip.>
- 7) Remove the upper inner trim. <Ref. to EI-62, REMOVAL, Upper Inner Trim.>
- 8) Remove the rear quarter trim. <Ref. to EI-64, WAGON MODEL, REMOVAL, Rear Quarter Trim.>

#### CAUTION:

**Do not remove the roof end trim with excessive force. Otherwise the roof trim may become damaged. Roof trim and roof end trim are fastened by rivets.**

- 9) Remove the sunroof opening trim. (Model with sunroof)

- 10) Remove the clips and each harness, pull out the rear center seat belt, and remove the roof trim.

#### CAUTION:

**Do not remove the roof end trim with excessive force. Otherwise the roof trim may become damaged.**

### B: INSTALLATION

Install in the reverse order of removal.

# Rear Gate Trim

EXTERIOR/INTERIOR TRIM

## 29. Rear Gate Trim

### A: REMOVAL

1) Remove clips (A), and remove the rear gate pillar trim.

2) Remove the clips, and remove the rear gate upper trim.

3) Remove the cover in the inner handle, and loosen the inside screw.

4) Turn over the weather strip, and remove the clips.

5) Remove the clips (A), and remove the rear gate lower trim.

6) Remove the rear gate weather strip.

### NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use a clip remover to remove.

### B: INSTALLATION

Install in the reverse order of removal.

## 30.Rear Shelf Trim

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear quarter trim. <Ref. to EI-63, SEDAN MODEL, REMOVAL, Rear Quarter Trim.>
- 3) Remove the high-mounted stop light. <Ref. to LI-31, REMOVAL, High-mounted Stop Light.>
- 4) Remove the rear seat cushion. <Ref. to SE-18, WAGON MODEL, REMOVAL, Rear Seat.>
- 5) Remove the lower anchor bolt of the rear center seat belt.

- 6) After disconnecting the high-mounted stop light harness connector (A) and removing the five clips, remove the rear shelf trim by pulling it forward.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Securely insert the vehicle body panel into the hook of the rear shelf trim center, and install the rear shelf trim.

- (1) Hook
- (2) Rear Shelf Trim
- (3) Vehicle body panel

# Trunk Room Trim

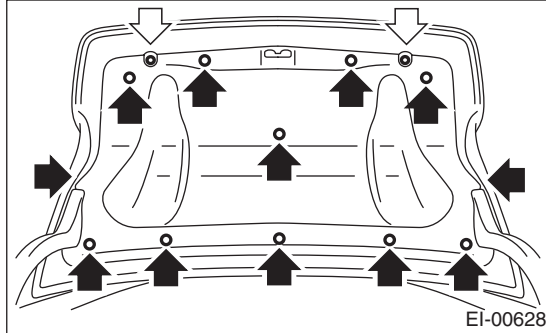

EXTERIOR/INTERIOR TRIM

## 31. Trunk Room Trim

### A: REMOVAL

#### 1. TRUNK LID TRIM

1) Remove the trim clips and stopper rubber, and remove the trunk lid trim.

2) Remove the four claws, and remove the trunk handle cover (1).

- (1) Trunk handle cover
- (2) Trunk lid trim
- (3) Trunk release handle

3) Remove clip (A) of the trunk side trim, and remove the trunk lid arm cover.

## 2. TRUNK ROOM TRIM

1) Remove the trunk room mat.

2) Remove the trim clips (A), and remove the trunk room end cover.

(B) Clip

3) Insert the flat tip screwdriver from the lower side of the trunk hook, and then remove the trunk hook by rotating it 90°.

4) Remove the trim clips, and remove the trunk side trim.

## B: INSTALLATION

Install in the reverse order of removal.

## 32.Floor Mat

### A: REMOVAL

- 1) Remove the front seats. <Ref. to SE-9, REMOVAL, Front Seat.>
- 2) Remove the rear seat cushion. <Ref. to SE-17, REMOVAL, Rear Seat.>
- 3) Remove the console box. <Ref. to EI-54, Console Box.>
- 4) Remove the console side panel. <Ref. to EI-55, REMOVAL, Center Console.>
- 5) Remove the lower inner trim. <Ref. to EI-61, REMOVAL, Lower Inner Trim.>
- 6) Remove the clips from the floor mat.
- 7) Remove the mat hook on both sides.
- 8) Remove the mat from toe board area.
- 9) Remove the mat from rear heater duct.
- 10) Roll the mat, and then take it out of opened rear door.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

- Secure the mat firmly with hook and clip.
- Insert the mat edge firmly into the groove of side sill cover.

## 33.Luggage Floor Box

### A: REMOVAL

- 1) Remove the luggage floor mat.
- 2) Remove the clips, and remove the luggage floor box.

### B: INSTALLATION

Install in the reverse order of removal.

## 34. Trunk Lid Garnish

### A: REMOVAL

1) Remove the license plate, and loosen bolts (A).

2) Remove the clip in the upper corner of the trunk lid garnish.

3) Place your hands between the trunk lid garnish and the trunk lid panel, and remove the trunk lid garnish starting from the edge, in order.

### B: INSTALLATION

Install in the reverse order of removal.

**Tightening torque:**

**7.5 N·m (0.77 kgf·m, 5.53 ft·lb)**

## 35.Rear Gate Garnish

### A: REMOVAL

- 1) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 2) Remove clip (A), and remove the rear gate panel side cover.

- 3) Remove the hexagon cap nut.

- 4) Remove the nuts, disconnect connectors, and remove the rear gate garnish.

### B: INSTALLATION

Install in the reverse order of removal.

# Heat Shield Cover

EXTERIOR/INTERIOR TRIM

## 36.Heat Shield Cover

### A: REMOVAL

### B: INSTALLATION

Install in the reverse order of removal.

#### 1. FRONT HEAT SHIELD COVER

Remove the four bolts to remove the front heat shield cover.

(A) Transmission mount

#### 2. CENTER HEAT SHIELD COVER

Remove the nut and bolt to remove center heat shield cover.

#### 3. REAR HEAT SHIELD COVER

1) Remove the muffler. <Ref. to EX(H4SO)-10, REMOVAL, Muffler.> <Ref. to EX(H4DOTC)-15, REMOVAL, Muffler.>

2) Remove the four bolts to remove the rear heat shield cover.

## 37.Ornament

### A: INSTALLATION

#### 1. LETTER MARK

Adhere the letter mark according to the following measurements.

- Sedan model

EI-01673

- |  |  |  |
|--|--|--|
| (a) Apply the edge of application tape by aligning with the end of the radius for the trunk lid garnish. | (b) Apply the application tape by aligning with the end of the radius, at the upper edge of the trunk lid garnish. | (c) Align the slit of the application tape to the panel end. |
| (d) Apply the application tape by aligning the cut out to the edge of the trunk lid garnish.             | (e) 33 mm (1.3 in)   | (f) 35 mm (1.38 in)  |

# General Description

## EXTERIOR BODY PANELS

### C: CAUTION

- Exterior body panels are heavy. Do not drop and damage the panels. During removal and installation, do not damage the panel painting surface.
- While removing mounting bolts, using assistance devices such as a support jack will help support the panel.
- Be careful not to lose small parts.

### D: PREPARATION TOOL

#### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST-925610000	925610000	WRENCH	Used for removing and installing door hinge.
 ST-927780000	927780000	REMOVER	Used for removing and installing the trunk torsion bar.

#### 2. GENERAL TOOL

TOOL NAME	REMARKS
Support jack	Used for supporting door panel.
Clip remover	Used for removing various types of clips.

## 2. Front Hood

### A: REMOVAL

#### 1. FRONT HOOD INSULATOR

- 1) Open the front hood.
- 2) Release the clips to remove the front hood insulator.

#### 2. FRONT HOOD WEATHER STRIP

- 1) Open the front hood.
- 2) Remove the clips, and remove the front hood weather strip (A) and intake duct weather strip (B).

- (C) Clip
- (D) Weather strip clip

#### NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

#### 3. FRONT HOOD HINGE

- 1) Remove the bolt, and remove the front hood panel. <Ref. to EB-14, FRONT HOOD PANEL, REMOVAL, Front Hood.>

- 2) Remove the clip, and remove the cowl side panel front.

- 3) Remove clamp (A) of the window washer hose, and remove the bolt of the hinge.

# Front Hood

## EXTERIOR BODY PANELS

### 4. FRONT HOOD STRIKER

- 1) Open the front hood.
- 2) Remove the bolt, and remove the front hood striker.

### 5. FRONT HOOD PANEL

- 1) Remove the upper grille of the front grille. (OUT-BACK model) <Ref. to EI-24, REMOVAL, Front Grille.>
- 2) Open the front hood to remove the window washer hose.

- 3) Remove the front hood insulator. <Ref. to EB-13, FRONT HOOD INSULATOR, REMOVAL, Front Hood.>
- 4) Remove the front hood weather strip. <Ref. to EB-13, FRONT HOOD WEATHER STRIP, REMOVAL, Front Hood.>
- 5) Remove the front hood striker. <Ref. to EB-14, FRONT HOOD STRIKER, REMOVAL, Front Hood.>
- 6) Remove the front hood duct. (Turbo model) <Ref. to EI-25, REMOVAL, Front Hood Grille.>
- 7) Remove the window washer hose and nozzle. <Ref. to WW-15, REMOVAL, Front Washer Nozzle.>

- 8) Remove the bolt, and remove the front hood panel from the front hood hinge.

### B: INSTALLATION

Install in the reverse order of removal.

#### NOTE:

Be careful not to catch the window washer hose in when installing the front hood insulator.

#### Tightening torque:

Refer to "COMPONENT" of "General Description". <Ref. to EB-6, FRONT HOOD, COMPONENT, General Description.>

### C: ADJUSTMENT

- 1) Adjust the clearance between front hood panel and front fender panel. Clearance must be equal at both sides. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>
- 2) Use the hinge mounting bolts to align the front hood longitudinal and lateral position.

- 3) Adjust the height at the front end of hood. <Ref. to SL-45, ADJUSTMENT, Front Hood Lock Assembly.>
- 4) Rotate the hood buffer to adjust lateral height.

### 3. Front Fender

#### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the side sill spoilers. <Ref. to EI-42, REMOVAL, Side Sill Spoiler.>
- 3) Remove the front grille. <Ref. to EI-24, REMOVAL, Front Grille.>
- 4) Remove the front bumper face. <Ref. to EI-30, REMOVAL, Front Bumper.>
- 5) Remove the headlight assembly. <Ref. to LI-13, REMOVAL, Headlight Assembly.>
- 6) Remove the mud guard. <Ref. to EI-29, REMOVAL, Mud Guard.>
- 7) Remove the cowl panel side.

- 8) Remove the bolt, and remove the front fender panel.

#### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) Install with attention to make uniform clearance between front fender panel and front hood panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

#### ***Tightening torque:***

***7.5 N·m (0.76 kgf-m, 5.5 ft-lb)***

# Front Door

## EXTERIOR BODY PANELS

### 4. Front Door

#### A: REMOVAL

##### 1. FRONT DOOR PANEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the outer mirror assembly. <Ref. to GW-19, REMOVAL, Outer Mirror Assembly.>
- 4) Remove the front door speaker. <Ref. to ET-7, REMOVAL, Front Speaker.>
- 5) Remove the sealing cover. <Ref. to EB-19, REMOVAL, Front Sealing Cover.>
- 6) Remove the gusset and front door glass. <Ref. to GW-11, REMOVAL, Front Door Glass.>
- 7) Remove the door sash, and remove the front door regulator and motor. <Ref. to GW-16, REMOVAL, Front Regulator and Motor Assembly.>
- 8) Remove the front door latch assembly. <Ref. to SL-35, REMOVAL, Front Door Latch and Door Lock Actuator Assembly.>
- 9) Remove the front outer handle. <Ref. to SL-34, REMOVAL, Front Outer Handle.>
- 10) Remove the screw to remove the door trim bracket.

- 11) Remove the front door weather strip.

- (A) Pin clip  
(B) Weather strip clip

#### NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 12) Remove the bolts and nuts to remove the door checker.

- 13) Remove the front door. <Ref. to EB-17, FRONT DOOR ASSEMBLY, REMOVAL, Front Door.>

## 2. FRONT DOOR ASSEMBLY

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front pillar lower trim. <Ref. to EI-61, REMOVAL, Lower Inner Trim.>
- 3) Remove the instrument panel lower cover or glove box lower cover. <Ref. to EI-51, REMOVAL, Instrument Panel Lower Cover.> or <Ref. to EI-52, REMOVAL, Glove Box.>
- 4) Disconnect the connector of door harness from body harness.

- 5) Put a wooden block on jack and place jack under the front door. Support the door with a jack to protect it from damage.

- 6) Remove the bolt from the door checker.

- 7) Remove the door-side bolts for upper and lower hinges to remove front door panel.

- 8) Remove the door hinge from vehicle.

## B: INSTALLATION

### 1. FRONT DOOR PANEL

Install in the reverse order of removal.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description".**

**<Ref. to EB-8, FRONT DOOR PANEL, COMPONENT, General Description.>**

### 2. FRONT DOOR ASSEMBLY

- 1) Put a wooden block on jack and place the front door on that.

- 2) Apply grease to the sliding area of door hinges, and install the door hinge to vehicle.
- 3) Install the front door to upper hinge and lower hinge adjusting by jack.
- 4) Tighten bolt of door checker.
- 5) Connect door harness connector, and install the instrument panel lower cover.
- 6) Install the front pillar lower trim.

#### **Tightening torque:**

**Refer to "COMPONENT" of "General Description".**

**<Ref. to EB-8, FRONT DOOR PANEL, COMPONENT, General Description.>**

### C: ADJUSTMENT

1) Using the ST, loosen the body-side bolts of upper and lower hinges to align the position for vertical and horizontal direction of the front door panel.

ST 925610000 DOOR HINGE WRENCH

2) Loosen the screw (A) and tap striker (B) using plastic hammer to adjust the gap between rear end surface of front door panel and front end surface of rear door.

#### CAUTION:

**Do not use an impact wrench. Welding area on the striker nut plate is easily broken.**

## 5. Front Sealing Cover

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the front door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the front speaker. <Ref. to ET-7, REMOVAL, Front Speaker.>
- 4) Remove the sealing cover.

#### NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new part.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

#### **Butyl tape:**

**3M 8626 or equivalent**

#### NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

### C: INSPECTION

If the sealing cover gets damaged, replace it with a new part.

## 6. Rear Door

### A: REMOVAL

#### 1. REAR DOOR PANEL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the rear speaker. <Ref. to ET-9, REMOVAL, Rear Speaker.>
- 4) Remove the sealing cover. <Ref. to EB-23, REMOVAL, Rear Sealing Cover.>
- 5) Remove the rear door glass. <Ref. to GW-22, REMOVAL, Rear Door Glass.>
- 6) Remove the door sash and rear door regulator and motor assembly. <Ref. to GW-24, REMOVAL, Rear Regulator and Motor Assembly.>
- 7) Remove the rear door latch. <Ref. to SL-39, REMOVAL, Rear Door Latch and Door Lock Actuator Assembly.>
- 8) Remove the rear outer handle. <Ref. to SL-38, REMOVAL, Rear Outer Handle.>
- 9) Remove the screw to remove the door trim bracket.

- 10) Remove the rear door inner weather strip.

- (A) Pin clip  
(B) Weather strip clip

#### NOTE:

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 11) Remove the bolts and nuts to remove the door checker.

- 12) Remove the rear door. <Ref. to EB-21, REAR DOOR ASSEMBLY, REMOVAL, Rear Door.>

**2. REAR DOOR ASSEMBLY**

- 1) Disconnect the ground cable from the battery.
- 2) Pull the door harness connector inside the center pillar, then disconnect the connector.

- 3) Put a wooden block on jack and place jack under the rear door. Support the rear door with the jack to protect it from damage.

- 4) Remove the bolt from the door checker.

- 5) Remove the door-side bolts for upper and lower hinges to remove the rear door panel.

- 6) Remove the door hinge from vehicle.

**B: INSTALLATION****1. REAR DOOR PANEL**

Install in the reverse order of removal.

**Tightening torque:**

*Refer to "COMPONENT" of "General Description".*

*<Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>*

**2. REAR DOOR ASSEMBLY**

- 1) Put a wooden block on jack and place the rear door on that.

- 2) Apply grease to the moving part of door hinges.
- 3) Install the rear door to upper hinge and lower hinge adjusting by jack.
- 4) Tighten bolt of door checker.
- 5) Connect the door harness connector, and install the center pillar inner protector.
- 6) Install the center pillar lower trim.

**Tightening torque:**

*Refer to "COMPONENT" of "General Description".*

*<Ref. to EB-9, REAR DOOR PANEL, COMPONENT, General Description.>*

### C: ADJUSTMENT

1) Open the rear door, loosen the door-side bolts of upper and lower hinges to align the position for vertical and horizontal direction of rear door panel.

2) Loosen the screw (A) and tap striker (B) using plastic hammer to adjust the gap between rear end surface of rear door panel and body surface.

#### **CAUTION:**

**Do not use an impact wrench. Welding area on the striker nut plate is easily broken.**

## 7. Rear Sealing Cover

### A: REMOVAL

- 1) Disconnect the ground cable from the battery.
- 2) Remove the rear door trim. <Ref. to EI-49, REMOVAL, Door Trim.>
- 3) Remove the sealing cover.

#### NOTE:

- Carefully remove the butyl tape. Excessive force will easily break the cover.
- If cover gets broken, replace it with a new part.

### B: INSTALLATION

- 1) Install in the reverse order of removal.
- 2) When replacing the sealing cover, use the butyl tape.
- 3) Press the butyl tape-applied area firmly to prevent any floating on surface.

#### **Butyl tape:**

**3M 8626 or equivalent**

#### NOTE:

- Apply a uniform bead of butyl tape.
- Attach the sealing cover, keeping it from becoming wrinkled.
- Breaks in the bead will allow water leakage and contamination.

### C: INSPECTION

If the sealing cover gets damaged, replace it with a new part.

# Trunk Lid

## EXTERIOR BODY PANELS

### 8. Trunk Lid

#### A: REMOVAL

##### 1. TORSION BAR

- 1) Open the trunk lid.
- 2) Using the ST, remove the torsion bar from the hinge link.

ST 927780000 REMOVER

#### CAUTION:

During removal and installation, handle the torsion bar carefully, because it will generate reactive force.

- 3) Remove the torsion bars RH/LH.

##### 2. TRUNK LID ARM

- 1) Disconnect the ground cable from the battery.
- 2) Open the trunk lid to remove the trunk lid trim, trunk lid arm cover and trunk room trim. <Ref. to EI-70, REMOVAL, Trunk Room Trim.>
- 3) Disconnect the trunk lid release cable. <Ref. to SL-43, REMOVAL, Trunk Lid Lock Assembly.>
- 4) Disconnect the connectors, and remove the harness clip, etc.
- 5) Remove the trunk lid mounting bolts, to remove the trunk lid panel from the trunk lid arm.

- 6) Remove the torsion bar from the trunk lid hinge link. <Ref. to EB-24, TORSION BAR, REMOVAL, Trunk Lid.>
- 7) Remove the rear shelf trim. <Ref. to EI-69, REMOVAL, Rear Shelf Trim.>

- 8) Remove the bolts, then remove the trunk lid arm.

##### 3. TRUNK LID PANEL

- 1) Disconnect the ground cable from the battery.
- 2) Open the trunk lid to remove the trunk lid trim and trunk lid arm cover. <Ref. to EI-71, TRUNK ROOM TRIM, REMOVAL, Trunk Room Trim.>
- 3) Disconnect the connector to remove the trunk lid harness.
- 4) Remove the trunk lid lock assembly. <Ref. to SL-43, REMOVAL, Trunk Lid Lock Assembly.>
- 5) Remove the trunk lid garnish. <Ref. to EI-74, REMOVAL, Trunk Lid Garnish.>
- 6) Remove the license plate light cover.

- 7) Remove the bolts, then remove the trunk lid panel from the trunk lid arm.

## **B: INSTALLATION**

- 1) Install in the reverse order of removal.
- 2) Apply grease to the rotating area of hinges and the torsion bar.
- 3) Install while paying attention to make a uniform clearance around the trunk lid panel. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

### ***Tightening torque:***

***Refer to "COMPONENT" of  
"General Description".***

***<Ref. to EB-11, REAR GATE PANEL,  
COMPONENT, General Description.>***

## 9. Rear Gate

### A: REMOVAL

#### 1. REAR GATE PANEL

- 1) Disconnect the ground cable from the battery.
- 2) Open the rear gate.
- 3) Remove the rear gate trim. <Ref. to EI-68, REMOVAL, Rear Gate Trim.>
- 4) Remove the rear gate garnish. <Ref. to EI-75, REMOVAL, Rear Gate Garnish.>
- 5) Remove the rear wiper arm. <Ref. to WW-16, REMOVAL, Rear Wiper Arm.>
- 6) Remove the rear wiper motor. <Ref. to WW-17, REMOVAL, Rear Wiper Motor.>
- 7) Remove the rear gate outer handle. <Ref. to SL-41, REMOVAL, Rear Gate Outer Handle.>
- 8) Remove the rear gate latch assembly. <Ref. to SL-42, REMOVAL, Rear Gate Latch Assembly.>
- 9) Remove the roof spoiler. <Ref. to EI-41, REMOVAL, Roof Spoiler.>
- 10) Remove harness clip of each connector from the rear gate panel.
- 11) Remove the weather strip clip (A), and remove the rear gate panel weather strip.

**NOTE:**

If the weather strip clip is removed with excessive force, the weather strip may be damaged. Be sure to use clip remover to remove.

- 12) Remove the rubber duct (A) connection, and pull out the harness and washer hose from the rear gate.

- 13) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

**CAUTION:**

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

- 14) Remove the mounting bolt of rear gate damper stay.

15) Remove the rear gate hinge bolt, and remove the rear gate panel.

16) Remove the rear gate hinge from the vehicle.

## 2. REAR GATE DAMPER STAY

### CAUTION:

- Do not damage piston rods and oil seals.
- Never disassemble cylinders: They contain gas.

- 1) Open the rear gate.
- 2) Before removing the rear gate damper stay, prevent the rear gate from closing using prop or the like.

### CAUTION:

If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.

3) Remove the mounting bolt of rear gate damper stay.

4) Remove the clips and detach the rear combination light covers.

5) Remove mounting bolt (A), and remove the damper stay.

# Rear Gate

## EXTERIOR BODY PANELS

### B: INSTALLATION

#### 1. REAR GATE PANEL

- 1) Install in the reverse order of removal.
- 2) Install with attention to make uniform clearance between rear gate panel and body. For the dimension of clearance, refer to "SPECIFICATION" in "General Description". <Ref. to EB-2, SPECIFICATION, General Description.>

**Tightening torque:**

**25 N·m (2.6 kgf·m, 18.4 ft·lb)**

#### 2. REAR GATE DAMPER STAY

- 1) Prevent the rear gate from closing using prop or the like.

**CAUTION:**

**If the prop comes off, operators may get injured and vehicle may get damaged. Make sure to support the rear gate with secure material to prevent injury or damage.**

- 2) Install in the reverse order of removal.

**Tightening torque:**

**Refer to "COMPONENT" of "General Description".**

**<Ref. to EB-11, REAR GATE PANEL, COMPONENT, General Description.>**

### C: DISPOSAL

#### 1. REAR GATE DAMPER STAY

**CAUTION:**

**Gas is colorless, odorless, and harmless. However, gas pressure may spray cutting powder or oil. Be sure to wear dust-resistant goggles.**

- 1) Cover with a vinyl sack as shown in the figure.

- (1) Rear gate damper stay
- (2) Vinyl sack

**NOTE:**

Prevent the vinyl sack from being caught by drill cutting edge.

2) Lift the body side slightly with piston rods fully extended, and secure the body side with vise.

Drill a hole in 2 to 3 mm (0.08 to 0.12 in) diameter at a point 10 to 200 mm (0.39 to 7.87 in) from door side, and bleed rear gate damper stay gas stay completely.

- (1) Body side
- (2) Door side
- (3) 190 mm (7.48 in)
- (4) 10 mm (0.39 in)
- (5) Piston rod
- (6) Cylinder
- (7) Portion to be drilled

# General Description

## CRUISE CONTROL SYSTEM

### 1. General Description

#### A: COMPONENT

CC-00605

- |   |  |  |
|---|--|--|
| (1) Engine control module (ECM)                           | (5) Transmission control module (TCM) (AT model) | (7) Neutral position switch (MT model) |
| (2) Cruise control command switch                         | (6) Inhibitor switch (AT model)                  | (8) Clutch switch (MT model)           |
| (3) Stop light & brake switch                             |  |  |
| (4) Cruise indicator light and cruise set indicator light |  |  |

## B: CAUTION

- Before disassembling or reassembling parts, always disconnect the battery ground cable from battery. When repairing the audio, control module, etc. which are provided with memory functions, record the memory contents before disconnecting the ground cable from battery. Otherwise, the memory will be cleared.
- Reassemble the parts in the reverse order of disassembly unless otherwise indicated.
- Adjust the parts to specifications specified in this manual.
- Connect the connectors securely during reassembly.
- After reassembly, ensure functional parts operate properly.

## C: PREPARATION TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance and voltage.

## 2. Cruise Control Unit

### A: NOTE

The control of cruise control system is carried out in engine control module (ECM).

### B: REMOVAL

- 2.5 L non-turbo model <Ref. to FU(H4SO)-37, REMOVAL, Engine Control Module (ECM).>
- 2.5 L turbo model <Ref. to FU(H4DOTC)-45, REMOVAL, Engine Control Module (ECM).>
- 3.0 L model <Ref. to FU(H6DO)-37, REMOVAL, Engine Control Module (ECM).>

### C: INSTALLATION

- 2.5 L non-turbo model <Ref. to FU(H4SO)-37, INSTALLATION, Engine Control Module (ECM).>
- 2.5 L turbo model <Ref. to FU(H4DOTC)-45, INSTALLATION, Engine Control Module (ECM).>
- 3.0 L model <Ref. to FU(H6DO)-37, INSTALLATION, Engine Control Module (ECM).>

## 3. Cruise Control Command Switch

### A: REMOVAL

**CAUTION:**

Before servicing, be sure to read the notes in the “AB” section for proper handling of the driver’s airbag module. <Ref. to AB-4, CAUTION, General Description.>

- 1) Set the front wheels in straight ahead position.
- 2) Turn the ignition switch to OFF.
- 3) Disconnect the ground cable from battery and wait for at least 20 seconds before starting work.
- 4) Using TORX® bit T30 (1), loosen two TORX® bolts which secure the driver’s airbag module.

- 5) Disconnect the airbag module connector on back of the airbag module.
- 6) Remove the steering wheel. <Ref. to PS-14, REMOVAL, Steering Wheel.>
- 7) Remove the eight screws to remove the lower cover from steering wheel.

- 8) Remove the screw on the backside of the steering wheel to remove the cruise control command switch.

### B: INSTALLATION

Install in the reverse order of removal.

### C: INSPECTION

Measure the cruise control command switch resistance.

Switch	Position	Terminal No.	Standard
CANCEL SET/COAST RESUME/ ACCEL	All OFF	7 and 6	Approx. 4 kΩ
CANCEL	ON	7 and 6	Less than 1 Ω
SET/COAST	ON	7 and 6	Approx. 250 Ω
RESUME/ ACCEL	ON	7 and 6	Approx. 1500 Ω
MAIN (CRUISE)	OFF	8 and 6	1 MΩ or more
	ON	8 and 6	Less than 1 Ω

If NG, replace the cruise control command switch.

## 4. Combination Meter

### A: NOTE

For the combination meter, refer to the IDI section.  
<Ref. to IDI-19, Combination Meter.>

## 5. Stop Light & Brake Switch

### A: NOTE

For the stop light & brake switch, refer to BR section. <Ref. to BR-44, INSPECTION, Stop Light Switch.>

### **6. Clutch Switch**

#### **A: NOTE**

For the clutch switch, refer to CL section. <Ref. to CL-35, Clutch Switch.>

## 7. Inhibitor Switch

### A: NOTE

#### 1. 4AT MODEL

For the inhibitor switch, refer to 4AT section. <Ref. to 4AT-47, INSPECTION, Inhibitor Switch.>

#### 2. 5AT MODEL

Inhibitor switch cannot be removed and checked, because the inhibitor switch is installed on control valve assembly.

When a malfunction occurs, refer to 5AT (diag) section. <Ref. to 5AT(diag)-34, DTC P0705 TRANSMISSION RANGE SENSOR CIRCUIT (PRNDL INPUT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Transmission Control Module (TCM)

CRUISE CONTROL SYSTEM

---

## 8. Transmission Control Module (TCM)

### A: NOTE

For the transmission control module (TCM), refer to the following section.

- 4AT model <Ref. to 4AT-64, Transmission Control Module (TCM).>
- 5AT model <Ref. to 5AT-59, Transmission Control Module (TCM).>

## 9. Neutral Position Switch

### A: NOTE

For the neutral position switch, refer to the following section.

- 5MT model <Ref. to 5MT-35, Switches and Harness.>
- 6MT model <Ref. to 6MT-41, Neutral Position Switch.>

# Neutral Position Switch

CRUISE CONTROL SYSTEM

---

# Basic Diagnostic Procedure

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 1. Basic Diagnostic Procedure

#### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK MALFUNCTION INDICATOR LIGHT.</b> Make sure the malfunction indicator light illuminates.	Does the malfunction indicator light illuminate?	Go to step 5.	Go to step 2.
2	<b>CHECK CRUISE INDICATOR LIGHT.</b> Make sure the cruise indicator light blinks.	Does the cruise indicator light blink?	Go to step 5.	Go to step 3.
3	<b>CHECK CRUISE CONTROL MAIN SWITCH OPERATION.</b> Check cruise control main switch operation. (Ensure the cruise indicator light illuminates.)	Is the cruise control main switch turned on? (Does the cruise indicator light illuminate?)	Go to step 4.	Go to phenomenon 1. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
4	<b>CHECK CRUISE CONTROL SET OPERATION.</b> Check the cruise control setting operation.	Can the cruise control be set while driving at 40 km/h (25 MPH) or more?	Go to step 6.	Go to step 5.
5	<b>PERFORM CRUISE CONTROL CANCEL CONDITIONS DIAGNOSIS.</b> Perform the cruise cancel conditions diagnosis.	Is DTC displayed?	Go to "List of Diagnostic Trouble Code (DTC)". <Ref. to CC(diag)-12, List of Diagnostic Trouble Code (DTC).>	Go to phenomenon 2. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
6	<b>CHECK CRUISE SET INDICATOR LIGHT.</b> Make sure the cruise set indicator light illuminates.	Does the cruise set indicator light illuminate?	Go to step 7.	Go to phenomenon 3. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
7	<b>CHECK VEHICLE SPEED IS HELD WITHIN SET SPEED.</b> Make sure the vehicle speed is held within set speed.	Is the vehicle speed kept within setting speed $\pm 3$ km/h ( $\pm 2$ MPH) ? (Make sure that on a level road.)	Go to step 8.	Go to phenomenon 4. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
8	<b>CHECK RESUME/ACCEL OPERATION.</b> Check the RESUME/ACCEL switch operation.	Does the vehicle speed increase or return to set speed after RESUME/ACCEL switch has been pressed?	Go to step 9.	Go to phenomenon 5. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

# Basic Diagnostic Procedure

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>9</b> <b>CHECK SET/COAST OPERATION.</b> Check the SET/COAST switch operation.	Does the vehicle speed decrease after SET/COAST switch has been pressed?	Go to step 10.	Go to phenomenon 6. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>10</b> <b>CHECK CANCEL OPERATION.</b> Check the CANCEL switch operation.	Is the cruise control released after CANCEL switch has been pressed?	Go to step 11.	Go to phenomenon 7. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>11</b> <b>CHECK CRUISE CONTROL RELEASE OPERATION.</b> Check the cruise control release operation.	Is the cruise control released after brake pedal has been depressed?	Go to step 12.	Go to phenomenon 8. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>12</b> <b>CHECK CRUISE CONTROL RELEASE OPERATION.</b> Check the cruise control release operation.	Is the cruise control released after shifting to the neutral position?	Go to step 13.	Go to phenomenon 9. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>
<b>13</b> <b>CHECK CRUISE CONTROL RELEASE OPERATION.</b> Check the cruise control release operation.	Is the cruise control released after depressing the clutch pedal?	Finish the diagnosis.	Go to phenomenon 10. <Ref. to CC(diag)-9, DIAGNOSTIC PROCEDURE WITH PHENOMENON, Diagnostics with Phenomenon.>

# General Description

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 2. General Description

#### A: CAUTION

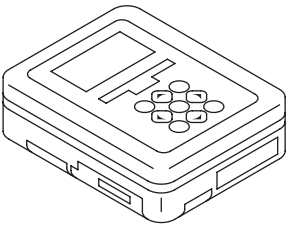

Airbag system wiring harness is routed near the cruise control command switch.

#### CAUTION:

- Airbag system wiring harnesses and connectors are yellow. Do not use electrical test equipment on these circuits.
- Be careful not to damage the airbag system wiring harness when servicing the cruise control command switch. Airbag system wiring harness is routed near the cruise control command switch.

#### B: PREPARATION TOOL

##### 1. SPECIAL TOOL

ILLUSTRATION	TOOL NUMBER	DESCRIPTION	REMARKS
 ST1B021XU0	1B021XU0	SUBARU SELECT MONITOR III KIT	Used for troubleshooting the electrical system.

##### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

#### C: INSPECTION

Measure the battery voltage and specific gravity of electrolyte.

#### **Standard voltage:**

**12 V or more**

#### **Specific gravity:**

**1.260 or more**

# Electrical Component Location

#### B: WIRING DIAGRAM

<Ref. to WI-220, WIRING DIAGRAM, Cruise Control System.>

### 5. Subaru Select Monitor

#### A: OPERATION

##### 1. GENERAL DESCRIPTION

The on-board diagnosis function of the cruise control system uses Subaru Select Monitor.

The on-board diagnosis function operates in two categories, which are used depending on the type of problems;

##### 1) Cruise Control Cancel Conditions Diagnosis:

(1) This category of diagnosis requires actual vehicle driving in order to determine the cause, as when cruise speed is cancelled during driving although cruise cancel condition is not entered.

(2) Cruise control memory in ECM stores the cancel condition (Code No.) which occurred during driving. When there are multiple cancel conditions (Code No.), they are shown on the Subaru Select Monitor.

#### CAUTION:

- The cruise control memory stores not only the cruise “cancel” which occurred (although “cancel” operation is not entered by the driver), but also the “cancel” condition input by the driver.

- The latest memory content (latest code) is cleared when ignition switch is turned OFF. However, the memory content by the diagnosis of faulty switches relating to the system and cruise control is retained as the fault history (memory code) after the ignition switch is turned OFF.

##### 2) Real-time Diagnosis:

Real-time diagnosis function is used to determine whether or not the input signal system is in good order, according to signal emitted from switches, sensors, etc.

(1) Vehicle cannot be driven at cruise speed when the problem occurs in the cruise control system or relevant circuits.

(2) Monitor the signal conditions from switches and sensors.

##### 2. CRUISE CONTROL CANCEL CONDITIONS DIAGNOSIS

- 1) Prepare the Subaru Select Monitor kit.
- 2) Connect the diagnosis cable to the Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to the data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to the data link connector.

- 4) Start the engine and turn the cruise control main switch to ON.
- 5) Start up the Subaru Select Monitor.
- 6) Select {2. Each System Check} in «Main Menu». On the system selection display screen, select the {Engine Control System} and the [OK]. Select the [OK] after the information of engine type is displayed.
- 7) Drive vehicle at 40 km/h (25 MPH) or more and set the cruise control.

#### CAUTION:

- When performing diagnosis, observe the legal speed limit on the road.
- DTC will be also displayed when cruise control is cancelled by the driver's operation. Do not confuse them.
- Be sure to get an assistant to support the diagnosis while driving, and have him/her operate the select monitor.

# Subaru Select Monitor

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

8) When the set speed is canceled by itself (without any cancel operations such as applying brake) or when the cruise control could not be set by performing the setting operation, selecting the {Check Cancel Code} on the engine malfunction diagnosis screen will display the DTC on the select monitor display.

### NOTE:

There are {Latest Code} and {Memorized Diagnostic Code(s)} in DTC. The latest code recognized during current test drive is displayed in {Latest Code}. DTCs by the diagnosis of faulty switches relating to the system and cruise control are displayed in {Memorized Diagnostic Code(s)}.

9) Perform Engine DTC Clear Memory operation.  
<Ref. to EN(H4SO)(diag)-54, OPERATION, Clear Memory Mode.>

<Ref. to EN(H4DOTC)(diag)-56, OPERATION, Clear Memory Mode.>

<Ref. to EN(H6DO)(diag)-57, OPERATION, Clear Memory Mode.>

DTCs of switches relating to the system and cruise control are deleted by clearing memory on the engine side.

### NOTE:

The latest code will be cleared by turning ignition switch to OFF.

## 3. REAL-TIME DIAGNOSIS

- 1) Connect the Subaru Select Monitor.
- 2) Turn the ignition switch and cruise control main switch to ON.
- 3) Start up the Subaru Select Monitor.
- 4) Select {2. Each System Check} in «Main Menu».
- 5) On the «System Selection» display screen, select the {Engine Control System}.
- 6) Select the [OK] after the information of engine type is displayed.
- 7) Select {Current Data Display & Save} in «Cruise Control Diagnosis» display screen.

8) Make sure that normal display is shown when operated as follows:

- Depress and release the brake pedal. (Stop light switch and brake switch are turned ON.)
- Turn the main switch to ON.
- Turn the “CANCEL” switch to ON.
- Turn the “SET/COAST” switch to ON.
- Turn the “RESUME/ACCEL” switch to ON.
- Depress or release the clutch pedal.
- Place the shift lever in any position other than neutral.

### NOTE:

- For details concerning operation procedures, refer to the “SUBARU SELECT MONITOR OPERATION MANUAL”.
- Refer to “List of Diagnostic Trouble Code (DTC)” for DTC. <Ref. to CC(diag)-12, List of Diagnostic Trouble Code (DTC).>

# Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## 6. Diagnostics with Phenomenon

### A: DIAGNOSTIC PROCEDURE WITH PHENOMENON

Phenomenon		Check item	Reference
1	Cruise control main switch is not turned to ON. (Cruise indicator light does not illuminate.)	(1) Check the cruise indicator light.	<Ref. to CC(diag)-11, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
		(2) Check the cruise control command switch.	<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-24, DTC 15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-25, DTC 21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 65, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
2	Cruise control cannot be set.	(1) Check the cruise control command switch.	<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-24, DTC 15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-25, DTC 21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 65, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(2) Check stop light switch and brake switch.	<Ref. to CC(diag)-17, DTC 12, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 25, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-27, DTC 61, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(3) Check clutch switch.	<Ref. to CC(diag)-19, DTC 13, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(4) Check the neutral position switch.	<Ref. to CC(diag)-21, DTC 14, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-27, DTC 62, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
		(5) Check vehicle speed sensor.	<Ref. to CC(diag)-26, DTC 22, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-27, DTC 32, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 63, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
3	Cruise set indicator light does not illuminate.	Check the cruise set indicator light.	<Ref. to CC(diag)-11, CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT, Diagnostics with Phenomenon.>
4	Vehicle speed is not held within set speed $\pm 3$ km/h ( $\pm 2$ MPH).	Check the vehicle speed sensor.	<Ref. to CC(diag)-26, DTC 22, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-27, DTC 32, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 63, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## Diagnostics with Phenomenon

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Phenomenon		Check item	Reference
5	Vehicle speed does not increase or does not return to set speed after RESUME/ACCEL switch has been pressed.	Check the RESUME/ACCEL switch.	<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-24, DTC 15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-25, DTC 21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 65, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
6	Vehicle speed does not decrease after SET/COAST switch has been pressed.	Check the SET/COAST switch.	<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-24, DTC 15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-25, DTC 21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 65, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
7	Cruise control is not released after CANCEL switch has been pressed.	Check the CANCEL switch.	<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-24, DTC 15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-25, DTC 21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-28, DTC 65, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
8	Cruise control is not released after brake pedal has been depressed.	Check the stop light switch and brake switch.	<Ref. to CC(diag)-17, DTC 12, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-26, DTC 25, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to CC(diag)-27, DTC 61, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

10	Cruise control is not released after clutch pedal has been depressed.	Check the clutch switch.	<Ref. to CC(diag)-19, DTC 13, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostics with Phenomenon

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## B: CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT

### TROUBLE SYMPTOM:

Cruise control can be set, but the cruise indicator light and cruise set indicator light do not illuminate.

Step	Check	Yes	No
<b>1</b> <b>CHECK CRUISE INDICATOR LIGHT AND CRUISE SET INDICATOR LIGHT.</b> 1) Perform self-diagnosis of the combination meter. <Ref. to IDI-4, SELF-DIAGNOSIS, INSPECTION, Combination Meter System.> 2) Check the cruise indicator light and cruise set indicator light if they illuminate.	Do the cruise indicator light and cruise set indicator light illuminate?	Go to step 2.	Replace the meter case assembly. <Ref. to IDI-19, Combination Meter.>
<b>2</b> <b>CHECK DTC OF LAN COMMUNICATION CIRCUIT.</b> 1) Complete self-diagnosis, and turn the ignition switch to ON again. 2) Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC of Low-speed CAN displayed?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>

## List of Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### 7. List of Diagnostic Trouble Code (DTC)

#### A: LIST

DTC	Item	Contents of diagnosis	Reference
11	Main switch	Main switch of cruise control command switch is turned to OFF, and then the cruise control is released.	This DTC is displayed without operating the main switch. <Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
12	Stop light & brake switch	Stop light switch or brake switch is turned to ON, and then the cruise control is released.	This DTC is displayed without depressing the brake pedal. <Ref. to CC(diag)-17, DTC 12, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
13	Clutch switch	Clutch switch is turned to ON, and then the cruise control is released.	This DTC is displayed without depressing the clutch pedal. <Ref. to CC(diag)-19, DTC 13, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
14	Neutral switch	Neutral position switch is turned to ON, and then the cruise control is released.	This DTC is displayed without shifting to neutral position. <Ref. to CC(diag)-21, DTC 14, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
15	Cancel switch	Cancel switch is turned to ON, and then the cruise control is released.	This DTC is displayed without operating the cancel switch. <Ref. to CC(diag)-24, DTC 15, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
16	Ignition switch	Ignition switch is turned to OFF, and then the cruise control is released.	This DTC is displayed without operating the ignition switch. <Ref. to CC(diag)-25, DTC 16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
21	Cruise control switch malfunction when ignition switch is turned to ON	When the ignition switch is turned to ON, each switch of cruise control command switch is already turned to ON.	This DTC is displayed when the ignition switch is turned to ON without operating the cruise control command switch. <Ref. to CC(diag)-25, DTC 21, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
22	Vehicle Speed Variation Malfunction	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-26, DTC 22, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# List of Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

DTC	Item	Contents of diagnosis	Reference
24	Cruise Control Related Switch Malfunction	Open circuit of cruise control switch is detected during cruise driving. (The system is judged as model without cruise control.)	This DTC is displayed with normal operation. <Ref. to CC(diag)-26, DTC 24, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
25	Brake Switch Input Circuit Malfunction	Malfunction of brake switch input circuit in ECM is detected.	<Ref. to CC(diag)-26, DTC 25, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
31	Engine speed signal	<ul style="list-style-type: none"> <li>Abnormal increase of engine speed is detected.</li> <li>Gear is placed in neutral, 1st or reverse position.</li> </ul>	Cruise in 2nd shift position or more. <Ref. to CC(diag)-26, DTC 31, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
32	Out of vehicle speed range of cruise control operation	<ul style="list-style-type: none"> <li>Controlled vehicle speed decreased under the limit during cruising.</li> <li>Set operation was performed at vehicle speed unavailable for setting.</li> <li>RESUME operation was performed without memorized vehicle speed.</li> </ul>	This DTC is displayed, though the vehicle speed is increased to the speed available for cruise set and set operation was performed again. <Ref. to CC(diag)-27, DTC 32, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
34	Prohibition when accelerator position is continued to be large	The vehicle has been driven at higher speed than set vehicle speed for an abnormally long time (approximately 10 minutes) during cruise driving.	This DTC is displayed when driving for a long period of time at higher speed than appropriate cruise set vehicle speed by operating accelerator pedal. In this case, the cruise setting is deactivated. <Ref. to CC(diag)-27, DTC 34, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
35	Prohibition when vehicle speed feedback is impossible	Set vehicle speed cannot be kept because of some reasons (steep uphill, parking brake, abnormal decrease of engine output, etc.) during cruise driving.	This DTC is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-27, DTC 35, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## List of Diagnostic Trouble Code (DTC)

### CRUISE CONTROL SYSTEM (DIAGNOSTICS)

DTC	Item	Contents of diagnosis	Reference
41	VDC/TCS operation	Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.	This DTC is displayed when driving condition is not suitable for cruise control. Perform cruise set operation again after clearing the possible cause. <Ref. to CC(diag)-27, DTC 41, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
43	ABS/VDC malfunction	ABS or Vehicle dynamics control (VDC) system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-27, DTC 43, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
44	Body integrated unit malfunction	Body integrated unit system malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-27, DTC 44, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
45	Meter Failure	Combination meter malfunction is detected during cruise driving or cruise setting.	<Ref. to CC(diag)-27, DTC 45, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
61	Brake switch malfunction	Malfunction in the stop light & brake switch is detected.	<Ref. to CC(diag)-27, DTC 61, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
62	Neutral position switch malfunction	Neutral position switch malfunction is detected.	<Ref. to CC(diag)-27, DTC 62, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
63	Vehicle speed variation malfunction 1	Malfunction of vehicle speed signal variation is detected.	<Ref. to CC(diag)-28, DTC 63, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
64	Engine sensor related sensor malfunction 1	Malfunction related to engine is detected.	<Ref. to CC(diag)-28, DTC 64, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
65	Cruise control related switch malfunction 1	Cruise control command switch malfunction is detected. (While the switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.)	<Ref. to CC(diag)-28, DTC 65, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
66	Cruise control computational malfunction	Cruise control calculation (microcomputer) malfunction is detected.	<Ref. to CC(diag)-28, DTC 66, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

## 8. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC 11

The malfunction is detected when the main switch is pressed or problem relating to the main switch occurs.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

#### WIRING DIAGRAM:

CC-00601

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.</b></p> <p>1) Remove the driver's airbag module. &lt;Ref. to AB-14, REMOVAL, Driver's Airbag Module.&gt;</p> <p>2) Disconnect the harness connector of cruise control command switch.</p> <p>3) Turn the ignition switch to ON.</p> <p>4) Measure the voltage between harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b>  <b>(ST3) No. 8 (+) — Chassis ground (-):</b>  <b>(ST3) No. 7 (+) — Chassis ground (-):</b></p>	Is the voltage 5 V or more?	Go to step 2.	Check the harness between cruise control command switch and ECM, and the steering roll connector for open or short circuit, or for poor contact.
<p><b>2 CHECK CRUISE CONTROL COMMAND SWITCH CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Remove the cruise control command switch. &lt;Ref. to CC-5, REMOVAL, Cruise Control Command Switch.&gt;</p> <p>3) Measure the resistance between harness connector terminal and chassis ground.</p> <p><b>Connector terminal</b>  <b>(ST3) No. 6 — Chassis ground:</b></p>	Is the resistance less than 10 $\Omega$ ?	Go to step 3.	Check for open between cruise control command switch and ECM and chassis ground, and check the ECM.
<p><b>3 CHECK CRUISE CONTROL COMMAND SWITCH.</b></p> <p>Measure the resistance between switch terminals when the cruise control command switch is not being pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. 4 k $\Omega$ ?	Go to step 4.	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
<p><b>4 CHECK CANCEL SWITCH.</b></p> <p>1) Turn the ignition switch to OFF.</p> <p>2) Remove the cruise control command switch. &lt;Ref. to CC-5, REMOVAL, Cruise Control Command Switch.&gt;</p> <p>3) Measure the resistance between switch terminals when the CANCEL switch is pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. less than 1 $\Omega$ when the CANCEL switch is pressed?	Go to step 5.	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
<p><b>5 CHECK SET/COAST SWITCH.</b></p> <p>Measure the resistance between switch terminals when the SET/COAST switch is pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. 250 $\Omega$ when SET/COAST switch is pressed?	Go to step 6.	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>
<p><b>6 CHECK RESUME/ACCEL SWITCH CIRCUIT.</b></p> <p>Measure the resistance between switch terminals when the RESUME/ACCEL switch is pressed.</p> <p><b>Terminals</b>  <b>No. 6 — No. 7:</b></p>	Is the resistance approx. 1,500 $\Omega$ when RESUME/ACCEL switch is pressed?	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>	Replace the cruise control command switch. <Ref. to CC-5, Cruise Control Command Switch.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

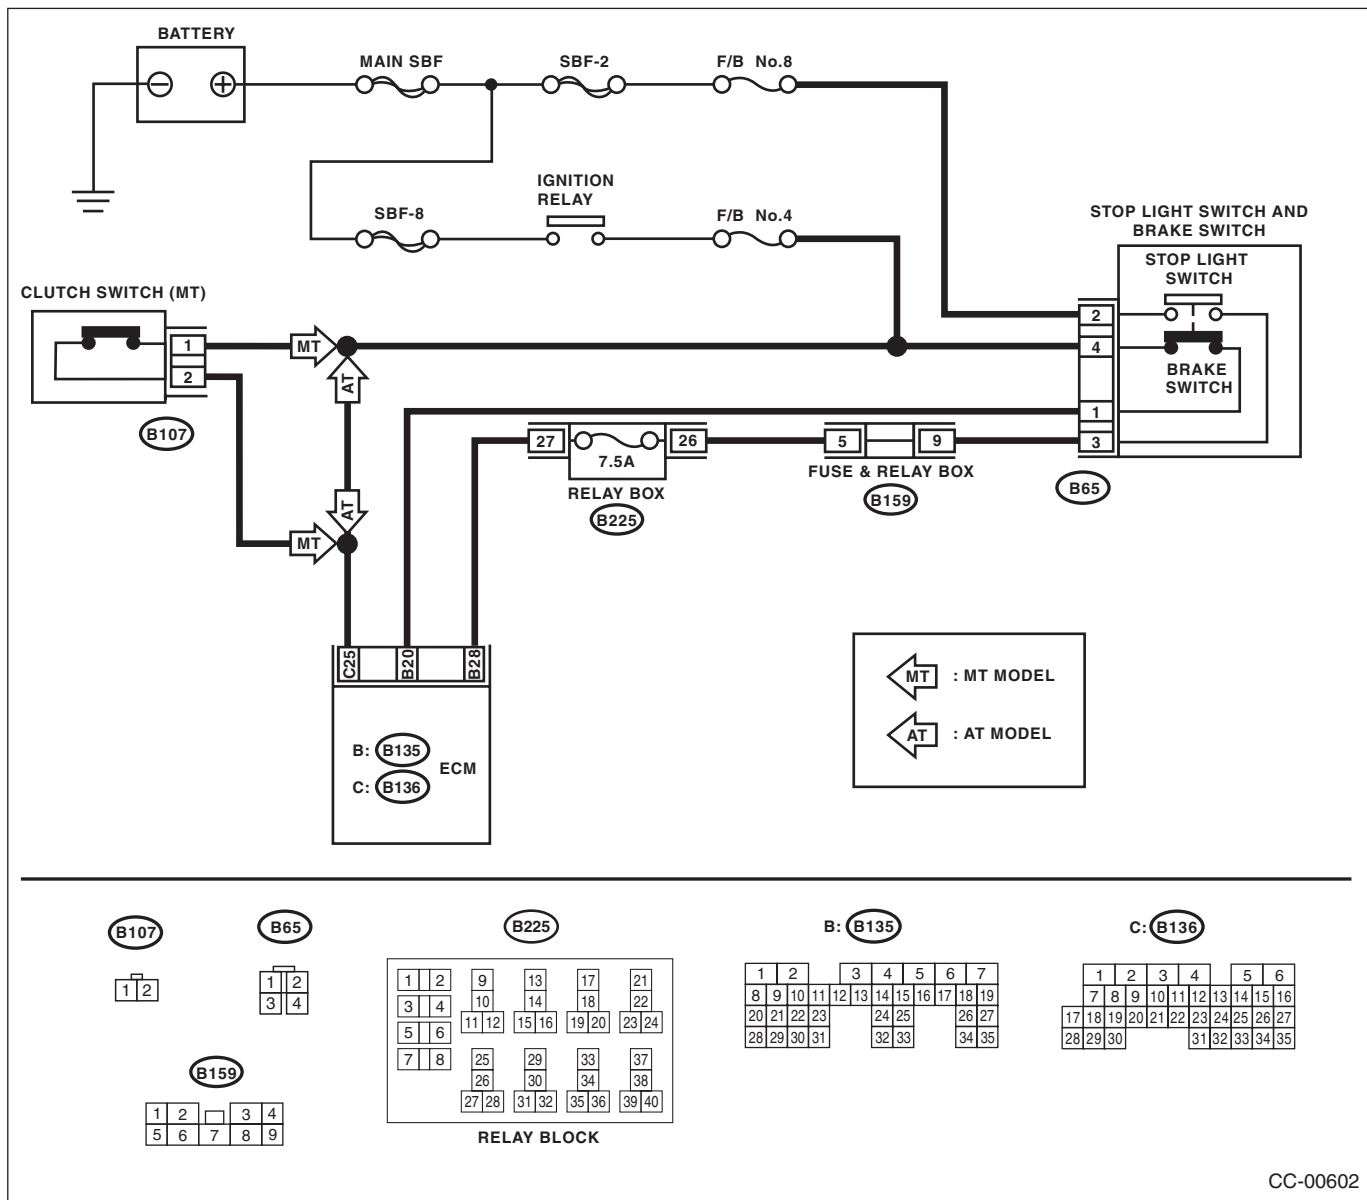

## B: DTC 12

The DTC is detected when the brake pedal is pressed or problem relating to stop light & brake switch occurs.

### TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

### WIRING DIAGRAM:

CC-00602

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the stop light & brake switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B65) No. 2 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> <li>• Check fuse No. 8 (in fuse &amp; relay box).</li> <li>• Check for open or short in the harness between stop light &amp; brake switch and fuse &amp; relay box.</li> </ul>
<b>2 CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b> Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B65) No. 4 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 3.	<ul style="list-style-type: none"> <li>• Check fuse No. 4 (in fuse &amp; relay box).</li> <li>• Check for open or short in the harness between stop light &amp; brake switch and fuse &amp; relay box.</li> </ul>
<b>3 CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between ECM harness connector terminal and stop light & brake switch harness connector terminal. <b>Connector &amp; terminal</b> <b>(B135) No. 28 — (B65) No. 3:</b> <b>(B135) No. 20 — (B65) No. 1:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 4.	Repair the harness.
<b>4 CHECK STOP LIGHT &amp; BRAKE SWITCH CIRCUIT.</b> Remove and check the stop light & brake switch. <Ref. to CC-7, Stop Light & Brake Switch.>	Is the stop light & brake switch OK?	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>	Replace the stop light & brake switch.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## C: DTC 13

The DTC is detected when the clutch pedal is depressed or problem relating to the clutch switch occurs.

### TROUBLE SYMPTOM:

- Cruise control cannot be set.
- Cruise control cannot be released.

### WIRING DIAGRAM:

CC-00602

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK CLUTCH SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the clutch switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B107) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	<ul style="list-style-type: none"> <li>• Check fuse No. 4 (in fuse &amp; relay box).</li> <li>• Check open or shorted circuit of harness between clutch switch and fuse &amp; relay box.</li> </ul>
<b>2</b> <b>CHECK CLUTCH SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector of ECM. 3) Measure the resistance between clutch switch harness connector terminal and ECM harness connector terminal. <b>Connector &amp; terminal</b> <b>(B107) No. 2 — (B136) No. 25:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 3.	Repair the harness.
<b>3</b> <b>CHECK CLUTCH SWITCH.</b> Remove and check the clutch switch. <Ref. to CC-8, Clutch Switch.>	Is clutch switch OK?	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>	Replace the clutch switch.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## D: DTC 14

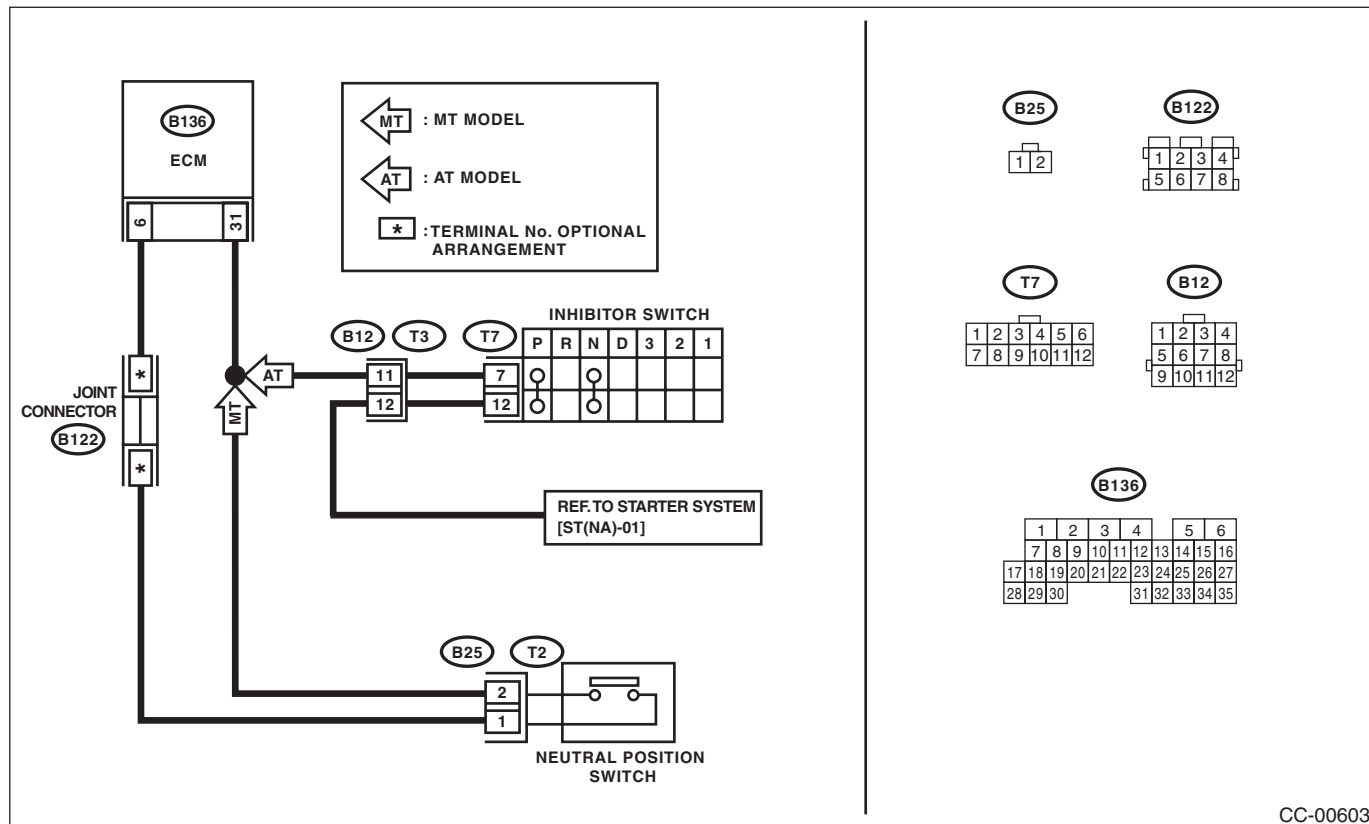

The DTC is detected when the select lever is placed in neutral position or problem relating to the neutral position switch occurs.

### TROUBLE SYMPTOM:

Cruise control cannot be set.

### WIRING DIAGRAM:

- H4 Non-turbo model

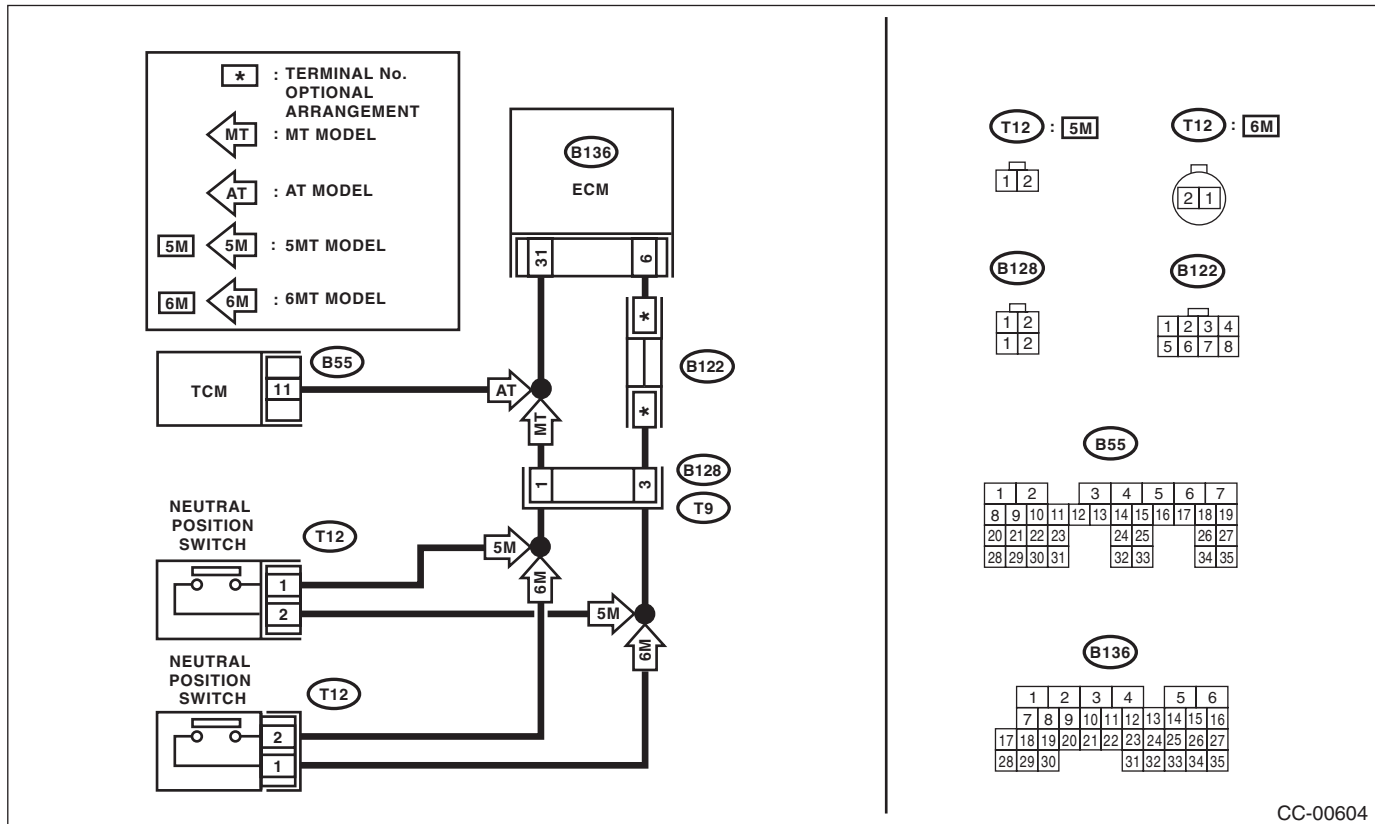

CC-00603

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

- H4 turbo model
- H6 model

CC-00604

Step	Check	Yes	No
1	<b>CHECK VEHICLE FOR SPECIFICATION.</b> Check the vehicle destination and specification.	Is the vehicle a 5AT model?	Go to step 2. / Go to step 5.
2	<b>CHECK NEUTRAL POSITION SWITCH.</b> 1) Connect the Subaru Select Monitor to the data link connector. 2) Turn the ignition switch to ON and start up the Subaru Select Monitor. 3) Select {Engine Control System} from the main menu. 4) Then, select {Current Data Display & Save}. 5) Check the neutral position switch signal by shifting the select lever to "P" or "N" range.	Is the Subaru Select Monitor ON when select lever is shifted into "P" or "N" range? Is Subaru Select Monitor OFF when select lever is shifted to a range other than the "P" or "N" range?	Replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> / Go to step 3. <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>
3	<b>CHECK TCM OUTPUT VOLTAGE.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between TCM harness connector terminal and chassis ground. <b>Connector &amp; terminal (B55) No. 11 (+) — Chassis ground (-):</b>	Is voltage 10 V or more when select lever is shifted to a range other than "P" or "N" range? Is voltage less than 1 V when select lever is shifted into "P" or "N" range?	Go to step 4. / Check the TCM. <Ref. to 5AT(diag)-2, Basic Diagnostic Procedure.>
4	<b>CHECK HARNESS BETWEEN TCM AND ECM.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from TCM and ECM. 3) Measure the resistance between TCM harness connector terminal and ECM harness connector terminal. <b>Connector &amp; terminal (B136) No. 31 — (B55) No. 19:</b>	Is the resistance less than 10 Ω?	Replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> / Repair the wiring harness. <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>5</b>	<b>CHECK TRANSMISSION TYPE.</b>	Go to step 6.	MT model: Go to step 9.
<b>6</b>	<b>CHECK INHIBITOR SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the inhibitor switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(T7) No. 7 (+) — Chassis ground (-):</b>	Go to step 7.	Check for open or short in the harness between inhibitor switch and ECM.
<b>7</b>	<b>CHECK INHIBITOR SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the starter motor harness connector. 3) Measure the resistance between inhibitor switch harness connector terminal and starter motor. <b>Connector &amp; terminal</b> <b>(T7) No. 12 — Starter motor:</b>	Go to step 8.	Repair the harness.
<b>8</b>	<b>CHECK INHIBITOR SWITCH.</b> Remove and check the inhibitor switch. <Ref. to CC-9, Inhibitor Switch.>	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).>	Replace the inhibitor switch.
<b>9</b>	<b>CHECK NEUTRAL POSITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the neutral position switch harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>5MT model:</b> <b>(B25) No. 1 (+) — Chassis ground (-):</b> <b>6MT model:</b> <b>(B128) No. 2 (+) — Chassis ground (-):</b>	Go to step 10.	Check for open or short in the harness between neutral position switch and ECM.
<b>10</b>	<b>CHECK NEUTRAL POSITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Measure resistance between harness connector terminal of neutral position switch and chassis ground. <b>Connector &amp; terminal</b> <b>5MT model:</b> <b>(B25) No. 2 — Chassis ground:</b> <b>6MT model:</b> <b>(B128) No. 1 — Chassis ground:</b>	Go to step 11.	Repair the harness.
<b>11</b>	<b>CHECK NEUTRAL POSITION SWITCH.</b> Remove and check the neutral position switch. <Ref. to CC-11, Neutral Position Switch.>	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).>	Replace the neutral position switch.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

### **E: DTC 15**

This DTC is detected when the cancel switch is pressed or problem relating to the main switch occurs.

#### **TROUBLE SYMPTOM:**

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

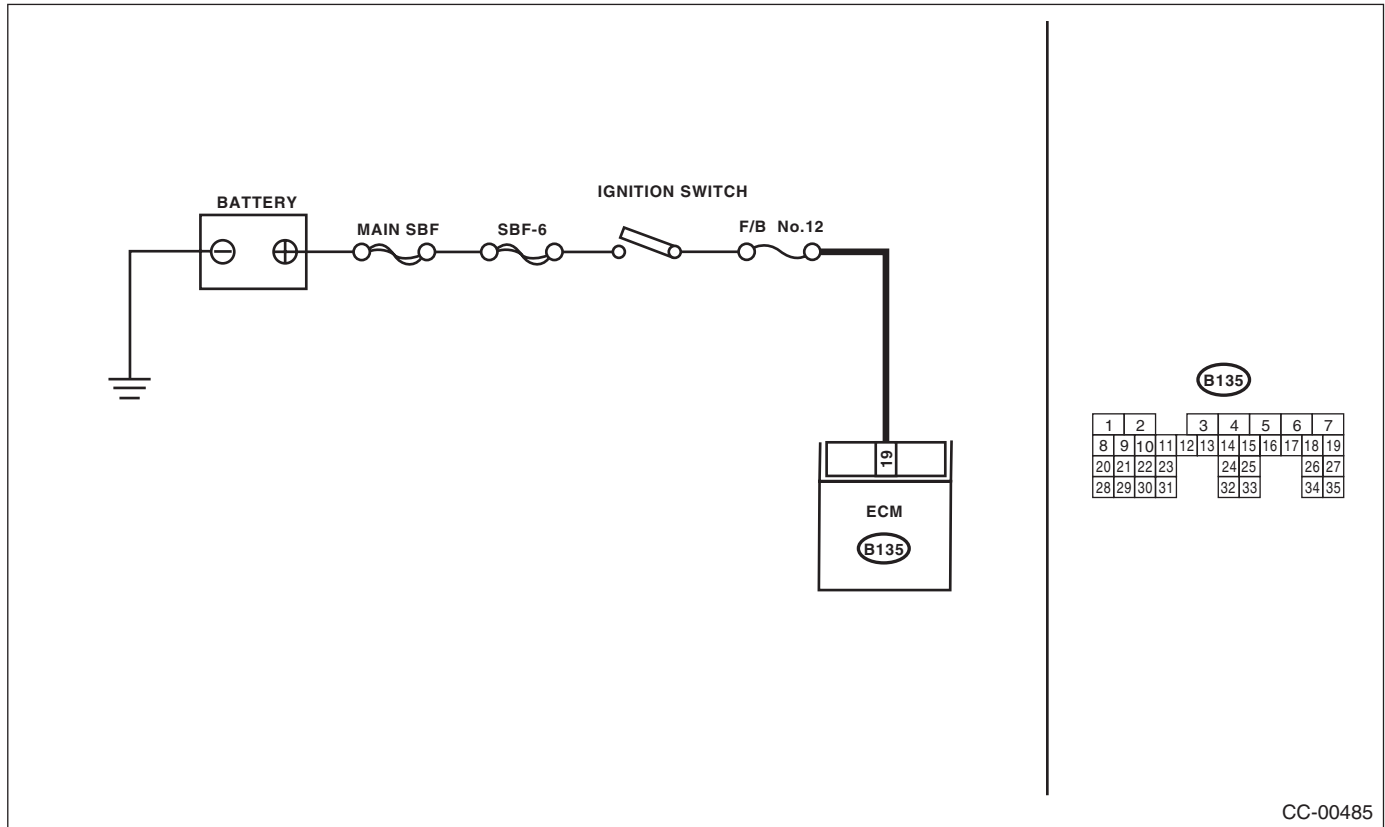

## F: DTC 16

This DTC is detected when the ignition switch is turned OFF or problem relating to the ignition switch occurs.

### TROUBLE SYMPTOM:

Cruise control cannot be set.

### WIRING DIAGRAM:

CC-00485

Step	Check	Yes	No
<b>1</b> <b>CHECK IGNITION SWITCH CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the ECM harness connector. 3) Turn the ignition switch to ON. 4) Measure the voltage between harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B135) No. 19 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Check for poor contact of the ECM connector.	<ul style="list-style-type: none"> <li>• Check fuse No. 12 (in fuse &amp; relay box).</li> <li>• Check the harness for open or short circuit between ignition switch and ECM.</li> </ul>

## G: DTC 21

Cruise control command switch malfunction is detected.

### TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

### H: DTC 22

Malfunction related to vehicle speed sensor is detected.

#### DIAGNOSIS:

Open or shorted circuit in vehicle speed sensor system.

#### TROUBLE SYMPTOM:

Cruise control cannot be set. (Cancelled immediately.)

	Step	Check	Yes	No
1	<b>CHECK ABS OR VDC WARNING LIGHT.</b> 1) Turn the ignition switch to ON. 2) After the initial operation of combination meter is completed, check if ABS or VDC warning light continues to illuminate.	Does the warning light continue to illuminate?	Check ABSCM or VDCCM. <Ref. to ABS(diag)-2, Basic Diagnostic Procedure.> <Ref. to VDC(diag)-2, Basic Diagnostic Procedure.>	Go to step 2.
2	<b>CHECK DTC OF LAN COMMUNICATION CIRCUIT.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC of Low-speed CAN displayed?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Replace the ECM. <Ref. to FU(H4SO)-37, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>

### I: DTC 24

Malfunction in cruise control-related switch is detected.

#### TROUBLE SYMPTOM:

- Cruise control cannot be set. (Cancelled immediately.)
- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

### J: DTC 25

Malfunction of brake input circuit in ECM is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4SO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

### K: DTC 31

Malfunction of the engine speed signal is detected.

Abnormal increase of engine speed is detected.

Gear is set to 1st or Reverse position.

After driving at the 2nd gear position or more, perform the cruise setting again. If the DTC is not detected, it is normal.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

## **L: DTC 32**

This DTC is detected out of vehicle speed range.

Increase vehicle speed high enough to allow the cruise control to function, and then perform setting operation again.

If the DTC is detected after performing the setting operation, perform DTC 22 diagnosis.

Refer to DTC 22 for diagnostic procedure.

<Ref. to CC(diag)-26, DTC 22, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## **M: DTC 34**

The vehicle has been driven at a speed higher than set speed for a long time (approximately 10 minutes) during cruise driving.

DTC is detected when driving for a long period of time at higher speed than appropriate cruise speed by operating accelerator pedal.

Perform the cruise control setting operation again. If the DTC is not detected, it is normal.

## **N: DTC 35**

Detected when it is impossible to perform the vehicle speed feedback.

Set vehicle speed cannot be kept for some reasons (steep uphill, unreleased parking brake, etc.) during cruise driving.

DTC is detected when driving condition is not suitable for cruise control.

Perform cruise set operation again after clearing the possible cause.

## **O: DTC 41**

VDC/TCS has operated.

Vehicle dynamics control (VDC) or TCS is operated during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

## **P: DTC 43**

ABS/VDC malfunction is detected.

VDC malfunction is detected during cruise driving or cruise setting.

<Ref. to VDC(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

## **Q: DTC 44**

Body integrated unit malfunction is detected.

Body integrated unit system malfunction is detected during cruise driving or cruise setting.

<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

## **R: DTC 45**

Malfunction of the combination meter is detected.

Combination meter malfunction is detected during cruise driving or cruise setting.

<Ref. to LAN(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

## **S: DTC 61**

Malfunction in the stop light & brake switch is detected.

### **TROUBLE SYMPTOM:**

- Cruise control cannot be set.
- Cruise control cannot be released.

Refer to DTC 12 for diagnostic procedure.

<Ref. to CC(diag)-17, DTC 12, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

## **T: DTC 62**

Neutral position switch malfunction is detected.

### **TROUBLE SYMPTOM:**

Cruise control cannot be set.

Refer to DTC 14 for diagnostic procedure.

<Ref. to CC(diag)-21, DTC 14, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## CRUISE CONTROL SYSTEM (DIAGNOSTICS)

---

### **U: DTC 63**

Malfunction of vehicle speed signal variation is detected.

#### **TROUBLE SYMPTOM:**

Cruise control cannot be set. (Cancelled immediately.)

Refer to DTC 22 for diagnostic procedure.

<Ref. to CC(diag)-26, DTC 22, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

### **V: DTC 64**

Malfunction related to engine is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4SO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

### **W: DTC 65**

Cruise control command switch malfunction is detected.

While the command switch is pressed ON for a long time (approximately two minutes), stuck ON condition is detected.

#### **TROUBLE SYMPTOM:**

- Cruise control cannot be set. (Cancelled immediately.)

- Cruise control cannot be released.

Refer to DTC 11 for diagnostic procedure.

<Ref. to CC(diag)-15, DTC 11, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

### **X: DTC 66**

Cruise control calculation malfunction is detected.

Refer to the Engine Diagnostic Procedure for diagnostic procedure.

<Ref. to EN(H4SO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H4DOTC)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

<Ref. to EN(H6DO)(diag)-2, PROCEDURE, Basic Diagnostic Procedure.>

# Basic Diagnostic Procedure

IMMOBILIZER (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

	Step	Check	Yes	No
1	<b>CHECK SECURITY INDICATOR LIGHT.</b> 1) Turn the ignition switch to "OFF" or "ACC". 2) Wait at least 60 seconds.	Does the security indicator light blink?	Go to step 2.	Check the security indicator light circuit. <Ref. to IM(diag)-10, CHECK SECURITY INDICATOR LIGHT CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
2	<b>CHECK KEY SWITCH.</b> Remove the key from ignition switch.	Does the security indicator light blink within 1 second after removing the key?	Go to step 3.	Check the key switch circuit. <Ref. to IM(diag)-12, CHECK KEY SWITCH CIRCUIT, INSPECTION, Diagnostics Chart for Security Indicator Light.>
3	<b>CHECK SECURITY INDICATOR LIGHT.</b> Turn the ignition switch to ON.	Does the security indicator light go off?	Go to step 5.	Go to step 4.
4	<b>CHECK ENGINE START.</b> Turn the ignition switch to START.	Does the starter operate?	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>	Check the DTC display (body integrated unit). Go to step 7.
5	<b>CHECK ENGINE START.</b> Turn the ignition switch to START.	Does the starter operate?	Go to step 6.	Check the LAN communication circuit. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>
6	<b>CHECK ENGINE START.</b> Turn the ignition switch to START.	Does the engine start?	Immobilizer system is normal.	Check the DTC display (ECM). Go to step 7.
7	<b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b> 1) Turn the ignition switch to OFF. 2) Connect the Subaru Select Monitor to the data link connector. <Ref. to IM(diag)-7, Subaru Select Monitor.> 3) Turn the ignition switch and Subaru Select Monitor switch to ON. 4) Read DTC's on the display.	Is the DTC displayed on screen?	Go to step 8.	Repair the related parts.
8	<b>PERFORM DIAGNOSIS.</b> 1) Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Repair the trouble cause. 3) Perform the Clear Memory Mode. 4) Read DTC's again.	Is the DTC displayed on screen?	Inspect using the "Diagnostic Procedure with Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-16, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	Finish the diagnosis.

## 2. General Description

### A: CAUTION

**CAUTION:**

- Do not use the electrical test equipment on the airbag system wiring harnesses and connector circuits.
- Be careful not to damage the airbag system wiring harness.
- While diagnostic items are being checked, do not operate radios, portable telephones, etc. which emit electromagnetic waves near or inside the vehicle.

- When turning the ignition switch to ON or OFF while diagnostic items are being checked, do not allow keys with different ID codes close to the ignition switch. If the ignition key is on a key holder, remove it from the key holder before performing diagnoses.

- When repeatedly turning the ignition switch to ON or OFF while diagnostic items are being checked, it should be switched in cycles of "ON" for at least 5 seconds → "OFF" for at least 8 seconds.

- (1) Ignition switch position
- (2) Sec.

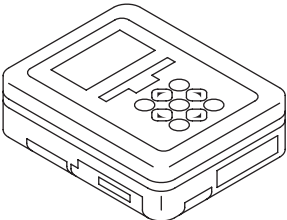

- If the engine fails to start with a registered ignition key, detach the ignition key from ignition switch and wait for approx. 1 second until security indicator light begins to flash. And then start the engine again.
- Before performing the diagnostics, obtain all keys for the vehicle from the owner.
- Do not install or register a body integrated unit already registered to another vehicle to diagnose failures or inspect functions.

### 2. GENERAL TOOL

TOOL NAME	REMARKS
Circuit tester	Used for measuring resistance, voltage and current.

### 3. Electrical Component Location

#### A: LOCATION

IM-00263

(1) Antenna

(3) Body integrated unit

(4) Transponder

(2) Security indicator light (LED bulb)

# Immobilizer Control Module I/O Signal

IMMOBILIZER (DIAGNOSTICS)

---

## 4. Immobilizer Control Module I/O Signal

### A: WIRING DIAGRAM

#### 1. IMMOBILIZER

<Ref. to WI-215, WIRING DIAGRAM, Immobilizer  
System.>

## 5. Subaru Select Monitor

### A: OPERATION

#### 1. HOW TO USE THE SUBARU SELECT MONITOR

- 1) Prepare the Subaru Select Monitor kit.
- 2) Connect the diagnosis cable to the Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to the data link connector.

(1) Data link connector is located in the lower portion of the instrument panel (on the driver's side).

(2) Connect the diagnosis cable to the data link connector.

#### CAUTION:

**Do not connect scan tools other than the Subaru Select Monitor.**

- 4) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.
- 5) Using the Subaru Select Monitor, call up DTCs and various data, then record them.

#### 2. READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE AND BODY INTEGRATED UNIT

Refer to "Read Diagnostic Trouble Code" for information about how to indicate DTC. <Ref. to IM(diag)-8, Read Diagnostic Trouble Code (DTC).>

#### 3. COMMUNICATION LINE CHECK

##### NOTE:

The communication line between ECM and body integrated unit can be checked in "System Operation Check Mode". This is referred to as "Communication line check".

- 1) Connect the Subaru Select Monitor.
- 2) On the «Main Menu» display, select {Each System Check}.
- 3) On the «System Selection Menu» display, select {Engine}.
- 4) After engine type information is displayed, select [OK].
- 5) On the «Engine Diagnosis» display, select {System Operation Check Mode}.
- 6) On the «System operation check mode» display, select the {security system}.
- 7) Start the communication line check.
- 8) Is «OK» displayed on screen?  
If displayed, go to step 9).  
If not, go to step 10).

9) After diagnostic results, it is determined that the circuit is not shorted. Finish the communication line check.

10) If a problem is detected, repair the trouble cause. <Ref. to IM(diag)-20, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

# Read Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

---

## 6. Read Diagnostic Trouble Code (DTC)

### A: OPERATION

#### 1. ECM

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Engine}.
- 3) After engine type information is displayed, select [OK].
- 4) On the «Engine Diagnosis», select {DTC Display}.
- 5) On the «DTC Display», select {Current Diagnostic Code(s)} or {History Diagnostic Code(s)}.

#### NOTE:

- For detailed operation procedure, refer to the “help on PC application for Subaru Select Monitor”.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

#### 2. BODY INTEGRATED UNIT

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Integrated Unit}.
- 3) After {Integrated Unit} is displayed, select [OK].
- 4) On the «Integ. Unit mode failure diag», select {DTC Display}.

#### NOTE:

- For detailed operation procedure, refer to the “help on PC application for Subaru Select Monitor”.
- For detailed concerning DTC, refer to the List of Diagnostic Trouble Codes (DTC). <Ref. to IM(diag)-14, LIST, List of Diagnostic Trouble Code (DTC).>

## 7. Clear Memory Mode

### A: OPERATION

#### 1. ECM

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Engine}.
- 3) After engine type information is displayed, select [OK].
- 4) On the «Engine Diagnosis», select {Clear Memory}.
- 5) When “Done” is displayed on the display screen, end the Subaru Select Monitor and turn the ignition switch to OFF.

#### NOTE:

- After the memory has been cleared, the idle air control solenoid valve must be initialized. To execute this procedure, turn the ignition switch to ON. Wait 3 seconds before starting the engine.
- For detailed operation procedure, refer to the “help on PC application for Subaru Select Monitor”.

#### 2. BODY INTEGRATED UNIT

- 1) On the «Main Menu», select {Each System Check}.
- 2) On the «System Selection Menu», select {Integrated Unit}.
- 3) After {Integrated Unit} is displayed, select [OK].
- 4) On the «Integ. Unit mode», select {Clear Memory}.
- 5) When “Done” is displayed on the display screen, end the Subaru Select Monitor and turn the ignition switch to OFF.

#### NOTE:

For detailed operation procedure, refer to the “help on PC application for Subaru Select Monitor”.

# Diagnostics Chart for Security Indicator Light

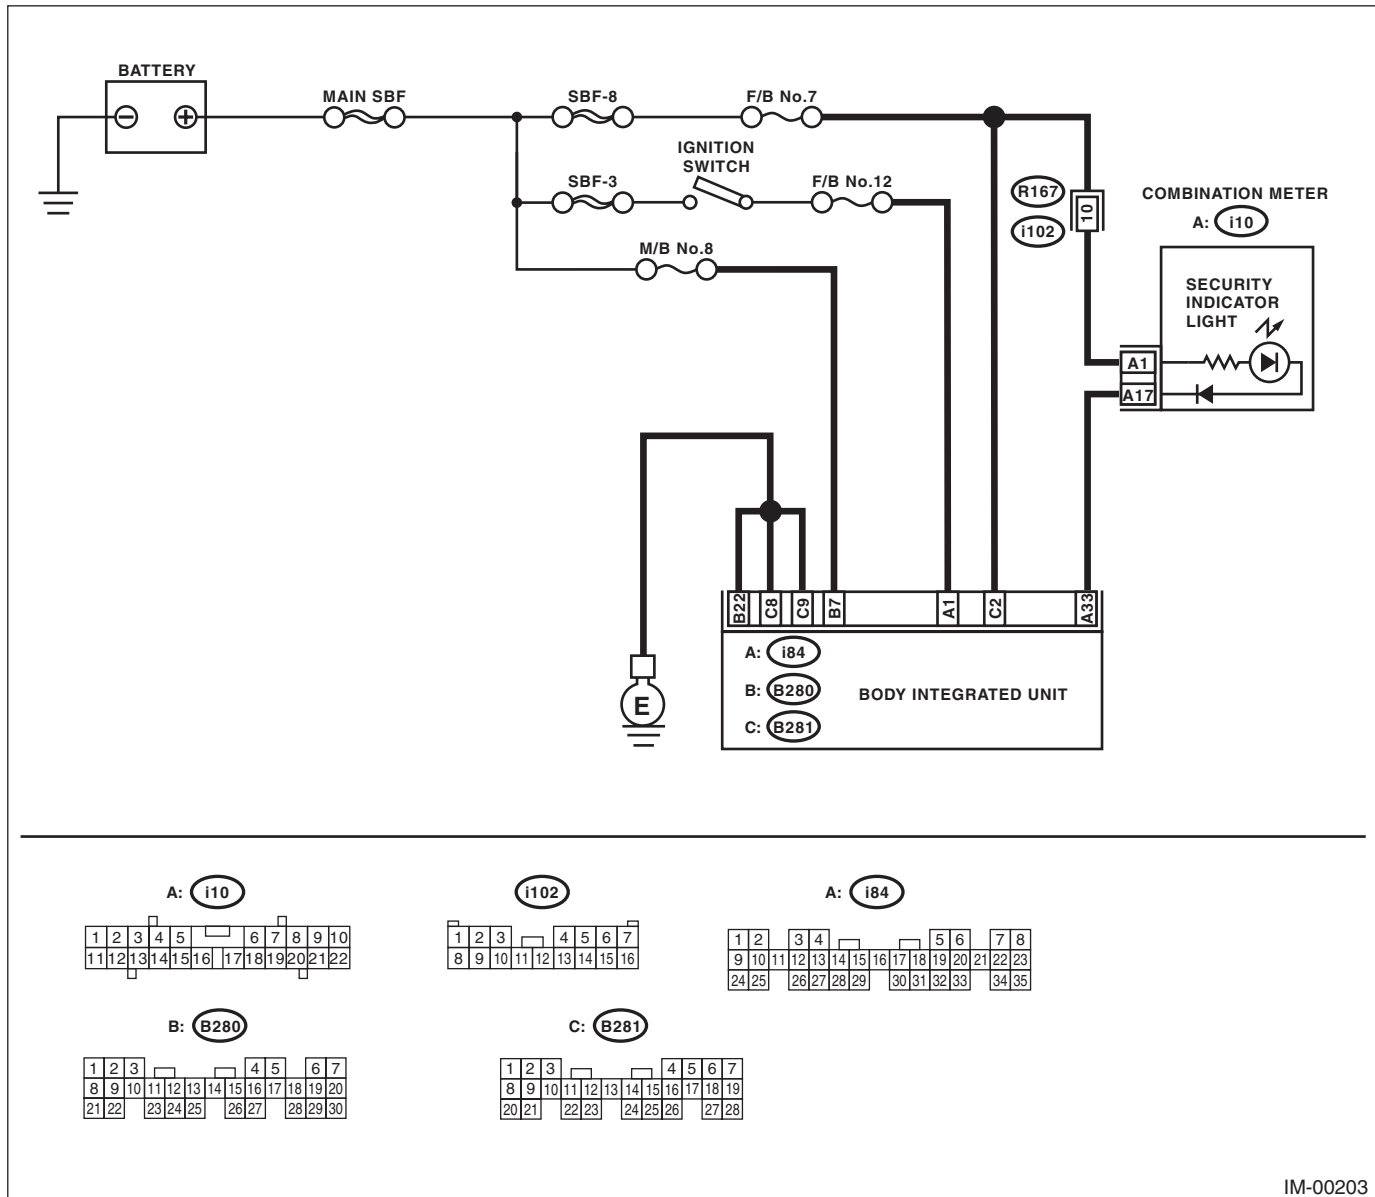

IMMOBILIZER (DIAGNOSTICS)

## 8. Diagnostics Chart for Security Indicator Light

### A: INSPECTION

#### 1. CHECK SECURITY INDICATOR LIGHT CIRCUIT

WIRING DIAGRAM:

# Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

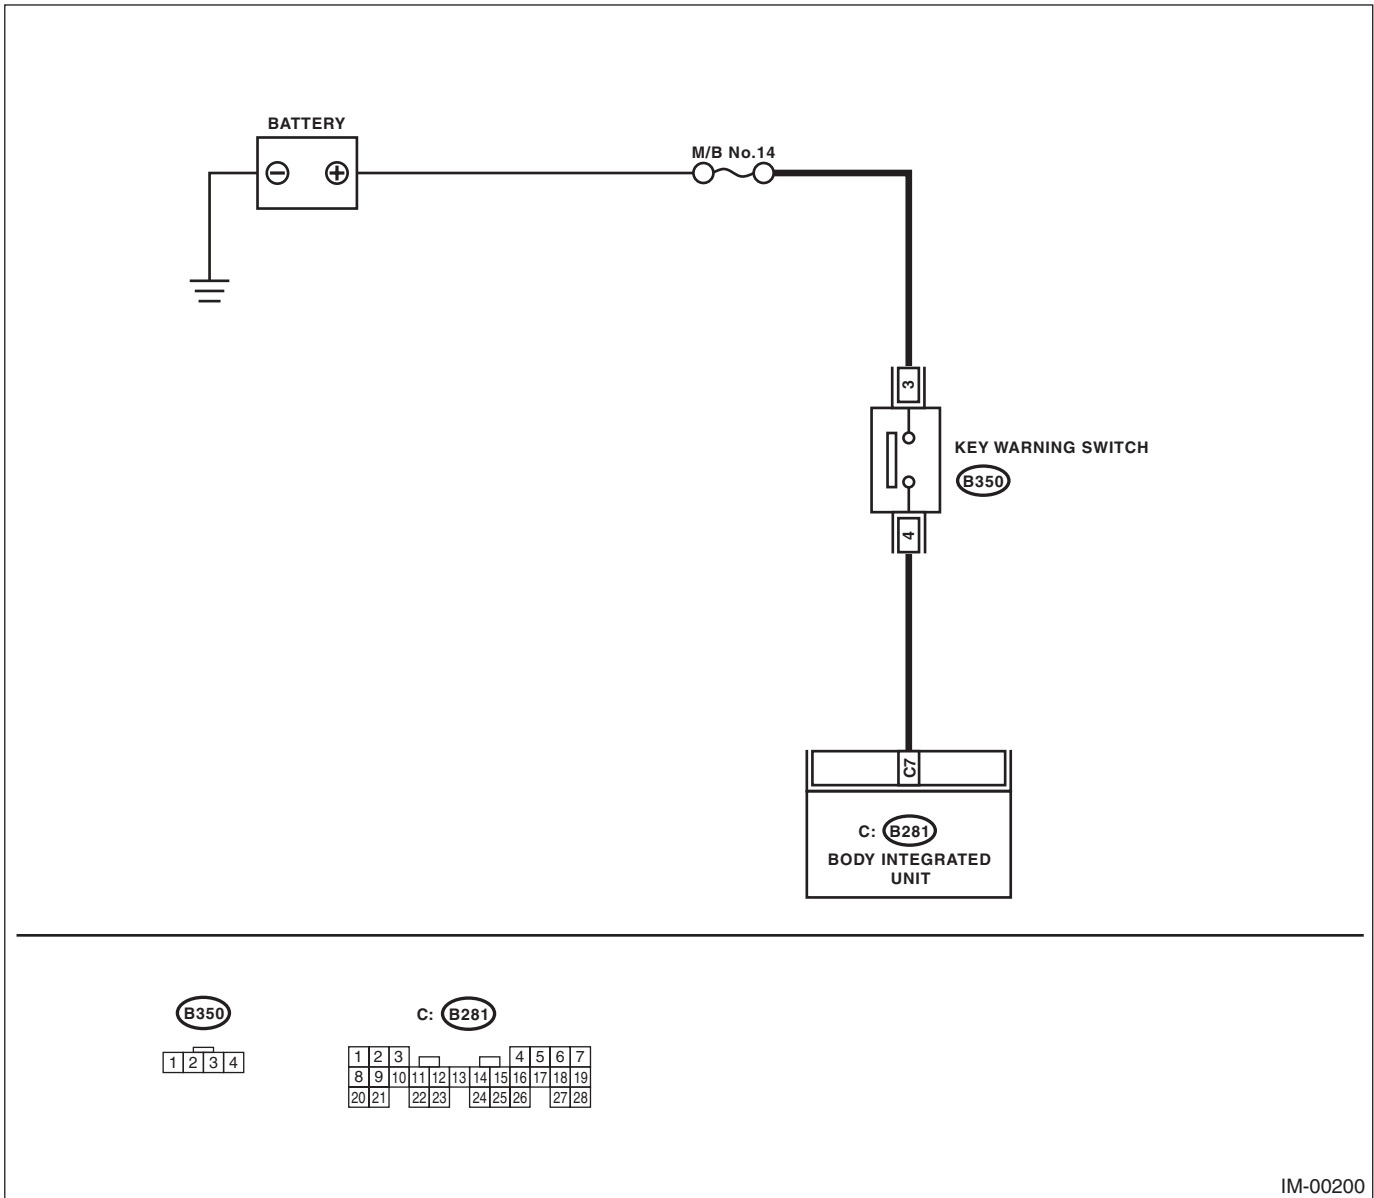

Step	Check	Yes	No
<b>1 CHECK SECURITY INDICATOR LIGHT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from the body integrated unit. 3) Connect a resistor (100 Ω) between the body integrated unit harness connector terminal (i84) No. 33 and chassis ground.	Does the security indicator light illuminate?	Go to step 2.	Go to step 5.
<b>2 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.</b> Measure the resistance between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 22 — Chassis ground:</i> <i>(B281) No. 8 — Chassis ground:</i> <i>(B281) No. 9 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Go to step 3.	Repair the open circuit of the body integrated unit ground circuit.
<b>3 CHECK BODY INTEGRATED UNIT IGNITION CIRCUIT.</b> 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(i84) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 4.	Check the harness for open or short circuit between the body integrated unit and ignition switch.
<b>4 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 7 (+) — Chassis ground (-):</i> <i>(B281) No. 2 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Check the harness for open or short circuit between the body integrated unit and fuse.
<b>5 CHECK COMBINATION METER CIRCUIT.</b> 1) Remove the combination meter. <Ref. to IDI-19, Combination Meter.> 2) Measure the voltage between combination meter harness connector terminal and chassis ground. <i>Connector &amp; terminal</i> <i>(i10) No. 1 (+) — Chassis ground (-):</i>	Is the voltage 10 V or more?	Go to step 6.	Check for an open or short circuit in the harness between the combination meter and fuse.
<b>6 CHECK COMBINATION METER CIRCUIT.</b> Measure the resistance between the body integrated unit harness connector terminal and combination meter harness connector terminals. <i>Connector &amp; terminal</i> <i>(i84) No. 33 — (i10) No. 17:</i>	Is the resistance less than 10 Ω?	LED bulb is defective. Replace the combination meter case assembly. <Ref. to IDI-20, DISASSEMBLY, Combination Meter.>	Repair the harness or connector.

# Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

## 2. CHECK KEY SWITCH CIRCUIT

WIRING DIAGRAM:

IM-00200

# Diagnostics Chart for Security Indicator Light

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK POWER SUPPLY CIRCUIT.</b> 1) Disconnect the key warning switch harness connector. 2) Set the ignition switch to ACC or LOCK (with key inserted). 3) Measure the voltage between the key warning switch harness connector terminal and chassis ground. <b>Connector &amp; terminal</b> <b>(B350) No. 3 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 2.	Check for an open or short circuit in the harness between the key warning switch and fuse.
<b>2</b> <b>CHECK KEY WARNING SWITCH.</b> 1) Insert the ignition key in the ignition switch. (OFF or ACC) 2) Measure the resistance between key warning switch connector terminals. <b>Connector &amp; terminal</b> <b>No. 3 — No. 4:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 3.	Replace the key warning switch.
<b>3</b> <b>CHECK KEY WARNING SWITCH.</b> 1) Remove the ignition key from the ignition switch. 2) Measure the resistance between key warning switch connector terminals. <b>Connector &amp; terminal</b> <b>No. 3 — No. 4:</b>	Is the resistance 1 M $\Omega$ or more?	Go to step 4.	Replace the key warning switch.
<b>4</b> <b>CHECK HARNESS BETWEEN KEY WARNING SWITCH AND BODY INTEGRATED UNIT.</b> 1) Disconnect the key warning switch harness connector. 2) Disconnect the harness connector from the body integrated unit. 3) Measure the resistance between the key warning switch harness connector and body integrated unit harness connector terminals. <b>Connector &amp; terminal</b> <b>(B350) No. 4 — (B281) No. 7:</b>	Is the resistance less than 10 $\Omega$ ?	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Repair the harness between the key warning switch and body integrated unit.

## List of Diagnostic Trouble Code (DTC)

### IMMOBILIZER (DIAGNOSTICS)

## 9. List of Diagnostic Trouble Code (DTC)

### A: LIST

#### 1. ECM

DTC	Item	Contents of diagnosis	Index No.
P0513	Incorrect Immobilizer Key	Incorrect immobilizer key (Use of unregistered key in body integrated unit)	<Ref. to IM(diag)-16, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1570	Antenna	Faulty antenna	<Ref. to IM(diag)-17, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1571	Reference Code Incompatibility	Reference code incompatibility between body integrated unit and ECM	<Ref. to IM(diag)-19, DTC P1571 REFERENCE CODE INCOMPATIBILITY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1572	EGI — Immobilizer Communication (Excluding Antenna Circuit)	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-20, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1574	Key — Immobilizer Communication	Communication failure between key and the body integrated unit	<Ref. to IM(diag)-22, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1576	EGI Control Module EEPROM	ECM malfunctioning	<Ref. to IM(diag)-23, DTC P1576 EGI CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1577	IMM Control Module EEPROM	Body integrated unit malfunctioning	<Ref. to IM(diag)-23, DTC P1577 IMM CONTROL MODULE EEPROM, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
P1578	Meter Failure	Reference code incompatibility between body integrated unit and combination meter	<Ref. to IM(diag)-24, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>

#### NOTE:

Perform diagnosis of engine DTC when a DTC other than an immobilizer DTC is detected. <Ref. to EN(H4DOTC)(diag)-83, List of Diagnostic Trouble Code (DTC).> <Ref. to EN(H6DO)(diag)-84, List of Diagnostic Trouble Code (DTC).>

# List of Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## 2. BODY INTEGRATED UNIT

DTC	Item	Contents of diagnosis	Index No.	Relation between ECM and DTC
B1401	M Collation NG	Reference code incompatibility between body integrated unit and combination meter	<Ref. to IM(diag)-24, DTC P1578 METER FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1578
B1402	Immobilizer Key Collation NG	<ul style="list-style-type: none"> <li>• Incorrect immobilizer key (Use of unregistered key in body integrated unit)</li> <li>• Faulty antenna</li> </ul>	<Ref. to IM(diag)-16, DTC P0513 INCORRECT IMMOBILIZER KEY, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> <Ref. to IM(diag)-17, DTC P1570 ANTENNA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> or <Ref. to IM(diag)-22, DTC P1574 KEY COMMUNICATION FAILURE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	<ul style="list-style-type: none"> <li>• P0513</li> <li>• P1570</li> <li>• P1574</li> </ul>
B1403	E/G Request NG	Communication failure between body integrated unit and ECM	<Ref. to IM(diag)-20, DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT), Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	P1572

### NOTE:

- In immobilizer system, performing the starter relay control. When the body integrated unit detect the inconformity of reference code, immediately out put the starter relay cut signal to ECM, and then ECM stop the starter relay operation. In this case, engine does not start, and DTC is not recorded in ECM. Check that the engine does not start on the DTC of body integrated unit.
- DTC B1401 and B1402 are recorded as current malfunctions when the ignition is turned OFF. Because of this, if an engine is attempted to be started with an immobilizer key that is not registered, a DTC will not appear on the Subaru Select Monitor immediately. Turn the ignition switch to OFF once, then turn it back ON to check the DTC. At this time, (when turning the ignition switch back ON), note that even if a registered immobilizer key is used, the DTC will be displayed as a current malfunction.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## 10. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: DTC P0513 INCORRECT IMMOBILIZER KEY

#### DTC DETECTING CONDITION:

Incorrect immobilizer key (Use of unregistered key in body integrated unit)

	Step	Check	Yes	No
1	<b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	END	Replace ignition keys (including transponder) which cannot be registered. Go to step 2.
2	<b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	END	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## B: DTC P1570 ANTENNA

### DTC DETECTING CONDITION:

Faulty antenna

### WIRING DIAGRAM:

IM-00262

Step	Check	Yes	No
<b>1</b> <b>CHECK THE ANTENNA CIRCUIT.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from the antenna. <Ref. to SL-59, Immobilizer Antenna.> 3) Measure the resistance of the antenna circuit. <i>Connector &amp; terminal</i> <i>(B351) No. 1 — No. 2:</i>	Is the resistance less than 10 Ω?	Go to step 2.	Replace the antenna. <Ref. to SL-59, Immobilizer Antenna.>
<b>2</b> <b>CHECK THE ANTENNA CIRCUIT.</b> 1) Disconnect the harness connector from the body integrated unit. 2) Measure the resistance between harness connector and chassis ground. <i>Connector &amp; terminal</i> <i>(B281) No. 21 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Repair the harness.	Go to step 3.
<b>3</b> <b>CHECK THE ANTENNA CIRCUIT.</b> Measure the resistance between harness connector and chassis ground. <i>Connector &amp; terminal</i> <i>(B281) No. 20 — Chassis ground:</i>	Is the resistance less than 10 Ω?	Repair the harness.	Go to step 4.

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<b>4 CHECK THE ANTENNA CIRCUIT.</b> 1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B281) No. 21 (+) — Chassis ground (-):</b>	Is the voltage 0 V?	Go to step 5.	Repair the harness.
<b>5 CHECK THE ANTENNA CIRCUIT.</b> Measure the voltage between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B281) No. 20 (+) — Chassis ground (-):</b>	Is the voltage 0 V?	Go to step 6.	Because the battery voltage or ignition switch "ON" circuit is shorted, repair the harness between the body integrated unit and antenna.
<b>6 CHECK BODY INTEGRATED UNIT FUNCTION.</b> 1) Turn the ignition switch to OFF. 2) Connect the harness connector to the body integrated unit. 3) Insert the key into the ignition switch, then measure changes in voltage between the antenna harness connectors. <b>Connector &amp; terminal</b> <b>(B281) No. 20 (+) — No. 21 (-):</b>	Is the voltage -30 — 30 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step 7.	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
<b>7 CHECK IGNITION KEY (TRANSPONDER).</b> 1) Remove the key from ignition switch. 2) Start the engine using other key which is already registered.	Does the engine start?	Replace the ignition key (including the transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## C: DTC P1571 REFERENCE CODE INCOMPATIBILITY

### DTC DETECTING CONDITION:

Reference code incompatibility between body integrated unit and ECM

	Step	Check	Yes	No
1	<b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	END	Go to step 2.
2	<b>CHECK FOR ANY OTHER DTC ON DISPLAY.</b>	Is any other immobilizer DTC displayed?	Check the appropriate DTC using the "List of Diagnostic Trouble Code (DTC)". <Ref. to IM(diag)-14, List of Diagnostic Trouble Code (DTC).>Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

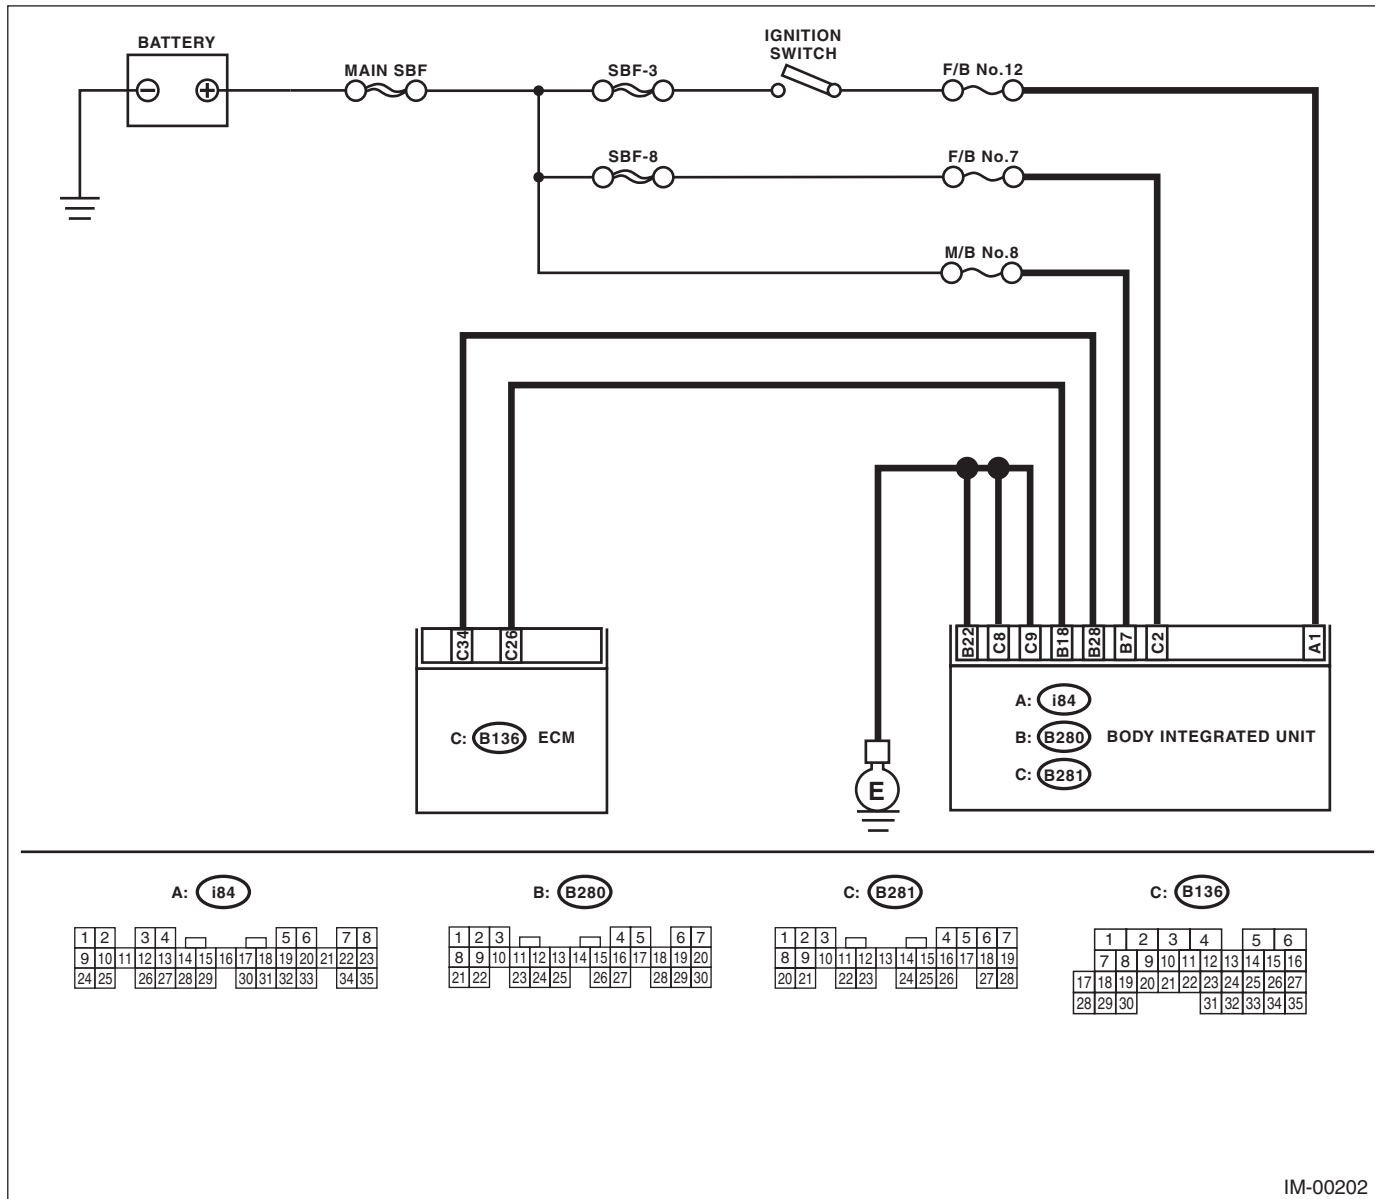

IMMOBILIZER (DIAGNOSTICS)

## D: DTC P1572 IMM CIRCUIT FAILURE (EXCEPT ANTENNA CIRCUIT)

### DTC DETECTING CONDITION:

Communication failure between body integrated unit and ECM

### WIRING DIAGRAM:

IM-00202

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<p><b>1 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF. 2) Disconnect the harness connector from the body integrated unit. 3) Measure the voltage between the body integrated unit harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(B280) No. 7 (+) — Chassis ground (-):</b> <b>(B281) No. 2 (+) — Chassis ground (-):</b></p>	Is the voltage 10 V or more?	Go to step 2.	Check the harness for open or short circuit between the body integrated unit and fuse.
<p><b>2 CHECK BODY INTEGRATED UNIT POWER SUPPLY CIRCUIT.</b></p> <p>1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(i84) No. 1 (+) — Chassis ground (-):</b></p>	Is the voltage 10 V or more?	Go to step 3.	Check the harness for open or short circuit between the body integrated unit and ignition switch.
<p><b>3 CHECK BODY INTEGRATED UNIT GROUND CIRCUIT.</b></p> <p>1) Turn the ignition switch to OFF. 2) Measure the resistance between the body integrated unit harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(B280) No. 22 — Chassis ground:</b> <b>(B281) No. 8 — Chassis ground:</b> <b>(B281) No. 9 — Chassis ground:</b></p>	Is the resistance less than 10 Ω?	Go to step 4.	Repair the open circuit of the body integrated unit ground circuit.
<p><b>4 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.</b></p> <p>1) Disconnect the harness connector from the ECM and body integrated unit. 2) Measure the resistance between the body integrated unit harness connector and ECM harness connector terminals.</p> <p><b>Connector &amp; terminal</b> <b>(B280) No. 18 — (B136) No. 26:</b></p>	Is the resistance less than 10 Ω?	Go to step 5.	Repair the open circuit of the harness between the body integrated unit and ECM.
<p><b>5 CHECK HARNESS BETWEEN BODY INTEGRATED UNIT AND ECM.</b></p> <p>Measure the resistance between the body integrated unit harness connector and ECM harness connector terminals.</p> <p><b>Connector &amp; terminal</b> <b>(B280) No. 28 — (B136) No. 34:</b></p>	Is the resistance less than 10 Ω?	Go to step 6.	Repair the open circuit of the harness between the body integrated unit and ECM.
<p><b>6 CHECK COMMUNICATION CIRCUIT HARNESS.</b></p> <p>1) Turn the ignition switch to ON. (engine OFF) 2) Measure the voltage between the body integrated unit harness connector terminal and chassis ground.</p> <p><b>Connector &amp; terminal</b> <b>(B280) No. 18 (+) — Chassis ground (-):</b> <b>(B280) No. 28 (+) — Chassis ground (-):</b></p>	Is the voltage 0 V?	Go to step 7.	Because the battery voltage or ignition switch "ON" circuit is shorted, repair the harness between the body integrated unit and ECM.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## IMMOBILIZER (DIAGNOSTICS)

Step	Check	Yes	No
<b>7</b> <b>CHECK COMMUNICATION CIRCUIT HARNESS.</b> Measure the voltage between the ECM harness connector terminal and engine ground. <b>Connector &amp; terminal</b> <i>(B136) No. 26 (+) — Engine ground (-):</i> <i>(B136) No. 34 (+) — Engine ground (-):</i>	Is the voltage 0 V?	Go to step 8.	Because the battery voltage or ignition switch "ON" circuit is shorted, repair the harness between the body integrated unit and ECM.
<b>8</b> <b>CHECK ECM BY COMMUNICATION LINE CHECK.</b> 1) Connect the harness connector to the ECM. 2) Disconnect the harness connector from the body integrated unit. 3) Start the communication line short check. <Ref. to IM(diag)-7, COMMUNICATION LINE CHECK, OPERATION, Subaru Select Monitor.>	Is the communication line check OK?	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).> Next, execute the registration procedure. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

## E: DTC P1574 KEY COMMUNICATION FAILURE

### DTC DETECTING CONDITION:

Communication failure between key and the body integrated unit

Step	Check	Yes	No
<b>1</b> <b>CHECK BODY INTEGRATED UNIT FUNCTION.</b> Insert the key into the ignition switch (LOCK position), then measure changes in voltage between the antenna connectors. <b>Connector &amp; terminal</b> <i>(B351) No. 1 (+) — No. 2 (-):</i>	Is the voltage -30 — 30 V? (Approx. 0.1 second after inserting the key) Is the voltage 0 V? (Approx. 1 second after inserting the key)	Go to step 2.	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".
<b>2</b> <b>CHECK IGNITION KEY (TRANSPONDER).</b> 1) Remove the key from ignition switch. 2) Start the engine using other key which is already registered.	Does the engine start?	Replace the ignition key (including the transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Replace the body integrated unit <Ref. to SL-55, Body Integrated Unit.> and replace all the ignition keys (including transponder). Execute the registration procedure next. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

## F: DTC P1576 EGI CONTROL MODULE EEPROM

### DTC DETECTING CONDITION:

- ECM malfunctioning
- Inaccessible ROM in ECM during key registration.

Step	Check	Yes	No
<b>1</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 2.
<b>2</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 3.
<b>3</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Replace the ECM. <Ref. to FU(H4DOTC)-45, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>

## G: DTC P1577 IMM CONTROL MODULE EEPROM

### DTC DETECTING CONDITION:

- Body integrated unit malfunctioning
- Failed to access the ROM inside the body integrated unit.

Step	Check	Yes	No
<b>1</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 2.
<b>2</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Go to step 3.
<b>3</b> <b>PERFORM REGISTRATION ON IGNITION KEY.</b> Perform registration on all keys of the vehicle. Refer to the "REGISTRATION MANUAL FOR IMMOBILIZER".	Is registration for all keys complete?	Make sure it is possible to start the engine with all keys that have been taught. This completes the work.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

IMMOBILIZER (DIAGNOSTICS)

---

## H: DTC P1578 METER FAILURE

### DTC DETECTING CONDITION:

Reference code incompatibility between combination meter and body integrated unit

### 1. CHECK LAN COMMUNICATION SYSTEM.

Inspect the LAN communication system in the following cases. <Ref. to LAN(diag)-2, Basic Diagnostic Procedure.>

- DTC U1300, U1301, U1302, B1100 or U1321 of the body integrated unit is displayed.
- “Er IU” or “Er LC” is displayed in combination meter odo/trip meter. (except for the meter with MID)

### 2. REPLACE COMBINATION METER.

Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>Next, perform the registration procedure for all immobilizer parts (combination meter and etc.). Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.

### NOTE:

When the combination meter has been replaced, be sure to perform the registration procedure of immobilizer.

# Basic Diagnostic Procedure

LAN SYSTEM (DIAGNOSTICS)

## 1. Basic Diagnostic Procedure

### A: PROCEDURE

#### 1. WITH SUBARU SELECT MONITOR

##### CAUTION:

- Subaru Select Monitor is required for reading DTC, performing diagnosis and reading current data.
- Remove foreign matter (dust, water, oil, etc.) from the body integrated unit connector during removal and installation.
- For model with immobilizer, registration of immobilizer may be needed after the replacement of controller etc. For detailed procedure, refer to the REGISTRATION MANUAL FOR IMMOBILIZER.

##### NOTE:

- To check harness for open or short circuits, shake the suspected trouble spot or connector.
- Check List for Interview <Ref. to LAN(diag)-3, Check List for Interview.>

	Step	Check	Yes	No
1	<b>CHECK PRE-INSPECTION.</b> Ask the customer when and how the trouble occurred using the interview check list. <Ref. to LAN(diag)-3, Check List for Interview.>	Did you interview the customer?	Go to step 3.	Interview the customer and Go to step 2.
2	<b>BASIC INSPECTION.</b> Check components which might affect body control. <Ref. to LAN(diag)-5, INSPECTION, General Description.>	Is the component that might influence the body control problem normal?	Go to step 3.	Repair or replace each component.
3	<b>CHECK INDICATION OF DTC.</b> 1) Read the DTC. <Ref. to LAN(diag)-12, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> NOTE: If the communication function of the Subaru Select Monitor cannot be executed properly, check the communication circuit. <Ref. to LAN(diag)-31, COMMUNICATION FOR INITIALIZING IMPOSSIBLE, Diagnostic Procedure with Diagnostic Trouble Code (DTC).> 2) Record all DTC.	Is DTC displayed?	Go to step 5.	Go to step 4.
4	<b>PERFORM GENERAL DIAGNOSTICS.</b> Inspect using the "General Diagnostics Table". <Ref. to LAN(diag)-85, General Diagnostic Table.>	Is result of inspection OK?	LAN system is normal.	Go to step 5.
5	<b>PERFORM DIAGNOSIS.</b> 1) Correct the cause of trouble. 2) Perform Clear Memory Mode. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read the DTC. <Ref. to LAN(diag)-12, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC displayed?	Repeat step 5 until DTC is not shown.	Finish the diagnosis.

# Check List for Interview

LAN SYSTEM (DIAGNOSTICS)

## 2. Check List for Interview

### A: CHECK

Inspect the following item about the vehicle's state.

#### 1. DISPLAY OF COMMUNICATION ERROR

Communication error is displayed in odo/trip meter. (Except for meter with MID)	When and how often are they displayed? <input type="checkbox"/> Always <input type="checkbox"/> Sometimes <input type="checkbox"/> Only once  Which communication error is displayed? (Record them all) <input type="checkbox"/> Er IU (Fail in the body integrated unit) <input type="checkbox"/> Er HC (Fail of high-speed CAN) <input type="checkbox"/> Er LC (Fail of low-speed CAN) <input type="checkbox"/> Er — (Fails of both high-speed and low-speed CAN) <input type="checkbox"/> Er EG (Fail of EGI communication data) <input type="checkbox"/> Er TC (fail of TCM communication data) <input type="checkbox"/> Er Ab (Fail of vehicle dynamics control (VDC)/ABS communication data)
Ignition key position	<input type="checkbox"/> OFF <input type="checkbox"/> ACC <input type="checkbox"/> ON (before starting engine) <input type="checkbox"/> START <input type="checkbox"/> ON (after starting engine, engine is running) <input type="checkbox"/> ON (after starting engine, engine is at a standstill)
Timing	<input type="checkbox"/> Immediately after turning the ignition ON. <input type="checkbox"/> Immediately after turning the ignition to START.

#### 2. DISPLAY STATUS IN THE COMBINATION METER

Display status in the combination meter	a) Engine coolant temperature gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
	b) Fuel gauge display	<input type="checkbox"/> OK / <input type="checkbox"/> NG
Display of other indicators	c) Malfunction indicator light	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	d) SPORT indicator light (AT warning light)	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	e) ABS warning light/Vehicle dynamics control (VDC) warning light	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	f) Security indicator light	<input type="checkbox"/> ON / <input type="checkbox"/> Blink / <input type="checkbox"/> OFF
	g) Seat belt warning light (Driver's seat)	<input type="checkbox"/> ON / <input type="checkbox"/> OFF
	h) Seat belt warning light (Passenger's seat)	<input type="checkbox"/> ON / <input type="checkbox"/> OFF

#### 3. SYMPTOM

Vehicle condition	a) Lighting adjustment is not possible by the illumination volume control.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	b) Rear wiper does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	c) Wiper deicer does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	d) Rear defogger does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	e) Door lock does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	f) Trunk/rear gate lock does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	g) Drivers door lock does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	h) Shift lock does not operate.	<input type="checkbox"/> Yes / <input type="checkbox"/> No
	i) Key illumination blinks.	<input type="checkbox"/> Yes / <input type="checkbox"/> No

## Check List for Interview

LAN SYSTEM (DIAGNOSTICS)

---

### 4. CONDITIONS UNDER WHICH TROUBLE OCCURS

Driving condition	<input type="checkbox"/> At standstill (While idling) <input type="checkbox"/> When the vehicle is running      Vehicle speed km/h (MPH) <input type="checkbox"/> While accelerating      Acceleration    km/h (MPH) to    km/h (MPH) <input type="checkbox"/> Decelerating (With braking)      Deceleration    km/h (MPH) to    km/h (MPH) <input type="checkbox"/> Decelerating (Without braking)      Deceleration    km/h (MPH) to    km/h (MPH)
	<input type="checkbox"/> Flat road <input type="checkbox"/> Uphill <input type="checkbox"/> Downhill <input type="checkbox"/> Gravel road <input type="checkbox"/> Bumpy road <input type="checkbox"/> Snowy road
	Does it occur when operating any part? Operated part: Trouble symptom:
	Are there any other troubles occurred? From where: Trouble symptom:

## 3. General Description

### A: CAUTION

#### 1. SUPPLEMENTAL RESTRAINT SYSTEM “AIRBAG”

Airbag system wiring harness is routed near the body integrated unit and twisted pair line.

#### CAUTION:

- Do not use electrical test equipment on any airbag system wiring harness and connector circuit.
- Be careful not to damage the airbag system wiring harness when servicing the body integrated unit and LAN system.

#### 2. LAN SYSTEM

- Bus line of LAN system is twisted pair line. Be careful not to bypass or partly unbind the twisted pair line.
- Do not make clearance between bus lines (CAN High, CAN Low).
- Difference of bus line length should be within 10 cm (3.94 in).
- Fray near the connector should be within 8 cm (3.14 in).

(A) Bypass wire connection

- If the characteristics of the twisted pair line are changed, it may extremely weaken against noise.
- When repairing the harness, connect the wires using soldering and protect it with insulating tape etc.

(A) Soldering and protection with insulating tape

### B: INSPECTION

Before performing diagnostics, check the following item which might affect body integrated unit malfunctions.

- 1) Measure the battery voltage and check electrolyte.

**Standard voltage: 12 V or more**

**Specific gravity: Above 1.260**

- 2) Check the fuse condition.  
Make sure that ampere of the fuse is setting value, and it is not blown out. While doing this, also check the backup fuse condition.
- 3) Check the connecting condition of harness and harness connector.
- 4) Confirm that a setting that does not match the vehicle equipment, is not set in the body integrated unit. <Ref. to LAN(diag)-18, REGISTRATION BODY INTEGRATED UNIT (EQUIPMENT SETTING), OPERATION, Subaru Select Monitor.>
- 5) Make sure that a setting that does not match the vehicle equipment, is not set in the function setting (ECM customizing) of the body integrated unit. <Ref. to LAN(diag)-21, FUNCTION SETTING (ECM CUSTOMIZING), OPERATION, Subaru Select Monitor.>
- 6) Confirm “Factory initial setting” of body integrated unit registrations is “Market”.
- 7) Confirm key illumination does not blink with ignition switch turned to ON.

# Electrical Component Location

## LAN SYSTEM (DIAGNOSTICS)

## 5. Control Module I/O Signal

### A: ELECTRICAL SPECIFICATION

CS-00273

Contents	Connector No.	Terminal No.	Signal (V)	Note
			Ignition switch ON (engine OFF)	
System control power supply	B281	2	10 — 13 V	Always
Backup power supply	B280	7	10 — 13 V	When backup fuse is installed
Ignition power supply	i84	1	10 — 13 V	Ignition ON
ACC power supply	i84	24	10 — 13 V	ACC ON
Ground	i84	21	0 V	Always
	B281	9		
	B281	8		
	B280	22		
Key warning switch	B281	7	10 — 13 V	When ignition key inserted
Stop light switch	B281	23	10 — 13 V	When brake pedal depressed
Illumination control switch (Bright switch)	i84	30	10 — 13 V (at dimmer ON)	Cancel the extinction of the clock and audio illumination
Illumination volume (Vi1)	i84	10	4.5 — 5.5 V	Small light ON
Illumination volume (Vi2)	i84	2	0.5 — 4.5 V	Small light ON
Illumination volume (Vi3)	i84	25	0 V	Ground circuit
Illumination output	i84	5	Pulse signal	Small light ON
Front fog light SW input	B281	17	10 — 13 V	Front fog light ON
Door switch input Driver's seat	i84	19	Less than 1 V (10 — 13 V at OFF)	Driver's door open (ON)
Door switch input Passenger's seat	i84	32	Less than 1 V (10 — 13 V at OFF)	Passenger's door open (ON)
Door switch input Rear RH seat	i84	18	Less than 1 V (10 — 13 V at OFF)	Rear RH door open (ON)
Door switch input Rear LH seat	i84	31	Less than 1 V (10 — 13 V at OFF)	Rear LH door open (ON)
Door switch Trunk/Rear gate	i84	17	Less than 1 V (10 — 13 V at OFF)	Trunk/Rear gate open (ON)
Manual switch (LOCK)	i84	15	Less than 1 Ω	Door lock switch ON

## Control Module I/O Signal

### LAN SYSTEM (DIAGNOSTICS)

Contents	Connector No.	Terminal No.	Signal (V)	Note
			Ignition switch ON (engine OFF)	
Manual switch (UNLOCK)	i84	29	Less than 1 Ω	Door unlock switch ON
Door lock power supply	i84	34	10 — 13 V	Always
All door lock output	i84	7	10 — 13 V	Manual lock switch, door key switch ON
Driver's door UNLOCK output	i84	23	10 — 13 V	Driver's seat unlock signal ON
All door UNLOCK output	i84	8	10 — 13 V	ALL door unlock signals ON
Rear gate UNLOCK output	i84	22	10 — 13 V	When the rear gate release switch is ON with all seats unlocked
Key/shift lock power supply	B281	1	10 — 13 V	Always
Shift lock output	B280	6	10 — 13 V	Ignition switch ON, shift position "P" range, foot brake ON (Only AT)
Key locking output	B280	5	10 — 13 V	Except P range, ignition key is inserted, ignition switch ON (AT model)
Wiper deicer switch	i84	14	Less than 1 Ω	Wiper deicer switch ON
Wiper deicer relay output	B280	14	1 V or less	Wiper deicer relay ON
Rear defogger switch	i84	28	Less than 1 Ω	Rear defogger switch ON
Rear defogger relay output	B281	16	1 V or less	Rear defogger relay ON
Shift switch (ON)	B281	26	Less than 1 Ω	At Manual mode
Shift switch (UP)	B281	15	Less than 1 Ω	At Manual mode UP
Shift switch (DOWN)	B281	25	Less than 1 Ω	At Manual mode DOWN
P range switch	B281	13	Less than 1 Ω	Shift range P position
Impact sensor	B281	5	8 V or more (pulse signal is usually used)	Impact sensor ON (Model with impact sensor)
Fuel level sensor	B281	19	0 — 102.3 Ω	Resistance differs according to the fuel level (displays resistance combining level gauge main and sub)
Ambient sensor	B281	3	0.5 — 4.5 V	SIG
	B281	10	0 V	GND
Seat belt switch (driver's seat)	i84	4	Less than 1 Ω	When driver's seat belt is not worn
Seat belt switch (Passenger's seat)	i84	13	Less than 1 Ω	When passenger's seat belt is not worn
Seat belt warning light (driver's seat)	i84	20	Less than 1 Ω	When driver's seat belt is worn
Seat belt warning light (Passenger's seat)	B281	27	Less than 1 Ω	When passenger's seat belt is worn
Rear wiper switch (ON)	B281	6	Less than 1 Ω	Rear wiper switch ON
Rear wiper switch (INT)	B281	18	Less than 1 Ω	Rear wiper switch ON
Rear washer switch	B281	27	Less than 1 Ω	Rear washer switch ON
Rear wiper power supply	B280	21	10 — 13 V	Ignition switch ON
Rear wiper ON output	B280	1	10 — 13 V	Rear wiper switch ON
Rear wiper return	B280	8	10 — 13 V	At wiper reversing
		1 — 8	10 — 13 V	

# Control Module I/O Signal

LAN SYSTEM (DIAGNOSTICS)

Contents	Connector No.	Terminal No.	Signal (V)	Note
			Ignition switch ON (engine OFF)	
Room light output	B280	3	1 V or less	When LOCK, UNLOCK with keyless entry
Key ring illumination output	B280	4	1 V or less	Ignition key removed, driver's door open
Turn hazard output	B280	12	1 V or less	When operating keyless entry answer back
Keyless Buzzer Output	i84	6	10 — 13 V	When operating keyless entry answer back
Security horn output	B280	11	1 V or less	When operating security horn
Security indicator light output	i84	33	Approx. 1 V	At ignition key removed, immobilizer operating
TPMS registration check signal input	B281	4	1 V or less	When inputting registration check signal
Keyless communication	i84	9	Serial communication	At keyless entry signal received
High speed CAN circuit	B280	20	Between B20 — B30 Serial communication	At communicating (sending and receiving)
High speed CAN circuit	B280	30		
Low-speed CAN circuit 1	i84	27	Between A26 — A27 Serial communication	At communicating (sending and receiving)
Low-speed CAN circuit 1	i84	26		
Low-speed CAN circuit 2	B280	26	Between B25 — B26 Serial communication	At communicating (sending and receiving) (Model with auto A/C)
Low-speed CAN circuit 2	B281	25		
Immobilizer antenna	B281	20 — 21	Serial communication	—
Immobilizer communication (Main)	B280	18 (Back-up 28)	Serial communication	—
Subaru Select Monitor communication	B280	19	Serial communication	—

## B: WIRING DIAGRAM

<Ref. to WI-229, WIRING DIAGRAM, CAN Communication System.> <Ref. to WI-143, AUTO A/C MODEL, WIRING DIAGRAM, Air Conditioning System.>

### 6. Subaru Select Monitor

#### A: OPERATION

##### 1. READ DIAGNOSTIC TROUBLE CODE (DTC)

###### NOTE:

- DTC is displayed in the sequence of inputting. (When entering two DTCs or more simultaneously, they are displayed in the sequence of priority.)
- When more than two DTCs are displayed, perform the diagnosis of top one.

- 1) Prepare the Subaru Select Monitor kit.
- 2) Connect the diagnosis cable to the Subaru Select Monitor.
- 3) Connect the Subaru Select Monitor to the data link connector.

Data link connector is located in the lower portion of instrument panel (on the driver's side).

###### CAUTION:

**Do not connect the scan tools except for Subaru Select Monitor.**

- 4) Turn the ignition switch to ON (engine OFF) and run the Subaru Select Monitor.
- 5) On the «Main Menu» display screen, select the {Each System Check}.
- 6) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
- 7) On the «Integ. Unit mode» display screen, select the {Diagnostic Code(s) Display}.

###### NOTE:

- For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.
- For details concerning DTCs, refer to the List of Diagnostic Trouble Code (DTC). <Ref. to LAN(diag)-28, List of Diagnostic Trouble Code (DTC).>

##### 2. READ CURRENT DATA

- 1) On the «Main Menu» display screen, select the {Each System Check}.
  - 2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
  - 3) On the «Integ. Unit mode failure diag» display screen, select the {Current Data Display & Save}.
  - 4) On the «Current Data Display & Save» display screen, select the {12 Data Display}.
  - 5) Using the scroll key, scroll the display screen up or down until the desired data is shown.
- A support list contains both of analog and digital data, and they are shown in the following table.

## 3. DISPLAY OF ANALOG DATA

Items to be displayed	Unit of measure	Remarks	Note
BATT Voltage (Control)	10 — 15 V	Body integrated unit input value	Always
BATT Voltage (BACK UP)	10 — 15 V	Body integrated unit input value	Always
IG Power Supply Voltage	10 — 15 V	Body integrated unit input value	Ignition switch ON
ACC voltage	10 — 15 V	Body integrated unit input value	Ignition switch ACC
Illumination VR voltage	0 — 5 V	Body integrated unit output value	Illumination volume input value
Illumi. output d-ratio	0 — 100%	Body integrated unit input value	Small light ON Illumination volume is other than bright.
Ambient temp sensor V	0 — 5 V	Body integrated unit output value	Ignition switch ON
Ambient temperature	-40 — 87.5°C	Body integrated unit output value	Ignition switch ON
Fuel level voltage	0 — 8 V	Body integrated unit input value	Ignition switch ON
Fuel level resistance	0 — 102.3 Ω	Body integrated unit input value	Ignition switch ON
Key-lock solenoid V	6 — 12 V	Body integrated unit output value	Other than parking range Key warning switch ON
Number of regist.	0 — 4	Key No. to register	
Front Wheel Speed	km/h	CAN data input value	Reception from VDC module
VDC/ABS latest f-code	DTC display (Temporarily)	CAN data input value	It is normal when DTC is not been input even if this code is displayed. Reception from VDC
Blower fan steps	0 — 2 levels	CAN data input value	0: OFF, 1: Low, 2: 2 levels or more Reception from air conditioner ECM (AUTO A/C model)
Fuel level resistance2	0 — 102.3 Ω	CAN data output value	Reception from body integrated unit
Fuel consumption	cc/s	CAN data input value	Reception from ECM and transmission to center monitor
Engine coolant temperature	-40 — 130°C	CAN data input value	Reception from ECM
Vehicle lateral G	m/s <sup>2</sup>	CAN data input value	Reception from VDC unit
SPORT Shift Stages	0 — 7 levels	CAN data input value	(0: Light OFF; 1 — 5: Gear display; 6: Fail; 7: ATF temperature High/Low) Reception from TCM (AT model)
Shift Position	0 — 7 levels	CAN data input value	0: 1; 1: 2; 2: 3; 3: 4; 4: D; 5: N; 6: R; 7: P shift position (There is no 8 input.) Reception from TCM (AT model)
Off delay time	OFF, Short, Normal, Long	Body integrated unit setting items	Customize setting

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

### 4. DISPLAY OF ON/OFF DATA

Items to be displayed	Unit of measure	Remarks	Note
key-lock warning SW	ON/OFF	Body integrated unit input value	ON when ignition key is inserted
Stop Light SW	ON/OFF	Body integrated unit input value	ON when brake pedal is depressed
Front fog light SW input	ON/OFF	Body integrated unit input value	ON when Front fog light is ON.
TPMS Input	ON/OFF	Body integrated unit input value	ON when TPMS registration completed
Door unlock SW input	ON/OFF	Body integrated unit input value	ON when door key cylinder is in UNLOCK
Driver's door SW input	ON/OFF	Body integrated unit input value	ON when driver's door is open
P-door SW input	ON/OFF	Body integrated unit input value	ON when passenger's door is open
Rear right door SW input	ON/OFF	Body integrated unit input value	ON when rear right door is open
Rear left door SW input	ON/OFF	Body integrated unit input value	ON when rear left door is open
R Gate SW input	ON/OFF	Body integrated unit input value	ON when trunk/rear gate is open
Manual lock SW input	ON/OFF	Body integrated unit input value	Manual lock switch ON
Manual unlock SW input	ON/OFF	Body integrated unit input value	Manual unlock switch ON
Bright SW input	ON/OFF	Body integrated unit input value	Except automatic A/C
Tiptronic Mode Switch	ON/OFF	Body integrated unit input value	SPORT shift mode ON
TIP UP SW input	ON/OFF	Body integrated unit input value	SPORT shift ON and ON at up operation
TIP DOWN SW input	ON/OFF	Body integrated unit input value	SPORT shift ON and ON at down operation
P SW	ON/OFF	Body integrated unit input value	ON when shift range is in parking
R wiper ON SW input	ON/OFF	Body integrated unit input value	Rear wiper switch ON
R wiper INT SW input	ON/OFF	Body integrated unit input value	ON when rear wiper switch is in INT
R washer SW input	ON/OFF	Body integrated unit input value	Rear washer switch ON
Wiper deicer SW input	ON/OFF	Body integrated unit input value	Wiper deicer switch ON
Rear defogger SW	ON/OFF	Body integrated unit input value	Rear defogger switch ON (manual A/C)
Driver's seat belt SW input	ON/OFF	Body integrated unit input value	Driver's seat buckle switch ON
P seatbelt SW input	ON/OFF	Body integrated unit input value	Passenger's seat buckle switch ON
Fr wiper input	ON/OFF	Body integrated unit input value	ON when front wiper is operating
Identification SW input	ON/OFF	Body integrated unit input value	ON with sedan
R defogger output	ON/OFF	Body integrated unit output value	ON when rear defogger relay is operating
Door lock actuator LOCK output	ON/OFF	Body integrated unit output value	ON when lock signal is output
All seat UNLOCK output	ON/OFF	Body integrated unit output value	ON when unlock signal is output
D-seat UNLOCK output	ON/OFF	Body integrated unit output value	ON when unlock signal is output
R gate/trunk UNLK output	ON/OFF	Body integrated unit output value	ON when rear gate/trunk unlock signal is output
R wiper output	ON/OFF	Body integrated unit output value	ON when rear wiper is operating
Shift lock solenoid	ON/OFF	Body integrated unit output value	ON when shift lock solenoid is operating (AT model)
Key locking output	ON/OFF	Body integrated unit output value	ON when key lock solenoid is operating (AT model)
Wiper deicer SW input	ON/OFF	Body integrated unit output value	ON when wiper deicer is operating
Starter cutting output	ON/OFF	Body integrated unit output value	
Hazard Output	ON/OFF	Body integrated unit output value	ON when keyless lock/unlock signal is received (when keyless switch connector is removed)
Keyless Buzzer Output	ON/OFF	Body integrated unit output value	ON when keyless lock/unlock signal is received (when keyless switch connector is removed)
Horn Output	ON/OFF	Body integrated unit output value	ON when security warning is operating

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Remarks	Note
Siren Output	ON/OFF	Body integrated unit output value	ON when siren is installed, customize settings are enabled, and security warning is operating
D-belt warning light O/P	ON/OFF	Body integrated unit output value	ON when Ignition switch is turned to ON, and buckle switch is turned off
P-belt warning light O/P	ON/OFF	Body integrated unit output value	ON when Ignition switch is turned to ON, occupant is seated, and buckle switch is turned off
Illumination light O/P	ON/OFF	Body integrated unit output value	ON when illumination is illuminated
Room light output	ON/OFF	Body integrated unit output value	ON when keyless lock/unlock signal is received (when keyless switch connector is removed)
Key illumi. light o/p	ON/OFF	Body integrated unit output value	ON when key illumination light is illuminated
Immobilizer light output	ON/OFF	Body integrated unit output value	ON when immobilizer pilot light blinks
Keyless operation 1	Registration/Normal	Body integrated unit input value	Not supported by North American specifications
Keyless operation 2	Clear/Normal	Body integrated unit input value	Not supported by North American specifications
CC Main Light	On/Off	CAN data input value	Cruise control switch on Reception from ECM and transmission to combination meter
CC Set Light	On/Off	CAN data input value	On when cruise control vehicle speed is set Reception from ECM and transmission to combination meter
SPORT Light	On/Off	CAN data input value	SPORT mode switch ON Reception from TCM and transmission to combination meter (AT model)
SPORT Blink	Blink/Off	CAN data input value	TCM error signal reception ON Reception from TCM and transmission to combination meter (AT model)
ATF temperature light	On/Off	CAN data input value	ATF oil temperature rise ON Reception from TCM and transmission to combination meter (AT model)
ATF Blink	Blink/Off	CAN data input value	4AT model: During learning control and bleeding control valve air
Tire diameter abnormal 1	On/Off	CAN data input value	4AT model: When FWD fuse is installed
Tire diameter abnormal 2	Blink/Off	CAN data input value	ON when difference in rotation between front and rear wheels is 4% or more Reception from TCM and transmission to combination meter (AT model)
SPORT Shift (UP)	UP/OFF	CAN data input value	ON when shift-up operation available lamp in the combination meter lights (AT model)
SPORT Shift (DOWN)	DOWN/OFF	CAN data input value	ON when shift-down operation available lamp in the combination meter lights (AT model)
SPORT Shift (buzzer 1)	ON/OFF	CAN data input value	Reception from TCM and transmission to combination meter (AT model)
SPORT Shift (buzzer 2)	ON/OFF	CAN data input value	Not supported by North American specifications
ABS/VDC Judging	ABS/VDC	CAN data input value	Transmission from vehicle dynamic control (VDC) to high speed control module
Small light SW	ON/OFF	CAN data input value	ON when small light is illuminated

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

Items to be displayed	Unit of measure	Remarks	Note
DRL	ON/OFF	CAN data input value	Headlight switch OFF, ignition switch ON (during DRL operation)
R defogger SW	ON/OFF	CAN data input value	Rear defogger switch ON
Australia Judging Flag	Australia/Others	CAN data output value	North American specifications have others
Large diameter tires	Large diameter/others	CAN data output value	Reception from combination meter
Number of cylinders	4 cylinders/6 cylinders	CAN data input value	—
E/G camshaft specification	SOHC/DOHC	CAN data input value	—
E/G Turbo	Turbo/Non-turbo	CAN data input value	—
E/G displacement (2.5 L)	2.5 L/ OFF	CAN data input value	—
E/G displacement (3.0 L)	3.0 L/ OFF	CAN data input value	—
AT/MT Model ID Signal	AT model / MT model	CAN data input value	—
Blower fan information	ON/OFF	CAN data input value	—
Keyless buzzer	ON/OFF	CAN data output value	ON when keyless answer-back buzzer operates (when keyless switch connector is removed)
Center display failure	OK/NG	CAN data input value	Reception from center display (NAVI monitor)
NAVI Failure	OK/NG	CAN data input value	Reception from Center Display
IE Bus failure	Can not use	CAN data input value	Reception from Center Display
Auto A/C failure	OK/NG	CAN data input value	Reception from auto A/C module
EBD Warning Light	OK/OFF	CAN data input value	Reception from VDC/ABS and transmission to combination meter
ABS Warning Light	OK/OFF	CAN data input value	Reception from VDC/ABS and transmission to combination meter
VDC OFF flag	ON/OFF	CAN data input value	Reception from VDC/ABS and transmission to combination meter
VDC/ABS OK B	OK/NG	CAN data input value	Reception from VDC/ABS (When an error is detected in either of the yaw rate, G sensor, steering sensor, or pressure sensor)

### NOTE:

For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

## 5. CONFIRMATION OF CURRENT SETTING

- 1) On the «Main Menu» display screen, select the {Each System Check}.
- 2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
- 3) On the «Integ. Unit mode failure diag» display screen, select the {Current Data Display & Save}.
- 4) On the «Current Data Display & Save» display screen, select the {12 Data Display}.
- 5) Using the scroll key, scroll the display screen up or down until the desired data is shown.
- 6) Display the following item and record the settings.

Required items for new registration (Except for system not equipped)

Contents	Item to confirm				Remarks
	1	2	3	4	
Key No. to register	1	2	3	4	Registered ID type
Off delay	OFF	Long	Normal	Short	Setting for lighting off time
Outside Temp Offset	-2°C — +2°C (0.5°C increments)				Adjustment of outside temperature
Rr defogger op. mode	Normal		Continuous		Normal: OFF at 15 minutes of operation Continuous: Operations from switch ON to OFF
Wiper deicer op. mode	Normal		Continuous		Normal: OFF at 15 minutes of operation Continuous: Operations from switch ON to OFF, repeats ON for 15 minutes, OFF for 2 minutes
Security Alarm Setup	ON		OFF		ON: Warning device operation possible OFF: Warning device does not operate
Impact Sensor Setup	ON		OFF		ON: Impact sensor operation possible OFF: Impact sensor does not operate Turn OFF for vehicles not equipped with an Impact Sensor
Alarm monitor delay setting	ON		OFF		ON: Monitor after a fixed period of time from reception of the keyless lock signal OFF: Monitor after reception of the keyless lock signal
Lockout prevention	ON		OFF		ON: Lockout prevention operation OFF: Lockout prevention not operated
Impact Sensor	Yes		No		Yes: Impact sensor equipped No: Impact sensor not equipped Always set to no for vehicles not equipped with the impact sensor.
Answer-back buzzer setup	ON		OFF		ON: Answer-back buzzer operation possible OFF: Answer-back buzzer not operated
Hazard answer-back setup	ON		OFF		ON: Hazard answer-back buzzer operation possible OFF: Hazard answer-back buzzer not operated
Ans.-back Buzzer	Yes		No		Yes: Vehicle equipped with answer-back buzzer No: Vehicle not equipped with answer-back buzzer
Passive arming	ON		OFF		ON: Passive arming operation possible OFF: Passive arming not in operation
Belt warning Switch	ON		OFF		ON: All alarms except the first stage not in operation OFF: Belt alarm operation possible
Door open warning (prevention of battery run-out)	Yes		No		Yes: Door interlocked room light goes off when on for 10 minutes consecutively when door is open. No: Room light remains illuminated until door is closed.
A/C ECM setting	Yes		No		Set models with auto A/C to Yes.
Wiper deicer	Yes		No		Yes: Vehicle equipped with wiper deicer No: Vehicle not equipped with wiper deicer
Rear fog light setting	Yes		No		Not supported by North American specifications
Factory initial setting	Factory		Market		Do not change to the factory mode. Set to market when using normally.

### 6. REGISTRATION BODY INTEGRATED UNIT (EQUIPMENT SETTING)

#### CAUTION:

Body integrated unit is core of LAN system, and also can select the function of all vehicle system control. It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.

If registrations and function setting are different from vehicle equipment, vehicle system does not operate normally and diagnosis cannot be performed correctly. Pay attention to following item.

- Be sure to correspond registrations and function settings to vehicle equipment.
- Do not change the settings of vehicle improperly.
- Confirm key illumination does not blink or “Factory initial setting” of body integrated unit registrations is “Market”. If “Factory initial setting” is set to “Factory,” key illumination blinks when ignition key is turned ON, to notify that the settings are unconfirmed.
- Key illumination does not blink with ignition switch turned to ON and go off with door closed.
- Be sure to register immobilizer if body integrated unit is replaced with a new part. (models with immobilizer)
- Make a registration of immobilizer when the parts related to immobilizer have been replaced. Refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.

- 1) Turn the ignition switch to OFF.
- 2) Connect the Subaru Select Monitor to the data link connector.

- 3) Turn the ignition switch to ON and run the Subaru Select Monitor.
- 4) On the «Main Menu» display screen, select the {Each System Check}.
- 5) On the «Each System Check» display screen, select the {Integ. Unit mode} and then select the «ECM customizing».

6) Change the setting with UP/DOWN key and select the [OK].

List of body integrated unit registration item

**NOTE:**

Setting is different depending on the grade of vehicle.

Data	Initial setting	Registration	Remarks
A/C ECM setting	OFF	ON	Illumination control does not operate if A/C ECM setting is set to "OFF" in case of model with auto A/C.
		OFF	If A/C ECM setting is set to "ON" in case of model without auto A/C, illumination change to night illumination and it is difficult to be recognized.
P/W ECM setting	OFF	ON	Set to "OFF".
		OFF	
Wiper deicer setting	OFF	ON	ON signal does not output with operation of wiper deicer switch if wiper deicer is set to "OFF" in models with a wiper deicer.
		OFF	
Rear fog light setting	OFF	ON	Set to "OFF".
		OFF	
Factory initial setting (Reset of body integrated unit)	Factory	Factory (Reset)	If Factory initial setting is set to "Factory", registrations of items above is changed to "OFF". After setting, be sure to set to "Market".
		Market (Settlement)	

**CAUTION:**

- It is possible to control the original functions of vehicle when registrations of body integrated unit and function setting are corresponded to vehicle equipment.
- When body integrated unit is a new part or "Factory" mode, key illumination blinks to show equipment settings have not been completed.
- Be sure not to change Factory initial setting except installation of new body integrated unit.

**NOTE:**

"Factory" mode:

- Body integrated unit has not been set yet. It can be recognized by key illumination blinking with ignition switch turned to ON.
- All replacement body integrated units are set to Factory mode. When replacing a body integrated unit, be sure to perform the registration operation.

"Market" mode:

Each settings have been set. It can be recognized by key illumination coming on in concocting with room light and going off with ignition switch turned to ON.

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

---

7) Perform the Factory setting. On the «ECM customizing» display screen of Subaru Select Monitor, select the {Factory initial setting} and select the [OK].

8) Change the mode from Factory to Market.

9) Change to the immobilizer cartridge, and register the immobilizer key. (For models with immobilizer, perform the procedures according to “IMMOBILIZER TEACHING OPERATION MANUAL”.)

10) When key registration is completed, “Do you want to register remote engine start?” is displayed. Perform registration only for equipped models.

11) Perform the function setting (ECM customizing).

<Ref. to LAN(diag)-21, FUNCTION SETTING (ECM CUSTOMIZING), OPERATION, Subaru Select Monitor.>

### NOTE:

For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

## 7. CLEAR MEMORY MODE

1) On the «Main Menu» display screen, select the {2. Each System Check}.

2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.

3) Select the [OK] after the information of body integrated unit type is displayed.

4) On the «Integ. unit mode failure diag» display screen, select the {Clear Memory}.

Display	Contents to be monitored
Clear Memory?	Clear function of DTC and freeze frame data

5) When “Done” is shown on the display screen, turn the ignition switch to OFF.

### NOTE:

For details concerning the operation procedure, refer to the “PC application help for Subaru Select Monitor”.

## 8. FREEZE FRAME DATA

### NOTE:

- Data stored at the time of trouble occurrence is shown on the display.
- Freeze frame data will be memorized maximum to 20.
- If freeze frame data is not stored in memory correctly (caused by low power supply of body integrated unit), DTC will be displayed with “?” on the head of it in the Subaru Select Monitor display. This shows it may be an unreliable reading.

## 9. FUNCTION SETTING (ECM CUSTOMIZING)

- 1) On the «Main Menu» display screen, select the {Each System Check}.
- 2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
- 3) On the «Integ. unit mode failure diag» display screen, select the {ECM customizing}.
- 4) Change the setting with UP/DOWN key and set with the [OK].

List of function setting item (ECM customizing)

Data	Initial setting value	Customize setting	Remarks	Destination Specifications
Off delay time	Normal		Delay time below can be selected by setting.	
			After door closed	After key unlock
		OFF	0 seconds	0 seconds
		Short	3 seconds	10 seconds
		Normal	5 seconds	20 seconds
		Long	8 seconds	30 seconds
Outside Temp Offset	0°C	-2 — +2 (increment of 0.5)	If it is set to +2.0°C at outside temperature of 12°, the displayed outside temperature will be 14°C.	
Rr defogger op. mode	15 min.	15 min.	Wiper deicer stops in 15 minutes automatically after switch is turned to ON.	
		Continuous	The wiper deicer activates for 15 minutes and turns inactive for 2 minutes repeatedly until the switch is turned OFF.	
Wiper deicer op. mode	15 min.	15 min.	Wiper deicer stops in 15 minutes automatically after switch is turned to ON.	
		Continuous	The wiper deicer activates for 15 minutes and turns inactive for 2 minutes repeatedly until the switch is turned OFF.	
Security Alarm Setup	ON	ON	Security alarm (hazard, horn or siren) in active condition	
		OFF	Security alarm in inactive condition	
Impact Sensor Setup	OFF	ON	Enabled when the Impact Sensor Setup is set to "ON". Impact sensor function becomes activated.	
		OFF	Impact sensor in inactive condition (Always set to OFF for vehicles not equipped with the sensor.)	
Alarm monitor delay setting	ON		After the keyless lock operation, the alarm monitor starts after the following delay time has passed.	
		ON	Delay time is 30 seconds.	
		OFF	Delay time is 0 seconds.	
Lockout prevention	ON	ON	Lockout prevention in inactive condition (The function does not operate if safety knob is locked by hand.)	
		OFF	Lockout prevention in inactive condition	
Impact Sensor	OFF	ON	Vehicle is controlled in impact sensor equipped mode. (Make sure to set to OFF for models without the impact sensor. When set to ON, hazard, the horn or siren will operate after doors are locked by the keyless entry system operation (Alarm monitor start).)	
		OFF	Vehicle is controlled in no impact sensor mode.	
Answer-back buzzer setup	ON	ON	Workable when answer-back buzzer setup is set to "ON". When lock/unlock is selected by keyless entry system operated, hazard answer-back buzzer operates.	
		OFF	When lock/unlock is selected by keyless entry system operated, answer-back buzzer does not sound.	

# Subaru Select Monitor

## LAN SYSTEM (DIAGNOSTICS)

Data	Initial setting value	Customize setting	Remarks	Destination Specifications
Hazard answer-back setup	ON	ON	Workable when hazard answer-back setup is set to "ON" When lock/unlock is selected by keyless entry system operated, hazard answer-back buzzer operates.	
		OFF	When lock/unlock is selected by keyless entry system operated, hazard answer-back does not operate.	
Ans.-back Buzzer	ON	ON	Vehicle is controlled in answer-back buzzer equipped mode.	
		OFF	Vehicle is controlled in answer-back buzzer non-equipped mode. (Always set to OFF for vehicles not equipped with the answer-back.)	
Initial Keyless Setting	—	—	—	
		Execution	Settings of keyless entry system are initialized. (Auto-lock time: 30 sec., Answer-back buzzer setup: ON, Hazard answer-back setup: ON, Automatic locking setup: ON, Ans.-back Buzzer: ON)	
Initial button setting	—	—	—	
		Execution	Settings of each function are initialized. (Off delay time: Normal, Rr defogger op. mode: 15 min., Wiper deicer op. mode: 15 min., Lockout prevention: ON)	
Passive arming	OFF	ON	Enabled when passive arming is set to "ON".	
		OFF		
Door open warning (prevention of battery run-out)	ON	ON	If detecting door open for 10 minutes, room light, key illumination and door warning light are turned off to prevent battery run-out.	
		OFF	Room light, key illumination and door warning light is not turned off.	
Belt warning Switch	OFF	ON	Alarm is set off with the indicator lit and buzzer beep from the first to third stage according to the vehicle speed and whether or not seat belts are worn.	
		OFF	Turns off the indicator and stops buzzer except for the first stage.	

5) After setting, make sure that vehicle equipment matches the changed settings in the {Current Data Display & Save}.

### CAUTION:

- The above settings most match the actual vehicle equipment for proper operation.
- Do not change settings other than the above while setting the functions.
- Be sure not to change Factory initial setting except installation of new body integrated unit.

### NOTE:

For details concerning the operation procedure, refer to the "PC application help for Subaru Select Monitor".

## 10.FUNCTION CHECK

In order to check the body integrated unit function, inspect the body integrated unit and actuator using Subaru Select Monitor without operating switches.

- 1) On the «Main Menu» display screen, select the {Each System Check}.
- 2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
- 3) On the «Integ. unit mode failure diag» display screen, select the {Function Check}.
- 4) Select the item to be operated on the «Function Check» display screen with «UP/Down key» and select the [OK].

- 5) Pressing [OK] starts, [NO] cancels the operation and [OK] returns to the System Operation Check Mode display screen.

### NOTE:

If not equipped (based on area or condition), process will not go on.

## Read Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

---

### 7. Read Diagnostic Trouble Code (DTC)

#### A: OPERATION

##### 1. WITHOUT SUBARU SELECT MONITOR

NOTE:

Use the Subaru Select Monitor; DTCs cannot be read without it.

##### 2. WITH SUBARU SELECT MONITOR

For details concerning the DTC read procedure, refer to "Subaru Select Monitor". <Ref. to LAN(diag)-12, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

## 8. Clear Memory Mode

### A: OPERATION

#### 1. WITHOUT SUBARU SELECT MONITOR

**NOTE:**

Use the Subaru Select Monitor for the Clear Memory Mode.

#### 2. WITH SUBARU SELECT MONITOR

For details concerning DTC clear operation, refer to "Subaru Select Monitor". <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.>

### 9. Read Current Data

#### A: OPERATION

- 1) On the «Main Menu» display screen, select the {Each System Check}.
- 2) On the «System Selection Menu» display screen, select the {Integ. Unit mode}.
- 3) On the «Integ. Unit mode failure diag» display screen, select the {Current Data Display & Save}.
- 4) On the «Data Display Menu» display screen, Select the {12 Data Display}.
- 5) Using the scroll key, scroll the display screen up or down until the desired data is shown.  
<Ref. to LAN(diag)-13, DISPLAY OF ANALOG DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-14, DISPLAY OF ON/OFF DATA, OPERATION, Subaru Select Monitor.> <Ref. to LAN(diag)-17, CONFIRMATION OF CURRENT SETTING, OPERATION, Subaru Select Monitor.>

## 10. Function Setting (Customize)

### A: OPERATION

#### 1. WITH SUBARU SELECT MONITOR

For detailed procedures of function setting (ECM customizing), refer to "SUBARU SELECT MONITOR". <Ref. to LAN(diag)-21, FUNCTION SETTING (ECM CUSTOMIZING), OPERATION, Subaru Select Monitor.>

## List of Diagnostic Trouble Code (DTC)

# List of Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

### 1. DTC TABLE

**NOTE:**

When more than two DTC codes are recorded, referring to their combination will make it easy to identify the possible cause. Refer to the list for typical examples.

DTC to Check	Diagnostic Code that was displayed.					Probable cause
	Body integrated unit	ECM	TCM	VDC/ABSCM	Combination meter display (except for meter with MID)	
B1100<Ref. to LAN(diag)-34, DTC B1100 INTEG. UNIT SYSTEM ERROR, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1100	—	—	—	Er IU	There could be a problem in the body integrated unit.
U1221<Ref. to LAN(diag)-63, DTC U1221 CAN-HS ECM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1221	—	P1718	C0057	Er HC	It is possible that the ECM is faulty.
U1222<Ref. to LAN(diag)-65, DTC U1222 CAN-HS TCM NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1222	P0600	—	C0057	Er HC	It is possible that the TCM is faulty.
U1223<Ref. to LAN(diag)-67, DTC U1223 CAN-HS VDC/ABS NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1223	P0600	P1718	—	Er HC	It is possible that the VDC/ABSCM is faulty.
U1321<Ref. to LAN(diag)-81, DTC U1321 CAN-LS METER NO-RECEIVE DATA, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1321	—	—	—	—	It is possible that the combination meter is faulty.
U1313<Ref. to LAN(diag)-80, DTC U1313 CAN-LS MONITOR DATA ABNORMAL, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	U1313	—	—	—	—	It is possible that the navigation monitor is faulty.
B1500<Ref. to LAN(diag)-83, DTC B1500 KEYLESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	B1500	—	—	—	—	It is possible that the keyless entry module is faulty.

## 12. Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### A: COMMUNICATION FOR INITIALIZING IMPOSSIBLE

**NOTE:**

- DTC is displayed in the sequence of the amount of counter numbers.
- When more than two DTCs are displayed, perform the diagnosis of top one.

**DIAGNOSIS:**

Subaru Select Monitor communication line is open or shorted.

**TROUBLE SYMPTOM:**

Not communicable with Subaru Select Monitor.

**WIRING DIAGRAM:**

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No	
1	<b>CHECK IGNITION SWITCH.</b>	Is the ignition switch ON?	Go to step 2.	Turn the ignition switch to ON, and select Integ. Unit mode using Subaru Select Monitor.
2	<b>CHECK BATTERY.</b> 1) Turn the ignition switch to OFF. 2) Measure the battery voltage.	Is the voltage 11 V or more?	Go to step 3.	Charge or replace the battery.
3	<b>CHECK BATTERY TERMINAL.</b>	Is there poor contact at the battery terminal?	Repair or tighten the battery terminal.	Go to step 4.
4	<b>CHECK COMMUNICATION OF SUBARU SELECT MONITOR.</b> 1) Turn the ignition switch to ON. 2) Using the Subaru Select Monitor, check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step 7.	Go to step 5.
5	<b>CHECK COMMUNICATION OF SUBARU SELECT MONITOR.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the body integrated unit connector. 3) Turn the ignition switch to ON. 4) Check whether communication to other systems can be executed normally.	Is the system name displayed?	Go to step 7.	Go to step 6.
6	<b>CHECK HARNESS CONNECTOR BETWEEN EACH CONTROL UNIT AND SUBARU SELECT MONITOR.</b> 1) Turn the ignition switch to ON. 2) Disconnect the body integrated unit connector. 3) Measure the resistance between data link connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 7 — Chassis ground:</b>	Is the resistance 1 M $\Omega$ or more?	Go to step 7.	Repair the harness and connector between each control unit and Subaru Select Monitor.
7	<b>CHECK OUTPUT SIGNAL TO BODY INTEGRATED UNIT.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit and chassis ground. <b>Connector &amp; terminal</b> <b>(B40) No. 7 (+) — Chassis ground (-):</b>	Is the voltage less than 1 V?	Go to step 8.	Repair the harness and connector between each control unit and Subaru Select Monitor.
8	<b>CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND DATA LINK CONNECTOR.</b> Measure the resistance between body integrated unit and data link connector. <b>Connector &amp; terminal</b> <b>(B40) No. 7 — (B280) No. 19:</b>	Is the resistance less than 1 $\Omega$ ?	Go to step 9.	Repair the harness and connector between body integrated unit and Subaru Select Monitor.
9	<b>CHECK INSTALLATION OF BODY INTEGRATED UNIT CONNECTOR.</b> Turn the ignition switch to OFF.	Is the body integrated unit connector inserted into body integrated unit until the clamp locks onto it?	Go to step 10.	Insert the body integrated unit connector into body integrated unit.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>10 CHECK POWER SUPPLY CIRCUIT.</b> 1) Turn the ignition switch to ON (engine OFF). 2) Measure the ignition voltage between body integrated unit connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i84) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 10 V or more?	Go to step 11.	Repair the open circuit of harness between body integrated unit and battery.
<b>11 CHECK HARNESS CONNECTOR BETWEEN BODY INTEGRATED UNIT AND CHASSIS GROUND.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the connector from body integrated unit. 3) Measure the resistance of harness between the body integrated unit and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 19 — Chassis ground:</b>	Is the resistance 1 MΩ or more?	Go to step 12.	Repair the poor contact of harness between body integrated unit and ground.
<b>12 CHECK POOR CONTACT OF CONNECTORS.</b>	Is there poor contact at control unit ground and Subaru Select Monitor?	Repair the poor contact of connector.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>

## CAUTION:

When replacing body integrated unit on the model with immobilizer system, refer to the “REGISTRATION MANUAL FOR IMMOBILIZER”.

## B: DIAGNOSTIC TROUBLE CODE (DTC) IS NOT STORED

### DIAGNOSIS:

Defective combination meter

### TROUBLE SYMPTOM:

- Communication error display in odo/trip meter is not cleared. (Except for meter with MID)
- “No trouble code” is displayed on Subaru Select Monitor.

### NOTE:

If DTC is not displayed on Subaru Select Monitor, LAN communication System should be OK.

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Read the DTC of body integrated unit using Subaru Select Monitor.	Is DTC displayed?	Perform the diagnosis according to DTC.	Go to step 2.
<b>2 CHECK COMBINATION METER.</b> Perform the self-diagnosis of combination meter.	Is combination meter OK?	Go to step 3.	Replace the combination meter. <Ref. to IDI-19, Combination Meter.>
<b>3 CHECK BODY INTEGRATED UNIT.</b> 1) Display the current data of ECM using Subaru Select Monitor. 2) Check data of “body integrated unit data received”.	Is “Yes” displayed?	Go to step 4.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
<b>4 CHECK BODY INTEGRATED UNIT.</b> 1) Display the current data of ECM using Subaru Select Monitor. 2) Check data of “body Integrated unit counter update”.	Is “Yes” displayed?	Repair the poor contact of connector.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## C: DTC B1100 INTEG. UNIT SYSTEM ERROR

### DTC DETECTING CONDITION:

System error in body integrated unit

### TROUBLE SYMPTOM:

- Check light comes on in the combination meter, and displays communication error display “Er IU”. (Except for meter with MID)
- LAN communication immobilizer function may not be executed normally.

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of body integrated unit. Go to step 2.	Go to step 2.
2	<b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Does the displayed DTC indicate current malfunction?	Go to step 4.	Go to step 3.
3	<b>CHECK CURRENT DATA.</b> Using the Subaru Select Monitor, display engine speed and vehicle speed signal from ECM, TCM, VDC/ABS and body integrated unit under the same conditions and compare data.	Does each data match each other?	Temporary poor contact occurs. Perform the clear memory operation.	Go to step 4.
4	<b>CHECK ALL DTCS.</b>	Is DTC concerning ECM displayed?	Go to step 5.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
5	<b>CHECK DTC CONCERNING ECM.</b>	Is output DTC on ECM concerning CAN communication failure?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Perform the diagnosis according to DTC concerning ECM.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## D: DTC B1101 BATT P/SUPPLY MALFUNCTION CONT

### DTC DETECTING CONDITION:

Battery power supply control circuit is open or shorted.

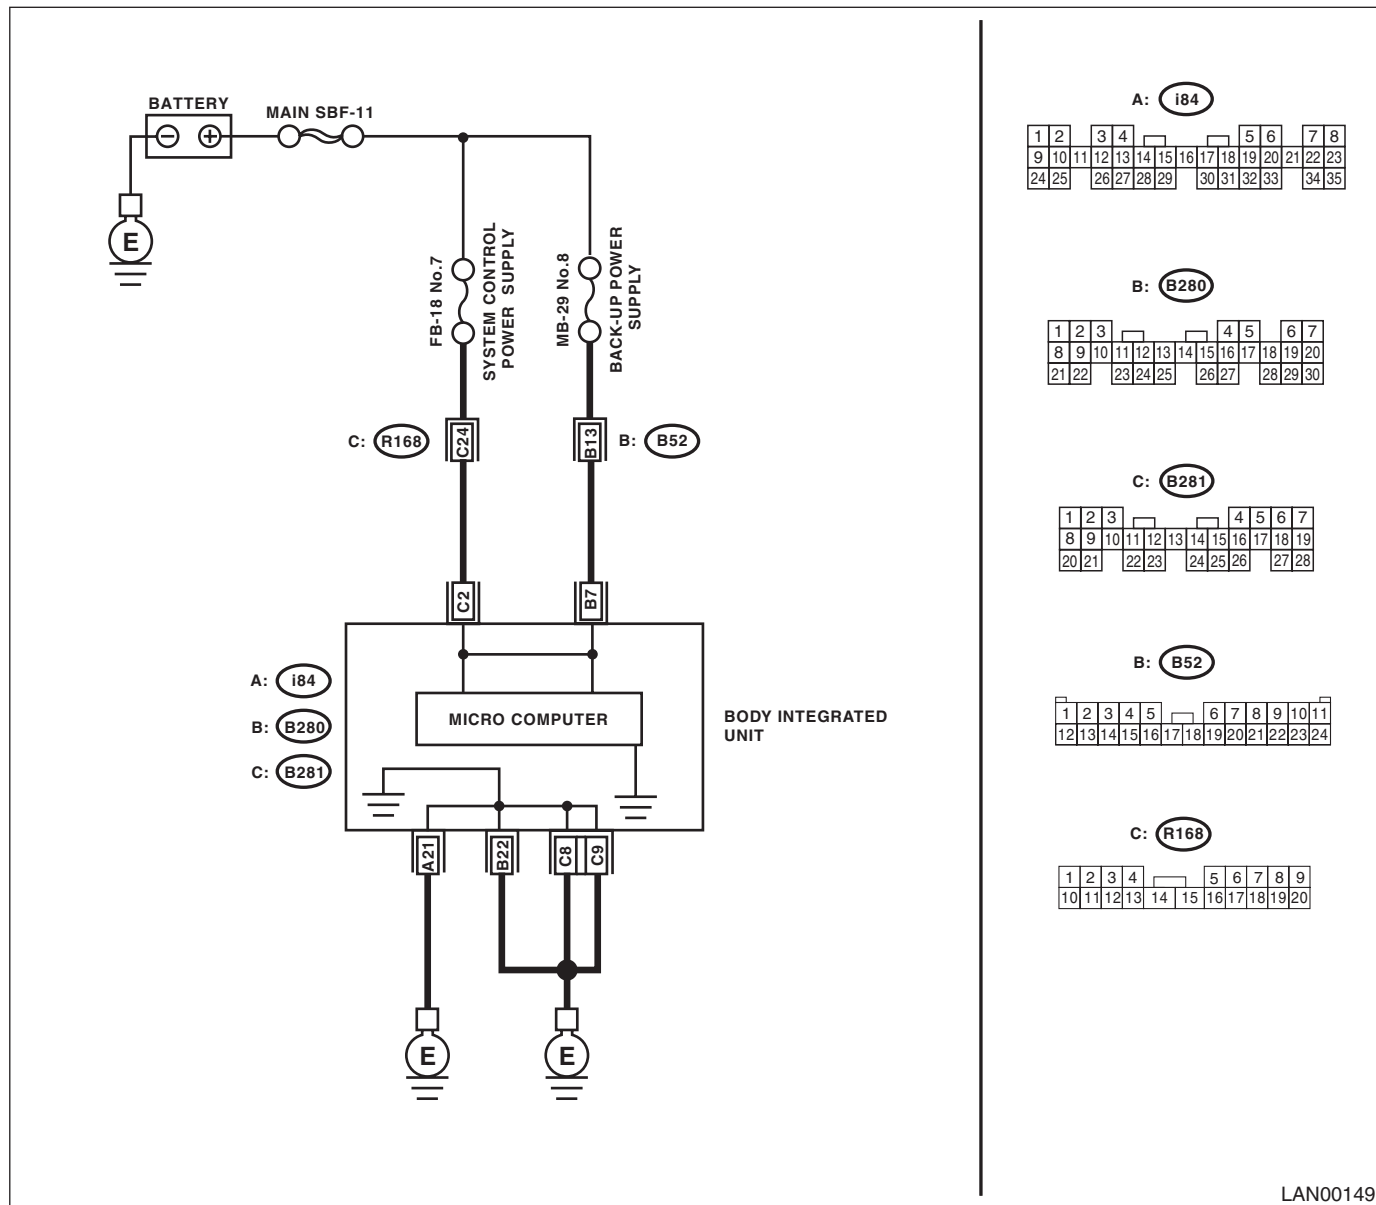

### TROUBLE SYMPTOM:

No malfunction occurs because the back-up power supply is activated.

### NOTE:

When B1102 BATT p/supply malfunction cont is output at the same time, all the function of body integrated unit may not operate.

### WIRING DIAGRAM:

LAN00149

## Diagnostic Procedure with Diagnostic Trouble Code (DTC)

### LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1</b> <b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 7).	Is the fuse blown out?	Replace the fuse (No. 7). If the replaced fuse has blown out easily, repair the short circuit of harness between fuse (No. 7) and body integrated unit.	Go to step 2.
<b>2</b> <b>CONTINUITY CHECK OF WIRING HARNESS.</b> 1) Disconnect the connector (B281) from body integrated unit. 2) Measure the voltage between body integrated unit connector and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B281) No. 2 (+) — Chassis ground (-):</b></i>	Is the voltage 9 — 15 V?	Go to step 3.	Repair the harness for open or shorted circuit between body integrated unit and fuse.
<b>3</b> <b>CHECK POOR CONTACT OF CONNECTORS.</b>	Is there poor contact in body integrated unit connector?	Repair the poor contact of connector.	Go to step 4.
<b>4</b> <b>CHECK BODY INTEGRATED UNIT HARNESS.</b> 1) Connect all connectors. 2) Perform the Clear Memory Mode. 3) Read DTC.	Is the same DTC displayed?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## E: DTC B1102 BATT P/SUPPLY MALFUNCTION CONT

### DTC DETECTING CONDITION:

Battery power supply backup circuit is open or shorted.

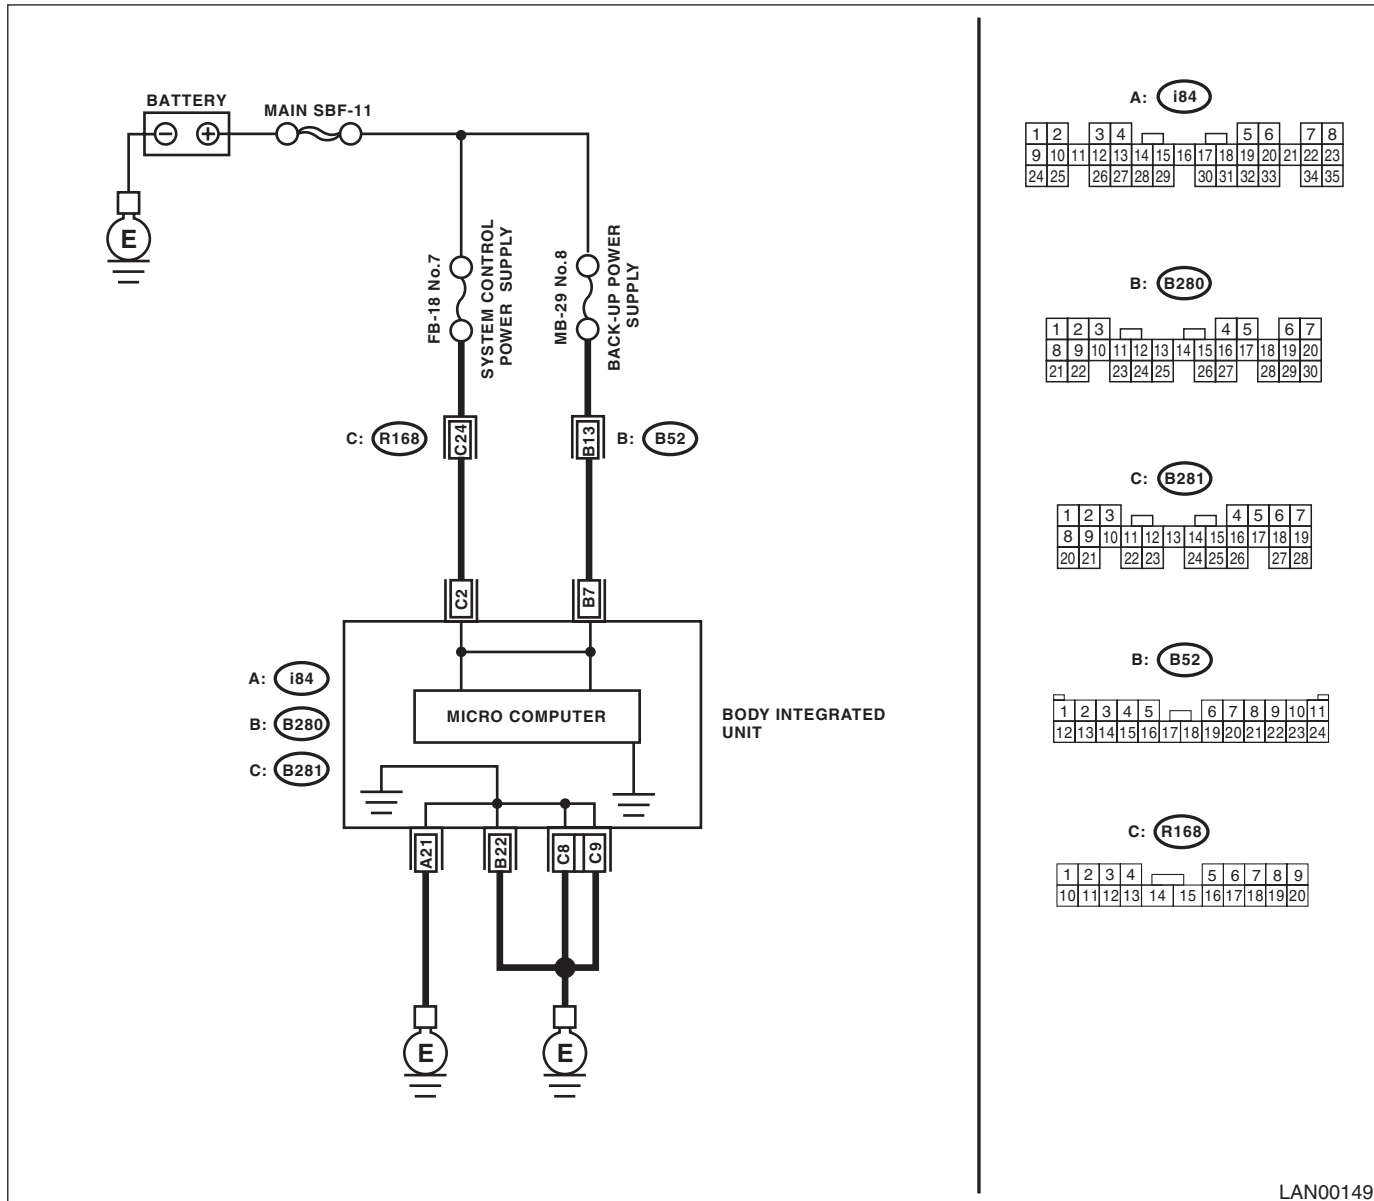

### TROUBLE SYMPTOM:

- Engine malfunction indicator light may illuminate.
- Keyless entry, room light and key illumination do not operate.
- "Er IU" may display in combination meter. (Except for meter with MID)

### NOTE:

When B1101 BATT p/supply malfunction cont is output at the same time, all function of body integrated unit may not function.

### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 8).	Is the fuse blown out?	Replace the fuse (No. 8). If the replaced fuse has blown out easily, repair the short circuit of harness between fuse (No. 8) and body integrated unit.	Go to step 2.
2	<b>CONTINUITY CHECK OF WIRING HARNESS.</b> 1) Disconnect the connector (B280) from body integrated unit. 2) Measure the voltage between body integrated unit connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 7 (+) — Chassis ground (-):</b>	Is the voltage 9 — 15 V?	Go to step 3.	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	<b>CHECK POOR CONTACT OF CONNECTORS.</b>	Is there poor contact in body integrated unit connector?	Repair the poor contact of connector.	Go to step 4.
4	<b>CHECK BODY INTEGRATED UNIT HARNESS.</b> 1) Connect all connectors. 2) Perform the Clear Memory Mode. 3) Read DTC.	Is the same DTC displayed?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## F: DTC B1103 IGNITION POWER FAILURE

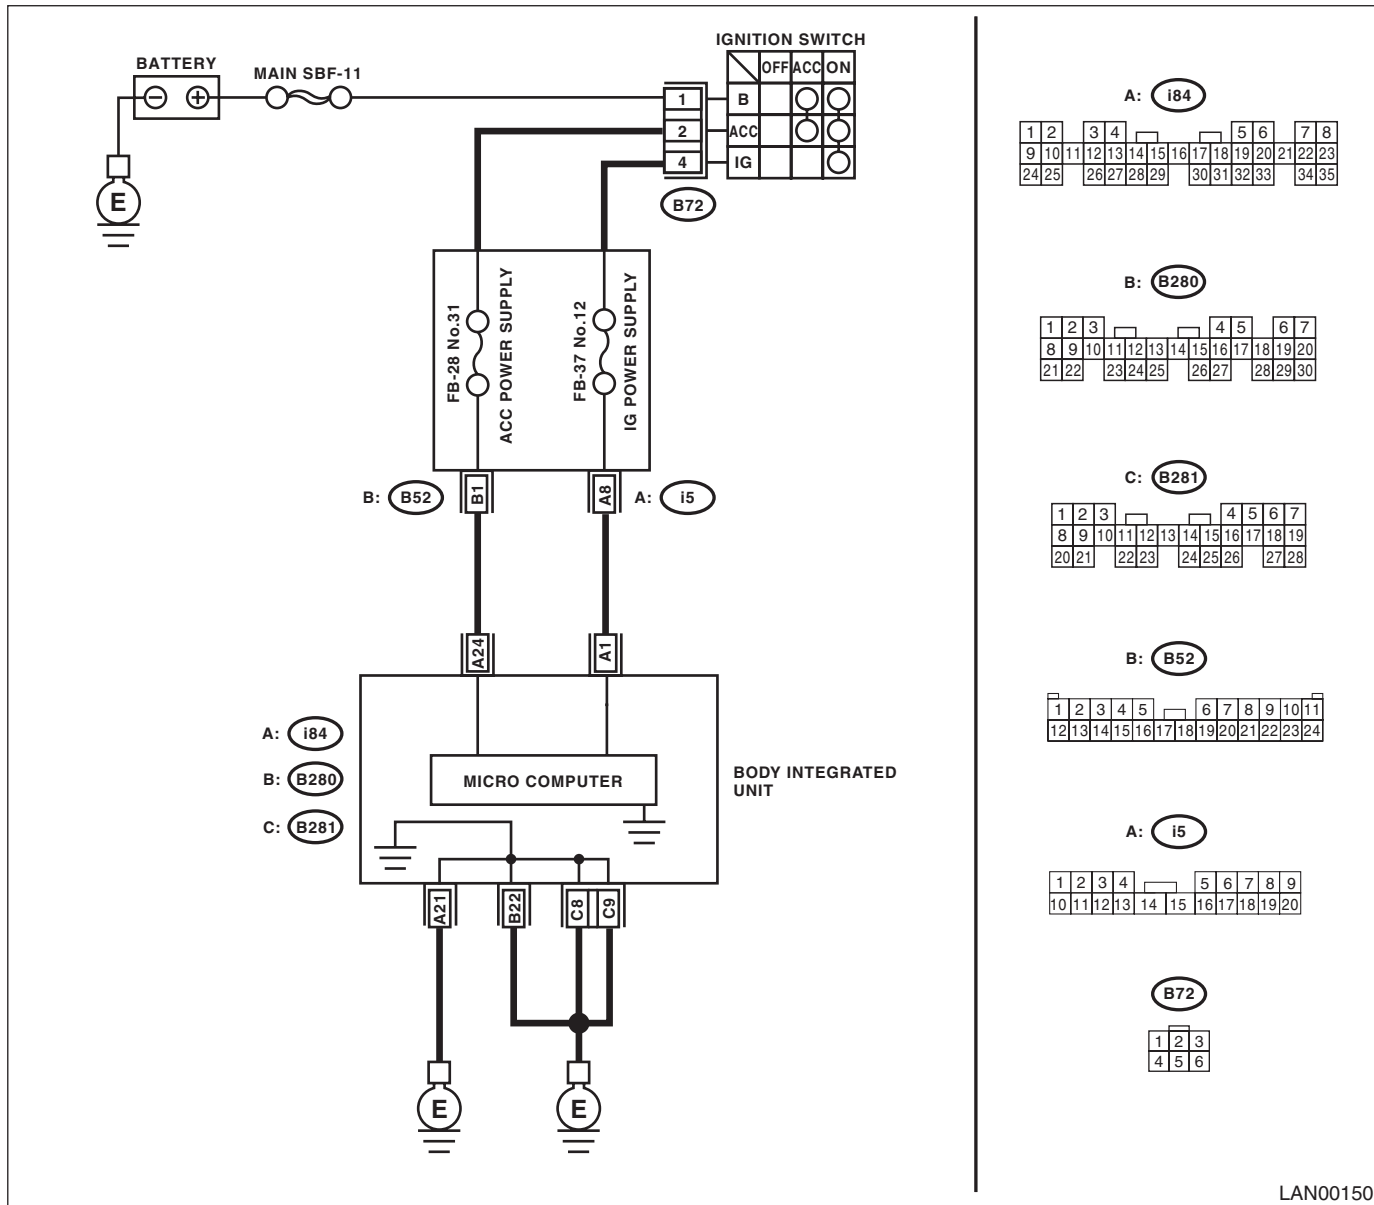

### DTC DETECTING CONDITION:

IGN power supply circuit is open or shorted.

### TROUBLE SYMPTOM:

Symptoms such as illuminating the malfunction indicator light or high speed CAN error display "Er HC" may occur. (Except for meter with MID)

### WIRING DIAGRAM:

LAN00150

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 12).	Is the fuse blown out?	Replace the fuse (No. 12). If the replaced fuse has blown out easily, repair the short circuit of harness between fuse (No. 12) and body integrated unit.	Go to step 2.
2	<b>CONTINUITY CHECK OF WIRING HARNESS.</b> 1) Disconnect the connector (i84) from body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground. <b>Connector &amp; terminal (i84) No. 1 (+) — Chassis ground (-):</b>	Is the voltage 9 — 15 V?	Go to step 3.	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	<b>CHECK POOR CONTACT OF CONNECTOR.</b>	Is there poor contact in body integrated unit connector?	Repair the poor contact of connector.	Go to step 4.
4	<b>CHECK BODY INTEGRATED UNIT HARNESS.</b> 1) Connect all connectors. 2) Perform the Clear Memory Mode. 3) Read DTC.	Is the same DTC displayed?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Temporary poor contact occurs.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## G: DTC B1104 ACC POWER FAILURE

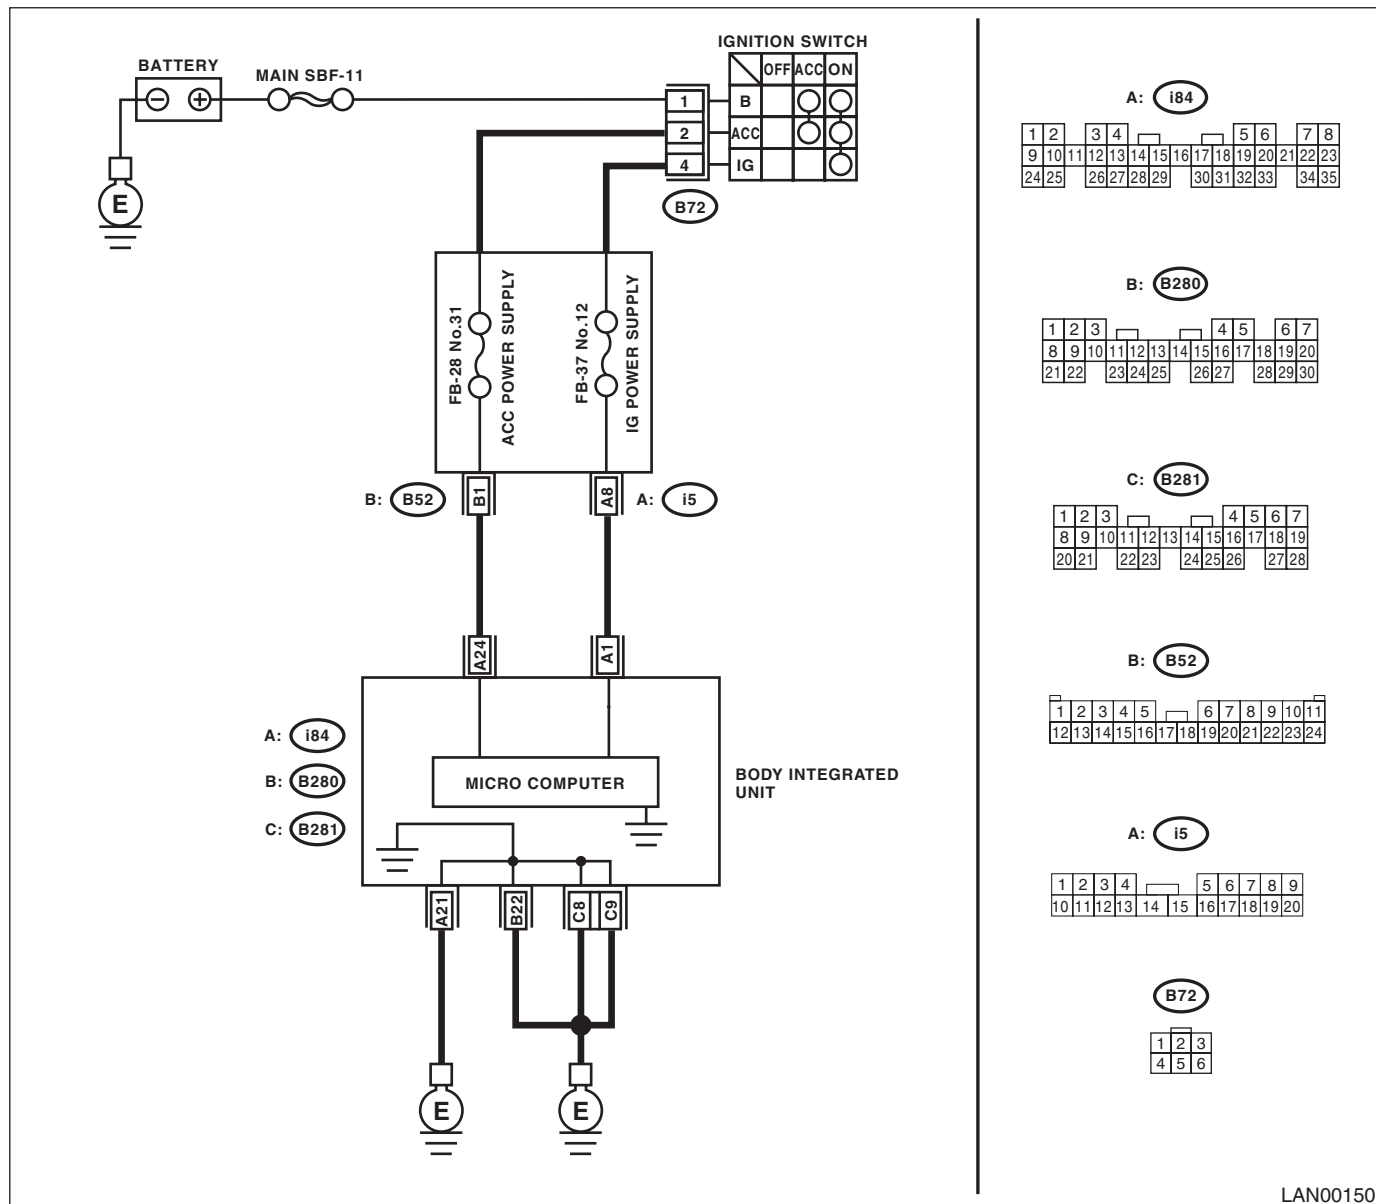

### DTC DETECTING CONDITION:

ACC power supply circuit is open or shorted.

### TROUBLE SYMPTOM:

Rear wiper may not operate at ACC position.

### WIRING DIAGRAM:

LAN00150

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK FUSE.</b> 1) Turn the ignition switch to OFF. 2) Remove the fuse (No. 31).	Is the fuse blown out?	Replace the fuse (No. 31). If the replaced fuse has blown out easily, repair the short circuit of harness between fuse (No. 31) and body integrated unit.	Go to step 2.
2	<b>CONTINUITY CHECK OF WIRING HARNESS.</b> 1) Disconnect the connector (i84) from body integrated unit. 2) Turn the ignition switch to ON. 3) Measure the voltage between body integrated unit connector and chassis ground. <b>Connector &amp; terminal (i84) No. 24 (+) — Chassis ground (-):</b>	Is the voltage 9 — 15 V?	Go to step 3.	Repair the harness for open or shorted circuit between body integrated unit and fuse.
3	<b>CHECK POOR CONTACT OF CONNECTOR.</b>	Is there poor contact in body integrated unit connector?	Repair the poor contact of connector.	Go to step 4.
4	<b>CHECK BODY INTEGRATED UNIT HARNESS.</b> 1) Connect all connectors. 2) Perform the Clear Memory Mode. 3) Read DTC.	Is DTC displayed?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Temporary poor contact occurs.

## H: DTC B1105 KEY INTERLOCK CIRCUIT ABNORMAL

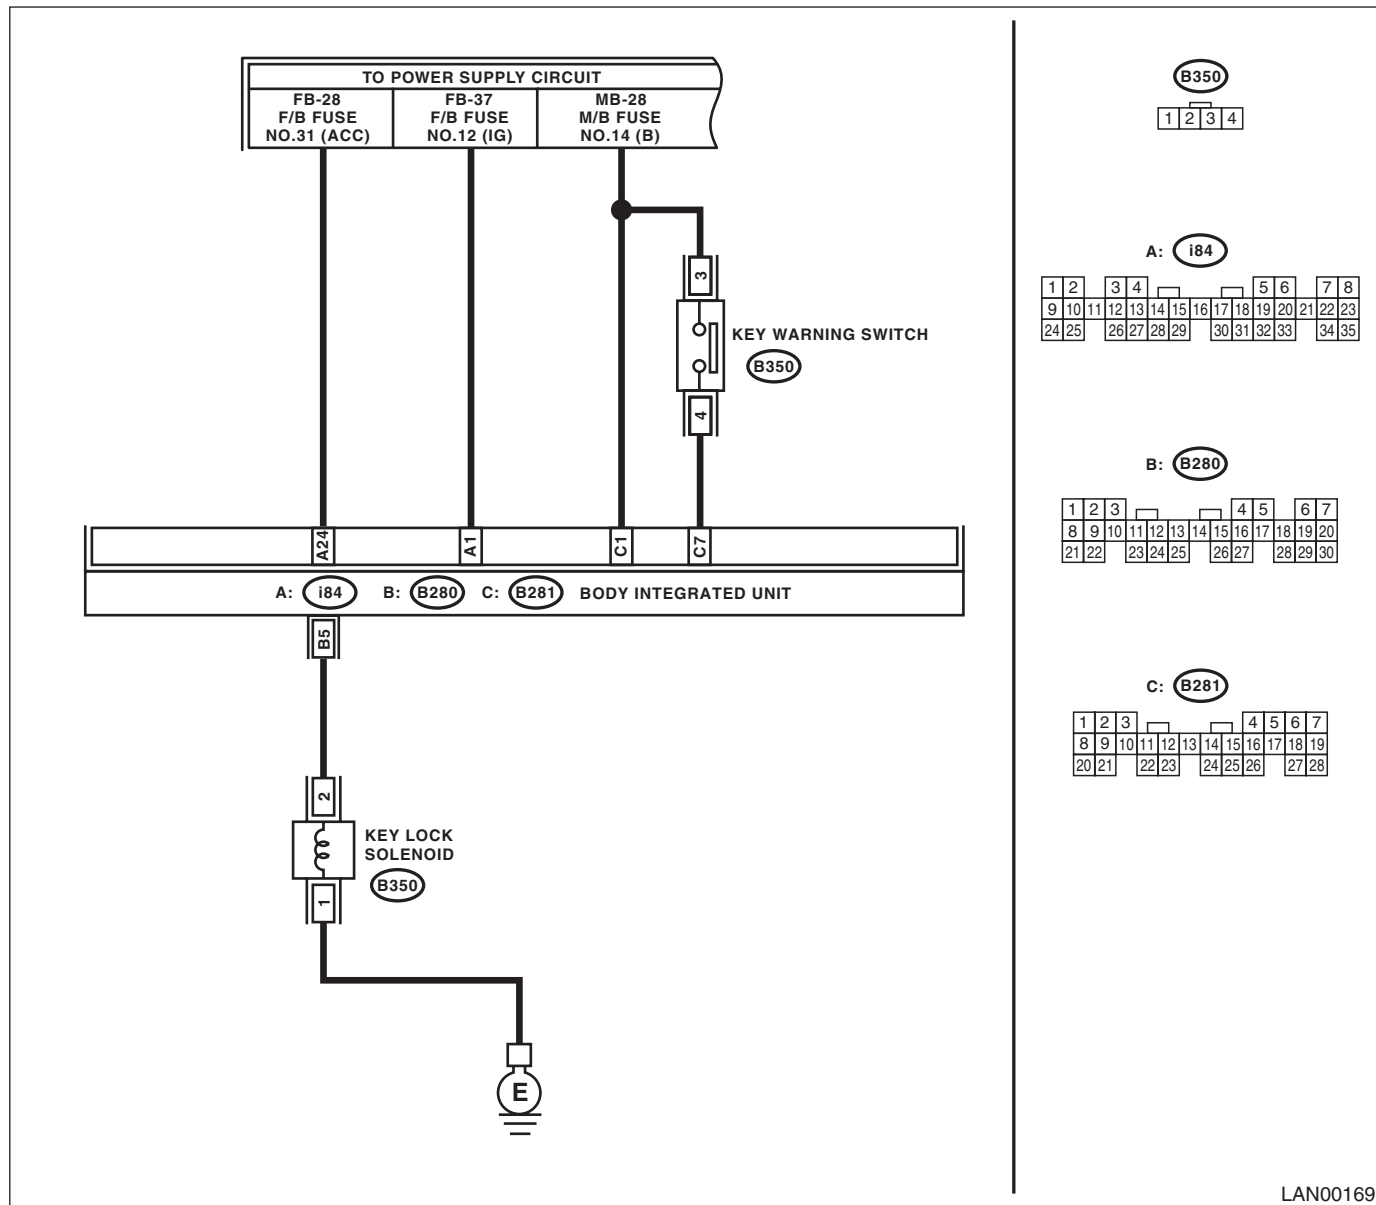

### DTC DETECTING CONDITION:

Key interlock circuit is shorted to ground.

### TROUBLE SYMPTOM:

- There is no key interlock power supply.
- Key interlock does not release or does not keep lock condition.

### WIRING DIAGRAM:

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK KEY LOCK SOLENOID.</b> 1) Disconnect the connector of key lock solenoid. 2) Measure the internal resistance of key lock solenoid. <i><b>Connector &amp; terminal</b></i> <i><b>(B350) No. 1 — No. 2:</b></i>	Is the resistance between 10 — 20 $\Omega$ ?	Go to step 2.	Replace the key lock solenoid.
<b>2 CHECK GROUND CIRCUIT.</b> 1) Disconnect the connector of key lock solenoid. 2) Measure the resistance between the key lock solenoid connector and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B350) No. 1 — Chassis ground:</b></i>	Is the resistance less than 10 $\Omega$ ?	Go to step 3.	Check the key lock solenoid ground circuit for short circuit and confirm the correct installation. Repair the ground circuit if defective.
<b>3 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280) and key lock solenoid connector (B350). 2) Measure the resistance between body integrated unit connector and chassis ground. <i><b>Connector &amp; terminal</b></i> <i><b>(B280) No. 5 — Chassis ground:</b></i>	Is the resistance 1 M $\Omega$ or more?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Repair the short circuit of harness or replace harness.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## I: DTC B1106 SHIFT LOCK CIRCUIT FAILURE

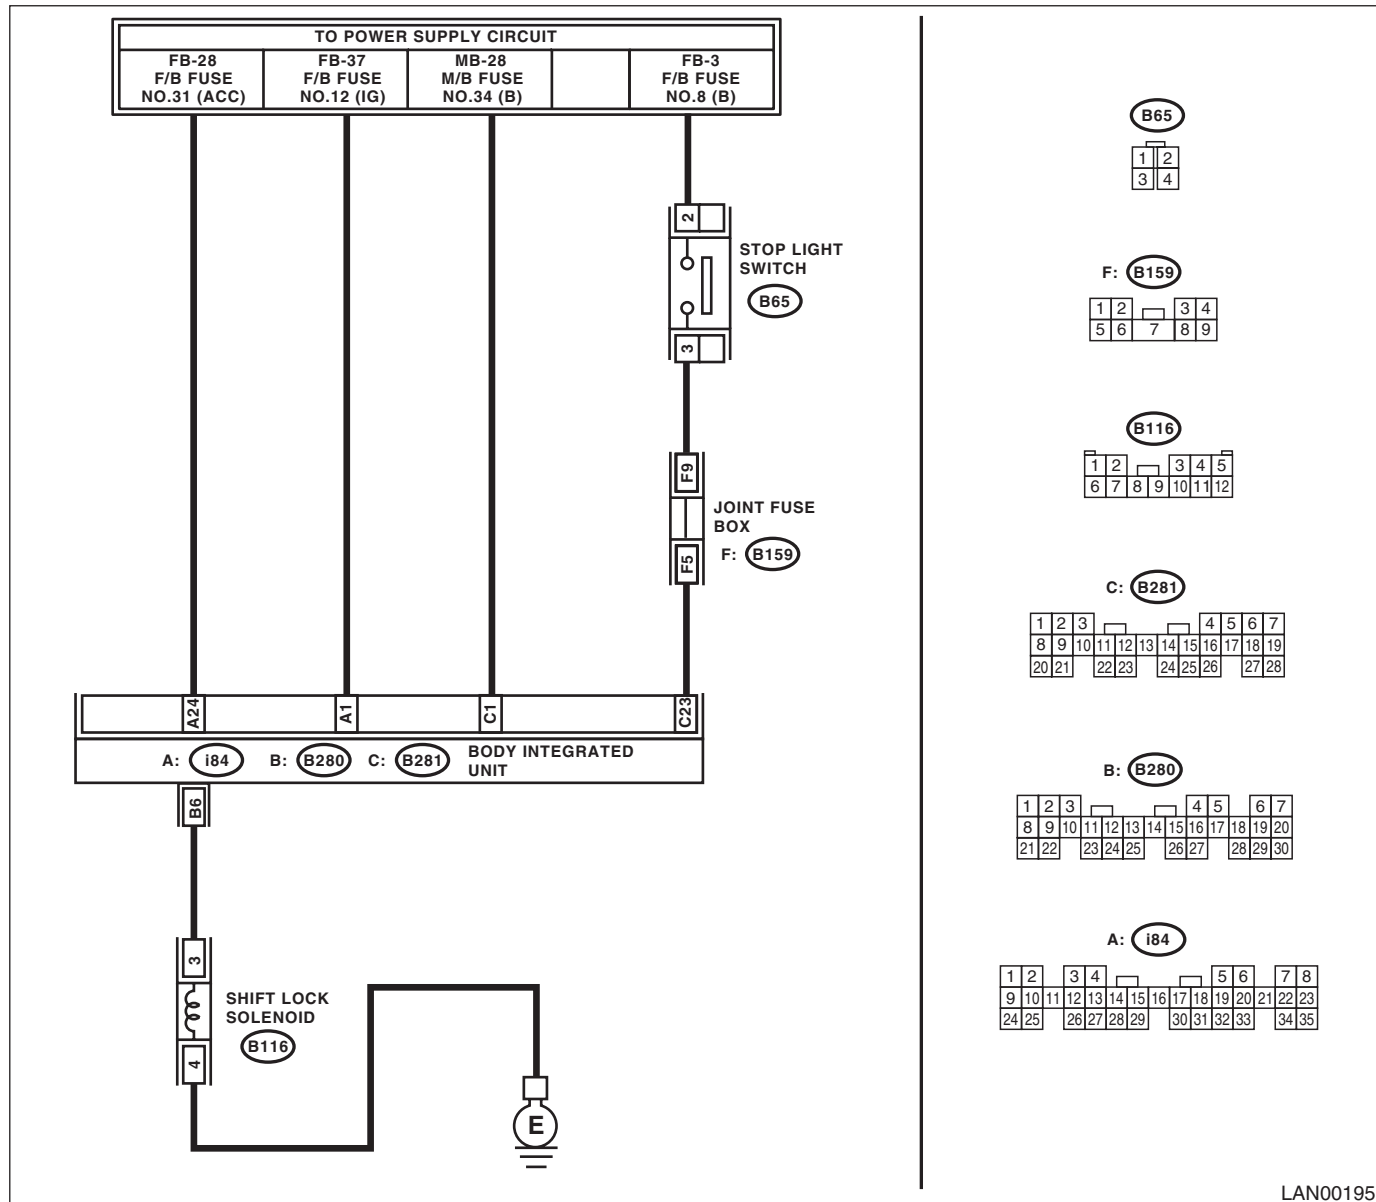

### DTC DETECTING CONDITION:

Shift lock circuit is shorted to ground.

### TROUBLE SYMPTOM:

Shift lock does not be released or remain locked.

### WIRING DIAGRAM:

LAN00195

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between body integrated unit connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 6 — Chassis ground:</b>	Is the resistance between 20 — 30 $\Omega$ ?	Go to step 5.	Go to step 2.
2	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Disconnect the shift lock solenoid connector. 3) Measure the resistance between body integrated unit connector and shift lock solenoid connector. <b>Connector &amp; terminal</b> <b>(B280) No. 6 — (B116) No. 3:</b>	Is the resistance less than 10 $\Omega$ ?	Go to step 3.	Repair or replace the open or short circuit of harness.
3	<b>CHECK SHIFT LOCK SOLENOID.</b> 1) Disconnect the shift lock solenoid connector. 2) Measure the internal resistance of shift lock solenoid. <b>Connector &amp; terminal</b> <b>(B116) No. 3 — No. 4:</b>	Is the resistance between 20 — 30 $\Omega$ ?	Go to step 4.	Replace the shift lock solenoid.
4	<b>CHECK GROUND CIRCUIT.</b> 1) Disconnect the shift lock solenoid connector. 2) Measure the resistance between the shield connector and chassis ground. <b>Connector &amp; terminal</b> <b>(B116) No. 4 — Chassis ground:</b>	Is the resistance less than 10 $\Omega$ ?	Temporary poor contact occurs. Check the connection of each terminal and repair when necessary.	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>
5	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280) and shift lock solenoid connector (B116). 2) Measure the resistance between body integrated unit connector (B280) and chassis ground. <b>Connector &amp; terminal</b> <b>(B280) No. 6 — Chassis ground:</b>	Is the resistance 1 M $\Omega$ or more?	Replace the body integrated unit. <Ref. to SL-55, Body Integrated Unit.>	Repair the short circuit of harness or replace harness.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## J: DTC U1201 CAN-HS COUNTER ABNORMAL

### DTC DETECTING CONDITION:

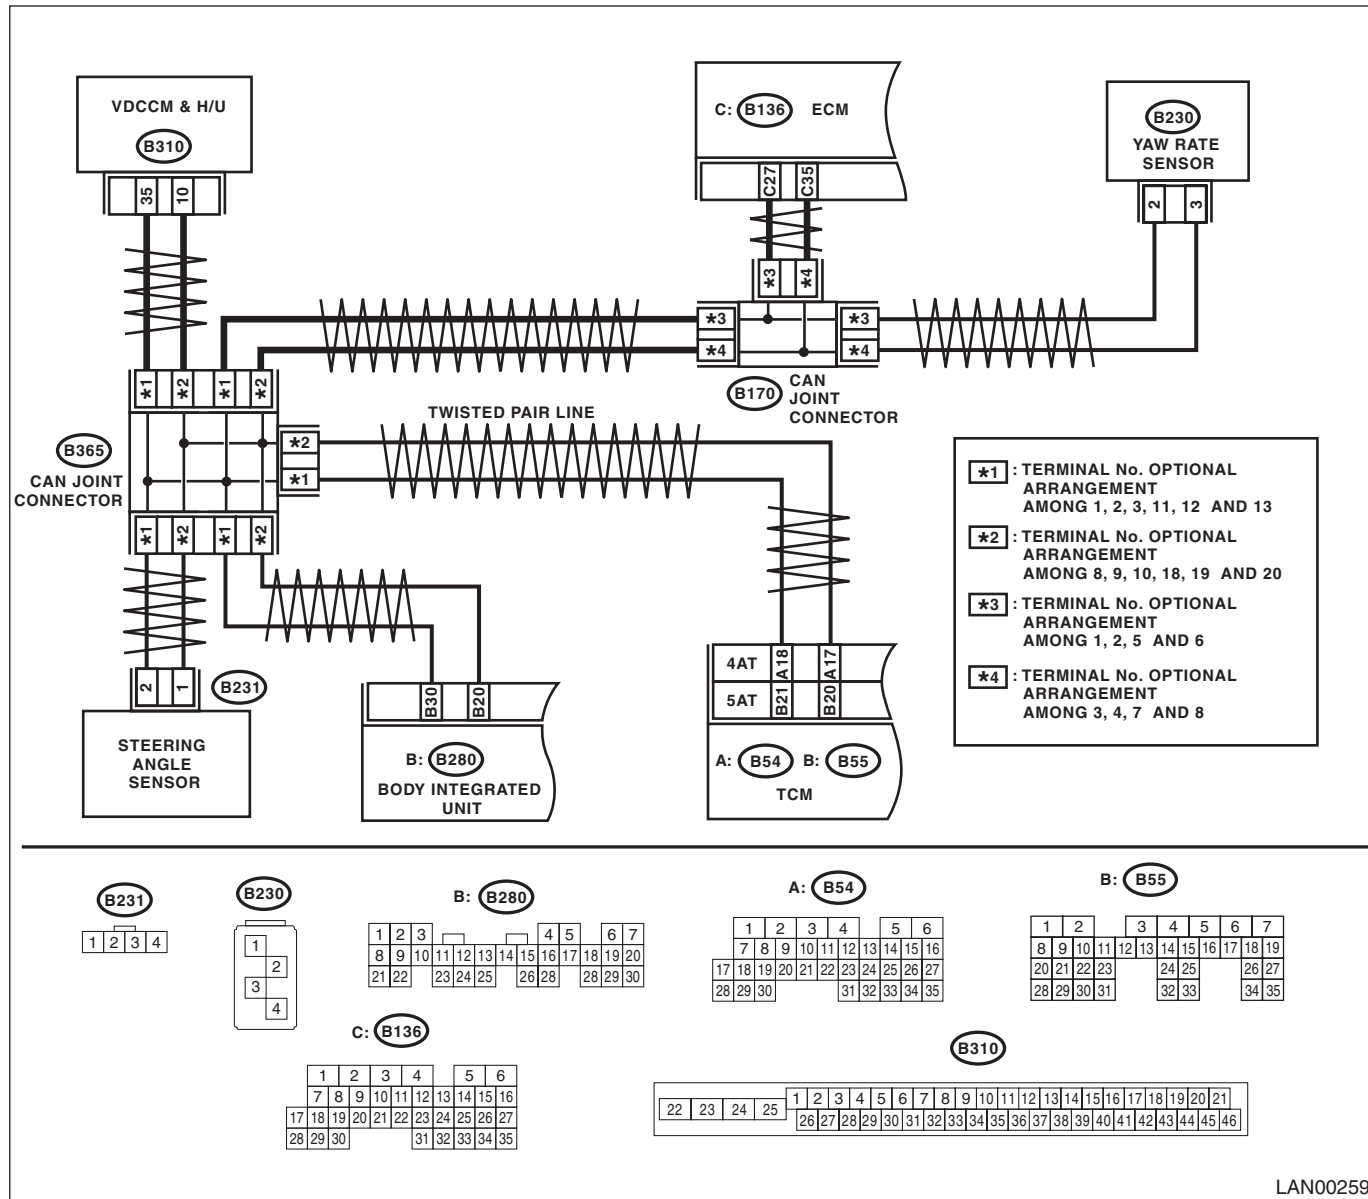

High speed CAN communication of body integrated unit which monitor the error data and non-received data are faulty.

### TROUBLE SYMPTOM:

- "Er HC" is displayed in odo/trip meter. (Except for meter with MID)
- Malfunction indicator light illuminates.

### WIRING DIAGRAM:

LAN00260

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Connect the Subaru Select Monitor to read all DTCs.	Are there DTCs other than that of body integrated unit?	Perform the diagnosis according to DTCs for other control units.	Go to step 2.
2	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 3.	Go to step 4.
3	<b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Does the displayed DTC indicate current malfunction?	Go to step 5.	Go to step 4.
4	<b>CHECK CURRENT DATA.</b> Using the Subaru Select Monitor, display engine speed and vehicle speed signal from ECM, TCM, VDC/ABS and body integrated unit under the same conditions and compare data.	Does each data match each other?	Temporary poor contact occurs. Perform the clear memory operation.	Go to step 5.
5	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Connect the tester to vehicle side connector, and measure the resistance. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance between 55 — 65 $\Omega$ ?	Go to step 6.	Go to step 9.
6	<b>CHECK HARNESS.</b> 1) Disconnect the TCM connector (B54). 2) Connect the tester to vehicle side connector, and measure the resistance. <b>Connector &amp; terminal</b> <b>5AT model:</b> <b>(B54) No. 20 — No. 21:</b> <b>4AT model:</b> <b>(B54) No. 17 — No. 18:</b>	Is the resistance between 55 — 65 $\Omega$ ?	Go to step 7.	Go to step 9.
7	<b>CHECK HARNESS.</b> NOTE: For ABS model, Go to step 12. 1) Disconnect the yaw rate sensor connector (B230). 2) Connect the tester to vehicle side connector, and measure the resistance. <b>Connector &amp; terminal</b> <b>(B230) No. 2 — No. 3:</b>	Is the resistance between 55 — 65 $\Omega$ ?	Go to step 8.	Go to step 9.
8	<b>CHECK HARNESS.</b> 1) Disconnect the steering angle sensor connector (B231). 2) Connect the tester to vehicle side connector, and measure the resistance. <b>Connector &amp; terminal</b> <b>(B231) No. 1 — No. 2:</b>	Is the resistance between 55 — 65 $\Omega$ ?	Go to step 12.	Go to step 9.
9	<b>CHECK HARNESS.</b>	Is the measured resistance 115 — 125 $\Omega$ when connecting the tester to vehicle side connector?	Go to step 12.	Go to step 10.
10	<b>CHECK HARNESS.</b>	Is the measured resistance less than 10 $\Omega$ when connecting the tester to vehicle side connector?	Repair or replace the short circuit of measured related harness.	Go to step 11.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>11</b> <b>CHECK HARNESS.</b>	Is the measured resistance 30 MΩ or more when connecting the tester to vehicle side connector?	Repair or replace the open circuit of measured related harness.	Go to step 12.
<b>12</b> <b>CHECK HARNESS.</b> 1) Disconnect the VDC/ABS CM connector. 2) Connect the tester to vehicle side harness, and measure the resistance. <b>Connector &amp; terminal</b> <b>VDC model:</b> <b>(B310) No. 10 — No. 35:</b> <b>ABS model:</b> <b>(B301) No. 11 — No. 26:</b>	Is the resistance between 115 — 125 Ω?	Go to step 13.	Go to step 14.
<b>13</b> <b>CHECK CONTROL MODULE.</b> 1) Connect the VDC/ABS CM connector. 2) Disconnect the connector from ECM. 3) Connect the tester to vehicle side harness, and measure the resistance between terminals. <b>Connector &amp; terminal</b> <b>(B136) No. 27 — No. 35:</b>	Is the resistance between 115 — 125 Ω?	Go to step 16.	Replace the VDC/ABS CM. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<b>14</b> <b>CHECK HARNESS.</b> 1) Connect the VDC/ABS CM connector. 2) Disconnect the connector from ECM. 3) Connect the tester to vehicle side harness, and measure the resistance between terminals. <b>Connector &amp; terminal</b> <b>(B136) No. 27 — No. 35:</b>	Is the resistance between 115 — 125 Ω?	Go to step 15.	Repair or replace the open circuit of main wiring harness.
<b>15</b> <b>CHECK CONTROL MODULE.</b> Connect the tester to ECM terminal, and measure the resistance. <b>Connector &amp; terminal</b> <b>(B136) No. 27 — No. 35:</b>	Is the resistance between 115 — 125 Ω?	Go to step 16.	Replace the ECM. <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>
<b>16</b> <b>CHECK CONTROL MODULE.</b> 1) Connect all the control module connectors. 2) Connect the Subaru Select Monitor and perform the clear memory. 3) Disconnect the TCM connector (B54 or B55). 4) Turn the ignition switch to ON and read the DTC of body integrated unit. <Ref. to LAN(diag)-12, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC U1201 displayed?	Go to step 17.	Check the TCM. <Ref. to 5AT(diag)-17, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>
<b>17</b> <b>CHECK CONTROL MODULE.</b> 1) Connect the TCM control module connector. 2) Using the Subaru Select Monitor, perform the clear memory. 3) Disconnect the steering angle sensor connector (B231). 4) Turn the ignition switch to ON and read the DTC of the body integrated unit. <Ref. to LAN(diag)-12, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC U1201 displayed?	Go to step 18.	Check the steering angle sensor. <Ref. to VDC(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>18 CHECK CONTROL MODULE.</b> 1) Connect the steering angle sensor connector. 2) Using the Subaru Select Monitor, perform the clear memory. 3) Disconnect the yaw rate sensor connector (B230). 4) Turn the ignition switch to ON and read the DTC of the body integrated unit. <Ref. to LAN(diag)-12, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>	Is DTC U1201 displayed?	Go to step 19.	Check the yaw rate sensor. <Ref. to VDC(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>
<b>19 CHECK CONTROL MODULE.</b> 1) Connect all the control module connectors. 2) Check the data of "body integrated unit data received" on the current data display of ECM using Subaru Select Monitor.	Is the "Yes" displayed?	Go to step 20.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
<b>20 CHECK CONTROL MODULE.</b> Check the data of "body integrated unit counter update" on the data display of ECM.	Is the "Yes" displayed?	Inspect the ABS/VDC CM and ECM. <Ref. to ABS(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to VDC(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.> <Ref. to EN(H6DO)(diag)-44, Read Diagnostic Trouble Code (DTC).>	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>

## LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>1 CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 2.	Go to step 2.
<b>2 CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 4.	Go to step 3.
<b>3 CHECK CURRENT DATA.</b> Using the Subaru Select Monitor, display engine speed and vehicle speed signal from ECM, TCM, VDC/ABS and body integrated unit under the same conditions and compare data.	Does each data match each other?	Temporary poor contact occurs. Perform the clear memory operation.	Go to step 4.
<b>4 CHECK TCM.</b> 1) Disconnect the TCM connector (B54 or B55). 2) Perform the clear memory operation for the body integrated unit. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read DTC of the body integrated unit.	Is DTC (U1202) displayed?	Go to step 5.	Check the TCM. <Ref. to 5AT(diag)-17, Subaru Select Monitor.>
<b>5 CHECK STEERING ANGLE SENSOR.</b> 1) Disconnect the steering angle sensor connector (B231). 2) Perform Clear Memory Mode for the body integrated unit. <Ref. to LAN(diag)-20, CLEAR MEMORY MODE, OPERATION, Subaru Select Monitor.> 3) Read DTC of the body integrated unit.	Is DTC (U1202) displayed?	Go to step 6.	Replace the steering angle sensor. <Ref. to VDC-17, REPLACEMENT, Steering Angle Sensor.>
<b>6 CHECK YAW RATE SENSOR.</b> 1) Disconnect the yaw rate sensor connector (B230). 2) Perform Clear Memory Mode for the body integrated unit. 3) Read DTC of the body integrated unit.	Is DTC (U1202) displayed?	Go to step 7.	Check the yaw rate sensor. <Ref. to VDC(diag)-14, READ DIAGNOSTIC TROUBLE CODE (DTC), OPERATION, Subaru Select Monitor.>
<b>7 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance between 55 — 65 $\Omega$ ?	Go to step 13.	Go to step 8.
<b>8 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance between 115 — 125 $\Omega$ ?	Go to step 10.	Go to step 9.
<b>9 CHECK HARNESS.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance 30 M $\Omega$ or more?	Open circuit in related line of body integrated unit. Repair the open circuit of harness or replace harness.	Go to step 10.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>10 CHECK HARNESS.</b> 1) Disconnect the VDC/ABS CM connector. 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>VDC model:</b> (B310) No. 10 — No. 35: <b>ABS model:</b> (B301) No. 11 — No. 26:	Is the resistance between 115 — 125 Ω?	Go to step 11.	Go to step 12.
<b>11 CHECK VDC/ABS CM.</b> 1) Disconnect the VDC/ABS CM connector. 2) Measure the resistance between VDC/ABS CM connector terminals. <b>Connector &amp; terminal</b> <b>VDC model:</b> (B310) No. 10 — No. 35: <b>ABS model:</b> (B301) No. 11 — No. 26:	Is the resistance between 115 — 125 Ω?	Go to step 12.	End resistance of VDC/ABS CM is open. Replace the VDC/ABS CM. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>
<b>12 CHECK ECM.</b> 1) Disconnect the ECM connector (B136). 2) Measure the resistance between ECM connector terminals. <b>Connector &amp; terminal</b> (B136) No. 27 — No. 35:	Is the resistance between 115 — 125 Ω?	Repair or replace the open circuit of the harness connector.	End resistance of ECM is open. Replace the ECM. <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>
<b>13 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between body integrated unit connector and chassis ground. <b>Connector &amp; terminal</b> (B280) No. 20 — Chassis ground: (B280) No. 30 — Chassis ground:	Is the resistance less than 10 Ω?	Go to step 14.	Go to step 15.
<b>14 CHECK CONTROL MODULE.</b> 1) Turn the ignition switch to ON. 2) Disconnect each control module connector one by one with the tester connected to vehicle side harness. <b>Connector &amp; terminal</b> (B280) No. 20 — Chassis ground: (B280) No. 30 — Chassis ground:	Are there any modules whose resistance has become 10 Ω or more?	Replace modules whose resistance has become 10 Ω or more.	Repair or replace the short circuit of the harness.
<b>15 CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the voltage between body integrated unit connector and chassis ground. <b>Connector &amp; terminal</b> (B280) No. 20 (+) — Chassis ground (-): (B280) No. 30 (+) — Chassis ground (-):	Is the voltage 6 V or more?	Go to step 16.	Go to step 17.
<b>16 CHECK CONTROL MODULE.</b> 1) Turn the ignition switch to ON. 2) Disconnect each control module connector one by one with the tester connected to vehicle side harness. <b>Connector &amp; terminal</b> (B280) No. 20 — Chassis ground: (B280) No. 30 — Chassis ground:	Is there any module for which the voltage has changed to 6 V or less?	Replace modules whose voltage has changed to 6 V or less.	Repair or replace the short circuit of the harness.

<b>1</b> <b>CHECK DTC.</b> Connect the Subaru Select Monitor to read all DTCs.	Are there DTCs other than that of body integrated unit?	Perform the diagnosis according to DTCs for other control units.	Go to step 2.
<b>2</b> <b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 3.	Go to step 4.
<b>3</b> <b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Does the displayed DTC indicate current malfunction?	Replace the VDC/ABS CM. <Ref. to VDC-7, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).>	Go to step 4.
<b>4</b> <b>CHECK CURRENT DATA.</b> Using the Subaru Select Monitor, display engine speed and vehicle speed signal from ECM, TCM, VDC/ABS and body integrated unit under the same conditions and compare data.	Does each data match each other?	Temporary poor contact occurs. Perform the clear memory operation.	Go to step 5.
<b>5</b> <b>CHECK VDC/ABS CM.</b> Read the DTC of VDCCM using the Subaru Select Monitor.	Is DTC other than "CAN communication" displayed?	Perform the diagnosis according to DTC.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## O: DTC U1221 CAN-HS ECM NO-RECEIVE DATA

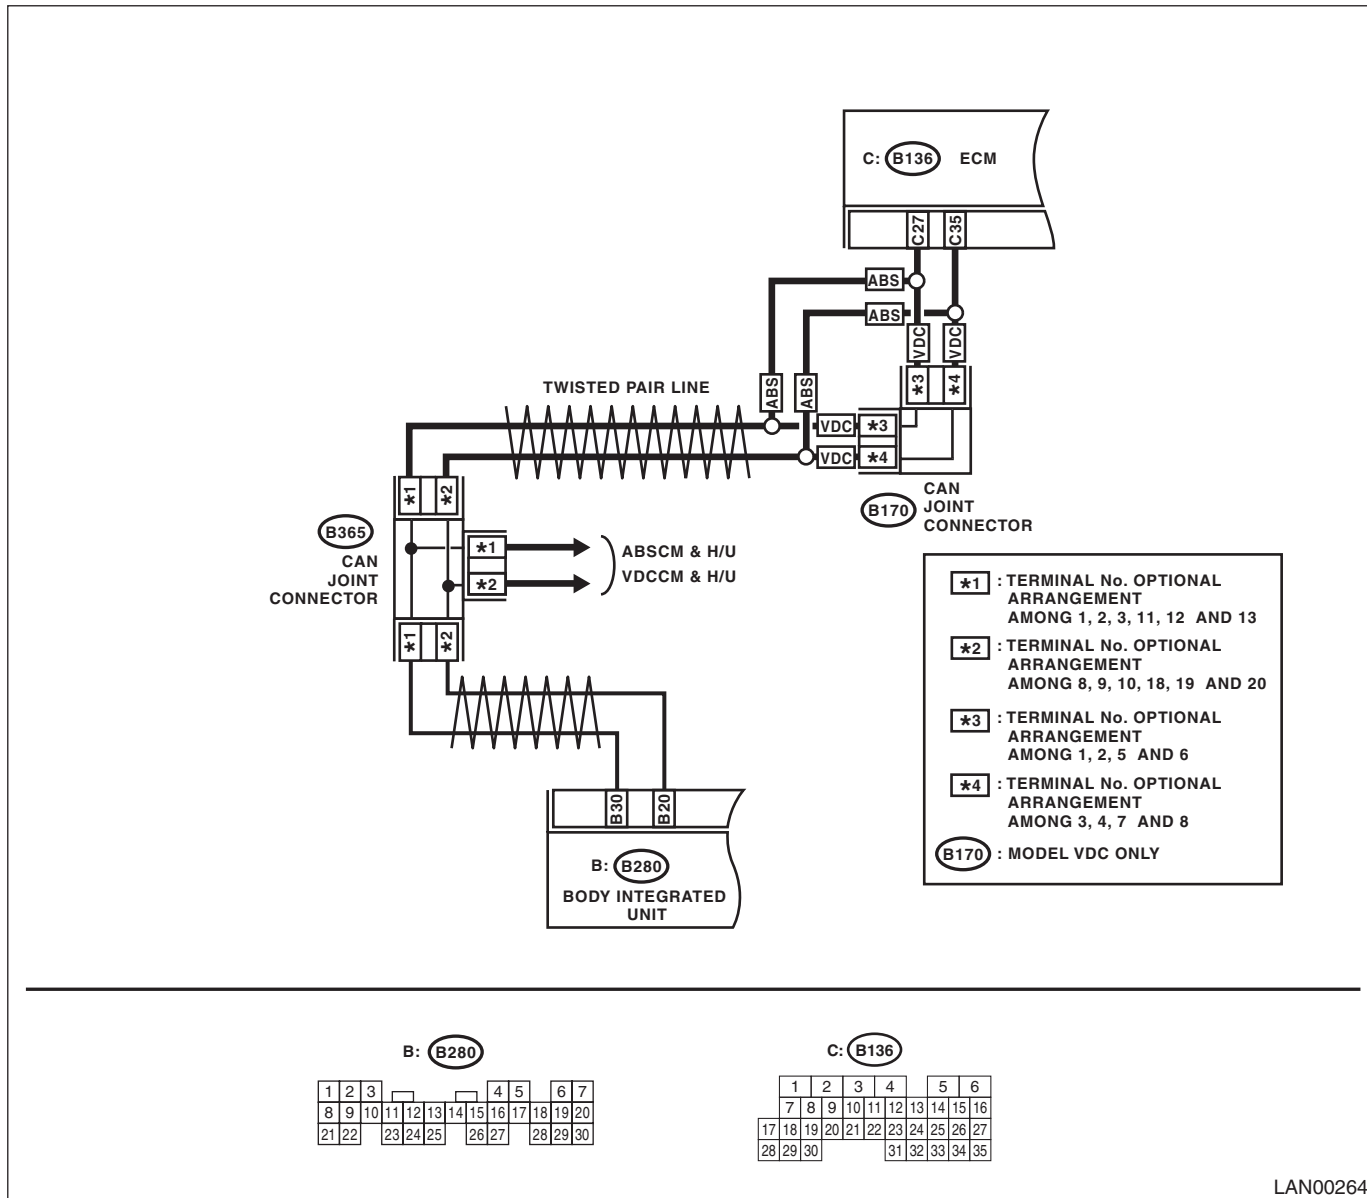

### DTC DETECTING CONDITION:

Defective ECM. (If error is in the main harness, DTC P0600 CAN communication link is input simultaneously.)

### TROUBLE SYMPTOM:

- Malfunction indicator light illuminates.
- "Er HC" is displayed in odo/trip meter. (Except for meter with MID)

### WIRING DIAGRAM:

LAN00264

Step	Check	Yes	No
1	<b>CHECK DTC.</b> Connect the Subaru Select Monitor to read all DTCs.	Are there DTCs other than that of body integrated unit?	Perform the diagnosis according to DTCs for other control units. Go to step 2.
2	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 3. Go to step 3.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
3	<b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Does the displayed DTC indicate current malfunction?	Go to step 5.	Go to step 4.
4	<b>CHECK CURRENT DATA.</b> Using the Subaru Select Monitor, display engine speed and vehicle speed signal from ECM, TCM, VDC/ABS and body integrated unit under the same conditions and compare data.	Does each data match each other?	Temporary poor contact occurs. Perform the clear memory operation.	Go to step 5.
5	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connectors. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance 55 — 65 $\Omega$ ? (Standard value: 60 $\Omega$ )	Go to step 8.	Go to step 6.
6	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280). 2) Measure the resistance between harness connectors. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance 115 — 125 $\Omega$ ? (End resistance or main wiring harness is open.)	Go to step 7.	If the resistance is 1 M $\Omega$ or larger, a line related to the body integrated unit is open. Repair the open circuit of harness or replace harness.
7	<b>CHECK ECM.</b> Read the DTC of ECM using the Subaru Select Monitor. <Ref. to EN(H6DO)(diag)-35, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>	Are there any DTCs other than one for "CAN communication"?	Perform the diagnosis according to DTC. <Ref. to EN(H6DO)(diag)-35, READ DIAGNOSTIC TROUBLE CODE (DTC) FOR ENGINE (NORMAL MODE), OPERATION, Subaru Select Monitor.>	Go to step 8.
8	<b>CHECK BODY INTEGRATED UNIT.</b> 1) Connect all the control module connectors. 2) Check the data of "body integrated unit data received" on the current data display of ECM using Subaru Select Monitor.	Is the "Yes" displayed?	Go to step 9.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
9	<b>CHECK BODY INTEGRATED UNIT.</b> Check the data of "body integrated unit counter update" on the data display of ECM.	Is the "Yes" displayed?	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>	Inspect the ECM. <Ref. to FU(H4SO)-37, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H4DOTC)-45, REMOVAL, Engine Control Module (ECM).> <Ref. to FU(H6DO)-37, Engine Control Module (ECM).>

2	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 3.	Go to step 3.
3	<b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Does the displayed DTC indicate current malfunction?	Go to step 5.	Go to step 4.
4	<b>CHECK CURRENT DATA.</b> Using the Subaru Select Monitor, display engine speed and vehicle speed signal from ECM, TCM, VDC/ABS and body integrated unit under the same conditions and compare data.	Does each data match each other?	Temporary poor contact occurs. Perform the clear memory operation.	Go to step 5.
5	<b>CHECK HARNESS.</b> 1) Disconnect the harness connector of body integrated unit. 2) Measure the resistance between harness connector terminals. <b>Connector &amp; terminal</b> <b>(B280) No. 20 — No. 30:</b>	Is the resistance between 55 — 65 $\Omega$ ?	Go to step 6.	Open circuit in related line of body integrated unit. Repair the open circuit of harness or replace harness.
6	<b>CHECK VDC/ABS CM.</b> 1) Connect all connectors. 2) Read the DTC of VDC/ABS CM using the Subaru Select Monitor.	Is DTC other than "CAN communication" displayed?	Perform the diagnosis according to DTC of VDC/ABS CM.	Go to step 7.
7	<b>CHECK BODY INTEGRATED UNIT.</b> 1) Connect all the control module connectors. 2) Check the data of "body integrated unit data received" on the current data display of ECM using Subaru Select Monitor.	Is the "Yes" displayed?	Go to step 8.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
8	<b>CHECK BODY INTEGRATED UNIT.</b> Check the data of "body integrated unit counter update" on the data display of ECM.	Is the "Yes" displayed?	Replace the VDC/ABS CM. <Ref. to VDC-7, REMOVAL, VDC Control Module and Hydraulic Control Unit (VDCCM&H/U).> <Ref. to ABS-6, REMOVAL, ABS Control Module and Hydraulic Control Unit (ABSCM&H/U).>	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

## R: DTC U1300 CAN-LS MALFUNCTION

### DTC DETECTING CONDITION:

Either end of low-speed CAN communication line is open or shorted, the connector is not connected properly, or the terminal has poor crimping.

### TROUBLE SYMPTOM:

"Er LC" is displayed in odo/trip meter (except for meters with MID), but communicating function is normal.

### WIRING DIAGRAM:

LAN00267

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Connect the Subaru Select Monitor to read DTC of body integrated unit.	Are there DTCs other than U1300?	Perform the diagnosis according to other DTCs.	Go to step 2.
2	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Is U1300 current malfunction?	Check the connection of harness connectors. Go to step 3.	Go to step 3.
3	<b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Is U1300 current malfunction?	Go to step 4.	Temporary poor contact occurs.
4	<b>CHECK CURRENT DATA.</b> Display the current data (Auto A/C failure) of body integrated unit using the Subaru Select Monitor.	Is OK displayed?	Go to step 5.	Perform auto A/C self-diagnosis. <Ref. to AC(diag)-9, OPERATION, Diagnostic Chart for Self-diagnosis.>
5	<b>CHECK AUTO A/C ECM.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the auto A/C ECM connector (B282). 3) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 4) Perform the clear memory operation for the body integrated unit. 5) Read the DTC of the body integrated unit.	Is DTC U1300 detected?	Go to step 6.	Go to step 7.
6	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (B280) and auto A/C control module connector (B282). 2) Check open or short conditions between body integrated unit connector and auto A/C control module connector. <b>Connector &amp; terminal</b> <b>(B282) No. 10 — (B280) No. 26:</b> <b>(B282) No. 9 — (B280) No. 25:</b>	Is harness normal?	Replace auto A/C ECM. <Ref. to AC-34, REMOVAL, Control Unit (Auto A/C Model).>	Repair or replace the open or short circuit of harness.
7	<b>CHECK CURRENT DATA.</b> Check current data (center display failure) of the body integrated unit.	Is OK displayed?	Go to step 8.	Repair or replace the center display. <Ref. to ET-15, REMOVAL, Navigation Display.>
8	<b>CHECK CENTER DISPLAY.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the center display connector (i119). 3) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 4) Perform the clear memory operation for the body integrated unit. 5) Read the DTC of the body integrated unit.	Is DTC U1300 detected?	Go to step 10.	Go to step 9.
9	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (i84) and center display connector (i119). 2) Check open or short conditions between body integrated unit connector and center display connector. <b>Connector &amp; terminal</b> <b>(i119) No. 14 — (i84) No. 26:</b> <b>(i119) No. 6 — (i84) No. 27:</b>	Is harness normal?	Replace the center display. <Ref. to ET-15, REMOVAL, Navigation Display.>	Repair or replace the open or short circuit of harness.

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

LAN SYSTEM (DIAGNOSTICS)

Step	Check	Yes	No
<b>10 CHECK CURRENT DATA.</b> Check current data (meter failure) of the body integrated unit.	Is OK displayed?	Go to step 11.	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>
<b>11 CHECK COMBINATION METER.</b> 1) Turn the ignition switch to OFF. 2) Disconnect the combination meter connector (i10). 3) Connect the Subaru Select Monitor and then turn the ignition switch to ON. 4) Perform the clear memory operation for the body integrated unit. 5) Read the DTC of the body integrated unit.	Is DTC U1300 detected?	Go to step 12.	Go to step 13.
<b>12 CHECK HARNESS.</b> 1) Disconnect the combination meter connector (i10). 2) Check open or short conditions between body integrated unit connector and combination meter connector. <i>Connector &amp; terminal</i> <i>(i10) No. 21 — (i84) No. 27:</i> <i>(i10) No. 22 — (i84) No. 26:</i>	Is harness normal?	Replace the combination meter. <Ref. to IDI-19, REMOVAL, Combination Meter.>	Repair or replace the open or short circuit of harness.
<b>13 CHECK HARNESS.</b> 1) Disconnect connectors of A/C ECM (B282), center monitor (i119), combination meter (i10) and body integrated unit connector (i84). 2) Measure the resistance between connector terminals. <i>Connector &amp; terminal</i> <i>(i84) No. 27 — (i84) No. 26:</i>	Is the resistance 1 M $\Omega$ or more?	Go to step 14.	Repair the short circuit of harness or replace harness.
<b>14 CHECK HARNESS.</b> 1) Connect the disconnected connectors. 2) Measure the resistance between body integrated unit connector and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 25 — Chassis ground:</i> <i>(B280) No. 26 — Chassis ground:</i> <i>(i84) No. 26 — Chassis ground:</i> <i>(i84) No. 27 — Chassis ground:</i>	Is the resistance less than 10 $\Omega$ ?	Repair the short circuit of harness or replace harness.	Go to step 15.
<b>15 CHECK HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between body integrated unit connector and chassis ground. <i>Connector &amp; terminal</i> <i>(B280) No. 25 (+) — Chassis ground (-):</i> <i>(B280) No. 26 (+) — Chassis ground (-):</i> <i>(i84) No. 26 (+) — Chassis ground (-):</i> <i>(i84) No. 27 (+) — Chassis ground (-):</i>	Is the voltage 6 V or more?	Repair the short circuit of harness or replace harness.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>

### DTC DETECTING CONDITION:

UART between keyless control unit and body integrated unit is open or shorted, the connector is not connected properly, or the terminal is crimped improperly.

### TROUBLE SYMPTOM:

Door lock does not operate with keyless.

### WIRING DIAGRAM:

LAN00268

# Diagnostic Procedure with Diagnostic Trouble Code (DTC)

## LAN SYSTEM (DIAGNOSTICS)

	Step	Check	Yes	No
1	<b>CHECK DTC.</b> Connect the Subaru Select Monitor to read DTC of body integrated unit.	Are there DTCs other than B1500?	Perform the diagnosis according to other DTCs.	Go to step 2.
2	<b>CHECK DTC.</b> Check DTC indicated by body integrated unit.	Does the displayed DTC indicate current malfunction?	Check the connection of harness connectors. Go to step 3.	Go to step 4.
3	<b>CHECK DTC.</b> Turn the ignition switch to OFF and read DTCs again.	Is B1500 current malfunction?	<Ref. to LAN(diag)-84, DTC B1500 KEY-LESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>	<Ref. to LAN(diag)-84, DTC B1500 KEY-LESS UART COM. MALFUNCTION, Diagnostic Procedure with Diagnostic Trouble Code (DTC).>
4	<b>CHECK HARNESS.</b> 1) Disconnect the body integrated unit connector (i84) and keyless entry control module connector (i96). 2) Measure the resistance between harnesses. <b>Connector &amp; terminal</b> <b>(i84) No. 9 — (i96) No. 3:</b>	Is the resistance less than 10 Ω?	Go to step 5.	Repair the open circuit of harness or replace harness.
5	<b>CHECK HARNESS.</b> Measure the resistance between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i84) No. 9 — Chassis ground:</b>	Is the resistance less than 1 MΩ?	Repair the short circuit of harness or replace harness.	Go to step 6.
6	<b>CHECK HARNESS.</b> 1) Turn the ignition switch to ON. 2) Measure the voltage between harness connector and chassis ground. <b>Connector &amp; terminal</b> <b>(i84) No. 9 (+) — Chassis ground (-):</b>	Is the voltage 6 V or more?	Repair the short circuit of harness or replace harness.	Go to step 7.
7	<b>CHECK OPERATION.</b> Check the door lock operation when the doors LOCK/UNLOCK using manual LOCK switch.	Does it operate on switch operation?	Go to step 8.	Replace the body integrated unit. <Ref. to SL-55, REMOVAL, Body Integrated Unit.>
8	<b>CHECK OPERATION.</b> 1) Remove the ignition key. 2) Close all the doors, and then perform the LOCK/UNLOCK operation on keyless entry operation.	Does it operate?	Temporary poor contact occurs.	Replace the keyless entry control module. <Ref. to SL-53, REMOVAL, Keyless Entry Control Module.>

## 13. General Diagnostic Table

### A: INSPECTION

Read the DTC or inspect and diagnose the following data in the current data display using Subaru Select Monitor.

#### 1. LAN SYSTEM

Item	Operation	Specifications		Note
		YES	NO	
Diagnostic code	DTC is not displayed when inspecting all DTCs.	DTC is not displayed.	Perform the diagnosis according to DTC.	—
Engine coolant temperature	Check the current data display of ECM, TCM and body integrated unit. Three data value are the same.	Same values	Inspect LAN system.	If engine coolant temperature sensor is not OK, inspect the sensor circuit.
R defogger SW	It turns to ON when pressing switch. (Low-speed CAN is OK)	Turns to ON.	Inspect rear defogger switch.	Rear defogger switch is connected with Low-speed CAN.
R defogger output	When switch input, it is output.	Output	Check the body integrated unit.	If not operating with output, check the rear defogger relay.
Door lock SW	When locked with door lock switch, it turns to ON.	Turns to ON.	Inspect door lock switch.	The door lock switch is connected to the Low-speed CAN.
Door lock actuator	When locked with door lock switch, it is output.	Output	Check the body integrated unit.	—

## General Diagnostic Table

LAN SYSTEM (DIAGNOSTICS)

### 2. BODY INTEGRATED UNIT

Item	Operation	Specifications		Note
		YES	NO	
Illumination VR power supply	Operate the illumination volume, illumination light is controlled according to the change of voltage on data display.	Illumination light is controlled with changing of data.	Inspect the illumination volume.	—
Fuel level resistance	Check the fuel level resistance and fuel level resistance 2. Both resistances are same.	Same values	Inspect the body integrated unit.	Compare the input and output values of body integrated unit.
R wiper SW input	When rear wiper SW to ON, data display turns to ON.	Turns to ON.	Inspect the rear wiper switch.	—
R wiper output	When rear wiper switch to ON, output signal turns to ON.	Turns to ON.	Check the body integrated unit.	If not operate with output turned to ON, check the rear wiper motor.
Keyless Entry	Keyless entry LOCK/UNLOCK the doors.	Operate	Inspect the keyless antenna.	If the antenna is OK, replace the body integrated unit.
Brake Switch	When brake pedal is depressed, it turns to ON.	Turns to ON.	Inspect the brake switch.	—
Shift lock solenoid	The shift lock releases when depressing the brake pedal.	Released	Inspect the shift lock.	—
Body integrated unit registration function setting	Does Vehicle equipment correspond to setting values?	Correspondence	Reconfigure the values according to vehicle equipment.	—
Customize	When changing customize setting, the registration completes correctly.	Registered	Inspect the body integrated unit.	—
Manual mode	Switch the shift (UP/DOWN) on Manual mode. Indicator is changed in 1 — 2.	Change	Inspect the shift lever.	—
Function check	Each checking item operate correctly. (Except for not equipped)	Operate	Inspect for non-functional actuator.	—
Security	After locking with keyless entry system and open the door, the security system operates and the horn sounds.	Horn sounds. (Security system operates.)	Inspect the security system.	—

## 1. Basic Diagnostic Procedure

### A: BASIC PROCEDURES

#### 1. GENERAL DESCRIPTION

The most important purpose of diagnostics is to quickly determine which part is malfunctioning, to save time and labor.

#### 2. IDENTIFICATION OF TROUBLE SYMPTOM

Determine what the problem is based on the symptom.

#### 3. PROBABLE CAUSE OF TROUBLE

Look at the wiring diagram and check the system's circuit. Then check the switch, relay, fuse, ground, etc.

#### 4. LOCATION AND REPAIR OF TROUBLE

- 1) Using the diagnostics, narrow down the causes.
- 2) If necessary, use a voltmeter, ohmmeter, etc.
- 3) Before replacing certain component parts (switch, relay, etc.), check the power supply, ground, for open wiring harness, poor connectors, etc. If no problem is encountered, check the component parts.

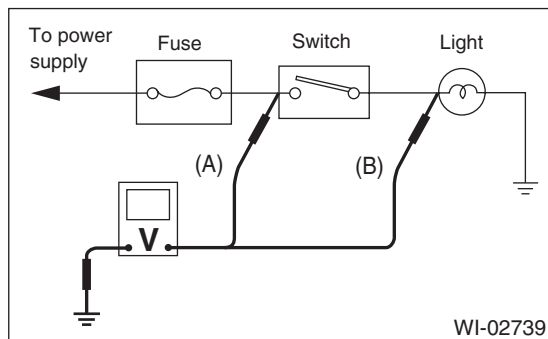

#### 5. SYSTEM OPERATION CHECK

After repairing, ensure that the system operates properly.

### B: BASIC INSPECTION

#### 1. VOLTAGE MEASUREMENT

- 1) Using a voltmeter, connect the negative lead to a good ground point or negative battery terminal and the positive lead to the connector or component terminal.
- 2) Contact the positive lead of the voltmeter on connector (A). The voltmeter will indicate a voltage.
- 3) Shift the positive lead to connector (B). The voltmeter will indicate no voltage.

- 4) With the test set-up held as it is, turn the switch to ON. The voltmeter will indicate a voltage and, at the same time, the light will illuminate.

- 5) The circuit is in good order. If a problem such as a light failing to illuminate occurs, use the procedures outlined above to track down the malfunction.

#### 2. CIRCUIT CONTINUITY CHECKS

- 1) Disconnect the battery terminal or connector so there is no voltage between the check points. Contact the two leads of an ohmmeter to each of the check points.

If the circuit has diodes, reverse the two leads and check again.

- 2) Use an ohmmeter to check for diode continuity. When contacting the negative lead to the diode positive side and the positive lead to the negative side, there should be continuity.

When contacting the two leads in reverse, there should be no continuity.

- 3) The symbol "○ — ○" indicates that continuity exists between two points or terminals. For example, when a switch position is at "3", continuity exists among terminals 1, 3 and 6, as shown in the table below.

Terminal	Switch Position					
Switch Position	1	2	3	4	5	6
OFF						
1	○	—			○	○
2	○	—		○		○
3	○		○			○
4	○	○				○

WI-02741

# Basic Diagnostic Procedure

## WIRING SYSTEM

### 3. HOW TO DETERMINE AN OPEN CIRCUIT

#### 1) WITH VOLTMETER:

An open circuit is determined by measuring the voltage between respective connectors and ground using a voltmeter, starting with the connector closest to the power supply. The power supply must be turned ON so that current flows in the circuit. If voltage is not present between a particular connector and ground, the circuit between that connector and the previous connector is open.

#### 2) WITH OHMMETER:

Disconnect all connectors affected, and check continuity in the wiring between adjacent connectors. When the ohmmeter indicates “infinite”, the wiring is open.

### 4. HOW TO DETERMINE A SHORT CIRCUIT

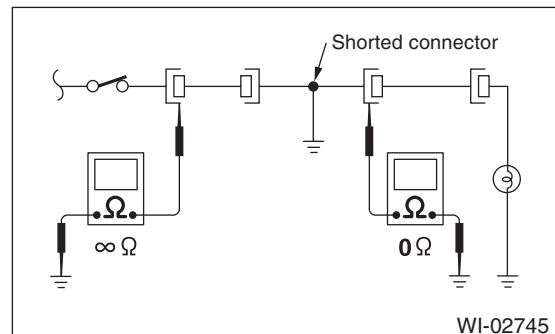

#### 1) WITH TEST LIGHT:

Connect a test light (rated at approx. 3 watts) in place of the blown fuse and allow current to flow through the circuit. Disconnect one connector at a time from the circuit. Starting with the one located farthest from the power supply. If the test light goes out when a connector is disconnected, the wiring between that connector and the next connector (farther from the power supply) is shorted.

#### 2) WITH OHMMETER:

Disconnect all affected connectors, and check continuity between each connector and ground. When the ohmmeter indicates continuity between a particular connector and a ground, that connector is shorted.

## C: HOW TO READ WIRING DIAGRAMS

### 1. WIRING DIAGRAM

The wiring diagram of each system is illustrated so that you can understand the path through which the electric current flows from the battery.

Sketches and codes are used in the diagrams. They should read as follows:

- Each connector and its terminal position are indicated by a sketch of the connector in a disconnected state which is viewed from the front.

- The number of poles or pins, presence of a lock are indicated in the sketch of each connector. In the sketch, the highest pole number refers to the number of poles which the connector has. For example, the sketch of the connector shown in figure indicates the connector has 9 poles.

Connector used in vehicle	Connector shown in wiring diagram		
	Sketch	Symbol	Number of poles
	<p>Double frames</p> <p>Indicates a lock is included.</p> <p>Indicates the number of poles.</p>		<p>Numbered in order from upper right to lower left</p>
	<p>Indicates a lock is included.</p> <p>Single frame</p>		<p>Numbered in order from upper left to lower right</p>

WI-02747

# Basic Diagnostic Procedure

## WIRING SYSTEM

- When one set of connectors is viewed from the front side, the pole numbers of one connector are symmetrical to those of the other. When these two connectors are connected as a unit, the poles which have the same number are joined.

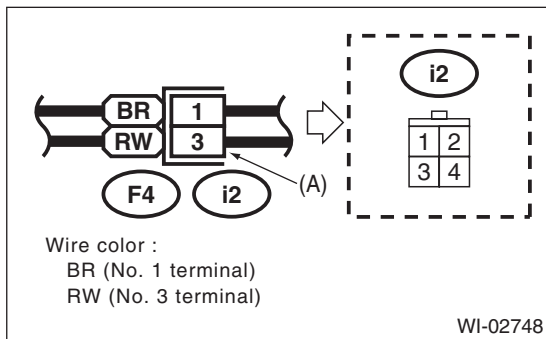

### • WIRING DIAGRAM:

The connectors are numbered along with the number of poles, external colors, and mating connections in the accompanying list.

- The sketch of each connector in the wiring diagram usually shows the (A) side of the connector. The relationship between the wire color, terminal number and connector is described in the figure.

### NOTE:

A wire which runs in one direction from a connector terminal sometimes may have a different color from that which runs in the other direction from that terminal.

- In the wiring diagram, connectors which have no terminal number refer to one-pole types. Sketches of these connectors are omitted intentionally.

- The following color codes are used to indicate the colors of the wires.

Color code	Color
L	Blue
B	Black
Y	Yellow
G	Green
R	Red
W	White
Br	Brown
Lg	Light green
Gr	Gray
P	Pink
Or	Orange
Sb	Light blue
V	Violet
SA	Sealed (Inner)
SB	Sealed (Outer)

- The wire color code, which consists of two letters (or three letters including Br or Lg), indicates the standard color (base color of the wire covering) by its first letter and the stripe marking by its second letter.

- The table lists the nominal sectional areas and allowable currents of the wires.

### CAUTION:

**When replacing or repairing a wire, be sure to use the same size and type of the wire which was originally used.**

### NOTE:

- The allowable current in the table indicates the tolerable amperage of each wire at an ambient temperature of 40°C (104°F).
- The allowable current changes with ambient temperature. Also, it changes if a bundle of more than two wires is used.

Nominal sectional area mm <sup>2</sup>	No. of strands/ strand diameter	Outside diameter of wiring mm	Allowable current Amps/ 40°C (104°F)
0.3	7/0.26	1.8	7
0.5	7/0.32	2.2 (or 2.0)	12
0.75	30/0.18	2.6 (or 2.4)	16
0.85	11/0.32	2.4 (or 2.2)	16
1.25	16/0.32	2.7 (or 2.5)	21
2	26/0.32	3.1 (or 2.9)	28
3	41/0.32	3.8 (or 3.6)	38
5	65/0.32	4.6 (or 4.4)	51
8	50/0.45	5.5	67

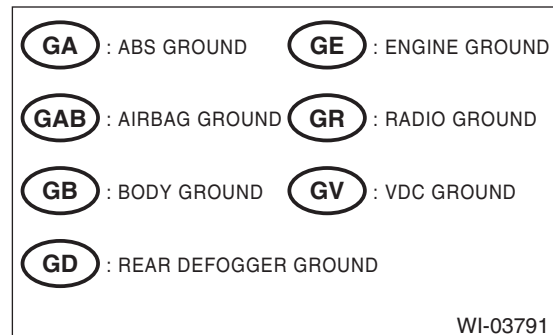

- Each unit is either directly grounded to the body or indirectly grounds through a harness ground terminal. Different symbols are used in the wiring diagram to identify the two grounding systems.

- The ground points shown in the wiring diagram refer to the following:

### NOTE:

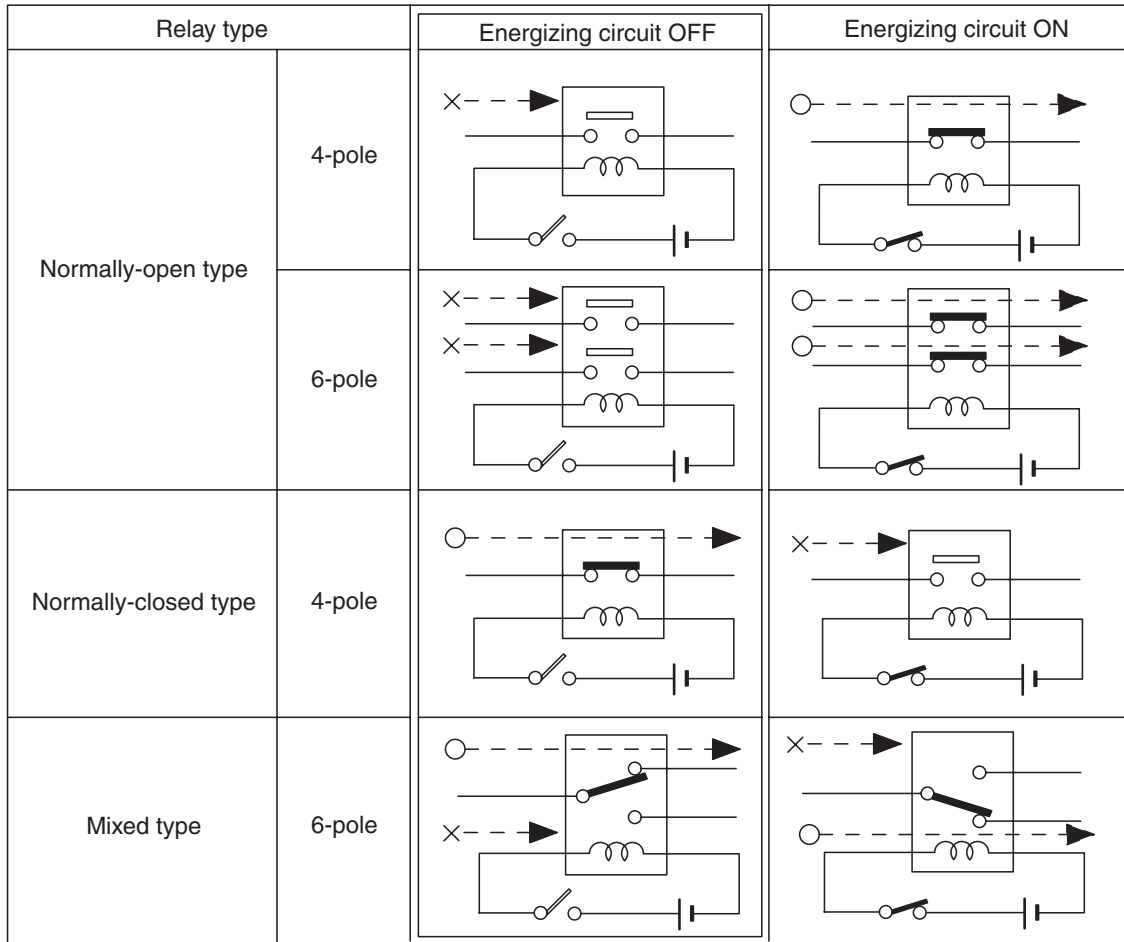

All wiring harnesses are provided with a ground point which should be securely connected.

# Basic Diagnostic Procedure

## WIRING SYSTEM

- Relays are classified as normally-open or normally-closed.
- The normally-closed relay has one or more contacts. The wiring diagram shows the relay mode when the energizing circuit is OFF.

Key to symbols:

- —▶ : Current flows.
- × —▶ : Current does not flow.

WI-16724

- Each connector number shown in the wiring diagram corresponds to that in the wiring harness. The location of each connector in the actual vehicle is determined by reading the first character of the connector (for example, a "F" for F8, "i" for i16, etc.) and the type of wiring harness. The first character of each connector number corresponds to the area or system of the vehicle.

Symbol	Wiring harness and cord
F	Front wiring harness
B	Bulkhead wiring harness
E	Engine wiring harness
T	Transmission cord
D	Door cord LH & RH, Rear gate cord Rear door cord LH & RH, Rear defogger cord
i	Instrument panel wiring harness
R	Rear wiring harness, Fuel tank cord, Roof cord, Rear gate cord, Rear defogger ground cord (Sedan model)
AB	Airbag wiring harness

# Basic Diagnostic Procedure

## WIRING SYSTEM

### D: SYMBOLS IN WIRING DIAGRAMS

A number of symbols are used in each wiring diagram to easily identify parts or circuits.

## 1. RELAY

A symbol used to indicate a relay.

## 2. CONNECTOR 1

The sketch of the connector indicates the one-pole types.

## 3. WIRING CONNECTION

Some wiring diagrams are indicated in foldouts for convenience. Wiring destinations are indicated where necessary by corresponding symbols. (When two pages are needed for clear indication)

## 4. FUSE NO. & RATING

The "FUSE No. & RATING" corresponds with that used in the fuse box (main fuse box, fuse and joint box).

## 5. CONNECTOR 2

- Each connector is indicated by a symbol.
- Each terminal number is indicated in the corresponding wiring diagram in an abbreviated form.
- For example, terminal number "G4" refers to No. 4 terminal of connector (G: F41) shown in the connector sketch.

## 6. CONNECTOR SKETCH

- Each connector sketch clearly identifies the shape and color of a connector as well as terminal locations. Non-colored connectors are indicated in white or natural color.
- When more than two types of connector number are indicated in a connector sketch, it means that the same type connectors are used.

## 7. GROUND

Each grounding point can be located easily by referring to the corresponding wiring harness.

## 8. DIODE

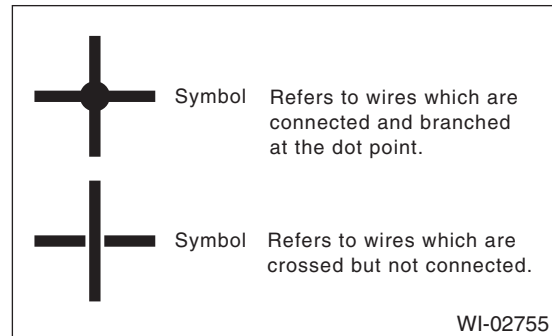

A symbol is used to indicate a diode.

## 9. WIRE TRACING ON EXTENDED WIRING DIAGRAMS

For a wiring diagram extending over at least two pages, a symbol (consisting of the same characters with arrows), facilitates wire tracing from one page to the next.

A ↔ A, B ↔ B

## 10. SYMBOLS OF WIRE CONNECTION AND CROSSING

## 11. POWER SUPPLY CIRCUIT

A symbol is used to indicate the power supply in each wiring diagram.

"MB-5", "MB-6", etc., which are used as power-supply symbols throughout the text, correspond with those shown in the "DC POWER SUPPLY CIRCUIT" in the wiring diagram.

Accordingly, using the "DC POWER SUPPLY CIRCUIT" and wiring diagrams permits service personnel to understand the entire electrical arrangement of a system.

## 12. CLASSIFICATION BY SPECIFICATION

When the wiring diagram differ according to vehicle specifications, the specification difference is described by using abbreviations.

## 13. TWISTED PAIR LINE

The twisted pair line is indicated by a symbol in the wiring diagrams.

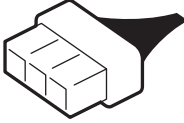

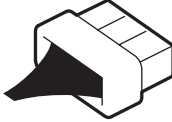

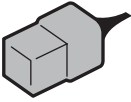

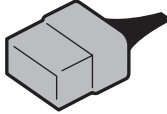

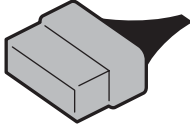

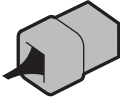

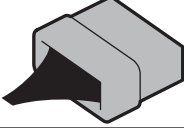

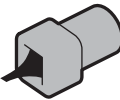

# Basic Diagnostic Procedure

## WIRING SYSTEM

### E: CONNECTOR SYMBOL IN WIRING HARNESS

A number of connector symbols are used in each wiring diagram to easily identify the wiring harness connectors.

Standard type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Standard type: Male		
		
		

Water proof type: Female		
Pole: From 1 to 8	Pole: From 9 to 20	Pole: More than 21
		
		
Water proof type: Male

## F: ABBREVIATION IN WIRING DIAGRAMS

Abbr.	Full name
A/B	Airbag
A/C	Air Conditioner
A/F	Air/Fuel (Air fuel ratio sensor)
ABS	Anti-lock Brake System
ACC	Accessory
ALT	Generator
ASSY	Assembly
AT	Automatic Transmission
ATF	Automatic Transmission Fluid
AWD	All Wheel Drive
B, BAT	Battery
CAN	Communication Area Network
CPU	Central Processing Unit
D	Drive Range
D, DN	Down
E	Ground
ECO	Economy
ECM	Engine Control Module
EGR	Exhaust Gas Recirculation
F/B	Fuse & Relay Box
FL	Front Left Hand
FR	Front Right Hand
FWD	Front Wheel Drive
G	Gravity (G sensor)
H/L	Headlight
HI	High
HID	High Intensity Discharge
I/F	Interface
IG	Ignition
Illumi.	Illumination
INT	Intermittent
LCD	Liquid Crystal Display
LH	Left Hand
Lo	Low
M	Motor
M/B	Main Fuse Box
MG	Magnet
Mi	Middle
MT	Manual Transmission
MID	Multi Information Display
MIST	Wiper mist (One-touch)
MT	Manual Transmission
N	Neutral Range
NA	Natural Aspiration
NAVI	Navigation
OP	Optional Parts or Open
P	Parking Range

Abbr.	Full name
PASS	Passing
PCV	Positive Crankcase Ventilation Valve
R	Reverse Range
R, RH	Right Hand
RL	Rear Left
RR	Rear Right
SBF	Slow Blow Fuse
SI-DRIVE	Subaru Intelligent Drive
S/S	SPORT Shift
ST	Starter
SW	Switch
TB	Turbo
TCM	AT Control Module
TPM	Tire Pressure Monitor
TPMS	Tire Pressure Monitor System
TV	Television
U, UP	Up
VDC	Vehicle Dynamics Control
VICS	Vehicle Information and Communication System
WASH	Washer

# Working Precautions

## WIRING SYSTEM

### 2. Working Precautions

#### A: PRECAUTIONS WHEN WORKING WITH THE PARTS MOUNTED ON THE VEHICLE

- 1) When working under a vehicle which is jacked-up, always be sure to use rigid rack.
- 2) The parking brake must always be applied during working. Also, in automatic transmission vehicles, keep the select lever set to the P (Parking) range.
- 3) Be sure the workshop is properly ventilated when running the engine. Further, be careful not to touch the belt or fan while the engine is operating.
- 4) Be careful not to touch hot metal parts, especially the radiator and exhaust system immediately after the engine has been turned off.

#### B: PRECAUTIONS IN TROUBLE DIAGNOSIS AND REPAIR OF ELECTRIC PARTS

- 1) The battery cable must be disconnected from the battery's (-) terminal, and the ignition switch must be set to the OFF position, unless otherwise required by the diagnostics.
- 2) Securely fasten the wiring harness with clamps and clips so that the harness does not interfere with the body end parts or edges and bolts or screws.
- 3) When installing parts, be careful not to catch them on the wiring harness.
- 4) When disconnecting a connector, do not pull the wires, but pull while holding the connector body.

- 5) Some connectors are provided with a lock. One type of such a connector is disconnected by pushing the lock, and the other, by moving the lock up. In either type the lock shape must be identified before attempting to disconnect the connector. To connect, insert the connector until it snaps and confirm that it is connected securely.

- 6) When checking continuity between connector terminals, or measuring voltage across the terminal and ground, always contact tester probe(s) on terminals from the wiring connection side. If the probe is too thick to gain access to the terminal, use "mini" test leads.

To check water-proof connectors (which are not measurable from the wiring side), contact test probes on the terminal side. Be careful not to bend or damage the terminals.

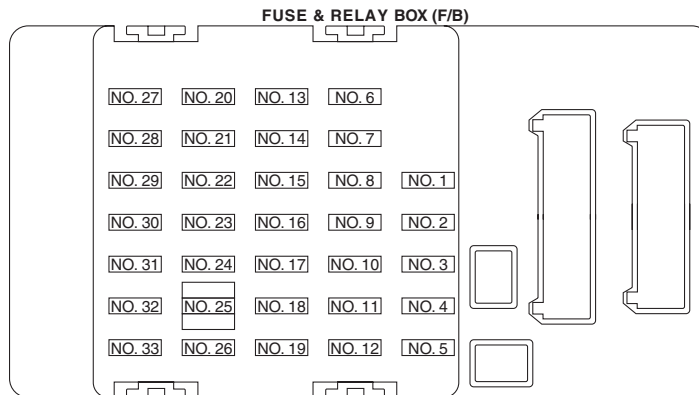

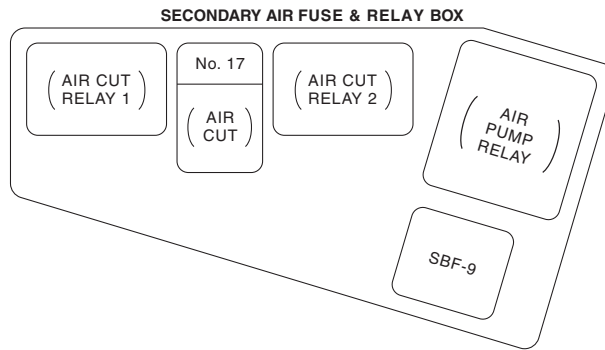

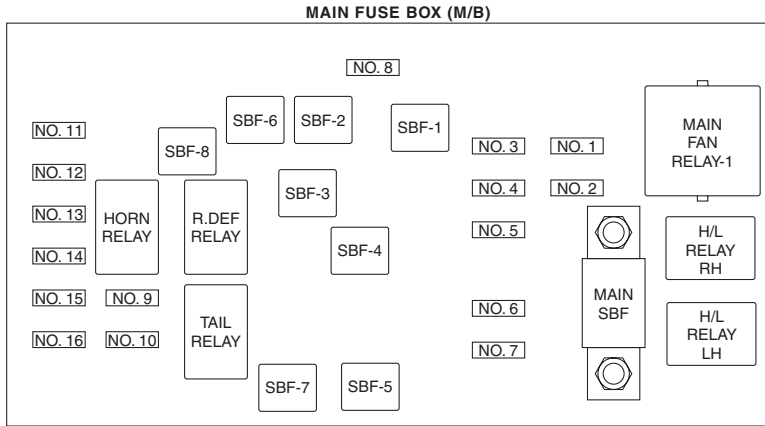

- 7) Sensors, relays, electrical unit, etc., are sensitive to strong impacts. Handle them with care so that they are not dropped or mishandled.

## FUEL INJECTION (FUEL SYSTEM)

---

### 1. General

- The Multipoint Fuel Injection (MFI) system supplies optimum air-fuel mixture under every engine operating condition through the use of the latest electronic control technology.

This system pressurizes the fuel to a constant pressure and injects it into each intake air port in the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where an electro-magnetic injection valve or injector opens for a short period that is precisely controlled depending on the quantity of air appropriate for each condition of operation. In actual control, an optimum fuel injection quantity is achieved by varying the duration of an electric pulse applied to the injector. This way of control enables simple, yet highly precise metering of the fuel.

- The engine control module (ECM) that controls the fuel injection system corrects the fuel injection amount depending on the vehicle speed, throttle opening, coolant temperature and other vehicle-operation-related information. The ECM receives the information in the form of electric signals from the corresponding sensors and switches.

The MFI system also has the following features:

- Reduced exhaust emissions
- Improves fuel efficiency
- Increased engine output
- Quick response to accelerator and brake pedal operation
- Superior start ability and warm-up performance in cold weather due to corrective controls made according to coolant and intake air temperatures

## 2. Air Line

### A: GENERAL

The air filtered by the air cleaner enters the throttle body where it is regulated in the volume by the throttle valve and then enters the intake manifold. It is then distributed to each cylinder where the air is mixed with fuel injected by the injector.

### B: MANIFOLD ABSOLUTE PRESSURE SENSOR

The manifold absolute pressure sensor is attached to the top of the throttle body, and continuously sends to the engine control module (ECM) voltage signals that are proportional to intake manifold absolute pressures. The ECM controls the fuel injection and ignition timing based on the intake manifold absolute pressure signals in addition to other signals from many sensors and other control modules.

- (2) Terminal
- (3) O-ring

- (A) Output voltage
- (B) Absolute pressure

## AIR LINE

### FUEL INJECTION (FUEL SYSTEM)

---

#### C: ELECTRONIC CONTROL THROTTLE SYSTEM

- The electronic control throttle system consists of an accelerator pedal position sensor mounted on the accelerator pedal, a throttle position sensor and a throttle motor mounted on the throttle body, and the ECM, which controls these devices.
- The movement of the accelerator pedal is converted into electrical signals by the accelerator pedal position sensor and sent to the ECM. Based on these signals the ECM controls the throttle motor to open and close the throttle valve.
- Idling control is now performed by the electronic control throttle system in place of the idle air control solenoid valve.

| (3) Electronic control throttle assembly |                                       |

## D: MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR

**NOTE:**

Not installed on some models.

The mass air flow and the intake air temperature sensors are integrated into a single unit. The unit is mounted on the air cleaner case and measures the amount as well as the temperature of the intake air.

The measured amount and temperature are converted into electrical signals and sent to the ECM. The ECM uses these signals to control injection and ignition timing as well as the fuel injection amount.

- (1) Mass air flow sensor
- (2) Intake air temperature sensor

(A) Air

FU-01231

# AIR LINE

## FUEL INJECTION (FUEL SYSTEM)

### E: TUMBLE GENERATOR VALVE

#### NOTE:

This is not installed on some models.

- A tumble generator valve is provided on the intake manifold of each engine bank. The right bank tumble generator valve has butterfly valves for the #1 and #3 cylinders and the left bank tumble generator valve has those for the #2 and #4 cylinders. The two butterfly valves in each tumble generator valve are fitted on a single shaft that is driven by an actuator.

- The tumble generator valves are controlled by the ECM according to the coolant temperature and the time elapsed after start of the engine. When the engine is started, the butterfly valves are moved to the closing ends. In this state, the intake air flows at very high speeds passing through narrowed passages in the directions determined by the individual intake air ports in the cylinder head. This creates tumbling air motions in the cylinders, which enables lean mixtures to be ignited and thus harmful exhaust emissions to be reduced during engine start. The tumble generator valves are fully open when the engine is operating at an ordinary driving speed, allowing intake air to flow without being changed in direction and velocity.

### 3. Fuel System

#### A: GENERAL

- The fuel pressurized by the fuel tank inside pump is delivered to each fuel injector through the fuel filter. Fuel injection pressure is regulated to an optimum level by the pressure regulator.
- Each injector injects fuel into the intake port of the corresponding cylinder where the fuel is mixed with air. The mixture then enters the cylinder. Fuel injection amount and timing are regulated by the ECM.

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### B: PRESSURE REGULATOR

The pressure regulator is installed at the injector end of the fuel supply line. It has a fuel chamber and spring chamber separated by a diaphragm. The fuel chamber is connected to the fuel supply line and the spring chamber is connected to the intake manifold. Fuel chamber also has a relief valve connected to the fuel return line through which fuel returns to the fuel tank. When the intake manifold vacuum increases, the diaphragm is pulled and the relief valve opens to decrease the fuel supply line pressure (or fuel injection pressure). When the intake manifold vacuum decreases, the diaphragm is pushed by the spring to increase the fuel supply line pressure. Thus, the difference between the fuel injection pressure and the intake manifold vacuum is kept at a constant level to precisely control the amount of injected fuel.

FU-02410

- (1) Relief valve
- (2) Diaphragm

- (A) To intake manifold
- (B) Fuel IN
- (C) Fuel OUT

### C: FUEL INJECTOR

- The MFI system employs top feed type fuel injectors.
- Each injector is installed in the fuel pipe in such a way that the injector is cooled by fuel.
- The features of this type of fuel injector are as follows:
  - 1) High heat resistance
  - 2) Low driving noise
  - 3) Easy to service
  - 4) Small size
- The injector injects fuel according to the valve open signal from the ECM. The needle valve is lifted by the solenoid, which is energized on arrival of the valve open signal.
- Since the injector's nozzle hole area, the lift of valve and the fuel pressure are kept constant, the amount of fuel injected is controlled only by varying the duration of the valve open signal from the ECM.
- The multi-hole nozzle makes it possible for the injector to produce fine fuel particles, which enhances the combustion efficiency and output performance of the engine.

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### D: FUEL TANK

The fuel tank utilizes a two-compartment design to ensure sufficient capacity without interfering with the rear differential. It is provided with a suction jet pump (included in the fuel pump and fuel level sensor assembly) which transfers fuel from one compartment to the other.

Each compartment has an individual fuel level sensor. The fuel tank is located under the rear seat and secured with hold-down bands.

- (1) Fuel pump and fuel level sensor assembly
- (2) Fuel sub level sensor
- (3) Band

- (4) Cushion
- (5) Steel

### E: FUEL PUMP AND FUEL LEVEL SENSOR ASSEMBLY

#### 1. FUEL PUMP

The fuel pump consists of a motor, impeller, pump casing, pump cover, check valve and filter. It is located in the fuel tank and combined with the fuel level sensor into a single unit. The operation of this impeller type pump is very quiet.

- When the ignition switch is turned ON, fuel pump relay is activated. Then the motor operates to rotate the impeller.
- As the impeller rotates, fuel in a vane groove of the impeller flows along the fuel passage into the next vane groove by centrifugal force. When fuel flows from one groove to the next, a pressure difference occurs due to friction. This creates a pumping effect.
- The fuel pushed up by rotation of the impeller then passes through the clearance between the armature and the magnet of the motor and is discharged through the check valve.
- When the fuel discharge pressure reaches the specified level, the relief valve opens and excess fuel is released into the fuel tank. In this manner, the relief valve prevents an abnormal increase in fuel pressure.
- When the engine and the fuel pump stop, check valve operates to close the discharge port, so that the fuel pressure in the fuel delivery line is retained.

#### 2. FUEL LEVEL SENSOR

The fuel level sensor is integrated with the fuel pump, which is located in the fuel tank. The sensor outputs an electric resistance signal that varies with movement of its float to indicate the level of the fuel remaining in the tank.

FU-02519

- (1) Fuel pump assembly
- (2) Fuel level sensor
- (3) Float
- (4) Fuel temperature sensor

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### 3. JET PUMP

- The jet pump utilizes the velocity of fuel returning from the engine to produce vacuum in it.
- Using the pumping effect produced by the vacuum, the jet pump transfers fuel from the sub-compartment and main compartment of the fuel tank to the fuel pump.
- When the return line nozzle is clogged, the fuel sent back through the return line flows back into the fuel tank via the relief valve.

FU-00226

- (2) Nozzle

(A) Return line

### 4. FUEL FILTER

The fuel filter is integrated with the fuel pump assembly, which is located in the fuel tank.

### F: SUB-COMPARTMENT FUEL LEVEL SENSOR

This sensor detects the level of the fuel in the sub side (the side without a fuel pump) of the fuel tank. Also, when the jet pump is operating, fuel in the sub side is drawn up and transferred to the fuel pump.

- (1) Fuel level sensor
- (2) Float

**(A)** To jet pump

### 4. Sensors and Switches

#### A: FRONT OXYGEN (A/F) SENSOR

- The front oxygen sensor uses zirconium oxide ( $ZrO_2$ ), which is a solid electrolyte, at portions exposed to exhaust gas.
  - The zirconium oxide has the property of generating electromotive force when its both sides are exposed to oxygen ions of different concentration and the magnitude of this electromotive force depends on how much the difference is.
- The front oxygen (A/F) sensor detects the amount of oxygen in exhaust gases by making use of this property of the zirconium oxide material.
- The sensor incorporates a ceramic heater to improve its performance at low temperatures.

- (4) Ceramic heater

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

- When rich air-fuel mixture is burnt in the cylinder, the oxygen in the exhaust gases is almost completely used in the catalytic reaction by the platinum coating on the external surface of the zirconium tube. This results in a very large difference in the oxygen ion concentration between the inside and outside of the tube, and the electromotive force generated is large.
- When a lean air-fuel mixture is burnt in the cylinder, relatively large amount of oxygen remains in the exhaust gases even after the catalytic action, and this results in a small difference in the oxygen ion concentration between the tube's internal and external surfaces. The electromotive force in this case is very small.
- The difference in oxygen concentration changes drastically in the vicinity of the stoichiometric air-fuel ratio, and hence the change in the electromotive force is also large. By using this information, the ECM can determine the air-fuel ratio of the supplied mixture easily. The front oxygen (A/F) sensor does not generate much electromotive force when the temperature is low. The output characteristics of the sensor stabilize at a temperature of approximately 700°C (1,292°F).

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

### B: FRONT OXYGEN SENSOR AND REAR OXYGEN SENSOR

#### NOTE:

The front oxygen sensor is not installed on some models.

- The front oxygen sensor and rear oxygen sensor are used to sense oxygen concentration in the exhaust gas. If the air-fuel ratio is leaner than the stoichiometric ratio in the mixture (i.e., excessive amount of air), the exhaust gas contains more oxygen. To the contrary, if the fuel ratio is richer than the stoichiometric ratio, the exhaust gas contains almost no oxygen.
- Detecting the oxygen concentration in exhaust gas using the front oxygen sensor and rear oxygen sensor makes it possible to determine whether the air-fuel ratio is leaner or richer than the stoichiometric ratio.
- The front oxygen sensor and the rear oxygen sensor have a zirconium tube (ceramic), which generates voltage if there is a difference in oxygen ion concentration between the inside and outside of the tube. Platinum is coated on the inside and outside of the zirconium tube as a catalysis and electrode material. The sensor housing is grounded to the exhaust pipe and the inside is connected to the ECM through the harness.
- A ceramic heater is employed to improve performance at low temperatures.

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

### C: ENGINE COOLANT TEMPERATURE SENSOR

The engine coolant temperature sensor is located on the engine coolant pipe. The sensor uses a thermistor whose resistance changes inversely with temperature. Resistance signals as engine coolant temperature information are transmitted to the ECM to make fuel injection, ignition timing, purge control solenoid valve and other controls.

FU-02017

- (1) Connector
- (2) Thermistor element

- (A) Resistance ( $k\Omega$ )
- (B) Temperature  $^{\circ}\text{C}$  ( $^{\circ}\text{F}$ )

### D: CRANKSHAFT POSITION SENSOR

- The crankshaft position sensor is installed on the oil pump, which is located in the front center portion of the cylinder block. The sensor generates a pulse when one of the teeth on the perimeter of the crankshaft sprocket (rotating together with the crankshaft) passes in front of it. The ECM determines the crankshaft angular position by counting the number of pulses.
- The crankshaft position sensor is a molded type, which consists of a magnet, core, coil, terminals and other components as illustrated below.

FU-00234

- (1) Terminal
- (2) Yoke core
- (3) Magnet

- (4) Coil
- (5) Core
- (6) Cover

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

- As the crankshaft rotates, each tooth aligns with the crankshaft position sensor. At that time, the magnetic flux in the sensor's coil changes since the air gap between the sensor pickup and the sprocket changes. This change in magnetic flux induces a voltage pulse in the sensor and the pulse is transmitted to the ECM.

FU-00354

- (1) Crankshaft position sensor
- (2) Crankshaft sprocket
- (3) Crankshaft half rotation

### E: CAMSHAFT POSITION SENSOR

- The camshaft position sensor is located on the left-hand camshaft support. This sensor detects the combustion cylinder at any given moment.
  - The sensor generates a pulse when one of the bosses on the back of the left-hand camshaft drive sprocket passes in front of the sensor. The ECM determines the camshaft angular position by counting the number of pulses.
- Internal construction and the basic operating principle of the camshaft position sensor are similar to those of the crankshaft position sensor.

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

---

### F: KNOCK SENSOR

- The knock sensor is installed on the cylinder block, and senses knocking that occur in the engine.
- The sensor is a piezo-electric type, which converts vibration resulting from knocking into electric signals.
- In addition to a piezo-electric element, the sensor has a weight and case as its components. If knocking occurs in the engine, the weight in the case moves causing the piezo-electric element to generate a voltage.
- The knock sensor harness is connected to the engine harness.

FU-00356

- (1) Nut
- (2) Weight
- (3) Piezo-electric element
- (4) Housing
- (5) Resistance

### G: VEHICLE SPEED SENSOR

Vehicle speed signals are sent from the vehicle speed sensor to the ABS and VDC control modules. The signals are sent to the ECM via CAN communication. (For details, refer to the LAN section.)  
<Ref. to LAN section.>

## 5. Control System

### A: GENERAL

The ECM receives signals from various sensors, switches, and other control modules. Using these signals, it determines the engine operating conditions and if necessary, emits signals to one or more systems to control them for optimum operation.

Major control items of the ECM are as follows:

- Fuel injection control
- Ignition control
- Idle air control
- Fuel pump control
- Canister purge control\*<sup>1</sup>
- Radiator fan control\*<sup>2</sup>
- On-board diagnosis function

\*1: Canister purge control is described under EC(H4SO) — Evaporative Emission Control System. <Ref. to EC(H4SO) section.>

\*2: Radiator fan control is described under CO(H4SO). <Ref. to CO(H4SO) section.>

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### B: INPUT AND OUTPUT SIGNALS

Signal	Unit	Function
Input signals	Manifold absolute pressure sensor	Detects the pressure of intake air (measures the absolute pressure).
	Mass air flow and intake air temperature sensor	Detects the temperature and amount of intake air.
	Throttle position sensor	Detects the throttle valve position.
	Front oxygen (A/F) sensor	Detects the density of oxygen in exhaust gases at the upstream of the front catalytic converter.
	Front oxygen sensor Rear oxygen sensor	Detects the density of oxygen in exhaust gases at the downstream of the front catalytic converter.
	Crankshaft position sensor	Detects the crankshaft angular position.
	Camshaft position sensor	Detects the combustion cylinder.
	Engine coolant temperature sensor	Detects the engine coolant temperature.
	Knock sensor	Detects engine knocking.
	Accelerator pedal position sensor	Indicates the accelerator pedal position.
	Ignition switch	Detects operation of the ignition switch.
	Starter switch	Detects the condition of engine cranking.
	Neutral position switch (MT)	Detects that the gear is in neutral.
	Inhibitor switch (AT)	Detects shift positions.
	A/C switch	Detects ON-OFF operation of the A/C switch.
	Fuel temperature sensor	Detects the temperature of the fuel in the fuel tank.
	Fuel level sensor	Detects the level of the fuel in the fuel tank.
	Fuel tank pressure sensor	Detects the evaporation gas pressure in the fuel tank.
	A/C mid pressure switch	Detects operation of the A/C mid pressure switch.
	Wiper switch	Detects ON-OFF operation of the wiper switch.
	Power steering switch	Detects operation of the power steering switch.
	Small light switch	Detects ON-OFF operation of the small light switch.
Blower fan switch	Detects ON-OFF operation of the blower fan switch.	
Rear defogger switch	Detects ON-OFF operation of the rear defogger switch.	

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

Signal	Unit	Function
Output signals	Fuel injector	Activates an injector.
	Ignition signal	Turns the primary current to the ignition coil ON or OFF.
	Electronic control throttle	Controls motor output for the electronic control throttle.
	Fuel pump relay	Turns ON or OFF the fuel pump relay.
	A/C control relay	Turns ON or OFF the A/C control relay.
	Radiator fan control relay	Turns ON or OFF the radiator fan control relay.
	Tumble generator valve actuator	Operates the tumble generator valve.
	Engine warning light	Indicates existence of abnormality.
	Purge control solenoid valve	Controls purge of evaporative gas absorbed by the canister.
	EGR valve	Adjusts the exhaust gas circulating flow to the intake pipe.
	Heater circuit of front and rear oxygen sensors	Controls heater of front and rear oxygen sensors.
	Pressure control solenoid valve	Controls evaporation pressure in the fuel tank.
	Drain valve	Closes the evaporation line between the fuel tank and canister to detect leakage of evaporation gas.
	Power supply	Controls ON/OFF of the main power supply relay.

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

---

### C: FUEL INJECTION CONTROL

- The ECM receives signals from various sensors and based on them, it determines the amount of fuel injected and the fuel injection timing. It performs the sequential fuel injection control over the entire engine operating range except during start-up of the engine.
- The amount of fuel injected depends upon the length of time the injector stays open. The fuel injection duration is determined according to varying operating condition of the engine. For the purpose of achieving highly responsive and accurate fuel injection duration control, the ECM performs a new feedback control that incorporates a learning feature as detailed later.
- The sequential fuel injection control is performed such that fuel is injected accurately at the time when the maximum air intake efficiency can be achieved for each cylinder (i.e., fuel injection is completed just before the intake valve begins to open).

#### 1. FUEL INJECTION DURATION

Fuel injection duration is basically determined as indicated below:

- While cranking the engine:

The duration defined below is used.

- Duration of fuel injection during engine start-up ..... Determined according to the engine coolant temperature detected by the engine coolant temperature sensor.

- During normal operation:

The duration is determined as follows:

Basic duration of fuel injection  $\times$  Correction factors + Voltage correction time

- Basic duration of fuel injection ..... The basic length of time fuel is injected. This is determined by two factors — the amount of intake air detected by the air flow sensor and the engine speed monitored by the crankshaft position sensor.
- Correction factors ..... See the next section.
- Voltage correction time ..... This is added to compensate for the time lag before operation of injector that results from variation in the battery voltage.

#### 2. CORRECTION FACTORS

The following factors are used to correct the basic duration of fuel injection in order to make the air-fuel ratio meet the requirements of varying engine operating conditions:

- Air-fuel ratio feedback factor:

This factor is used to correct the basic duration of fuel injection in relation to the actual engine speed. (See the next section for more details.)

- Start increment factor:

This factor is used to increase the fuel injection duration only while the engine is being cranked to improve its start ability.

- Coolant-temperature-dependent increment factor:

This factor is used to increase the fuel injection duration depending on engine coolant temperature signals to facilitate cold starting. The lower the coolant temperature, the greater becomes the increment.

- After-start increment factor:

- This factor is used to increase the fuel injection duration for a certain period immediately after start of the engine to stabilize engine operation.
- The increment depends on the coolant temperature at the start of the engine.

- **Wide-open-throttle increment factor:**

This factor is used to increase the fuel injection duration depending on the relationship between the throttle position sensor signal and air flow sensor signal.

- **Acceleration increment factor:**

This factor is used to increase the fuel injection duration to compensate for a time lag between air flow measurement and fuel injection control for better engine response to driver's pedal operation during acceleration.

### 3. AIR-FUEL RATIO FEEDBACK FACTOR

The ECM creates this factor utilizing the front oxygen (A/F) sensor signal. When the signal is high, the air-fuel ratio is leaner than the stoichiometric ratio. The ECM then makes the fuel injection duration longer by modifying the factor. When the signal is low showing that the mixture is rich, the ECM modifies the factor to make the injection duration shorter. In this way, the air-fuel ratio is maintained at a level close to the stoichiometric ratio at which the three-way catalytic converter acts most effectively.

- (6) ECM

- (A) Injection duration increment signal
- (B) Injection duration decrement signal
- (C) High oxygen density
- (D) Low oxygen density
- (E) Lean signal
- (F) Rich signal

### 4. LEARNING FEATURE

The air-fuel ratio feedback control includes a learning feature, which contributes to more accurate and responsive control.

- In the air-fuel ratio feedback control, the ECM calculates the necessary amount of correction based on data from the front oxygen (A/F) sensor and adds the result to the basic duration (which is stored in the ECM's memory for each condition defined by the engine speed and various loads.)
- Without a learning feature, the ECM carries out the above-mentioned process every time. This means that if the amount of necessary correction is large, the air-fuel ratio feedback control becomes less responsive and less accurate.
- The learning feature enables the ECM to store the amount of correction into memory, and takes it into account with the basic fuel injection duration to create a new reference fuel injection duration. Using the reference duration as the basic duration for the injection a few times later, the ECM can reduce the amount of correction and thus make its feedback control more accurate and responsive to changes in the air-fuel ratio due to difference in driving condition and sensor/actuator characteristics that may result from unit-to-unit variation or aging over time.

## D: IGNITION CONTROL

- The ECM determines operating condition of the engine based on signals from the manifold absolute pressure sensor, engine coolant temperature sensor, intake air temperature sensor, crankshaft position sensor and other sources. The ECM then selects the ignition timing most appropriate for the condition thus determined from those stored in its memory and outputs at that timing a primary current OFF signal to the igniter to initiate ignition.
- This control uses a quick-to-response learning feature by which the data stored in the ECM memory is processed in comparison with information from various sensors and switches.
- Thus, the ECM can always perform optimum ignition timing taking into account the output, fuel efficiency, exhaust gas, and other factors for every engine operating condition.
- Ignition control during start-up  
 Engine speed fluctuates during start of the engine, so the ECM cannot control the ignition timing. During that period, the ignition timing is fixed at 10° BTDC by using the 10° signal from the crankshaft position sensor.

FU-02412

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### ● Ignition control after start of engine

From the time to receive crank angle signals indicating  $180^\circ$  of a turn, the ECM measures the engine speed, and by using this data it decides the dwell set timing and ignition timing according to the engine condition.

## F: FUEL PUMP CONTROL

Using the signal from the crankshaft position sensor, the ECM controls operation of the fuel pump by turning its relay ON or OFF. To improve safety, the fuel pump is stopped if the engine stalls with the ignition switch ON.

Ignition switch ON	Fuel pump relay	Fuel pump
A certain period of time after ignition switch is turned ON	ON	Operates
While cranking the engine	ON	Operates
While engine is operating	ON	Operates
When engine stops	OFF	Does not operate

# ON-BOARD DIAGNOSIS SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

---

### 6. On-board Diagnosis System

#### A: GENERAL

- The on-board diagnosis system detects and indicates a fault by generating a code corresponding to each fault location. The malfunction indicator light on the combination meter indicates occurrence of a fault or abnormality.
- When the malfunction indicator light comes on as a result of detection of a fault by the ECM, the corresponding diagnostic trouble code (DTC) and freeze frame engine condition are stored in the ECM.
- On the OBD-II conformable car, it is necessary to connect the SUBARU Select Monitor (SSM) or General Scan Tool (GST) to the data link connector in order to check the DTC.
- The SSM and GST can be used for erasing DTCs. These can also read freeze frame data in addition to other pieces of engine data.
- If there is a failure involving sensors, which may affect drive control of the vehicle, the fail-safe function ensures minimum level of drivability.

#### B: FAIL-SAFE FUNCTION

For a sensor or switch that has been judged to be faulty by the on-board diagnosis, the ECM generates a pseudo signal to keep the vehicle operational. (The control becomes degraded.)

# SYSTEM OVERVIEW

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 1. System Overview

There are three emission control systems, which are as follows:

- Crankcase emission control system
- Exhaust emission control system
  - Catalytic converter
  - Air/fuel (A/F) control system
  - Ignition control system
  - Exhaust gas recirculation system
- Evaporative emission control system
  - On-board refueling vapor recovery (ORVR) system

# SYSTEM OVERVIEW

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

Item		Main components	Function
Crankcase emission control system		Positive crankcase ventilation (PCV) valve	Draws blow-by gas into intake manifold from crankcase and burn it together with air-fuel mixture. Amount of blow-by gas to be drawn in is controlled by intake manifold pressure.
Exhaust emission control system	Catalytic converter	Front	Oxidizes HC and CO contained in exhaust gases as well as reducing NOx.
		Rear	
	Air/fuel (A/F) control system	Engine control module (ECM)	Receives input signals from various sensors, compares signals with stored data, and emits a signal for optimal control of air-fuel mixture ratio.
		Front oxygen (A/F) sensor	Detects density of oxygen contained exhaust gases.
		Front oxygen sensor Rear oxygen sensor	Detects density of oxygen contained in exhaust gases.
		Throttle position sensor	Detects throttle opening.
		Manifold absolute pressure sensor	Detects absolute pressure of intake manifold.
		Mass air flow and intake air temperature sensor	Detects amount of intake air. Detects intake air temperature at air cleaner case.
	Ignition control system	ECM	Receives various signals, compares signals with basic data stored in memory, and emits a signal for optimal control of ignition timing.
		Crankshaft position sensor	Detects engine speed (revolution).
		Camshaft position sensor	Detects reference signal for combustion cylinder discrimination.
		Engine coolant temperature sensor	Detects coolant temperature.
	Exhaust gas recirculation system	Knock sensor	Detects engine knocking.
		EGR valve	Adjusts the amount of exhaust gas flowing back to the intake pipe.
Evaporative emission control system	Canister	Absorbs evaporative gas that accumulates in fuel tank when engine stops, and releases it to combustion chambers for a complete burn when the engine is started. This prevents HC from being discharged into atmosphere.	
	Purge control solenoid valve	Receives a signal from ECM and controls purge of evaporative gas absorbed by canister.	
	Pressure control solenoid valve	Receives a signal from ECM and controls evaporative gas pressure in fuel tank.	
ORVR system	Vent valve	Controls evaporation pressure in the fuel tank.	
	Drain valve	Closes the evaporation line by receiving a signal from ECM to check the evaporation gas leak.

# CRANKCASE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 3. Crankcase Emission Control System

- The positive crankcase ventilation (PCV) system prevents air pollution that will be caused by blow-by gas being emitted from the crankcase. The system consists of a sealed oil filler cap, rocker covers with fresh air inlet, connecting hoses, a PCV valve and an air intake duct.
- In a part-throttle condition, the blow-by gas in the crankcase flows into the intake manifold through the connecting hose of crankcase and PCV valve by the strong vacuum created in the intake manifold. Under this condition, fresh air is introduced into the crankcase through the connecting hose of the rocker cover.
- In a wide-open-throttle condition, a part of blow-by gas flows into the air intake duct through the connecting hose and is drawn into the throttle chamber, because under this is condition, the intake manifold vacuum is not strong enough to introduce through the PCV valve all blow-by gases that increase in the amount with engine speed.

| (5) Oil filler cap     | (10) PCV valve |                                    |

## 4. Catalytic Converter

- The basic materials of the three-way catalytic converter are platinum (Pt), rhodium (Rh) and palladium (Pd), and a thin coat of their mixture is applied onto a honeycomb or porous ceramic (carrier). To avoid damaging the catalytic converter, only unleaded gasoline should be used.
- The catalytic converter reduces HC, CO and NO<sub>x</sub> in exhaust gases through chemical reactions (oxidation and reduction). These harmful components are reduced most efficiently when their concentrations are in a certain balance. These concentrations vary with the air-fuel ratio. The ideal air-fuel ratio for reduction of these components is the stoichiometric ratio.
- Therefore, the air-fuel ratio needs to be controlled to around the stoichiometric ratio to purify the exhaust gases most efficiently.

## **AIR/FUEL (A/F) CONTROL SYSTEM**

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### **5. Air/fuel (A/F) Control System**

- The air/fuel (A/F) control system makes a correction to the basic fuel injection duration in accordance with the signals from the front oxygen (A/F) sensor and the rear oxygen sensor so that the stoichiometric ratio is maintained, thus ensuring most effective exhaust gas purification by the three-way catalytic converter. Different basic fuel injection durations are preset for various engine speeds and loads, as well as the amount of intake air.
- This system also has a learning control function which stores the corrected data in relation to the basic fuel injection in the memory map. This allows an appropriate air-fuel ratio correction to be added automatically in quick response to any situation that requires such an effect. Thus, the air-fuel ratio is optimally maintained under various conditions while purifying exhaust gases most effectively, improving driving performance and compensating for changes in sensors' performance over time.

# IGNITION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 6. Ignition Control System

- The ignition system is controlled by the ECM.

The ECM monitors the operating condition of the engine using the signals from the sensors and switches shown below and determines the ignition timing most appropriate for each engine operating condition. Then it sends a signal to the igniter, commanding generation of a spark at that timing.

- The ECM uses a preprogrammed map for a “closed-loop” control which provides its ignition timing control with excellent transient characteristics, i.e., highly responsive ignition timing control.

# EVAPORATIVE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 8. Evaporative Emission Control System

### A: GENERAL

- The evaporative emission control system prevents fuel vapors from escaping into atmosphere. This system includes a canister, purge control solenoid valve, fuel cut valve, and the lines connecting them.
- Fuel vapor in the fuel tank is introduced into the canister through the evaporation line, and are absorbed by activated carbon in it. The fuel cut valve is also incorporated in the fuel tank line.
- The purge control solenoid valve is controlled optimally by the ECM according to the engine condition.
- The pressure control solenoid valve incorporated in the fuel tank evaporation line regulates the pressure/vacuum in the fuel tank under the control of the ECM which uses the signal from the fuel tank pressure sensor.

- |                                  |                                     |                                     |

### B: FUEL CUT VALVE

The fuel cut valve is incorporated in the fuel tank. The rising level of the fuel in the fuel tank causes the float to move up and close the cap hole so that no fuel can flow to the evaporation line.

# EVAPORATIVE EMISSION CONTROL SYSTEM

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### C: FUEL TANK CAP

- The fuel tank cap is of a quick lock type and can be opened or closed in 1/4 of a full turn.
- The fuel tank cap has a relief valve, which prevents development of vacuum in the fuel tank in the event of a problem with the fuel vapor line.

When there is no problem with the fuel vapor line, the filler pipe is sealed at the portion (A) and by the seal pressed against the filler pipe end. If vacuum develops in the fuel tank, the atmospheric pressure forces the spring down to open the valve; consequently outside air flows into the fuel tank, thus controlling the inside pressure.

EC-02109

- (1) Seal
- (2) Spring
- (3) Valve
- (4) Filter

# EVAPORATIVE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## D: CANISTER

The canister incorporates a drain valve and a drain filter.

The charcoal filled in the canister temporarily stores fuel vapors. When the purge control solenoid valve is opened by a signal from the ECM, the external fresh air entering the canister carries the fuel vapors into the collector chamber.

The drain filter is installed at the air inlet port of the drain valve. It cleans the air taken in the canister through the drain valve.

The drain valve is located just below the drain filter.

# ON-BOARD REFUELING VAPOR RECOVERY (ORVR) SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 9. On-board Refueling Vapor Recovery (ORVR) System

### A: GENERAL

The on-board refueling vapor recovery system allows the fuel vapors in the fuel tank to be introduced directly into the canister through the vent valve when the fuel tank inside pressure increases as a result of refueling.

The diagnosis of the system is performed by monitoring the fuel tank inside pressure data from the fuel tank pressure sensor while forcibly closing the drain valve.

### B: OPERATION

- While driving

Since the back side of the diaphragm in the pressure control solenoid valve is open to the atmosphere, the diaphragm is held pressed by the atmospheric pressure in the position where only the external air is introduced into the canister. When the fuel vapor pressure acting on the other side of the diaphragm increases and overcomes the atmospheric pressure, it pushes the diaphragm and opens the port through which the fuel vapors make their way to the canister.

EC-02094

- |                                     |                          |
|-------------------------------------|--------------------------|
| (1) Canister                        | (4) Intake manifold      |
| (2) Pressure control solenoid valve | (5) Shut-off valve: open |
| (3) Purge control solenoid valve    |                          |

# ON-BOARD REFUELING VAPOR RECOVERY (ORVR) SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- While refueling

As the fuel enters the fuel tank, the tank inside pressure increases. When the inside pressure becomes higher than the atmospheric pressure, the port of the vent valve opens, allowing the fuel vapors to be introduced into the canister through the vent line. The fuel vapors are absorbed by charcoal in the canister, so the air discharged from the drain valve contains no fuel. When a filler gun is inserted, the shut-off valve closes the evaporation line.

EC-02095

# GENERAL

## MECHANICAL

### 1. General

The engine used in this vehicle is of a horizontally opposed, four-cylinder design. This four-stroke-cycle, water-cooled, SOHC engine uses a total of 16 valves and its main components are made of aluminum alloy. It is fueled by a multiple fuel injection system.

The engine's major structural and functional features are as follows:

- The cylinder head forms pent roof combustion chambers, each having a spark plug located at its center and two each of intake and exhaust valves (four valves per cylinder). The intake and exhaust ports are located in a cross-flow arrangement.
- There are a screw and nut at the valve end of each rocker arm. They are used for adjusting the valve clearance.
- A single timing belt drives two camshafts on the left and right banks and the water pump on the left bank. A belt tension adjuster automatically adjusts the belt tension and eliminates the need for manual adjustments.
- The crankshaft is supported at five journals with high rigidity and strength.
- The cylinder block is made of aluminum die-casting, and cast iron cylinder liners are cast in.

ME-00312

- |                    |                        |                           |

## 2. Timing Belt

- A single timing belt drives two camshafts (one in the left bank and one in the right bank). The belt also drives the water pump by its non-toothed side.
- The timing belt teeth have a specially designed round profile, which contributes to quiet operation. The timing belt is made of strong and inflexible core cords, wear-resistant canvas and heat-resistant rubber material.
- A hydraulic automatic belt tension adjuster always keeps the belt taut to the specified tension. Any manual belt tension adjustment is unnecessary.

# AUTOMATIC BELT TENSION ADJUSTER

MECHANICAL

## 3. Automatic Belt Tension Adjuster

The automatic belt tension adjuster consists of a tensioner unit and a bracket. It maintains the timing belt tension automatically at a specified level to enable the belt to transmit power correctly, reduce operating noise and increase the life of the belt.

The cylinder of the tensioner unit incorporates an adjuster rod, wear ring, plunger spring, return spring, check ball and silicone oil.

The automatic belt tension adjuster gives tension to the belt by a levering action which is produced by the push force of the tensioner unit's adjuster rod. It operates in the process detailed below.

ME-00314

- |                           |                          |
|---------------------------|--------------------------|

| (5) Adjuster rod          | (12) Tensioner bracket   |
| (6) Plunger               | (13) Cylinder            |
| (7) Oil pressure chamber  |                          |

# AUTOMATIC BELT TENSION ADJUSTER

MECHANICAL

---

- Timing belt tensioning action

When the belt becomes slack, the adjuster rod is pushed upward by the return spring. The oil in the reservoir chamber, which is pressurized by the plunger spring to a certain level, pushes open the check ball and flows into the oil pressure chamber to keep the pressure constant. The thrust force  $F$  resulting from extension of the adjuster rod applies a counterclockwise torque to the tensioner bracket, which causes the belt tension pulley at its end to turn in the same direction. This applies tensioning pressure  $P_b$  to the timing belt.

- Timing belt tension balancing action

When the belt tension pulley is pushed against the timing belt with pressure  $P_b$ , reaction force  $T_b$  of the timing belt generates the reaction force  $P$  at the point on which the adjuster rod force is acting. This force  $P$  pushes the adjuster rod until it balances with the sum of the thrust force  $F$  and the pressure of the oil in the oil pressure chamber. Therefore, the timing belt tension is kept constant.

- Over-tension correction action

If the tension of the timing belt increases excessively, the force  $P$  becomes larger than the thrust force  $F$  and silicone oil is returned from the oil pressure chamber to the reservoir chamber little by little until the force  $P$  balances again with the thrust force  $F$ . Thus the timing belt tension is maintained at the specified level at all times.

# BELT COVER

MECHANICAL

## 4. Belt Cover

- The belt cover is made of lightweight, heat resistant synthetic resin molding. It constitutes a totally enclosed housing with its cylinder block mating edges sealed with rubber gaskets. This effectively protects the inside components from dust and liquid.
- Rubber seals used between the cylinder block and the belt cover effectively reduces transmission of noise and vibration.
- The front belt cover has a line mark for ignition-timing checking.

ME-00315

- (1) Front belt cover
- (2) Belt cover No. 2 (RH)
- (3) Belt cover No. 2 (LH)
- (4) Belt cover (LH)

## 5. Valve Rocker Assembly (Until '05MY)

- The intake valve rocker arms and the exhaust valve rocker arms are installed on their own rocker shafts both of which are retained by the camshaft caps.
- The valve end of each rocker arm is provided with valve rocker adjusting screw and nut. Turning of this screw adjusts the valve clearance.
- The exhaust valve rocker arms are Y-shaped, and each arm operates two exhaust valves simultaneously.
- Each rocker shaft has an oil passage in it.

ME-00316

## 7. Variable Valve Lift System (From '06MY)

### A: GENERAL

Variable valve lift system of SOHC engine is the system that aims at the improvement of fuel efficiency, the improvement of engine output, and the decrease of toxic substances in exhaust gas, etc.

It changes the lift amount of intake valve to low-lift or high-lift according to the engine driving status. Then, the combustion status of air-fuel mixture has been improved in the medium-low speed area. In the high-speed area, the intake air efficiency has been improved. As a result, the engine output improves, and at the same time the fuel efficiency improves.

### B: STRUCTURE

The variable valve lift mechanism that is provided to intake valve rocker assembly changes the lift amount of one side intake valves to high-lift or low-lift according to the engine speed and engine load. The variable valve lift mechanism is operated by the engine oil pressure that is controlled by the oil switching valve (OSV).

#### 1. CAMSHAFT

3 cams are provided to each cylinder: the fixed lift cam, the variable high lift cam, and the variable low lift cam.

ME-02786

- |                            |                           |

# VARIABLE VALVE LIFT SYSTEM (FROM '06MY)

MECHANICAL

## 2. VARIABLE VALVE LIFT MECHANISM

The variable valve lift mechanism consists of a low lift arm, high lift arm, torsion spring, and a small cylinder that includes 2 locking pins and a spring. The engine oil pressure is led from OSV to the oil chamber of support.

ME-02787

- |                   |                    |
|-------------------|--------------------|
| (1) High lift arm | (5) Locking pin    |
| (2) Low lift arm  | (6) Small cylinder |
| (3) Support       | (7) Spring         |
| (4) Oil chamber   | (8) Torsion spring |

## C: OPERATION

### 1. LOW LIFT

When the low lift arm and the high lift arm are pushed up by the camshaft rotation, the locking pin is in the unlock position. Therefore, the high lift arm is separated from the low lift rocker arm and can operate freely. The valve lift may be small in this condition because the valve is opened or closed being linked with the low lift cam via the low lift arm.

At this time, the high lift arm is pushed against the high lift cam with the torsion spring.

In the cylinder at intake air process, the swirl occurs because the flow velocity is sped up by the air-fuel mixture sucked from one side valve. The flow velocity of air-fuel mixture in the combustion chamber is further sped up around TDC on its compression stroke because of the piston head and the squish area of the combustion chamber.

Then, the rich A/F area is made around the ignition area of spark plug and the combustion of the air-fuel mixture is improved. As a result, the generated torque improves, and at the same time it is possible to drive with the lean A/F, and toxic substances in exhaust gas are decreased.

ME-02788

- Operation change from low lift to high lift

When the oil pressure provided from OSV to the oil chamber increases, the locking pin is pushed against the high lift arm side. Then, the return spring of small cylinder is compressed, and then the locking pin of low lift arm is pressed into the locking hole of high lift arm. By a series of these operations, the low lift arm is integrated to the high lift arm.

ME-02789

# VARIABLE VALVE LIFT SYSTEM (FROM '06MY)

MECHANICAL

---

## 2. HIGH LIFT

As the valve is pushed up to the high lift cam by the high lift arm and low lift arm that were integrated, the valve lift becomes larger.

When the low lift arm operates upward or downward, the connecting position between the locking pin of low lift arm and the locking pin of support may change. But the low lift arm keeps integrating with the high lift arm because the locking pin of the low lift arm keeps being pushed.

By opening the 2 intake valves, the air flow resistance of valves is decreased and the valve overlap in TDC on its exhaust stroke is increased (because the valve opening angle of high lift cam is wider than the fixed lift cam). Then, in the high-speed area that the throttle valve opens greatly, the intake and exhaust inertia effect can be used. As a result, a lot of air is sucked in the cylinder and the engine output may be improved.

ME-02790

## VARIABLE VALVE LIFT SYSTEM (FROM '06MY)

MECHANICAL

- Operation change from high lift to low lift

When the oil pressure from OSV to oil chamber is decreased, the return spring of small cylinder pushes back the locking pin of low lift arm and the locking pin of rocker shaft holder to the unlock position.

As a result, the low lift arm separates from the high lift arm, and then the variable valve lift mechanism becomes the low lift operation.

ME-02791

# CYLINDER HEAD

## 8. Cylinder Head

- The cylinder head is made of low pressure cast aluminum.
- Each combustion chamber in the cylinder head is a compact, pent roof design. The spark plug is located at the center of the combustion chamber, which contributes to creation of a wide “squish area” for increased combustion efficiency.
- The two intake and two exhaust valves are arranged on opposite sides for a cross-flow feature.
- As a design feature, the exhaust port of adjacent cylinders are joined to a single port, aiming at decreasing heat dissipation and accelerate activation of the catalytic converter.
- The cylinder head gasket is a metallic gasket. The gasket is highly resistant to heat and maintains high level of sealing performance for a long period.

ME-00318

- (1) Intake valve
- (2) Intake port
- (3) Squish area
- (4) Combustion chamber

- (5) Exhaust port
- (6) Exhaust valve
- (7) Spark plug

## 9. Cylinder Block

- The cylinder block is made of aluminum die casting. Its open-deck design provides it with such advantageous features as relatively small weight, high rigidity and excellent cooling efficiency.
- The cylinder liners are made of cast iron. As they are of a dry type, their outer surfaces are entirely in contact with the cylinder block.
- The cylinder block supports the crankshaft at its five journals. The journal supporting portions are designed such that sufficient stiffness and quiet operation are ensured.
- Sintered material is fit in the casting at the #5 journal to achieve further quietness.
- The oil pump is located in the front center of the cylinder block and the water pump is located at the front of the left-cylinder bank. At the rear of the right-cylinder bank is an oil separator which removes oil mist contained in blow-by gas.

# CRANKSHAFT

MECHANICAL

---

## 10.Crankshaft

The crankshaft is supported in the cylinder block at five journals. Each corner formed by a journal or pin and a web is finished by fillet-rolling method which increases strength of that area. The five crankshaft bearings are made of aluminum alloy and the No. 5 bearing is provided with a flanged metal to support thrust forces.

ME-00319

## 11. Piston

- The pistons are of a slipper skirt design for reduced weight and friction. The piston is also a thermal flow type whose oil control ring groove is provided with round oil drain holes.
- The piston pin is offset toward the thrust side (No. 1 and No. 3 pistons downwards, No. 2 and No. 4 pistons upwards) to reduce piston slap noises.
- The piston head has recesses to prevent interference with the intake and exhaust valves. It also has engraved marks to identify the piston size and the direction of installation. On type I models, the piston heads are concaved at the entire exhaust side to gather the tumble flow around the spark plug and improve combustion. Only on the type I models the pistons are distinguished left or right.
- Three piston rings are used for each piston; two compression rings and one oil control ring. The top piston ring has inner bevels and the second piston ring has an interrupt (cut) on the bottom outside to reduce oil consumption.

**MEMO**

**EX(H4SO)-4**

### 1. General

- The engine cooling system consists of a down-flow radiator featuring high heat-dissipation performance, an electric-motor-driven fan, a water pump, a thermostat, and an engine coolant temperature sensor.
- The reservoir tank is made of translucent resin and enables easy confirmation of the coolant level. Also, coolant should be added to the reservoir tank when replenishment is necessary.
- The ECM controls the operation of the radiator main fan and sub fan depending on the signals from the engine coolant temperature sensor, vehicle speed sensor and A/C switch.

## 2. Cooling Circuits

The cooling system operates in three different phases depending on the temperature of the engine coolant.

- 1st phase (thermostat closed)

When the engine coolant temperature is lower than the preset value, the thermostat remains closed. The coolant flows through the heater circuit. This permits the engine to warm up quickly.

- 2nd phase (thermostat open)

When the engine coolant temperature reaches the preset value, the thermostat opens. The coolant flows through the radiator where it is cooled.

- 3rd phase (thermostat open and radiator fan operating)

When the engine coolant temperature becomes higher than the preset value, the ECM receives a signal from the engine coolant temperature sensor and causes the radiator fan(s) to operate.

**NOTE:**

Refer to the Service Manual for preset engine coolant temperature values for each stage.

# RADIATOR CAP

COOLING

---

## 7. Radiator Cap

The radiator cap has a pressure valve and a vacuum valve. When the radiator inner pressure becomes higher than specified, the pressure valve opens to send coolant to the reservoir tank. Also, when the radiator inner pressure becomes lower than the atmospheric pressure during the cooling down phase, the vacuum valve opens to send back coolant from the reservoir tank to the radiator. These functions prevent damage to the radiator components.

- (1) Pressure valve
- (2) Vacuum valve

### 1. General

- The lubrication system forcibly circulates engine oil throughout the engine using an oil pump. The oil pressure is regulated by the relief valve built into the oil pump.
- The oil pump is a thin, large-diameter trochoid rotor type which can accommodate the engine's high output. The pump is directly driven by the crankshaft.
- The engine oil is cleaned by a full-flow, paper element type oil filter. The filter has a bypass valve, which allows the engine oil to flow bypassing the filter if it is clogged.
- The inside of the oil pan is fitted with a baffle plate, which reduces changes in the oil level due to movement of the vehicle, thus ensuring uninterrupted suction of oil.
- The engine oil discharged from the oil pump is delivered to the journal bearings, connecting rod bearings, and other parts requiring lubrication and cooling through the oil filter, vertical passage in the right bank of the cylinder block, and the oil galleries in the right and left banks of the cylinder block.
- The engine oil is also distributed to each cylinder head valve mechanism at a proper flow rate achieved by metering by the orifice provided in each oil gallery.

# ENGINE OIL FLOW

LUBRICATION

## 2. Engine Oil Flow

LU-02109

## 3. Oil Pump

- The oil pump is a trochoid rotor type consisting of an inner rotor and outer rotor assembled with each other in a pump body. When the inner rotor is driven by the crankshaft, the outer rotor is rotated, changing the space between it and the inner rotor. The change in the space occurs because of the difference in the number of teeth between the rotors.
- Engine oil is carried from the inlet port to the discharge port. As the pump rotates, the space carrying the oil becomes smaller, thus the oil is pressurized and discharged from the discharge port. A relief valve is built in the oil pump at its discharge side. When the oil pressure becomes higher than the preset value, the relief valve regulates the pressure by sending excessive oil back to the inlet side.

LU-00058

- (1) Inner rotor
- (2) Outer rotor
- (3) Oil seal
- (4) Oil pump case
- (5) Oil pump cover

- (6) Plug
- (7) Gasket
- (8) Relief valve spring
- (9) Relief valve

# OIL FILTER

## 4. Oil Filter

The oil filter is a full-flow filtering, cartridge type that utilizes a paper element. It also has a built-in bypass valve. If the filter gets clogged causing the oil pressure to exceed the preset value, the bypass valve opens and detours the engine oil to flow around the filter. The filter element has a special pleat design to increase the effective filtering area.

LU-00059

- (1) Oil seal
- (2) Filter body
- (3) Bypass valve
- (4) Pleated element

## 5. Oil Pan and Oil Strainer

- The oil pan is attached to the cylinder block using liquid gasket for sealing. The oil strainer is a metal net type and removes large foreign particles from the engine oil. It is located in the middle of the oil pan. The pipe from the strainer is connected to the suction port of the oil pump in the left bank of the cylinder block.
- There is a baffle plate inside the oil pan. It stabilizes the oil level and reinforces the oil pan.

- (1) Oil strainer
- (2) Level gauge guide
- (3) Baffle plate
- (4) Oil level gauge

- (a) LOW level
- (b) FULL level (engine hot condition)
- (c) FULL level (engine cold condition)

# OIL PRESSURE SWITCH

LUBRICATION

## 6. Oil Pressure Switch

The oil pressure switch is located in the front upper portion of the right cylinder block bank. The purpose of this switch is to monitor the operation of the oil pump as well as the lubricating oil pressure when the engine is running.

LU-00061

- |               |                    |
|---------------|--------------------|
| (1) Contact   | (4) Molded portion |
| (2) Diaphragm | (5) Terminal       |
| (3) Spring    |                    |

1) When oil pressure does not build up (immediately after ignition switch is turned ON):  
The diaphragm is pushed toward the cylinder block by the spring force (a force equivalent to the specified oil pressure). This closes the contact points, causing the oil pressure warning light in the combination meter to illuminate.

2) When oil pressure reaches the specified value (after engine starts):  
After reaching the specified value, the oil pressure pushes the diaphragm against the spring force. This opens the contact points and the oil pressure warning light goes out.

# GENERAL

## SPEED CONTROL SYSTEM

---

### 1. General

An electronically controlled throttle is adopted.

The movement of the accelerator pedal is converted into electrical signals by the accelerator pedal position sensor and these signals are sent to the ECM.

The ECM controls the operation of the throttle body based on the signals from the accelerator pedal position sensor and on other driving conditions.

SP-02029

(1) Accelerator pedal position sensor

# IGNITION COIL

## IGNITION

---

### 1. Ignition Coil

Ignition coils are made integral with an igniter. The ignition system is of a dual-ignition-coil design, each coil causing two plugs to generate sparks simultaneously. In response to the signal from the ECM, the igniter supplies current to an ignition coil and the ignition coil supplies high-voltage current to a pair of spark plugs (#1 and #2 or #3 and #4) simultaneously.

## 2. Generator

The generator has a built-in regulator which provides diagnostic functions in addition to a voltage regulating function as follows:

1) Voltage regulation

The on-off operation of transistor connects and disconnects the field current circuit, providing a constant level of output voltage.

2) Diagnosis warning

When any of the following problems occur, the charge light illuminates.

(1) No voltage generation

Brush wear exceeds specified wear limits, field coil circuit is broken, etc.

(2) Excessive output

Output voltage is greater than 16 volts (approx.)

(3) Terminal B disconnection

Harness is disconnected from generator terminal B.

(4) Terminal S disconnection

Harness is disconnected from generator terminal S. In this case, voltage is slightly greater than specified regulated voltage; however, voltage regulation is still controlled and the battery is prevented from becoming overcharged.

## FUEL INJECTION (FUEL SYSTEM)

---

### 1. General

- The Multipoint Fuel Injection (MFI) system supplies optimum air-fuel mixture under every engine operating condition through the use of the latest electronic control technology.

This system pressurizes the fuel to a constant pressure and injects it into each intake air port in the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where an electro-magnetic injection valve or injector opens for a short period that is precisely controlled depending on the quantity of air appropriate for each condition of operation. In actual control, an optimum fuel injection quantity is achieved by varying the duration of an electric pulse applied to the injector. This way of control enables simple, yet highly precise metering of the fuel.

- The engine control module (ECM) that controls the fuel injection system corrects the fuel injection amount depending on the vehicle speed, throttle opening, coolant temperature and other vehicle-operation-related information. The ECM receives the information in the form of electric signals from the corresponding sensors and switches.

The MFI system also has the following features:

- Reduced exhaust emissions
- Reduced fuel consumption
- Increased engine output
- Quick response to accelerator and brake pedal operation
- Superior startability and warm-up performance in cold weather due to corrective controls made according to coolant and intake air temperatures

## 2. Air Line

### A: GENERAL

The air filtered by the air cleaner enters the throttle body where it is regulated in the volume by the throttle valve and then enters the intake manifold. It is then distributed to each cylinder where the air is mixed with fuel injected by the injector.

### B: MANIFOLD ABSOLUTE PRESSURE SENSOR

The manifold absolute pressure sensor is attached to the intake manifold, and continuously sends to the engine control module (ECM) voltage signals that are proportional to intake manifold absolute pressures. The ECM controls the fuel injection and ignition timing based on the intake manifold absolute pressure signals in addition to other signals from many sensors and other control modules.

FU-01239

## FUEL INJECTION (FUEL SYSTEM)

---

### C: ELECTRONIC CONTROL THROTTLE SYSTEM

- The electronic control throttle system consists of an accelerator pedal position sensor mounted on the accelerator pedal, a throttle position sensor and a throttle motor mounted on the throttle body, and the ECM which controls these devices.
- The movement of the accelerator pedal is converted into electrical signals by the accelerator pedal position sensor and sent to the ECM. Based on these signals the ECM controls the throttle motor to open and close the throttle valve.
- Idling control is now performed by the electronic control throttle system in place of the idle air control solenoid valve.

## D: MASS AIR FLOW AND INTAKE AIR TEMPERATURE SENSOR

The mass air flow and the intake air temperature sensors are integrated into a single unit. The unit is mounted on the air cleaner case and measures the amount as well as the temperature of the intake air.

The measured amount and temperature are converted into electrical signals and sent to the ECM. The ECM uses these signals to control injection and ignition timing as well as the fuel injection amount.

- (1) Mass air flow sensor
- (2) Intake air temperature sensor

(A) Air

## FUEL INJECTION (FUEL SYSTEM)

### E: TUMBLE GENERATOR VALVE

- A tumble generator valve is provided on each engine bank, between the intake manifold and intake air ports. The right bank tumble generator valve has butterfly valves for the #1 and #3 cylinders and the left bank tumble generator valve has those for the #2 and #4 cylinders. The two butterfly valves in each tumble generator valve are fitted on a single shaft that is driven by an actuator.
- The tumble generator valves are controlled by the ECM according to the coolant temperature and the time elapsed after start of the engine. When the engine is started, the butterfly valves are moved to the closing ends. In this state, the intake air flows at very high speeds passing through narrowed passages in the directions determined by the individual intake air ports in the cylinder head. This creates tumbling air motions in the cylinders, which enables lean mixtures to be ignited and thus harmful exhaust emissions to be reduced during engine start. The tumble generator valves are fully open when the engine is operating at an ordinary driving speed, allowing intake air to flow without being changed in direction and velocity.

## 3. Fuel System

### A: GENERAL

- The fuel pressurized by the fuel tank inside pump is delivered to each fuel injector by way of the fuel pipe and fuel filter. Fuel injection pressure is regulated to an optimum level by the pressure regulator.
- Each injector injects fuel into the intake port of the corresponding cylinder where the fuel is mixed with air. The mixture then enters the cylinder. Fuel injection amount and timing are regulated by the ECM.
- On some models, the fuel bypass return passage connected between the fuel pump and engine prevents excessive fuel to be supplied to the engine and lowers the fuel temperature after return, to reduce the generation of evaporative gas.

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### B: PRESSURE REGULATOR

The pressure regulator is installed in the fuel supply line. It has a fuel chamber and spring chamber separated by a diaphragm. The fuel chamber is connected to the fuel supply line and the spring chamber is connected to the intake manifold. Fuel chamber also has a relief valve connected to the fuel return line through which fuel returns to the fuel tank. When the intake manifold vacuum increases, the diaphragm is pulled and the relief valve opens to decrease the fuel supply line pressure (or fuel injection pressure). When the intake manifold vacuum decreases, the diaphragm is pushed by the spring to increase the fuel supply line pressure. Thus, the difference between the fuel injection pressure and the intake manifold vacuum is kept at a constant level to precisely control the amount of injected fuel.

FU-02028

- (1) Pressure regulator
- (A) To intake manifold
- (B) Fuel IN
- (C) Fuel OUT

### C: FUEL INJECTOR

- The MFI system employs side feed type fuel injectors.
- Each injector is installed in the fuel pipe in such a way that the injector is cooled by fuel.
- The features of this type of fuel injector are as follows:
  - 1) High heat resistance
  - 2) Low driving noise
  - 3) Easy to service
  - 4) Small size
- The injector injects fuel according to the valve open signal from the ECM. The needle valve is lifted by the solenoid which is energized on arrival of the valve open signal.
- Since the injector's nozzle hole area, the lift of valve and the fuel pressure are kept constant, the amount of fuel injected is controlled only by varying the duration of the valve open signal from the ECM.
- The multi-hole nozzle makes it possible for the injector to produce fine fuel particles, which enhances the combustion efficiency and output performance of the engine.

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### D: FUEL TANK

The fuel tank utilizes a two-compartment design to ensure sufficient capacity without interfering with the rear differential. It is provided with a suction jet pump (included in the fuel pump and fuel level sensor assembly) which transfers fuel from one compartment to the other.

Each compartment has an individual fuel level sensor. The fuel tank is located under the rear seat and secured with hold-down bands.

- (1) Fuel pump and fuel level sensor assembly

### E: FUEL PUMP AND FUEL LEVEL SENSOR ASSEMBLY

#### 1. FUEL PUMP

The fuel pump consists of a motor, impeller, pump casing, pump cover, check valve and filter. It is located in the fuel tank and combined with the fuel level sensor into a single unit. The operation of this impeller type pump is very quiet.

- When the ignition switch is turned ON, fuel pump relay is activated. Then the motor operates to rotate the impeller.
- As the impeller rotates, fuel in a vane groove of the impeller flows along the fuel passage into the next vane groove by centrifugal force. When fuel flows from one groove to the next, a pressure difference occurs due to friction. This creates a pumping effect.
- The fuel pushed up by rotation of the impeller then passes through the clearance between the armature and the magnet of the motor and is discharged through the check valve.
- When the fuel discharge pressure reaches the specified level, the relief valve opens and excess fuel is released into the fuel tank. In this manner, the relief valve prevents an abnormal increase in fuel pressure.
- When the engine and the fuel pump stop, the check valve closes the discharge port, so that the fuel pressure in the fuel delivery line is retained.

#### 2. FUEL LEVEL SENSOR

The fuel level sensor is integrated with the fuel pump which is located in the fuel tank. The sensor outputs an electric resistance signal that varies with movement of its float to indicate the level of the fuel remaining in the tank.

- (4) Fuel temperature sensor

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### 3. JET PUMP

- The jet pump utilizes the velocity of fuel returning from the engine to produce vacuum in it.
- Using the pumping effect produced by the vacuum, the jet pump transfers fuel from the sub side and main side of the fuel tank to the fuel pump.
- When the return line nozzle is clogged, the fuel sent back through the return line flows back into the fuel tank via the relief valve.

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

### 4. Sensors and Switches

#### A: FRONT OXYGEN (A/F) SENSOR

- The front oxygen sensor uses zirconium oxide ( $ZrO_2$ ) which is a solid electrolyte, at portions exposed to exhaust gas.
- The zirconium oxide has the property of generating electromotive force when its both sides are exposed to oxygen ions of different concentration and the magnitude of this electromotive force depends on how much the difference is.  
The front oxygen (A/F) sensor detects the amount of oxygen in exhaust gases by making use of this property of the zirconium oxide material.
- The zirconium oxide material is formed into a closed end tube and its external surface is exposed to exhaust gases with smaller oxygen ion concentration, whereas its internal surface is exposed to atmospheric air. The external surface has a porous platinum coating. The sensor housing is grounded to the exhaust pipe and the inside is connected to the ECM through the harness to be able to use the current output from the sensor.
- The sensor incorporates a ceramic heater to improve its performance at low temperatures.

FU-02163

- (1) Protection tube
- (2) Gasket

- (4) Ceramic heater

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

- When rich air-fuel mixture is burnt in the cylinder, the oxygen in the exhaust gases is almost completely used in the catalytic reaction by the platinum coating on the external surface of the zirconia tube. This results in a very large difference in the oxygen ion concentration between the inside and outside of the tube, and the electromotive force generated is large.
- When a lean air-fuel mixture is burnt in the cylinder, relatively large amount of oxygen remains in the exhaust gases even after the catalytic action, and this results in a small difference in the oxygen ion concentration between the tube's internal and external surfaces. The electromotive force in this case is very small.
- The difference in oxygen concentration changes drastically in the vicinity of the stoichiometric air-fuel ratio, and hence the change in the electromotive force is also large. By using this information, the ECM can determine the air-fuel ratio of the supplied mixture easily. The front oxygen (A/F) sensor does not generate much electromotive force when the temperature is low. The output characteristics of the sensor stabilize at a temperature of approximately 700°C (1,292°F).

- (B) Air/fuel ratio
- (C) Rich
- (D) Lean

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

### B: REAR OXYGEN SENSOR

- The rear oxygen sensor is used to sense oxygen concentration in the exhaust gas. If the air-fuel ratio is leaner than the stoichiometric ratio in the mixture (i.e., excessive amount of air), the exhaust gas contains more oxygen. To the contrary, if the fuel ratio is richer than the stoichiometric ratio, the exhaust gas contains almost no oxygen.
- By detecting the oxygen concentration in the exhaust gas using the oxygen sensor makes it possible to determine whether the air-fuel ratio is leaner or richer than the stoichiometric ratio.
- The rear oxygen sensor has a zirconia tube (ceramic) which generates voltage if there is a difference in oxygen ion concentration between the inside and outside of the tube. Platinum is coated on the inside and outside of the zirconia tube as a catalysis and electrode material. The sensor housing is grounded to the exhaust pipe and the inside is connected to the ECM through the harness.
- A ceramic heater is employed to improve performance at low temperatures.

- (2) Thermistor element

- (A) Resistance (kΩ)
- (B) Temperature °C (°F)

### D: EXHAUST GAS TEMPERATURE SENSOR

The exhaust gas temperature sensor is located on the joint pipe and used to monitor the condition of the pre-catalytic converter.

## E: CRANKSHAFT POSITION SENSOR

- The crankshaft position sensor is installed on the oil pump which is located in the front center portion of the cylinder block. The sensor generates a pulse when one of the teeth on the perimeter of the crankshaft sprocket (rotating together with the crankshaft) passes in front of it. The ECM determines the crankshaft angular position by counting the number of pulses.
- The crankshaft position sensor is a magnet pickup type and is molded with components such as a magnet, core, coil, and terminal, etc.

FU-00234

- (2) Camshaft
- (3) Detection point
- (4) Camshaft one rotation (crankshaft two rotations)

## G: KNOCK SENSOR

- The knock sensor is installed on the cylinder block, and senses knocking that occurs in the engine.
- The sensor is a piezo-electric type which converts vibration resulting from knocking into electric signals.
- In addition to a piezo-electric element, the sensor has a weight and case as its components. If knocking occurs in the engine, the weight in the case moves causing the piezo-electric element to generate a voltage.
- The knock sensor harness is connected to the engine harness.

FU-00356

- (1) Nut
- (2) Weight
- (3) Piezo-electric element
- (4) Housing
- (5) Resistance

## H: VEHICLE SPEED SENSOR

Vehicle speed signals are sent from the vehicle speed sensor to the ABS and VDC control modules. The signals are sent to the ECM via CAN communication. For details, refer to the LAN section. <Ref. to LAN section.>

### 5. Control System

#### A: GENERAL

The ECM receives signals from various sensors, switches, and other control modules. Using these signals, it determines the engine operating conditions and if necessary, emits signals to one or more systems to control them for optimum operation.

Major control items of the ECM are as follow:

- Fuel injection control
- Ignition control
- Idle air control
- Fuel pump control
- Canister purge control\*<sup>1</sup>
- Radiator fan control\*<sup>2</sup>
- On-board diagnosis function

\*1: Canister purge control is described under EC(H4DOTC) — Emission Control (Aux. Emission Control Devices) Evaporative Emission Control System. <Ref. to EC(H4DOTC) section, Evaporative Emission Control System.>

\*2: Radiator fan control is described under CO(H4DOTC) — COOLING. <Ref. to CO(H4DOTC) section.>

FUEL INJECTION (FUEL SYSTEM)

## B: INPUT AND OUTPUT SIGNALS

Signal	Unit	Function
Input signals	Manifold absolute pressure sensor	Detects the pressure (measures the absolute pressure) of intake air .
	Mass air flow and intake air temperature sensor	Detects the temperature and amount of intake air.
	Throttle position sensor	Detects the throttle valve position.
	Front oxygen (A/F) sensor	Detects the density of oxygen in exhaust gases at the upstream of the front catalytic converter.
	Rear oxygen sensor	Detects the density of oxygen in exhaust gases at the downstream of the front catalytic converter.
	Crankshaft position sensor	Detects the crankshaft angular position.
	Camshaft position sensor	Detects the combustion cylinder.
	Engine coolant temperature sensor	Detects the engine coolant temperature.
	Knock sensor	Detects engine knocking.
	Accelerator position sensor	Detects the position of the accelerator pedal.
	Exhaust gas temperature sensor	Detects the exhaust gas temperature.
	Fuel temperature sensor	Detects the temperature of the fuel in the fuel tank.
	Fuel tank pressure sensor	Detects the evaporation gas pressure in the fuel tank.
	Ignition switch	Detects operation of the ignition switch.
	Starter switch	Detects the condition of engine cranking.
	Neutral position switch (MT)	Detects that the gear is in neutral.
	Inhibitor switch (AT)	Detects shift positions.
	A/C switch	Detects ON-OFF operation of the A/C switch.
	Power steering switch	Detects the steering condition.
	Output signals	Fuel injector
Ignition signal		Turns the primary ignition current ON or OFF.
Electronic control throttle		Controls motor output to the electronic control throttle.
Oil flow control solenoid valve		Controls oil pressure for oil flow control solenoid valve.
Fuel pump control unit		Controls the fuel pump.
A/C control relay		Turns ON or OFF the A/C control relay.
Radiator fan control relay		Turns ON or OFF the radiator fan control relay.
Wastegate control solenoid valve		Controls supercharging pressure
Engine malfunction indicator light (MIL)		Indicates existence of abnormality.
Purge control solenoid valve		Controls purge of evaporative gas absorbed by the canister.
Tumble generator valve actuator		Operates the tumble generator valve.
Pressure control solenoid valve		Controls evaporation pressure in fuel tank.
Drain valve		Closes the evaporation line between the fuel tank and canister to detect leakage of evaporation gases.
Oil flow control solenoid valve		Controls advance and retard angles of the intake valves.
Heater circuit of front and rear oxygen sensors		Controls the heater of the front and rear oxygen sensors.
Electronic control throttle motor cut relay		Turns ON-OFF the electronic control throttle motor relay.
Power supply		Controls ON/OFF of the main power supply relay.

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

---

### C: FUEL INJECTION CONTROL

- The ECM receives signals from various sensors and based on them, it determines the amount of fuel injected and the fuel injection timing. It performs the sequential fuel injection control over the entire engine operating range except during start-up of the engine.
- The amount of fuel injected depends upon the length of time the injector stays open. The fuel injection duration is determined according to varying operating condition of the engine. For the purpose of achieving highly responsive and accurate fuel injection duration control, the ECM performs a new feedback control that incorporates a learning feature as detailed later.
- The fuel injection control is performed such that fuel is injected accurately at the time when the maximum efficiency can be achieved for each cylinder.

#### 1. FUEL INJECTION DURATION

Fuel injection duration is basically determined as indicated below:

- While cranking the engine:

The duration defined below is used.

- Duration of fuel injection during engine start-up ..... Determined according to the engine coolant temperature detected by the engine coolant temperature sensor.

- During normal operation:

The duration is determined as follows:

Basic duration of fuel injection × Correction factors + Voltage correction time

- Basic duration of fuel injection ..... The basic length of time fuel is injected. This is determined by two factors — the amount of intake air detected by the air flow sensor and the engine speed monitored by the crankshaft position sensor.
- Correction factors ..... See the next section.
- Voltage correction time ..... This is added to compensate for the time lag before operation of injector that results from variation in the battery voltage.

### 2. CORRECTION FACTORS

The following factors are used to correct the basic duration of fuel injection in order to make the air-fuel ratio meet the requirements of varying engine operating conditions:

- **Air-fuel ratio feedback factor:**

This factor is used to correct the basic duration of fuel injection in relation to the actual engine speed. (See the next section for more details.)

- **Start increment factor:**

This factor is used to increase the fuel injection duration only while the engine is being cranked to improve its startability.

- **Coolant-temperature-dependent increment factor:**

This factor is used to increase the fuel injection duration depending on engine coolant temperature signals to facilitate cold starting. The lower the coolant temperature, the greater the increment.

- **After-start increment factor:**

- This factor is used to increase the fuel injection duration for a certain period immediately after start of the engine to stabilize engine operation.
- The increment depends on the coolant temperature at the start of the engine.

- **Wide-open-throttle increment factor:**

This factor is used to increase the fuel injection duration depending on the relationship between the throttle position sensor signal and air flow sensor signal.

- **Acceleration increment factor:**

This factor is used to increase the fuel injection duration to compensate for a time lag between air flow measurement and fuel injection control for better engine response to driver's pedal operation during acceleration.

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### 3. AIR-FUEL RATIO FEEDBACK FACTOR

The ECM creates this factor utilizing the front oxygen (A/F) sensor signal. When the signal is high, the air-fuel ratio is leaner than the stoichiometric ratio. The ECM then makes the fuel injection duration longer by modifying the factor. When the signal is low showing that the mixture is rich, the ECM modifies the factor to make the injection duration shorter. In this way, the air-fuel ratio is maintained at a level close to the stoichiometric ratio at which the three-way catalytic converter acts most effectively.

FU-00240

- (1) Front catalytic converter
- (2) Exhaust gases
- (3) Front oxygen (A/F) sensor
- (4) Fuel injector
- (5) Combustion chamber
- (6) ECM

- (A) Injection duration increment signal
- (B) Injection duration decrement signal
- (C) High oxygen density
- (D) Low oxygen density
- (E) Lean signal
- (F) Rich signal

### 4. LEARNING FEATURE

The air-fuel ratio feedback control includes a learning feature which contributes to more accurate and responsive control.

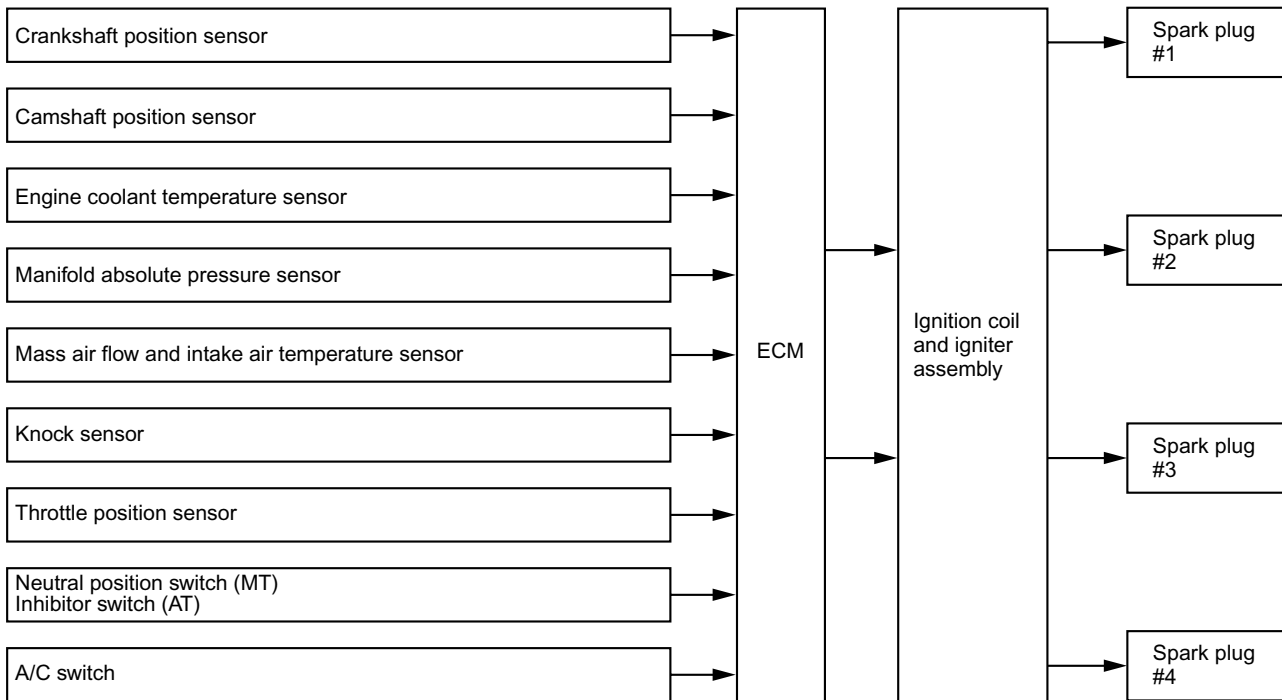

- In the air-fuel ratio feedback control, the ECM calculates the necessary amount of correction based on data from the front oxygen (A/F) sensor and adds the result to the basic duration (which is stored in the ECMs memory for each condition defined by the engine speed and various loads.)
- Without a learning feature, the ECM carries out the above-mentioned process every time. This means that if the amount of necessary correction is large, the air-fuel ratio feedback control becomes less responsive and less accurate.
- The learning feature enables the ECM to store the amount of correction into memory and add it to the basic fuel injection duration to create a new reference fuel injection duration. Using the reference duration as the basic duration for the injection a few times later, the ECM can reduce the amount of correction and thus make its feedback control more accurate and responsive to changes in the air-fuel ratio due to difference in driving condition and sensor/actuator characteristics that may result from unit-to-unit variation or aging over time.

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### D: IGNITION CONTROL

- The ECM determines operating condition of the engine based on signals from the manifold absolute pressure sensor, engine coolant temperature sensor, intake air temperature sensor, crankshaft position sensor and other sources. The ECM then selects the ignition timing most appropriate for the condition thus determined from those stored in its memory and outputs at that timing a primary current OFF signal to the igniter to initiate ignition.
- This control uses a quick-to-response learning feature by which the data stored in the ECM memory is processed in comparison with information from various sensors and switches.
- Thus, the ECM can always perform optimum ignition timing taking into account the output, fuel consumption, exhaust gas, and other factors for every engine operating condition.
- Ignition control during start-up  
Engine speed fluctuates during start of the engine, so the ECM cannot control the ignition timing. During that period, the ignition timing is fixed at  $10^\circ$  BTDC by using the  $10^\circ$  signal from the crankshaft position sensor.

FU-02164

- The ECM identifies cylinders at TDC and determines ignition timing as follows:
  - Within the range (A), the crank angle signal is input every 10° rotation of the crankshaft.
  - The ECM discriminates a TDC cylinder group from the other by detecting the ranges (B) and (C) where no signals are input.
  - The ECM judges that the No. 1 and No. 2 cylinders are at TDC when it detects the range (B), and that the No. 3 and No. 4 cylinders are at TDC when it detects the range (C).

FU-00358

- (1) Cylinder number (TDC)
- (2) Crank angle pulse
- (3) Ignition timing at starting
- (4) Ignition timing at normal condition
- (5) Cylinder at combustion

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### E: IDLE AIR CONTROL

• The ECM controls the electronic control throttle based on signals from the crankshaft position sensor, engine coolant temperature sensor, air flow sensor, manifold absolute pressure sensor and A/C switch so that the proper idle speed for each engine load is achieved.

FU-00359

- |                                       |                                  |

| (5) Vehicle speed sensor              | (10) Electronic control throttle |

### F: FUEL PUMP CONTROL

The ECM controls the operation of the fuel pump through the fuel pump control unit, based on signals from the crankshaft position sensor. To improve safety, a “fuel pump stop signal” is sent from the ECM to the fuel pump control unit to stop the fuel pump if the engine stalls while the ignition switch is ON.

Ignition switch ON	Fuel pump
A certain period of time after ignition switch is turned ON	Operates
While cranking the engine	Operates
While engine is operating	Operates
When engine stops	Does not operate

## 6. On-board Diagnosis System

### A: GENERAL

- The on-board diagnosis system detects and indicates a fault by generating a code corresponding to each fault location. The engine malfunction indicator light on the combination meter indicates occurrence of a fault or abnormality.
- When the malfunction indicator light comes on as a result of detection of a fault by the ECM, the corresponding diagnostic trouble code (DTC) and freeze frame data indicating the engine condition are stored in the ECM.
- On the OBD-II conformable car, it is necessary to connect the SUBARU Select Monitor (SSM) or General Scan Tool (GST) to the data link connector in order to check for DTCs.
- The SSM and GST can be used for erasing DTCs. These can also read freeze frame data in addition to other pieces of engine data.
- If there is a failure involving sensors, which may affect drive control of the vehicle, the fail-safe function ensures minimum level of drivability.

### B: FAIL-SAFE FUNCTION

For a sensor or switch which has been judged faulty in the on-board diagnosis, the ECM, if appropriate, generates an associated pseudo signal to keep the vehicle operational. (The control becomes degraded.)

### 7. SUBARU Intelligent Drive System (From '07MY)

#### A: GENERAL

The SI-DRIVE (SUBARU Intelligent Drive) system is a system that allows selection of the vehicle driving mode, from the I (intelligent mode), S (sport mode), and S# (sport sharp mode). The mode is changed using the SI-DRIVE selector on the console.

- I (intelligent mode)

This is a mode that balances stress-free driving and fuel economy. This mode is optimal for driving in city areas where maximum power output is not required.

- S (sport mode)

This is an all-round driving mode that can be used anywhere. This mode is suited for driving on highways and open country roads.

- S# (sport sharp mode)

This is a driving mode for acceleration, etc, where more engine output is required. This mode is suited for driving in mountainous areas, when merging with traffic on highways, and for accelerating to overtake other cars.

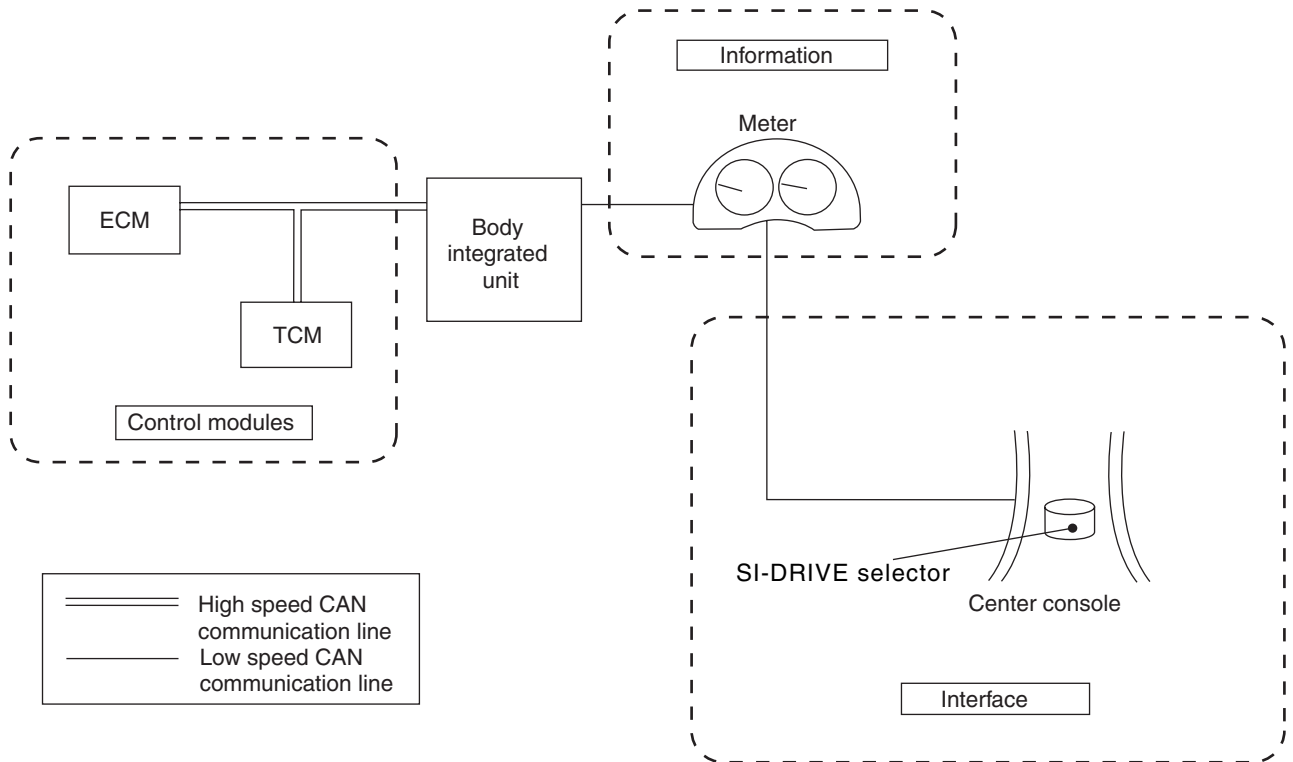

FU-03200

# SUBARU INTELLIGENT DRIVE SYSTEM (FROM '07MY)

FUEL INJECTION (FUEL SYSTEM)

The SI-DRIVE operation will be detected by the meter, and the ECM will be notified that the mode has changed by CAN communication through the integrated unit. The ECM will change the driving modes and display data on the meter.

FU-03201

---

### B: OPERATION

#### SI-DRIVE SELECTOR

It is possible to change modes by turning the knob on the console. Turn the knob counterclockwise for S (sport mode), turn clockwise for S# (sport sharp mode) and push the knob for I (intelligent mode). After turning the knob, it will return to its original position.

FU-03195

## C: MULTI-INFORMATION DISPLAY

- Meter interrupt screen

When a mode change is performed, a mode change screen will be displayed for approximately 3 seconds, indicating which mode was selected. When displaying, a buzzer (blip) will sound.

Displayed for 3 seconds

FU-03191

- SI-DRIVE screen

By operating the control switch on the steering wheel, it is possible to display the SI-DRIVE screen. The SI-DRIVE screen will display a graph that changes according to the drive mode and accelerator opening.

SI-DRIVE display

FU-03192

- Mode display in screens other than SI-DRIVE

The driving mode will be displayed on the left side in screens other than SI-DRIVE.

# SYSTEM OVERVIEW

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 1. System Overview

There are three emission control systems, which are as follows:

- Crankcase emission control system
- Exhaust emission control system
  - Catalytic converter
  - Air/fuel (A/F) control system
  - Ignition control system
- Evaporative emission control system
  - On-board refueling vapor recovery (ORVR) system

# SYSTEM OVERVIEW

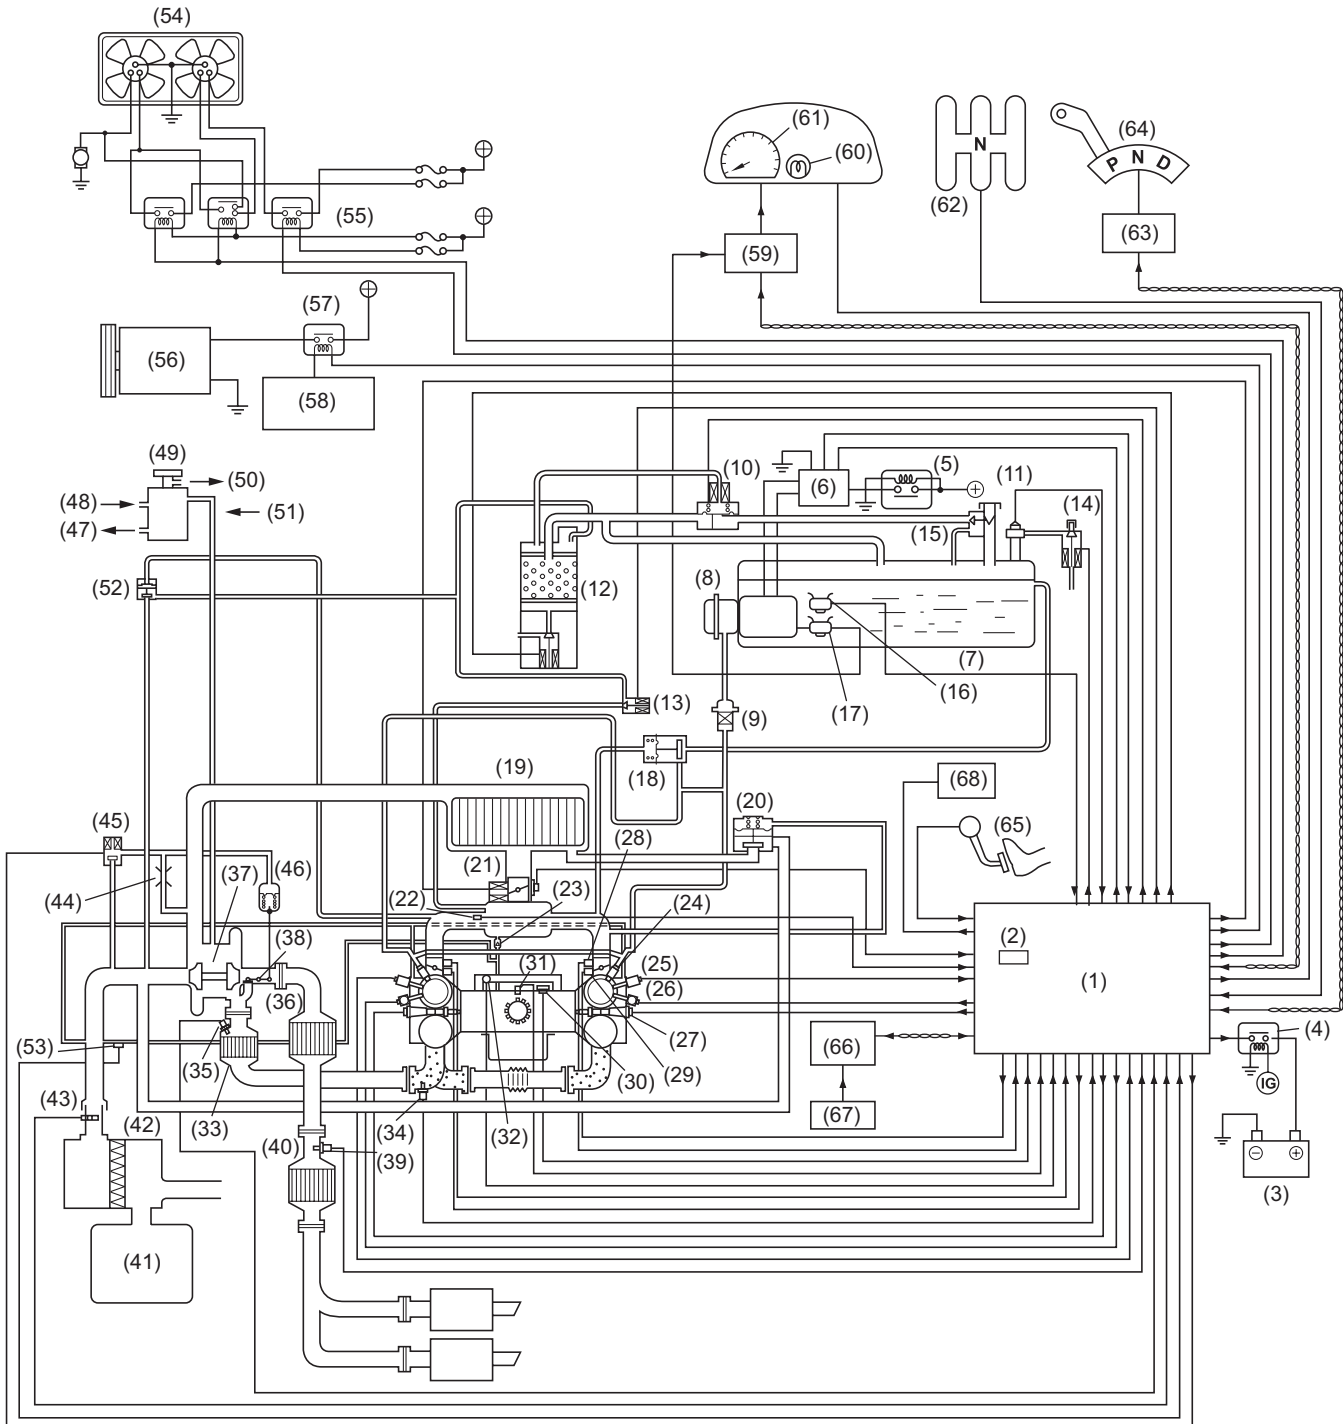

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

Item			Main components	Function
Crankcase emission control system			Positive crankcase ventilation (PCV) valve	Draws blow-by gas into intake manifold from crankcase and burn it together with air-fuel mixture. Amount of blow-by gas to be drawn in is controlled by intake manifold pressure.
Exhaust emission control system	Catalytic converter	Pre	Catalytic converter	Oxidizes HC and CO contained in exhaust gases as well as reducing NOx.
		Front		
		Rear		
	Air/fuel (A/F) control system		Engine control module (ECM)	Receives input signals from various sensors, compares signals with stored data, and emits a signal for optimal control of air-fuel mixture ratio.
			Front oxygen (A/F) sensor	Detects density of oxygen contained exhaust gases.
			Rear oxygen sensor	Detects density of oxygen contained in exhaust gases.
			Throttle position sensor	Detects throttle opening.
			Manifold absolute pressure sensor	Detects absolute pressure of intake manifold.
			Mass air flow and intake air temperature sensor	Detects amount of intake air.
				Detects intake air temperature at air cleaner case.
	Ignition control system		ECM	Receives various signals, compares signals with basic data stored in memory, and emits a signal for optimal control of ignition timing.
			Crankshaft position sensor	Detects engine speed (revolution).
		Camshaft position sensor	Detects reference signal for combustion cylinder discrimination.	
		Engine coolant temperature sensor	Detects coolant temperature.	
		Knock sensor	Detects engine knocking.	
Evaporative emission control system			Canister	Absorbs evaporative gas that accumulates in fuel tank when engine stops, and releases it to combustion chambers for a complete burn when the engine is started. This prevents HC from being discharged into atmosphere.
			Purge control solenoid valve	Receives a signal from ECM and controls purge of evaporative gas absorbed by canister.
			Pressure control solenoid valve	Receives a signal from ECM and controls evaporative gas pressure in fuel tank.
ORVR system			Vent valve	Closes the port to the canister when the fuel tank is full of fuel.
			Drain valve	Closes the evaporation line by receiving a signal from ECM to check the evaporation gas leak.

# CRANKCASE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 3. Crankcase Emission Control System

- The positive crankcase ventilation (PCV) system prevents air pollution that will be caused by blow-by gas being emitted from the crankcase.

The system consists of a sealed oil filler cap, rocker covers with fresh air inlet, connecting hoses, a PCV valve and an air intake duct.

- In a part-throttle condition, the blow-by gas in the crankcase flows into the intake manifold through the connecting hose of crankcase and PCV valve by the strong vacuum created in the intake manifold. Under this condition, fresh air is introduced into the crankcase through the connecting hose of the rocker cover.

- In a wide-open-throttle condition, a part of blow-by gas flows into the air intake duct through the connecting hose and is drawn into the throttle chamber, because under this is condition, the intake manifold vacuum is not strong enough to introduce through the PCV valve all blow-by gases that increase in the amount with engine speed.

- The PCV hose is provided with a leak detection function.

EC-02112

- |                     |                       |                        |

| (5) Case            |                       |                        |

## 4. Catalytic Converter

- The basic materials of the three-way catalytic converter are platinum (Pt), rhodium (Rh) and palladium (Pd), and a thin coat of their mixture is applied onto a honeycomb or porous ceramic (carrier). To avoid damaging the catalytic converter, only unleaded gasoline should be used.
- The catalytic converter reduces HC, CO and NO<sub>x</sub> in exhaust gases through chemical reactions (oxidation and reduction). These harmful components are reduced most efficiently when their concentrations are in a certain balance. These concentrations vary with the air-fuel ratio. The ideal air-fuel ratio for reduction of these components is the stoichiometric ratio.
- Therefore, the air-fuel ratio needs to be controlled to around the stoichiometric ratio to purify the exhaust gases most efficiently.

# AIR/FUEL (A/F) CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 5. Air/fuel (A/F) Control System

- The air/fuel (A/F) control system makes a correction to the basic fuel injection duration in accordance with the signals from the front oxygen (A/F) sensor and the rear oxygen sensor so that the stoichiometric ratio is maintained, thus ensuring most effective exhaust gas purification by the three-way catalytic converter. Different basic fuel injection durations are preset for various engine speeds and loads, as well as the amount of intake air.
- This system also has a learning control function which stores the corrected data in relation to the basic fuel injection in the memory map. This allows an appropriate air-fuel ratio correction to be added automatically in quick response to any situation that requires such an effect. Thus, the air-fuel ratio is optimally maintained under various conditions while purifying exhaust gases most effectively, improving driving performance and compensating for changes in sensors' performance over time.

# IGNITION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 6. Ignition Control System

- The ignition system is controlled by the ECM.  
The ECM monitors the operating condition of the engine using the signals from the sensors and switches shown below and determines the ignition timing most appropriate for each engine operating condition. Then it sends a signal to the igniter, commanding generation of a spark at that timing.
- The ECM uses a preprogrammed map for a “closed-loop” control which provides its ignition timing control with excellent transient characteristics, i.e., highly responsive ignition timing control.

# EVAPORATIVE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 7. Evaporative Emission Control System

### A: GENERAL

- The evaporative emission control system prevents fuel vapors from escaping into atmosphere. This system includes a canister, purge control solenoid valve, fuel cut valve, and the lines connecting them.
- Fuel vapors in the fuel tank are introduced into the canister through the evaporation line, and are absorbed by activated carbon in it. The fuel cut valve is also incorporated in the fuel tank line.
- The purge control solenoid valve is controlled optimally by the ECM according to the engine condition.
- The pressure control solenoid valve incorporated in the fuel tank evaporation line regulates the pressure/vacuum in the fuel tank under the control of the ECM which uses the signal from the fuel tank pressure sensor.

- |                                  |                                     |                                     |

| (5) ECM                          | (11) Fuel temperature sensor        | (17) Fuel tank sensor control valve |
| (6) Canister                     | (12) Fuel level sensor              |                                     |

### B: FUEL CUT VALVE

The fuel cut valve is incorporated in the fuel tank. The rising level of the fuel in the fuel tank causes the float to move up and close the cap hole so that no fuel can enter the evaporation line.

# EVAPORATIVE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## C: FUEL TANK CAP

- The fuel tank cap is of a quick lock type and can be opened or closed in 1/4 of a full turn.
- The fuel tank cap has a relief valve, which prevents development of vacuum in the fuel tank in the event of a problem with the fuel vapor line.

When there is no problem with the fuel vapor line, the filler pipe is sealed at the portion (A) and by the seal pressed against the filler pipe end. If vacuum develops in the fuel tank, the atmospheric pressure forces the spring down to open the valve; consequently outside air flows into the fuel tank, thus controlling the inside pressure.

EC-02109

- (1) Seal
- (2) Spring
- (3) Valve
- (4) Filter

# EVAPORATIVE EMISSION CONTROL SYSTEM

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### D: CANISTER

The canister incorporates a drain valve and a drain filter.

The charcoal filled in the canister temporarily stores fuel vapors. When the purge control solenoid valve is opened by a signal from the ECM, the external fresh air entering the canister carries the fuel vapors into the collector chamber.

The drain filter is installed at the air inlet port of the drain valve. It cleans the air taken in the canister through the drain valve.

# EVAPORATIVE EMISSION CONTROL SYSTEM

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

### G: PRESSURE CONTROL SOLENOID VALVE

The fuel tank pressure control solenoid valve is located in the evaporation line between the canister and the fuel tank. It adjusts the fuel tank inside pressure under the control of the ECM.

When the tank inside pressure becomes higher than the atmospheric pressure, the valve is opened allowing fuel vapors to be introduced into the canister.

On the other hand, when the tank inside pressure becomes lower than the atmospheric pressure, external air is taken from the drain valve into the canister.

### H: VENT VALVE

The vent valve is located inside of the fuel tank. During filling the fuel tank, fuel vapors are introduced into the canister through the vent valve.

When the fuel vapor pressure becomes higher than the atmospheric pressure and overcomes the spring force which is applied to the back side of the diaphragm, the port toward the canister is opened. The vent valve also has a float which rises and block the port toward the canister when the fuel is full.

# ON-BOARD REFUELING VAPOR RECOVERY (ORVR) SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 8. On-board Refueling Vapor Recovery (ORVR) System

### A: GENERAL

The on-board refueling vapor recovery system allows the fuel vapors in the fuel tank to be introduced directly into the canister through the vent valve when the fuel tank inside pressure increases as a result of refueling.

The diagnosis of the system is performed by monitoring the fuel tank inside pressure data from the fuel tank pressure sensor while forcibly closing the drain valve.

### B: OPERATION

- While driving

Since the back side of the diaphragm in the pressure control solenoid valve is open to the atmosphere, the diaphragm is held pressed by the atmospheric pressure in the position where only the external air is introduced into the canister. When the fuel vapor pressure acting on the other side of the diaphragm increases and overcomes the atmospheric pressure, it pushes the diaphragm and opens the port through which the fuel vapors make their way to the canister.

# ON-BOARD REFUELING VAPOR RECOVERY (ORVR) SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- While refueling

As the fuel enters the fuel tank, the tank inside pressure increases. When the inside pressure becomes higher than the atmospheric pressure, the port of the vent valve opens, allowing the fuel vapors to be introduced into the canister through the vent line. The fuel vapors are absorbed by charcoal in the canister, so the air discharged from the drain valve contains no fuel. When a filler gun is inserted, the shut-off valve closes the evaporation line.

## SECONDARY AIR SYSTEM (FROM '06MY)

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

### 10.Secondary Air System (From '06MY)

#### A: GENERAL

The secondary air system reduces harmful emissions by initiating the actuation of the catalyzer early by supplying air to the exhaust port of the cylinder head when the engine is cold started to reburn unburned gas.

#### B: COMPONENT

The secondary air system consists of the two secondary air combination valves (depending on the specification, there are vehicles with only one air combination valve.), pipes and air passages running through the cylinder head. The secondary air pump and the secondary air combination valves are controlled by the ECM which judges the startup conditions of the engine.

## 2. Turbocharger System

### A: GENERAL

- The turbocharger system consists of a water-cooled turbocharger, air-cooled intercooler, wastegate control solenoid valve, etc.
- The turbine rotated by exhaust gas pressure rotates the compressor.
- As a result, the intake air is compressed by the compressor before it is delivered to the intake manifold.
- This turbocharger system controls the supercharging pressure according to changes in the atmospheric pressure. Even at a high altitude, therefore, the system offers stable performance without being affected by variations in atmospheric pressure.

# TURBOCHARGER SYSTEM

## INTAKE (INDUCTION)

### B: TURBOCHARGER UNIT

The turbocharger is water-cooled. It utilizes a wastegate valve to adjust its supercharging pressure to an optimum level. The turbine is housed in a lightweight, thin-wall, heat-resistant casting. The compressor housing is made of thin-wall, aluminum alloy casting. The shaft for turbine and compressor is supported by a full-floating metal bearing system.

IN-02099

- (B) Exhaust gas outlet
- (C) Air outlet port
- (D) Coolant inlet

- (E) Lubricating oil inlet
- (F) Air inlet
- (G) Wastegate valve operation pressure

## C: LUBRICATION OF TURBOCHARGER

The turbocharger is lubricated by engine oil branched out from the oil pump. To cope with very high speed of the turbocharger turbine and the compressor shaft which may reach a maximum of several hundred thousands of rpm, full-floating type bearings are used which can form adequate oil films on their inside and outside during running.

Further the oil supplied to the turbocharger also plays a role of cooling the turbine so that heat from exhaust gas does not transmitted to the bearings.

IN-00048

- (1) Compressor housing
- (2) Turbine wheel

- (3) Turbine housing
- (4) Compressor impeller

## D: COOLING OF TURBOCHARGER

The turbocharger unit is cooled by engine coolant, which enhances the reliability and durability of the unit. The engine coolant from the coolant drain hose located under the cylinder head is led by a pipe to the coolant passage provided in the turbocharger bearing housing. After cooling the bearing housing, the engine coolant is led into the coolant filler tank through a pipe.

# TURBOCHARGER SYSTEM

INTAKE (INDUCTION)

---

## E: WASTEGATE CONTROL SOLENOID VALVE

The wastegate control solenoid valve switches the intake air pressure passages to the wastegate controller in response to signals from the ECM. When the solenoid valve opens, the intake air pressure upstream of the turbocharger unit is applied to the wastegate controller. When the solenoid valve closes, the intake air pressure downstream of the turbocharger unit (supercharged air pressure) is applied to the wastegate controller.

IN-02001

(1) Coil

**MEMO**

# TURBOCHARGER SYSTEM

INTAKE (INDUCTION)

---

## F: REGULATION OF SUPERCHARGING PRESSURE

### 1. BASIC FUNCTION OF THE WASTEGATE VALVE

When the engine speed increases as the throttle valve opens, the amount of exhaust gas increases. This increases the speed of the turbine (approx. 20,000 to 150,000 rpm), the supercharging pressure and the engine output.

If the resultant supercharging pressure is extremely high, however, it may cause knocking and an excessively high thermal load on such engine components as pistons. In the worst case, the engine may be damaged or broken. To prevent this, the waste gate valve and its controller are provided. By sensing the supercharging pressure, the waste gate valve controller controls the operation of the waste gate valve to maintain the supercharging pressure at a predetermined level.

IN-00049

- (1) Wastegate valve
- (2) Turbocharger
- (3) Wastegate valve controller

# TURBOCHARGER SYSTEM

While the supercharging pressure is lower than the predetermined level, the wastegate valve is closed so that entire exhaust gas is directed to the turbine.

IN-00050

When the supercharging pressure reaches the predetermined level, the wastegate controller lets the supercharging pressure press the diaphragm. This causes the wastegate valve to open through a linkage. With the wastegate valve open, part of the exhaust gas is allowed to flow into the exhaust gas pipe that bypasses the passage to the turbine.

This decreases the exhaust gas pressure that rotates the turbine and keeps the supercharging pressure constant.

- It means  $P_2 - P_1 = \text{constant}$ .

$P_1$ : Atmospheric pressure

$P_2$ : Supercharging pressure

IN-00051

# TURBOCHARGER SYSTEM

INTAKE (INDUCTION)

---

## 2. CONCEPT OF THE WASTEGATE VALVE CONTROL

At high altitudes, the atmospheric pressure ( $P_1$ ) is low, so that the supercharging pressure ( $P_2$ ) is also low in a conventional system. The wastegate solenoid valve operates in such a way that a constant supercharging pressure ( $P_2$ ) is maintained by acting in response to change in the atmospheric pressure.

IN-02002

(1) ECU

## G: INTERCOOLER

- Since the intake air having passed through the turbocharger unit is heated to a very high temperature, the air itself expands, resulting in a lower supercharging efficiency. The intercooler is provided just before the throttle body to cool down the intake air and improve the boosting efficiency.
- The intercooler is an air cooled type. The air delivered from the air intake duct provided at the engine hood flows through the core and cools the intake air passing through the intercooler.

IN-02100

- (A) From turbocharger
- (B) To throttle body

# TURBOCHARGER SYSTEM

## INTAKE (INDUCTION)

### H: AIR BYPASS VALVE

When a throttle valve is suddenly closed, a surge may occur due to a sudden rise of the air pressure in the passage between the turbocharger and throttle body. To prevent this, an air bypass valve and air passage are provided. The air bypass valve, actuated by the vacuum created by a sudden closure of the throttle valve, allows the suction air to bypass the turbocharger and flow directly upstream, thus lowering the pressure in the air passage.

IN-02003

- (A) To intake manifold
- (B) To turbocharger inlet duct
- (C) From intercooler

# GENERAL

## MECHANICAL

### 1. General

The engine used in this vehicle is of a horizontally opposed, four-cylinder design. This four-stroke-cycle, water-cooled, DOHC turbocharged engine uses a total of 16 valves and its main components are made of aluminum alloy. It is fueled by a multiple fuel injection system.

The engine's major structural and functional features are as follows:

- The cylinder head forms pent roof combustion chambers, each having a spark plug located at its center and two each of intake and exhaust valves (four valves per cylinder). The intake and exhaust ports are located in a cross-flow arrangement.
- A single timing belt drives four camshafts on the left and right banks and the water pump on the left bank. Belt tension is automatically adjusted by a belt tension adjuster, eliminating need for manual adjustment.
- The crankshaft is supported at five journals with high rigidity and strength.
- The cylinder block is made of cast aluminum, and cast iron cylinder liners are cast in.

\*\* : The #1 piston is set at TDC on the compression stroke when the piston-position mark on the camshaft sprocket is facing directly upward.

# AUTOMATIC BELT TENSION ADJUSTER

MECHANICAL

## 3. Automatic Belt Tension Adjuster

The automatic belt tension adjuster consists of a tensioner unit and a bracket. It maintains the timing belt tension automatically at a specified level to enable the belt to transmit power correctly, reduce operating noise and increase the life of the belt.

The cylinder of the tensioner unit incorporates an adjuster rod, wear ring, plunger spring, return spring, check ball and silicone oil.

The automatic belt tension adjuster gives tension to the belt by a levering action which is produced by the push force of the tensioner unit's adjuster rod. It operates in the process detailed below.

ME-00314

- |                           |                          |
|---------------------------|--------------------------|
| (1) Oil seal              | (8) Plunger spring       |
| (2) Wear ring             | (9) Check ball           |
| (3) Oil reservoir chamber | (10) Timing belt         |
| (4) Return spring         | (11) Belt tension pulley |
| (5) Adjuster rod          | (12) Tensioner bracket   |
| (6) Plunger               | (13) Cylinder            |
| (7) Oil pressure chamber  |                          |

# AUTOMATIC BELT TENSION ADJUSTER

MECHANICAL

---

- Timing belt tensioning action

When the belt becomes slack, the adjuster rod is pushed upward by the return spring. The oil in the reservoir chamber, which is pressurized by the plunger spring to a certain level, pushes open the check ball and flows into the oil pressure chamber to keep the pressure constant.

The thrust force  $F$  resulting from extension of the adjuster rod applies a counterclockwise torque to the tensioner bracket, which causes the belt tension pulley at its end to turn in the same direction. This applies tensioning pressure  $P_b$  to the timing belt.

- Timing belt tension balancing action

When the belt tension pulley is pushed against the timing belt with pressure  $P_b$ , reaction force  $T_b$  of the timing belt generates the reaction force  $P$  at the point on which the adjuster rod force is acting. This force  $P$  pushes the adjuster rod until it balances with the sum of the thrust force  $F$  and the pressure of the oil in the oil pressure chamber. Therefore, the timing belt tension is kept constant.

- Over-tension correction action

If the tension of the timing belt increases excessively, the force  $P$  becomes larger than the thrust force  $F$  and silicone oil is returned from the oil pressure chamber to the reservoir chamber little by little until the force  $P$  balances again with the thrust force  $F$ . Thus the timing belt tension is maintained at the specified level at all times.

# BELT COVER

MECHANICAL

## 4. Belt Cover

- The belt cover is made of lightweight, heat resistant synthetic resin molding. It constitutes a totally enclosed housing with its cylinder block mating edges sealed with rubber gaskets. This effectively protects the inside components from dust and liquid.
- Rubber seals used between the cylinder block and the belt cover effectively reduces transmission of noise and vibration.
- The front belt cover has a line mark for ignition-timing checking.

ME-00823

## 5. Camshaft

The DOHC engine uses four camshafts in all; intake and exhaust camshafts on each of the right and left banks.

The camshafts are of a composite material type using sintered steel for cam lobes and carbon steel for pipe part.

The sintered steel cams are very high in the resistance to wear, which enables the cam lift to be increased. In addition, use of a hollow pipe material contributes to reduction in weight.

Each camshaft is supported at its three journals and held in position by three camshaft caps. The two flanges on each camshaft supports thrust forces to limit the end play of the camshaft within the tolerance.

For DOHC turbo model engines, slots (notches) for variable valve timing position sensors are provided at the intake side.

**ME(H4DOTC)-8**

## 6. Cylinder Head

- The cylinder head is made of low pressure cast aluminum.
- Each combustion chamber in the cylinder head is a compact, pent roof design. The spark plug is located at the center of the combustion chamber, which contributes to creation of a wide “squish area” for increased combustion efficiency.
- The two intake and two exhaust valves are arranged on opposite sides for a cross-flow feature.
- The cylinder head gasket is a metallic gasket consisting of three layers of the stainless steel sheets. The gasket is highly resistant to heat and maintains high level of sealing performance for a long period.

ME-00793

- (1) Intake valve
- (2) Intake port
- (3) Squish area
- (4) Combustion chamber

- (5) Exhaust port
- (6) Exhaust valve
- (7) Spark plug

# CYLINDER BLOCK

MECHANICAL

---

## 7. Cylinder Block

- The cylinder block is made of aluminum die casting. A semi-closed deck structure is used to obtain a higher rigidity to hold the cylinder liners.
- The cylinder liners are made of cast iron. As they are of a dry type, their outer surfaces are entirely in contact with the cylinder block.
- The cylinder block supports the crankshaft at its five journals. The journal supporting portions are designed such that sufficient stiffness and quiet operation are ensured.
- Sintered material is fit in the casting at the #5 journal to achieve further quietness.
- The oil pump is located in the front center of the cylinder block and the water pump is located at the front of the left-cylinder bank. At the rear of the right-cylinder bank is an oil separator which removes oil mist contained in blow-by gas.

## 8. Crankshaft

The crankshaft is supported in the cylinder block at five journals. Each corner formed by a journal or pin and a web is finished by fillet-rolling method, which increases strength of that area. The five crankshaft bearings are made of aluminum alloy and the No. 5 bearing is provided with a flanged metal to support thrust forces.

ME-00319

# PISTON

MECHANICAL

## 9. Piston

- The pistons are of a slipper skirt design for reduced weight and friction. The piston is also a thermal flow type whose oil control ring groove is provided with round oil drain holes.
- The piston pin is offset toward the thrust side (No. 1 and No. 3 downwards, No. 2 and No. 4 upwards) to reduce piston slap noises.
- The piston head has recesses to prevent interference with the intake and exhaust valves. It also has engraved marks to identify the piston size and the direction of installation. All the pistons are common in their design.
- Three piston rings are used for each piston; two compression rings and one oil control ring. The top piston ring has inner bevels and the second piston ring has a cut on the bottom outside to reduce oil consumption.

## 10. Variable Valve Timing System

This engine has a variable valve timing system, which adjusts the opening and closing timings of the valves optimally by continuously changing the phase angle of the camshaft sprocket relative to the camshaft.

- The ECM determines the optimal cam angle relative to the crank angle by making reference to the engine speed, vehicle speed, throttle opening and other relevant parameters.
- Under the control of the ECM, the oil flow control solenoid valve moves its spool to switch the hydraulic passage to/from the advance and retard chambers that are formed in the camshaft sprocket to change continuously the phase angle between the camshaft sprocket and camshaft.

### A: PHASE ANGLE ADVANCES

In response to an advance signal from the ECM, the oil flow control solenoid valve moves its spool such that hydraulic pressure is applied to the advance chamber in the camshaft sprocket. The sprocket is then turned in the direction in which its phase angle advances relative to the camshaft.

ME-00825

- (1) Variable valve timing controller (attached to camshaft sprocket)
- (2) Vane (attached to camshaft)
- (3) ECM

- (3) ECM
- (4) Oil flow control solenoid valve
- (5) Oil pressure
- (6) Turns in retard direction

## C: A CERTAIN PHASE ANGLE IS RETAINED

When the ECM issues a signal to keep the phase angle unchanged, the oil flow control solenoid valve moves its spool to the position at which the hydraulic pressures to/from both the chambers are blocked. The pressures in the chambers are thus maintained, so the phase angle does not change and the intake valves' opening and closing timings also remain unchanged.

# SODIUM-FILLED EXHAUST VALVES

MECHANICAL

---

## 11.Sodium-filled Exhaust Valves

Each exhaust valve contains pure sodium in its hollow stem. Sodium has high thermal conductivity. The entrapped sodium will liquefy at high temperatures and move inside the stem as the valve is operated. Thus the sodium will effectively transfer heat from the valve head to the valve stem, contributing to cooling down the valve head faster.

# STRETCH TYPE BELT (FROM '08MY)

MECHANICAL

## 13.Stretch Type Belt (From '08MY)

### A: GENERAL

- Stretch type belt uses elastic material in its core, resulting in eliminating a tensioner pulley and in a weight reduction.
- The stretch type belt eliminates the need to adjust tension of the belt.

ME-03635

### B: STRUCTURE

The stretch type belt is built as shown in the following figure providing the elastic feature.

ME-03636

- (A) Upper cloth (nylon)
- (B) Core (nylon)
- (C) Adhesive rubber
- (D) Rib rubber

## 14. Dual AVCS (Active Valve Control System) (From '08MY)

### A: GENERAL

The dual AVCS (Active Valve Control System) changes the camshaft phase angle in relation to the camshaft sprocket to optimize valve timing of the intake and exhaust valves, improving torque in a low and medium speed range, output performance in a high speed range, emission performance, and fuel efficiency.

- The ECM determines the best camshaft angle in relation to the crankshaft angle based on engine speed, vehicle speed, throttle angle, and other relevant parameters.
- Under the control of the ECM, the oil flow control solenoid valve moves its spool to change the phase angle between the camshaft sprocket and camshaft successively by switching the oil path designed between the advance angle chamber and the retard angle chamber.

### B: COMPONENT

## C: OPERATION

### 1. ADVANCEMENT IN PHASE ANGLE

The oil flow control solenoid valve applies oil pressure to the advance angle chamber of the camshaft sprocket by moving its spool in response to an advance angle signal from the ECM. As the pressure is applied, the camshaft that is attached to the vanes rotates in the phase angle advance direction in relation to the camshaft sprocket.

**MEMO**

### 1. General

- The engine cooling system consists of a down-flow radiator which features high heat-dissipation performance, an electric-motor-driven fan, a water pump, a thermostat, and an engine coolant temperature sensor.
- The reservoir tank is made of translucent resin and enables easy confirmation of the coolant level. Also, coolant should be added to the reservoir tank when replenishment is necessary.
- The ECM controls the operation of the radiator main fan and sub fan depending on the signals from the engine coolant temperature sensor, vehicle speed sensor and A/C switch.

## 2. Cooling Circuits

The cooling system operates in three different phases depending on the temperature of the engine coolant.

- 1st phase (thermostat closed)

When the engine coolant temperature is below the preset temperature, the thermostat remains closed. The coolant flows through the heater circuit. This permits the engine to warm up quickly.

- 2nd phase (thermostat open)

When the engine coolant temperature becomes higher than the preset temperature, the thermostat opens. The coolant flows through the radiator where it is cooled.

- 3rd phase (thermostat open and radiator fan operating)

When the engine coolant temperature sensor becomes hotter than the preset value, the ECM receives signals from the engine coolant temperature sensor and causes the radiator fan(s) to operate. When the engine is stopped after high-speed operation, vapor produced in the turbocharger cooling section flows from the coolant filler tank to the reservoir tank where it condenses back into water. Water is then absorbed by the coolant filler tank as the engine cools down.

**NOTE:**

Refer to the Service Manual for preset engine coolant temperature values for each stage.

## 3. Water Pump

The water pump is located in the front portion of the left bank cylinder block and is driven by the engine through the timing belt. The thermostat is fitted into the coolant inlet at the bottom of the water pump. When the pump's impeller rotates, the coolant is drawn into the pump from the lower pipe (which is connected to the radiator hose) via the thermostat. It then flows along the perimeter of the impeller and then is discharged for circulation through a circuit depending on the coolant temperature.

	High	High-Speed	High-Speed	High-Speed

# RADIATOR CAP

COOLING

## 7. Radiator Cap

The radiator cap at the coolant filler tank side has a pressure valve and a vacuum valve. When the radiator inner pressure becomes higher than specified, the pressure valve opens to send coolant to the reservoir tank. Also, when the radiator inner pressure becomes lower than the atmospheric pressure during the cooling down phase, the vacuum valve opens to send back coolant from the reservoir tank to the radiator. These functions prevent damage to the radiator components.

CO-00245

- (1) Pressure valve
- (2) Vacuum valve

## 8. Relief Valve Cap

The relief valve cap at the radiator side has a pressure valve. When the radiator inner pressure becomes higher than specified, the pressure valve opens to send coolant to the reservoir tank. This function prevents damage to the radiator components.

**CAUTION:**

Due to the difference in construction, the relief valve cap cannot be used in place of the radiator cap at the coolant filler tank side. If the relief valve cap is fit on the coolant filler tank, overheating may occur.

CO-00246

(1) Pressure valve

# RELIEF VALVE CAP

COOLING

---

**MEMO**

### 1. General

- The lubrication system force-circulates engine oil throughout the engine using an oil pump. The oil pressure is regulated by the relief valve built into the oil pump.
- The oil pump is a thin, large-diameter trochoid rotor type which can accommodate the engine's high output. The pump is directly driven by the crankshaft.
- The engine oil is cleaned by a full-flow, paper element type oil filter. The filter has a bypass valve which allows the engine oil to flow bypassing the filter if it is clogged.
- The inside of the oil pan is fitted with a baffle plate which reduces changes in the oil level due to movement of the vehicle, thus ensuring uninterrupted suction of oil.
- The engine oil discharged from the oil pump is delivered to the journal bearings, connecting rod bearings, and other parts requiring lubrication and cooling via the vertical passage in the right bank of the cylinder block, the oil filter, and the oil galleries in the right and left banks of the cylinder block.
- The engine oil is also distributed to each cylinder head valve mechanism at a proper flow rate achieved by metering by the orifice provided in each oil gallery.
- An oil cooler is installed to keep the engine oil in an optimum temperature range and prevent degradation of lubrication performance.

# ENGINE OIL FLOW

LUBRICATION

## 2. Engine Oil Flow

LU-02101

## 3. Oil Pump

- The oil pump is a trochoid rotor type consisting of an inner rotor and outer rotor assembled with each other in a pump body. When the inner rotor is driven by the crankshaft, the outer rotor is rotated, changing the space between it and the inner rotor. The change in the space occurs because of the difference in the number of teeth between the rotors.
- Engine oil is carried from the inlet port to the discharge port. As the pump rotates, the space carrying the oil becomes smaller, thus the oil is pressurized and discharged from the outlet port.
- A relief valve is built in the oil pump at its discharge side. When the oil pressure becomes higher than the preset value, the relief valve regulates the pressure by sending excessive oil back to the inlet side.

# OIL FILTER

## 4. Oil Filter

The oil filter is a full-flow filtering, cartridge type that utilizes a paper element. It also has a built-in bypass valve. If the filter gets clogged causing the oil pressure to exceed the preset value, the bypass valve opens and detours the engine oil to flow around the filter. The filter element has a special pleat design to increase the effective filtering area.

LU-00059

- (1) Oil seal
- (2) Filter body
- (3) Bypass valve
- (4) Pleated element

## 5. Oil Pan and Oil Strainer

- The oil pan is attached to the cylinder block using liquid gasket for sealing. The oil strainer is a metal net type and removes large foreign particles from the engine oil. It is located in the middle of the oil pan. The pipe from the strainer is connected to the suction port of the oil pump in the left bank of the cylinder block.
- There is a baffle plate inside the oil pan. It stabilizes the oil level and reinforces the oil pan.

- (1) Oil strainer

# OIL PRESSURE SWITCH

LUBRICATION

## 6. Oil Pressure Switch

The oil pressure switch is located in the front upper portion of the right cylinder block bank. The purpose of this switch is to monitor the operation of the oil pump as well as the lubricating oil pressure when the engine is running.

LU-00061

- |               |                    |
|---------------|--------------------|
| (1) Contact   | (4) Molded portion |
| (2) Diaphragm | (5) Terminal       |
| (3) Spring    |                    |

1) When oil pressure does not build up (immediately after ignition switch is turned ON):  
The diaphragm is pushed toward the cylinder block by the spring force (a force equivalent to the specified oil pressure). This closes the contact points, causing the oil pressure warning light in the combination meter to illuminate.

2) When oil pressure reaches the specified value (after engine starts):  
After reaching the specified value, the oil pressure pushes the diaphragm against the spring force. This opens the contact points and the oil pressure warning light goes out.

## 7. Oil Cooler

The oil cooler used in turbo models is of a water cooled type. It serves to maintain engine oil in proper temperature range and so prevent degradation of lubricating oil performance.

## FUEL INJECTION (FUEL SYSTEM)

---

### 1. General

- The Multipoint Fuel Injection (MFI) system supplies optimum air-fuel mixture under every engine operating condition through the use of the latest electronic control technology.

This system pressurizes the fuel to a constant pressure and injects it into each intake air port in the cylinder head. The injection quantity of fuel is controlled by an intermittent injection system where an electro-magnetic injection valve or injector opens for a short period that is precisely controlled depending on the quantity of air appropriate for each condition of operation. In actual control, an optimum fuel injection quantity is achieved by varying the duration of an electric pulse applied to the injector. This way of control enables simple, yet highly precise metering of the fuel.

- The engine control module (ECM) that controls the fuel injection system corrects the fuel injection amount depending on the vehicle speed, throttle opening, coolant temperature and other vehicle-operation-related information. The ECM receives the information in the form of electric signals from the corresponding sensors and switches.

The MFI system also has the following features:

- Reduced exhaust emissions
- Improves fuel efficiency
- Increased engine output
- Quick response to accelerator and brake pedal operation
- Superior start ability and warm-up performance in cold weather due to corrective controls made according to coolant and intake air temperatures

## 2. Air Line

### A: GENERAL

The air filtered by the air cleaner enters the throttle body where it is regulated in the volume by the throttle valve and then enters the intake manifold. It is then distributed to each cylinder where the air is mixed with fuel injected by the injector.

### B: MANIFOLD ABSOLUTE PRESSURE SENSOR

The manifold absolute pressure sensor is attached to the top of the throttle body, and continuously sends to the engine control module (ECM) voltage signals that are proportional to intake manifold absolute pressures. The ECM controls the fuel injection and ignition timing based on the intake manifold absolute pressure signals in addition to other signals from many sensors and other control modules.

FU-02152

(1) Manifold absolute pressure sensor

(B) Absolute pressure

## AIR LINE

### FUEL INJECTION (FUEL SYSTEM)

---

#### C: ELECTRONIC CONTROL THROTTLE SYSTEM

- The electronic control throttle system consists of an accelerator pedal position sensor mounted on the accelerator pedal, a throttle position sensor and a throttle motor mounted on the throttle body, and the ECM, which controls these devices.
- The movement of the accelerator pedal is converted into electrical signals by the accelerator pedal position sensor and sent to the ECM. Based on these signals the ECM controls the throttle motor to open and close the throttle valve.
- Idling control is now performed by the electronic control throttle system in place of the idle air control solenoid valve.

### 3. Fuel System

#### A: GENERAL

- The fuel pressurized by the fuel tank inside pump is delivered to each fuel injector by way of the fuel pipe and fuel filter. Fuel injection pressure is regulated to an optimum level by the pressure regulator.
- Each injector injects fuel into the intake port of the corresponding cylinder where the fuel is mixed with air. The mixture then enters the cylinder. Fuel injection amount and timing are regulated by the ECM.

FU-02153

- (2) #2 fuel injector
- (3) #3 fuel injector
- (4) #4 fuel injector
- (5) #5 fuel injector
- (6) #6 fuel injector

- (7) Fuel pump
- (8) Fuel pump control unit
- (9) ECM
- (10) Pressure regulator
- (11) Pulsation damper

### B: PRESSURE REGULATOR

The pressure regulator is installed at the injector end of the fuel supply line. It has a fuel chamber and spring chamber separated by a diaphragm. The fuel chamber is connected to the fuel supply line and the spring chamber is connected to the intake manifold. Fuel chamber also has a relief valve connected to the fuel return line through which fuel returns to the fuel tank. When the intake manifold vacuum increases, the diaphragm is pulled and the relief valve opens to decrease the fuel supply line pressure (or fuel injection pressure). When the intake manifold vacuum decreases, the diaphragm is pushed by the spring to increase the fuel supply line pressure. Thus, the difference between the fuel injection pressure and the intake manifold vacuum is kept at a constant level of 343 kPa (3.50 kgf/cm<sup>2</sup>, 49.7 psi) to precisely control the amount of injected fuel.

# FUEL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

---

### C: FUEL INJECTOR

- The MFI system employs top feed type fuel injectors.
- Each injector is installed in the fuel pipe in such a way that the injector is cooled by fuel.
- The features of this type of fuel injector are as follows:
  - 1) High heat resistance
  - 2) Low driving noise
  - 3) Easy to service
  - 4) Small size
- The injector injects fuel according to the valve open signal from the ECM. The needle valve is lifted by the solenoid, which is energized on arrival of the valve open signal.
- Since the injector's nozzle hole area, the lift of valve and the fuel pressure are kept constant, the amount of fuel injected is controlled only by varying the duration of the valve open signal from the ECM.
- The multi-hole nozzle makes it possible for the injector to produce fine fuel particles, which enhances the combustion efficiency and output performance of the engine.

### D: FUEL TANK

The fuel tank utilizes a two-compartment design to ensure sufficient capacity without interfering with the rear differential. It is provided with a suction jet pump (included in the fuel pump and fuel level sensor assembly) which transfers fuel from one compartment to the other.

Each compartment has an individual fuel level sensor. The fuel tank is located under the rear seat and secured with hold-down bands.

### E: FUEL PUMP AND FUEL LEVEL SENSOR ASSEMBLY

#### 1. FUEL PUMP

The fuel pump consists of a motor, impeller, pump casing, pump cover, check valve and filter. It is located in the fuel tank and combined with the fuel level sensor and fuel temperature sensor into a single unit. The operation of this impeller type pump is very quiet.

- When the ignition switch is turned ON, fuel pump relay is activated. Then the motor operates to rotate the impeller.
- As the impeller rotates, fuel in a vane groove of the impeller flows along the fuel passage into the next vane groove by centrifugal force. When fuel flows from one groove to the next, a pressure difference occurs due to friction. This creates a pumping effect.
- The fuel pushed up by rotation of the impeller then passes through the clearance between the armature and the magnet of the motor and is discharged through the check valve.
- When the fuel discharge pressure reaches the specified level, the relief valve opens and excess fuel is released into the fuel tank. In this manner, the relief valve prevents an abnormal increase in fuel pressure.
- When the engine and the fuel pump stop, the check valve operates to close the discharge port, so that the fuel pressure in the fuel delivery line is retained.

#### 2. FUEL LEVEL SENSOR

The fuel level sensor is integrated with the fuel pump, which is located in the fuel tank. The sensor outputs an electric resistance signal that varies with movement of its float to indicate the level of the fuel remaining in the tank.

- (1) Fuel pump assembly
- (2) Fuel level sensor
- (3) Float

### 3. JET PUMP

- The jet pump utilizes the velocity of fuel returning from the engine to produce vacuum in it.
- Using the pumping effect produced by the vacuum, the jet pump transfers fuel from the sub-compartment and main compartment of the fuel tank to the fuel pump.
- When the return line nozzle is clogged, the fuel sent back through the return line flows back into the fuel tank via the relief valve.

FU-00226

### F: SUB-COMPARTMENT FUEL LEVEL SENSOR

This sensor detects the level of the fuel in the sub side (the side without a fuel pump) of the fuel tank. Also, when the jet pump is operating, fuel in the sub side is drawn up and transferred to the fuel pump.

- (1) Fuel level sensor
- (2) Float

(A) Jet pump

## 4. Sensors and Switches

### A: FRONT OXYGEN (A/F) SENSOR

- The front oxygen (A/F) sensor uses zirconium oxide ( $ZrO_2$ ), which is a solid electrolyte, at portions exposed to exhaust gas.
- The zirconium oxide has the property of generating electromotive force when its both sides are exposed to oxygen ions of different concentration and the magnitude of this electromotive force depends on how much the difference is.  
The front oxygen (A/F) sensor detects the amount of oxygen in exhaust gases by making use of this property of the zirconium oxide material.
- The zirconium oxide material is formed into a closed end tube and its external surface is exposed to exhaust gases with smaller oxygen ion concentration, whereas its internal surface is exposed to atmospheric air. The external surface has a porous platinum coating. The sensor's inside is connected to the ECM through a harness to send the current output from the sensor.
- The sensor incorporates a ceramic heater to improve its performance at low temperatures.

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

- When rich air-fuel mixture is burnt in the cylinder, the oxygen in the exhaust gases is almost completely used in the catalytic reaction by the platinum coating on the external surface of the zirconium tube. This results in a very large difference in the oxygen ion concentration between the inside and outside of the tube, and the electromotive force generated is large.
- When a lean air-fuel mixture is burnt in the cylinder, relatively large amount of oxygen remains in the exhaust gases even after the catalytic action, and this results in a small difference in the oxygen ion concentration between the tube's internal and external surfaces. The electromotive force in this case is very small.
- The difference in oxygen concentration changes drastically in the vicinity of the stoichiometric air-fuel ratio, and hence the change in the electromotive force is also large. By using this information, the ECM can determine the air-fuel ratio of the supplied mixture easily. The front oxygen (A/F) sensor does not generate much electromotive force when the temperature is low. The output characteristics of the sensor stabilize at a temperature of approximately 700°C (1,292°F).

FU-02015

- (A) Current
- (B) Air/fuel ratio
- (C) Rich
- (D) Lean

## B: REAR OXYGEN SENSOR

- The rear oxygen sensor is used to sense oxygen concentration in the exhaust gas. If the air-fuel ratio is leaner than the stoichiometric ratio in the mixture (i.e., excessive amount of air), the exhaust gas contains more oxygen. To the contrary, if the fuel ratio is richer than the stoichiometric ratio, the exhaust gas contains almost no oxygen.
- By detecting the oxygen concentration in the exhaust gas using the oxygen sensor makes it possible to determine whether the air-fuel ratio is leaner or richer than the stoichiometric ratio.
- The rear oxygen sensor has a zirconium tube (ceramic), which generates voltage if there is a difference in oxygen ion concentration between the inside and outside of the tube. Platinum is coated on the inside and outside of the zirconium tube as a catalysis and electrode material. The sensor's inside is connected to the ECM through a harness.
- A ceramic heater is employed to improve performance at low temperatures.

FU-02017

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

### D: CRANKSHAFT POSITION SENSOR

- The crankshaft position sensor is installed on the rear end of the cylinder block. The sensor generates a pulse when one of the teeth on the perimeter of the crankshaft plate (rotating together with the crankshaft) passes in front of it. The ECM determines the crankshaft angular position by counting the number of pulses.
- As the crankshaft rotates, each tooth of the crankshaft plate aligns with the crankshaft position sensor so that the magnetic flux in the sensor's coil changes since the air gap between the sensor pickup and the crankshaft plate changes. This change in magnetic flux induces a voltage pulse in the sensor and the pulse is transmitted to the ECM.

FU-00609

- (1) Crankshaft plate
- (2) Crankshaft half rotation

## E: CAMSHAFT POSITION SENSOR

- The camshaft position sensor is located on the cylinder head. It detects the combustion cylinder at any given moment.
  - The sensor generates a pulse when one of the slots in the camshaft plate passes in front of the sensor. The ECM detects the camshaft position by measuring the pulse. Three slots are provided on the plate as shown below.

# SENSORS AND SWITCHES

## FUEL INJECTION (FUEL SYSTEM)

### F: KNOCK SENSOR

- The knock sensor is installed on the cylinder block, and senses knocking that occur in the engine.
- The sensor is a piezo-electric type, which converts vibration resulting from knocking into electric signals.
- In addition to a piezo-electric element, the sensor has a weight and case as its components. If knocking occurs in the engine, the weight in the case moves causing the piezo-electric element to generate a voltage.
- The knock sensor harness is connected to the engine harness.

### G: VEHICLE SPEED SENSOR

Vehicle speed signals are sent from the vehicle speed sensor to the ABS control module or the vehicle dynamics control (VDC) control module.

The signals are sent to the ECM via CAN communication.<Ref. to LAN section.>

## 5. Control System

### A: GENERAL

The ECM receives signals from various sensors, switches, and other control modules. Using these signals, it determines the engine operating conditions and if necessary, emits signals to one or more systems to control them for optimum operation.

Major control items of the ECM are as follows:

- Fuel injection control
- Ignition control
- Idle air control
- Fuel pump control
- Canister purge control\*<sup>1</sup>
- Radiator fan control\*<sup>2</sup>
- On-board diagnosis function

\*1: Canister purge control is described under EC (H6DO) section. <Ref. to EC(H6DO) section.>

\*2: Radiator fan control is described under CO (H6DO) section. <Ref. to CO(H6DO) section.>

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

### B: INPUT AND OUTPUT SIGNALS

Signal	Unit	Function
Input signals	Manifold absolute pressure sensor	Detects the amount (measures the absolute pressure) of intake air.
	Mass air flow and intake air temperature sensor	Detects the temperature and amount of intake air.
	Throttle position sensor	Detects the throttle valve position.
	Front oxygen (A/F) sensor	Detects the density of oxygen in exhaust gases at the upstream of the front catalytic converter.
	Rear oxygen sensor	Detects the density of oxygen in exhaust gases at the downstream of the rear catalytic converter.
	Crankshaft position sensor	Detects the crankshaft angular position.
	Camshaft position sensor	Detects the combustion cylinder.
	Engine coolant temperature sensor	Detects the engine coolant temperature.
	Knock sensor	Detects engine knocking.
	Accelerator pedal position sensor	Indicates the accelerator pedal position.
	Variable valve lift diagnosis oil pressure switch	Detects the oil pressure in the variable valve lift circuit.
	Oil temperature sensor	Detects the oil temperature in the variable valve lift circuit.
	Ignition switch	Detects operation of the ignition switch.
	Starter switch	Detects the condition of engine cranking.
	Power steering switch	Detects the steering condition.
	A/C mid pressure switch	Detects the A/C refrigerant pressure through an ON-OFF switch.
	Inhibitor switch	Detects shift positions.
	A/C switch	Detects ON-OFF operation of the A/C switch.
	Fuel temperature sensor	Detects the temperature of the fuel in the fuel tank.
	Fuel tank pressure sensor	Detects the pressure in the fuel tank.
Output signals	Fuel injector	Activates an injector.
	Ignition signal	Turns the primary ignition current ON or OFF.
	Electronic control throttle	Controls motor output for the electronic control throttle.
	Electronic control throttle motor cut relay	Turns ON-OFF the electronic control throttle motor relay.
	Oil flow control solenoid valve	Controls oil pressure for AVCS.
	Oil switching solenoid valve	Controls oil pressure for variable valve lift.
	Fuel pump control unit	Controls the fuel pump.
	A/C control relay	Turns ON or OFF the A/C control relay.
	Radiator fan control signal	Controls operation of radiator fans.
	Malfunction indicator light (MIL)	Indicates existence of abnormality.
	Pressure control solenoid valve	Controls evaporation pressure in the fuel tank.
	Drain valve	Closes the evaporation line between the fuel tank and canister to detect leakage of evaporation gas.
	Purge control solenoid valve	Controls purge of evaporative gas absorbed by the canister.
	Heater circuit of front and rear oxygen sensors	Controls heater of front and rear oxygen sensors.
	Power supply	Controls ON/OFF of the main power supply relay.

### **C: FUEL INJECTION CONTROL**

- The ECM receives signals from various sensors and based on them, it determines the amount of fuel injected and the fuel injection timing. It performs the sequential fuel injection control over the entire engine operating range except during start-up of the engine.
- The amount of fuel injected depends upon the length of time the injector stays open. The fuel injection duration is determined according to varying operating condition of the engine. For the purpose of achieving highly responsive and accurate fuel injection duration control, the ECM performs a new feedback control that incorporates a learning feature as detailed later.
- Fuel injection control is performed in a way that fuel is injected accurately at the time when the maximum air intake efficiency can be achieved for each cylinder.

#### **1. FUEL INJECTION DURATION**

Fuel injection duration is basically determined as indicated below:

- While cranking the engine:

The duration defined below is used.

- Duration of fuel injection during engine start-up ..... Determined according to the engine coolant temperature detected by the engine coolant temperature sensor.

- During normal operation:

The duration is determined as follows:

Basic duration of fuel injection × Correction factors + Voltage correction time

- Basic duration of fuel injection ..... The basic length of time fuel is injected. This is determined by two factors — the amount of intake air detected by the air flow sensor and the engine speed monitored by the crankshaft position sensor.
- Correction factors ..... See the next section.
- Voltage correction time ..... This is added to compensate for the time lag before operation of injector that results from variation in the battery voltage.

# CONTROL SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

---

### 2. CORRECTION FACTORS

The following factors are used to correct the basic duration of fuel injection in order to make the air-fuel ratio meet the requirements of varying engine operating conditions:

- **Air-fuel ratio feedback factor:**

This factor is used to correct the basic duration of fuel injection in relation to the actual engine speed. (See the next section for more details.)

- **Start increment factor:**

This factor is used to increase the fuel injection duration only while the engine is being cranked to improve its start ability.

- **Coolant-temperature-dependent increment factor:**

This factor is used to increase the fuel injection duration depending on engine coolant temperature signals to facilitate cold starting. The lower the coolant temperature, the greater becomes the increment.

- **After-start increment factor:**

- This factor is used to increase the fuel injection duration for a certain period immediately after start of the engine to stabilize engine operation.
- The increment depends on the coolant temperature at the start of the engine.

- **Wide-open-throttle increment factor:**

This factor is used to increase the fuel injection duration depending on the relationship between the throttle position sensor signal and air flow sensor signal.

- **Acceleration increment factor:**

This factor is used to increase the fuel injection duration to compensate for a time lag between air flow measurement and fuel injection control for better engine response to driver's pedal operation during acceleration.

### 3. AIR-FUEL RATIO FEEDBACK FACTOR

The ECM creates this factor utilizing the front oxygen (A/F) sensor signal. When the signal is high, the air-fuel ratio is leaner than the stoichiometric ratio. The ECM then makes the fuel injection duration longer by modifying the factor. When the signal is low showing that the mixture is rich, the ECM modifies the factor to make the injection duration longer. In this way, the air-fuel ratio is maintained at a level close to the stoichiometric ratio at which the three-way catalytic converter acts most effectively.

FU-00240

- (1) Front catalytic converter
- (2) Exhaust gases
- (3) Front oxygen (A/F) sensor
- (4) Fuel injector
- (5) Combustion chamber
- (6) ECM

- (A) Injection duration increment signal
- (B) Injection duration decrement signal
- (C) High oxygen density
- (D) Low oxygen density
- (E) Lean signal
- (F) Rich signal

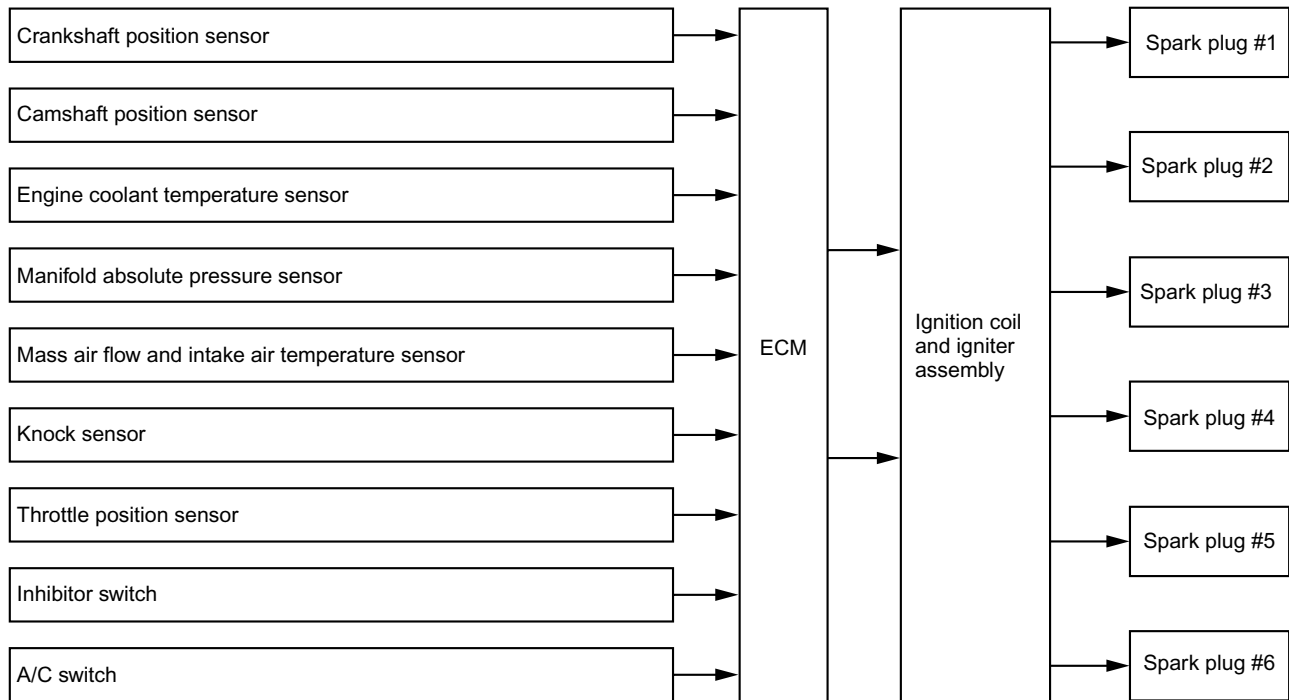

### 4. LEARNING FEATURE

The air-fuel ratio feedback control includes a learning feature, which contributes to more accurate and responsive control.

- In the air-fuel ratio feedback control, the ECM calculates the necessary amount of correction based on data from the front oxygen (A/F) sensor and adds the result to the basic duration (which is stored in the ECM's memory for each condition defined by the engine speed and various loads.)
- Without a learning feature, the ECM carries out the above-mentioned process every time. This means that if the amount of necessary correction is large, the air-fuel ratio feedback control becomes less responsive and less accurate.
- The learning feature enables the ECM to store the amount of correction into memory and add it to the basic fuel injection duration to create a new reference fuel injection duration. Using the reference duration as the basic duration for the injection a few times later, the ECM can reduce the amount of correction and thus make its feedback control more accurate and responsive to changes in the air-fuel ratio due to difference in driving condition and sensor/actuator characteristics that may result from unit-to-unit variation or aging over time.

## D: IGNITION CONTROL

- The ECM determines operating condition of the engine based on signals from the mass air flow and intake air temperature sensor, manifold absolute pressure sensor, engine coolant temperature sensor, crankshaft position sensor and other sources. The ECM then selects the ignition timing most appropriate for the condition thus determined from those stored in its memory and outputs at that timing a primary current OFF signal to the igniter to initiate ignition.
- This control uses a quick-to-response learning feature by which the data stored in the ECM memory is processed in comparison with information from various sensors and switches.
- Thus, the ECM can always perform optimum ignition timing taking into account the output, fuel efficiency, exhaust gas, and other factors for every engine operating condition.
- Ignition control during start-up  
 Engine speed fluctuates during start of the engine, so the ECM cannot control the ignition timing. During that period, the ignition timing is fixed at 10° BTDC by using the 10° signal from the crankshaft position sensor.

FU-02175

# CONTROL SYSTEM

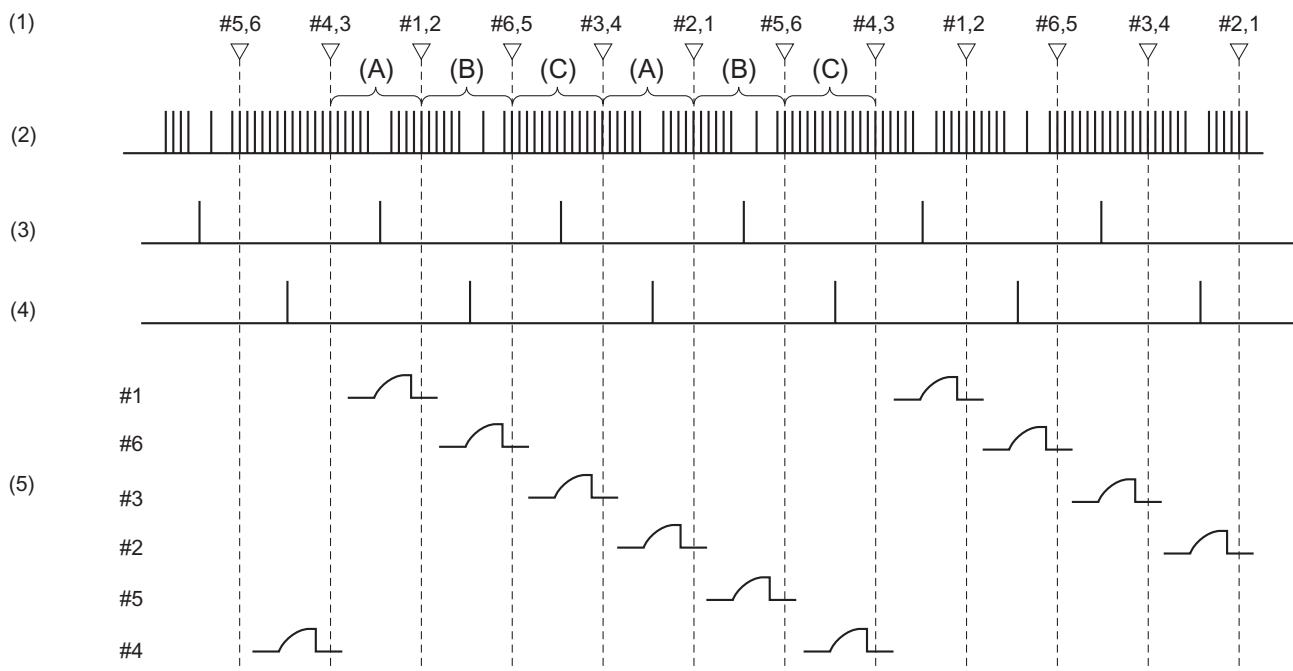

## FUEL INJECTION (FUEL SYSTEM)

● On the sensor plate at the rear end of the crankshaft, there are projections placed at 10° and 30° intervals. The ECM receives crankshaft angle pulse signals that are generated when the crankshaft position sensor passes these projections.

Using crankshaft position sensor signals and camshaft position sensor pulse signals, the ECM determines the position of each piston as follows:

The ECM interprets the pulses of range (A) shown below as the No. 1 and No. 2 cylinder pistons being at TDC, the pulses of range (B) as the No. 5 and No. 6 cylinder pistons being at TDC, and the pulses of range (C) as the No. 3 and No. 4 cylinder pistons being at TDC.

● The ECM outputs an ignition signal for the No. 1, No. 3 or No. 5 cylinder when it receives a cam angle pulse (RH) before a TDC signal and for the No. 2, No. 4 or No. 6 cylinder when it receives a cam angle pulse (LH) before a TDC signal.

FU-02492

- (1) Cylinder number (TDC)
- (2) Crank angle pulse
- (3) Cam angle pulse (RH)
- (4) Cam angle pulse (LH)
- (5) Ignition timing

## E: IDLE AIR CONTROL

• The ECM controls the electronic control throttle based on signals from the crankshaft position sensor, engine coolant temperature sensor, air flow and intake air temperature sensor, and A/C switch etc. so that the proper idle speed for each engine load is achieved.

FU-00614

- |   |                                  |
|---|----------------------------------|

| (5) Throttle position sensor                        | (11) ECM                         |
| (6) Engine coolant temperature sensor               | (12) Electronic control throttle |

## F: FUEL PUMP CONTROL

The ECM controls the operation of the fuel pump through the fuel pump control unit, based on signals from the crankshaft position sensor. To improve safety, a “fuel pump stop signal” is sent from the ECM to the fuel pump control unit to stop the fuel pump if the engine stalls while the ignition switch is ON.

Ignition switch ON	Fuel pump relay	Fuel pump
A certain period of time after ignition switch is turned ON	ON	Operates
While cranking the engine	ON	Operates
While engine is operating	ON	Operates
When engine stops	OFF	Does not operate

# ON-BOARD DIAGNOSIS SYSTEM

## FUEL INJECTION (FUEL SYSTEM)

---

### 6. On-board Diagnosis System

#### A: GENERAL

- The on-board diagnosis system detects and indicates a fault by generating a code corresponding to each fault location. The engine malfunction indicator light on the combination meter indicates occurrence of a fault or abnormality.
- When the malfunction indicator light comes on as a result of detection of a fault by the ECM, the corresponding diagnostic trouble code (DTC) and freeze frame data indicating the engine condition are stored in the ECM.
- On the OBD-II conformable car, it is necessary to connect the SUBARU Select Monitor (SSM) or General Scan Tool (GST) to the data link connector in order to check for DTCs.
- The SSM and GST can be used for erasing DTCs. These can also read freeze frame data in addition to other pieces of engine data.
- If there is a failure involving sensors, which may affect drive control of the vehicle, the fail-safe function ensures minimum level of drivability.

#### B: FAIL-SAFE FUNCTION

For a sensor or switch which has been judged faulty in the on-board diagnosis, the ECM, if appropriate, generates an associated pseudo signal to keep the vehicle operational. (The control becomes degraded.)

# SYSTEM OVERVIEW

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 1. System Overview

There are three emission control systems, which are as follows:

- Crankcase emission control system
- Exhaust emission control system
  - Catalytic converter
  - Air/fuel (A/F) control system
  - Ignition control system
- Evaporative emission control system
  - On-board refueling vapor recovery (ORVR) system

# SYSTEM OVERVIEW

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

Item		Main components	Function
Crankcase emission control system		Positive crankcase ventilation (PCV) valve	Draws blow-by gas into intake manifold from crankcase and burn it together with air-fuel mixture. Amount of blow-by gas to be drawn in is controlled by intake manifold pressure.
Exhaust emission control system	Catalytic converter	Front	Oxidizes HC and CO contained in exhaust gases as well as reducing NOx.
		Rear	
	Air/fuel (A/F) control system	Engine control module (ECM)	Receives input signals from various sensors, compares signals with stored data, and emits a signal for optimal control of air-fuel mixture ratio.
		Front oxygen (A/F) sensor	Detects density of oxygen contained exhaust gases.
		Rear oxygen sensor	Detects density of oxygen contained in exhaust gases.
		Throttle position sensor	Detects throttle opening.
		Manifold absolute pressure sensor	Detects absolute pressure of intake manifold.
		Mass air flow and intake air temperature sensor	Detects amount of intake air. Detects the amount of intake air temperature inside the air cleaner case.
	Ignition control system	ECM	Receives various signals, compares signals with basic data stored in memory, and emits a signal for optimal control of ignition timing.
		Crankshaft position sensor	Detects engine speed (revolution).
		Camshaft position sensor	Detects reference signal for combustion cylinder discrimination.
		Engine coolant temperature sensor	Detects coolant temperature.
Evaporative emission control system	Canister	Absorbs evaporative gas that accumulates in fuel tank when engine stops, and releases it to combustion chambers for a complete burn when the engine is started. This prevents HC from being discharged into atmosphere.	
	Purge control solenoid valve	Receives a signal from ECM and controls purge of evaporative gas absorbed by canister.	
	Pressure control solenoid valve	Receives a signal from ECM and controls evaporative gas pressure in fuel tank.	
On-board refueling vapor recovery (ORVR) system	Vent valve	Opens a valve during refueling to let fuel vapor in the fuel tank flow to the canister. The system also closes the port to the canister when the fuel tank is full of fuel.	
	Drain valve	Closes the evaporation line by receiving a signal from ECM to check the evaporation gas leak.

# CRANKCASE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 3. Crankcase Emission Control System

The positive crankcase ventilation (PCV) system prevents air pollution that will be caused by blow-by gas being emitted from the crankcase.

The system consists of rocker covers with fresh air inlet, connecting hoses, a PCV valve and a chamber.

EC-02036

- (8) Spring
- (9) Valve

- (A) To intake manifold
- (B) Blow-by gas

## 4. Catalytic Converter

- The basic materials of the three-way catalytic converter are platinum (Pt), rhodium (Rh) and palladium (Pd), and a thin coat of their mixture is applied onto honeycomb or porous ceramics of an oval or round shape (carrier). To avoid damaging the catalytic converter, only unleaded gasoline should be used.
- The catalytic converter reduces HC, CO and NO<sub>x</sub> in exhaust gases through chemical reactions (oxidation and reduction). These harmful components are reduced most efficiently when their concentrations are in a certain balance. These concentrations vary with the air-fuel ratio. The ideal air-fuel ratio for reduction of these components is the stoichiometric ratio.
- Therefore, the air-fuel ratio needs to be controlled to around the stoichiometric ratio to purify the exhaust gases most efficiently.

# AIR/FUEL (A/F) CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

## 5. Air/fuel (A/F) Control System

- The air/fuel (A/F) control system makes a correction to the basic fuel injection duration in accordance with the signals from the front oxygen (A/F) sensor so that the stoichiometric ratio is maintained, thus ensuring most effective exhaust gas purification by the three-way catalytic converter. Different basic fuel injection durations are preset for various engine speeds and loads, as well as the amount of intake air.
- This system also has a learning control function which stores the corrected data in relation to the basic fuel injection in the memory map. This allows an appropriate air-fuel ratio correction to be added automatically in quick response to any situation that requires such an effect. Thus, the air-fuel ratio is optimally maintained under various conditions while purifying exhaust gases most effectively, improving driving performance and compensating for changes in sensors' performance over time.

## 6. Ignition Control System

- The ignition system is controlled by the ECM.

The ECM monitors the operating condition of the engine using the signals from the sensors and switches shown below and determines the ignition timing most appropriate for each engine operating condition. Then it sends a signal to the igniter, commanding generation of a spark at that timing.

- The ECM uses a preprogrammed map for a “closed-loop” control which provides its ignition timing control with excellent transient characteristics, i.e., highly responsive ignition timing control.

# EVAPORATIVE EMISSION CONTROL SYSTEM

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

### 7. Evaporative Emission Control System

#### A: GENERAL

- The evaporative emission control system prevents fuel vapors from escaping into atmosphere. This system includes a canister, purge control solenoid valve, fuel cut valve, and the lines connecting them.
- Fuel vapor in the fuel tank is introduced into the canister through the evaporation line, and are absorbed by activated carbon in it. The fuel cut valve is also incorporated in the fuel tank line.
- The purge control solenoid valve is controlled optimally by the ECM according to the engine condition.
- The pressure control solenoid valve incorporated in the fuel tank evaporation line regulates the pressure/vacuum in the fuel tank under the control of the ECM which uses the signal from the fuel tank pressure sensor.

- |                                  |                                     |                                     |

#### B: FUEL CUT VALVE

The fuel cut valve is incorporated in the fuel tank. The rising level of the fuel in the fuel tank causes the float to move up and close the cap hole so that no fuel can enter the evaporation line.

# EVAPORATIVE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## C: FUEL TANK CAP

- The fuel tank cap is of a quick lock type and can be opened or closed in 1/4 of a full turn.
- The fuel tank cap has a relief valve, which prevents development of vacuum in the fuel tank in the event of a problem with the fuel vapor line.
- When there is no problem with the fuel vapor line, the filler pipe is sealed at the portion (A) and by the seal pressed against the filler pipe end. If vacuum develops in the fuel tank, the atmospheric pressure forces the spring down to open the valve; consequently outside air flows into the fuel tank, thus controlling the inside pressure.

EC-02109

- (1) Seal
- (2) Spring

- (3) Valve
- (4) Filter

# EVAPORATIVE EMISSION CONTROL SYSTEM

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

---

### D: CANISTER

The canister incorporates a drain valve and a drain filter.

The charcoal filled in the canister temporarily stores fuel vapors. When the purge control solenoid valve is opened by a signal from the ECM, the external fresh air entering the canister carries the fuel vapors into the collector chamber.

The drain filter is installed at the air inlet port of the drain valve. It cleans the air taken in the canister through the drain valve.

EC-02093

- (B) To intake manifold

# EVAPORATIVE EMISSION CONTROL SYSTEM

## EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

### F: PRESSURE CONTROL SOLENOID VALVE

The fuel tank pressure control solenoid valve is located in the evaporation line between the shut-off valve on fuel filler pipe and the fuel tank. It adjusts the fuel tank inside pressure under the control of the ECM.

When the tank inside pressure becomes higher than the atmospheric pressure, the valve is opened allowing fuel vapors to be introduced into the canister.

On the other hand, when the tank inside pressure becomes lower than the atmospheric pressure, external air is taken from the drain valve into the canister.

EC-00026

| (5) Valve              |                          |

### G: VENT VALVE

The vent valve is located inside of the fuel tank. During filling the fuel tank, fuel vapors are introduced into the canister through the vent valve.

When the fuel vapor pressure becomes higher than the atmospheric pressure and overcomes the spring force which is applied to the back side of the diaphragm, the port toward the canister is opened. The vent valve also has a float which rises and block the port toward the canister when the fuel is full.

# EVAPORATIVE EMISSION CONTROL SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## H: SHUT-OFF VALVE

The shut-off valve is located at the top of the fuel filler pipe. When a filler gun is inserted into the filler pipe, the shut-off valve closes the evaporation line.

# ON-BOARD REFUELING VAPOR RECOVERY (ORVR) SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

## 8. On-board Refueling Vapor Recovery (ORVR) System

### A: GENERAL

The on-board refueling vapor recovery system allows the fuel vapors in the fuel tank to be introduced directly into the canister through the vent valve when the fuel tank inside pressure increases as a result of refueling.

The diagnosis of the system is performed by monitoring the fuel tank inside pressure data from the fuel tank pressure sensor while forcibly closing the drain valve.

### B: OPERATION

- While driving

Since the back side of the diaphragm in the pressure control solenoid valve is open to the atmosphere, the diaphragm is held pressed by the atmospheric pressure in the position where only the external air is introduced into the canister. When the fuel vapor pressure acting on the other side of the diaphragm increases and overcomes the atmospheric pressure, it pushes the diaphragm and opens the port through which the fuel vapors make their way to the canister.

EC-02103

- |                                     |                          |
|-------------------------------------|--------------------------|
| (1) Canister                        | (4) Intake manifold      |
| (2) Pressure control solenoid valve | (5) Shut-off valve: Open |
| (3) Purge control solenoid valve    |                          |

# ON-BOARD REFUELING VAPOR RECOVERY (ORVR) SYSTEM

EMISSION CONTROL (AUX. EMISSION CONTROL DEVICES)

- While refueling

As the fuel enters the fuel tank, the tank inside pressure increases. When the inside pressure becomes higher than the atmospheric pressure, the port of the vent valve opens, allowing the fuel vapors to be introduced into the canister through the vent line. The fuel vapors are absorbed by charcoal in the canister, so the air discharged from the drain valve contains no fuel. When a filler gun is inserted, the shut-off valve closes the evaporation line.

EC-02104

- |                                     |                            |

# GENERAL

## MECHANICAL

---

### 1. General

The H6 engine is of a horizontally opposed, six-cylinder design. This four-stroke-cycle, water-cooled, DOHC engine uses a total of 24 valves and its main components are made of aluminum alloy. It is fueled by a multiple fuel injection system.

The engine's major structural and functional features are as follows:

- A maintenance-free, chain-and-sprocket type camshaft drive mechanism is used which also contributes to reduction in the overall length of the engine.
- The cylinder block is an aluminum die-casting fitted with iron die-cast cylinder liners.
- Lightweight and compact design.

The cylinder bore pitch is 98.4 mm (3.874 in), which is much shorter than 113 mm (4.45 in) of the H4 engine.

The cylinder bore and piston stroke dimensions have been selected optimally for sufficient output and reduced size of the engine; they are 89.2 mm (3.512 in) and 80.0 mm (3.150 in) in contrast to 92.0 mm (3.622 in) and 75.0 mm (2.953 in) of the H4 engine.

The cylinder block is of a "siamese-triplet" design with the three cylinders of each bank cast without coolant passages between cylinders, while ensuring adequate cooling by employing an open-deck design.

The right bank camshafts and the left bank camshafts are driven by different timing chains, whereas the accessories are driven through their own pulleys by a single serpentine belt (two belts were used in the previous model's engine).

- Quiet operation

Unlike V6 engines, horizontally opposed six-cylinder engines do not generate secondary vibration (which is caused by primary operational vibration in a V6 engine and has a frequency twice as large as that of the primary vibration) although V6 engines have space saving merit. In addition to this inherent quietness provided by complete dynamic balance, the H6 engine incorporates the following quietly operating considerations:

The crankshaft is supported by seven bearings.

The chains driving the camshafts are provided with hydraulic tension adjusters and covered by a chain cover at the front of the engine.

An aluminum die-cast oil pan upper reinforces the joint of the right and left cylinder block banks, while giving additional rigidity to the crankshaft bearing areas.

The engine is connected to the transmission more rigidity than with the H4 engine by using 11 bolts (eight bolts in the H4 engine).

## 2. Timing Chains

• Two timing chains are used to drive the camshafts, one each for driving the two camshafts on each bank. Every camshaft is fitted with a sprocket through which it is driven by the corresponding timing chain. The left bank timing chain transmits the power from the crankshaft sprocket directly to the left bank camshaft sprockets, whereas the right bank timing chain transmits the crankshaft power via the lower idler sprocket which is driven by the left bank timing chain. (The lower idler gear has two tooth rows; the left bank timing chain engages with the inner row teeth and the right bank chain engages with the outer row teeth.) By this way, the right and left bank camshafts rotate in synchronization with each other.

The left bank timing chain also drives the water pump.

• The hydro-mechanical automatic chain tension adjuster provided for each chain constantly maintains the specified chain tension necessary to properly drive the camshafts, as well as to provide this chain and sprocket camshaft drive mechanism with a “maintenance-free” feature.

ME-02431

- |                                     |                                      |                                |

# AUTOMATIC CHAIN TENSION ADJUSTER

MECHANICAL

## 3. Automatic Chain Tension Adjuster

The right and left bank timing chains are provided with their own tensioners. The tensioners are of a hydro-mechanical type that utilizes the engine oil pressure and can automatically keep the tension of the chains at a proper level without need for manual adjustments.

The tensioner case has an oil port that aligns with the oil port in the cylinder block when it is installed in position. The inside of the tensioner case is a high-pressure hydraulic chamber with a check ball. The pressure of the oil in the chamber is adjusted by the relief valve. Featuring a plunger with external screw threads, the tensioner can keep the chain taut constantly even when the engine is stationary.

ME-00609

- (1) Tensioner case
- (2) Spring
- (3) Plunger

- (4) Spring
- (5) Adjuster rod
- (6) Plunger case

## 4. Timing Chain Case

- The timing chain case is formed by the front chain cover and rear chain cover, both made of aluminum die-casting. This two-piece chain case design helps reduce noise.
- Sealing materials used between the engine block and rear chain cover are an O-ring, metal gasket, and liquid gasket. Between the front and rear chain covers, liquid gasket is used to prevent oil from leaking out.
- A fluorocarbon resin oil seal is used at the crankshaft opening in the front chain cover.

ME-02080

- (1) Front chain cover
- (2) Rear chain cover

## 5. Camshaft

- The camshafts are of a composite material type using sintered steel for cam lobes and carbon steel for pipe part.

The sintered steel cams are very high in the resistance to wear, which enables the cam lift to be increased. In addition, use of the sintered steel cams contributes to reduction in weight.

- Each camshaft is supported at its four journals by the corresponding bearings. The front-most bearing has flanges on its both ends to receive thrust loads that are generated during movement of the camshaft.

- The bearings are lubricated by the oil that enters the passage in each camshaft from the port at the front-end journal and flows out through the hole in each journal.

- The intake camshaft has at its rear end a flange, which is used as an angle sensing wheel by the camshaft position sensor.

- As the engine is equipped with a variable valve lift system, each of the intake camshafts have high-lift cams and low-lift cams.

# CYLINDER HEAD

MECHANICAL

## 6. Cylinder Head

- The cylinder heads are made of aluminum alloy, which features light weight and high cooling efficiency.
- Each cylinder head incorporates a DOHC mechanism, which is adapted to the four valves per cylinder arrangement. A variable valve lift system is used at the intake port. The exhaust ports are formed in three independent ports. These design features contribute together to higher output.
- The combustion chamber is of a compact pent roof design with the spark plug located at its top center. The squish area formed between the piston top surface and combustion chamber helps improve mixing of air and fuel and thus combustion efficiency.
- Coolant flows from the rear to the front of the cylinder head of each bank. This serial-flow coolant line arrangement ensures highly efficient cooling of the engine.
- A metal gasket is used between the cylinder head and cylinder block. Tightening the cylinder head bolts by the angle-tightening method ensures invariable sealing performance of this gasket.

- (1) Intake port
- (2) Intake valve
- (3) Exhaust valve

- (4) Exhaust port
- (5) Combustion chamber

## 7. Cylinder Block

- The cylinder block of this horizontally-opposed-cylinder engine is made of aluminum die-casting. It is split into right and left halves at its center where the crankshaft is supported. The cylinder liners are made of cast iron and are embedded as integral part of the cylinder block body during the casting process.
- The coolant passages of the right and left banks are independent of each other (parallel-flow type). The water jackets around the cylinder liners are open at the cylinder head side end of each bank (open-deck design).
- The cylinder block supports the crankshafts journals through seven main bearings rigidly and quietly. The #7 bearing is a flanged thrust bearing which controls the crankshafts end play.
- Rigid engine-to-transmission connection is ensured by 11 bolts (three more bolts than with the H4 engine).
- The aluminum die-cast oil pan upper located below the cylinder block reinforces connection between the cylinder block banks and its special form provides a baffle effect to suppress large fluctuation of oil level. In addition, the oil pan upper constitutes part of the oil and cooling circuits as well as the water pump volute chamber and thermostat chamber.

ME-02082

# CRANKSHAFT

MECHANICAL

## 8. Crankshaft

The crankshaft is supported in the cylinder block by seven bearings. Each corner formed by a journal or pin and a web is finished by fillet-rolling method, which increases strength of that area. The seven crankshaft bearings are made of aluminum alloy and the No. 7 bearing is provided with a flanged metal to support thrust forces.

ME-00614

## 9. Piston

- The pistons are of a slipper skirt design for reduced weight and friction. The oil control ring groove utilizes a thermal design.
- The piston pin is offset either downward (Nos. 1, 3 and 5 pistons) or upward (Nos. 2, 4 and 6 pistons).
- Recesses are provided in the piston to maintain clearance between the piston and valve heads. All the right and left bank pistons are the same in shape. Each piston has a location mark (mark indicating the front of engine) on its top.
- Three piston rings are used for each piston; two compression rings and one oil control ring. The top piston ring has inner bevels and the second piston ring has an interrupt (cut) on the bottom outside to reduce oil consumption.

# VARIABLE VALVE TIMING SYSTEM

MECHANICAL

---

## 10. Variable Valve Timing System

Regarding the construction and operation of the variable valve timing system, refer to ME (H4DOTC) section, Variable Valve Timing System. <Ref. to ME(H4DOTC) section, Variable Valve Timing System.>

## 11.Variable Valve Lift System

The engine is provided with a variable valve lift system. The variable valve lift system optimizes the intake valve lift by switching to use low lift cams or high lift cams in accordance with engine speed.

- In response to the signals from the ECM, the oil switching solenoid valve operates to switch the valve lift.
- At low engine speeds, the lift is reduced to increase intake air speed and to obtain effective combustion and higher torque output. The lift of the two valves are different from each other. By differentiating the intake air volume in this way, a swirl occurs in the combustion chamber and combustion is improved.
- At high engine speeds, the lift is increased to reduce intake resistance and to obtain higher power.
- To protect the engine, the system does not allow racing up the engine to high speeds in P or N range.

## 12.Engine Mounting

The front cushion rubber for H6 engines hold the engine at three points to increase rigidity. The cushion has an upper and lower liquid chambers inside, and an orifice connects the upper and lower liquid chambers while a diaphragm separates the upper liquid chamber and air chamber. A rubber membrane is also added, and vibration and noise are reduced by optimally tuning its spring constant.

## EXHAUST

### 1. General

- The exhaust system consists of a front exhaust pipe assembly, a rear exhaust pipe with a resonance chamber, and a muffler.
- The front exhaust pipe assembly consists of right and left exhaust pipes each incorporating a front catalytic converter, and a rear catalytic converter that is located at the joint of the two pipes.
- The exhaust system features an excellent sound suppression design; the rear exhaust pipes have a large capacity chamber and twin mufflers.

### 1. General

- The engine cooling system consists of a down-flow radiator featuring high heat-dissipation performance, an electric-motor-driven fan, a water pump, a thermostat, and an engine coolant temperature sensor.
- The reservoir tank is designed to eliminate the need for replenishing coolant.
- The ECM controls the operation of the radiator main fan and sub fan depending on the signals from the engine coolant temperature sensor, vehicle speed sensor, A/C switch and A/C mid pressure switch.

## 2. Cooling Circuits

The cooling system operates in three different phases depending on the temperature of the engine coolant.

- 1st phase (thermostat closed)

When the engine coolant temperature is below 80°C (176°F), the thermostat remains closed. The coolant flows through the bypass and heater circuits.

This permits the engine to warm up quickly.

- 2nd phase (thermostat open)

When the engine coolant temperature is above 80 — 84°C (176 — 183.2°F), the thermostat opens. The coolant flows through the radiator where it is cooled.

- 3rd phase (thermostat open and radiator fan operating)

When the engine coolant temperature sensor sends a signal indicating a temperature above 91°C (196°F) to the ECM, it causes the radiator fan (or fans) to operate.

# WATER PUMP

COOLING

## 3. Water Pump

The water pump is fitted in a housing formed in the rear chain cover using an O-ring as a seal between the pump case and the housing. The pump is driven by the timing chain through a sprocket and rotation of the impeller in a volute chamber creates flow of coolant toward the cylinder block.

The pump case is made of aluminum die-casting and the impeller is made of steel sheet. The impeller shaft is supported by a ball bearing and a roller bearing. Its end exposed to coolant is sealed by a mechanical seal and the other end exposed to engine oil is sealed by an oil seal.

The volute chamber is formed by the rear chain cover and the oil pan upper. A metal gasket is used at the joint between the chain cover and oil pan upper.

(2) A/C ON control (A/C mid pressure switch OFF)

(3) A/C ON control (A/C mid pressure switch ON)

(A) Fan speed (%)

(B) Coolant temperature

## 7. Radiator Cap

The radiator cap has a pressure valve and a vacuum valve. When the radiator inner pressure becomes higher than specified, the pressure valve opens to send coolant to the reservoir tank. Also, when the radiator inner pressure becomes lower than the atmospheric pressure during the cooling down phase, the vacuum valve opens to send back coolant from the reservoir tank to the radiator. These functions prevent damage to the radiator components.

# GENERAL

## LUBRICATION

---

### 1. General

- The lubrication system forcibly circulates engine oil throughout the engine using an oil pump. The oil pressure is regulated by the relief valve.
- The oil pump is a thin, large-diameter trochoid rotor type which can accommodate the engine's high output. The pump is directly driven by the crankshaft.
- The engine oil is cleaned by a full-flow, paper element type oil filter. The filter has a bypass valve, which allows the engine oil to flow bypassing the filter if it is clogged.
- The engine oil discharged from the oil pump is delivered to the journal bearings, connecting rod bearings, and other parts requiring lubrication and cooling via an oil passage, oil filter, and oil galleries.
- The engine oil is also distributed to each cylinder head valve mechanism at a proper flow rate achieved by metering by the orifice provided in each cylinder head oil gallery.

# OIL FILTER

LUBRICATION

---

## 4. Oil Filter

The oil filter is a full-flow filtering, cartridge type that utilizes a paper element. It also has a built-in bypass valve. The filter element has a special pleat design to increase the effective filtering area.

LU-00059

- (1) Oil seal
- (2) Filter body
- (3) Bypass valve
- (4) Pleated element

## 5. Oil Pan and Oil Strainer

- The oil pan consists of an upper oil pan (aluminum die-casting) and a lower oil pan (formed steel plate). The upper oil pan has an integrally mold baffle plate to improve stability of the oil level.
- The oil strainer has a stay whose end is attached to the upper oil pan. The strainer pipe is connected to the upper oil pan using an O-ring. The upper oil pan forms a passage together with the block and liquid gasket, and the passage leads from the block through an O-ring to the rear chain cover, which is connected to the oil pump. The strainer is located close to the bottom at the center of the oil pan where the oil level changes the least.

| (1) Contact   | (4) Molded portion |
| (2) Diaphragm | (5) Terminal       |
| (3) Spring    |                    |

1) When oil pressure does not build up (immediately after ignition switch is turned ON):  
The diaphragm is pushed toward the oil pan upper by the spring force (a force equivalent to the specified oil pressure). This closes the contact points, causing the oil pressure warning light in the combination meter to illuminate.

2) When oil pressure reaches the specified value (after engine starts):  
After reaching the specified value of 14.7 kPa (0.15 kgf/cm<sup>2</sup>, 2.1 psi), the oil pressure pushes the diaphragm against the spring force. This opens the contact points and the oil pressure warning light goes out.

# SELECT LEVER

## CONTROL SYSTEM

### 1. Select Lever

- The automatic transmission select lever can be moved to any of the 4 ranges and the transmission enters sports mode when the lever is moved laterally from D range, and further switches to sports shift mode (manual mode) when the lever is moved forward (“+” direction) or rearward (“-” direction).
- The select lever makes shift direction (longitudinal) movements as well as select direction (lateral) movements. The select lever is guided by a gate to make these movements.
- In the sports shift mode, the transmission upshifts when the selector lever is moved forward (“+” direction) and downshifts when the lever is moved rearward (“-” direction).
- To transmit movements of the select lever to the transmission, a select cable is used.
- The select lever mechanism has a detent spring. It ensures more precise positioning of the select lever.

- (1) Select cable
- (2) Base plate, lower
- (3) Base plate, upper
- (4) Gate

- (5) Select lever
- (6) Arm
- (A) View A

## 2. Shift Lock and Key Interlock System

### A: GENERAL

To increase safety during standing start, the shift lock system prevents movement of the select lever from the “P” position to any other position unless the brake pedal is depressed. This system is also provided with a key interlock function which prevents removal of the ignition key from the key cylinder unless the selector lever is placed in the “P” position.

# SHIFT LOCK AND KEY INTERLOCK SYSTEM

## CONTROL SYSTEM

CS-00540

**(A)** Shift lock system

- (5) Brake pedal switch

**(B)** Key interlock system

- (6) Body integrated unit
- (7) Inhibitor switch
- (8) TCM
- (9) 4AT
- (10) 5AT

## B: SHIFT LOCK SYSTEM OPERATION

The shift lock system has a solenoid-operated plunger (1). With the select lever in the P position, the plunger remains extended, holding the lock arm (2) in its pushed out (locking) position. When the brake pedal is depressed with the ignition switch in either the ON or START position, the solenoid is energized and the plunger is retracted. This causes the lock arm to lift to the select lever release position. The select lever now can be moved to any other position. The P position of the select lever is detected by the inhibitor switch (3).

- (2) Lock arm
- (3) Inhibitor switch
- (4) 4AT
- (5) 5AT

CS-00541

# SHIFT LOCK AND KEY INTERLOCK SYSTEM

## CONTROL SYSTEM

### C: KEY INTERLOCK FUNCTION

● When the select lever is at any position other than P, the solenoid is energized and its guide pin extends to hold the lock pin in its pushed out position. Held in its extended position, the lock pin interferes with the stopper portion of the rotator which turns together with the ignition key. Thus, the ignition key cannot be rotated to the “LOCK” position.

# SHIFT LOCK AND KEY INTERLOCK SYSTEM

CONTROL SYSTEM

- When the select lever is moved to “P”, the “P” position switch in the select lever assembly operates, deenergizing the solenoid. As the push force of the guide pin is removed, the return spring moves the lock pin toward the solenoid and the lock pin becomes clear of the rotator stopper. Then the key can be rotated to the LOCK position and removed from the ignition switch.

# OIL PUMP

## 1. Oil Pump

### A: CONSTRUCTION

The pump consists of a parachoid rotor pair, a housing and a cover. The inner rotor has nine teeth and the outer rotor has ten teeth.

AT-00461

- |                      |                 |                    |
|----------------------|-----------------|--------------------|

| (2) Hose             | (5) Inner rotor | (8) Seal ring      |
| (3) Nipple           | (6) Outer rotor | (9) Thrust bearing |

### B: FUNCTION

- The pump draws automatic transmission fluid (ATF) from the oil pan through the oil strainer located under the control valve assembly. The ATF then flows through a passage in the transmission case, and after passing through the oil pump housing and oil pump cover, it enters the suction port.
- As the inner rotor rotates, the outer rotor also rotates. This motion causes the ATF to be sucked up through the suction port and discharged from the discharge port.
- The discharged ATF flows through a passage in the oil pump cover and then a passage in the oil pump housing. It then goes through a passage in the transmission case to the control valve assembly, from which the ATF is directed to various clutches, brakes, and torque converter lockup clutch for acting as hydraulic fluid and lubricating oil. Part of the ATF also flows to the manual valve, from where it is distributed to the circuit corresponding to the range selected by the selector lever.
- As engine speed increases, the delivery rate of the oil pump also increases.

| (5) Suction port     |                      |

# REVERSE CLUTCH

AUTOMATIC TRANSMISSION

## 2. Reverse Clutch

### A: CONSTRUCTION

AT-00463

- (1) High clutch drum
- (2) Lip seal
- (3) D-ring
- (4) Reverse clutch piston
- (5) Dish plate
- (6) Driven plate

- (7) Drive plate
- (8) Retaining plate
- (9) Snap ring
- (10) Thrust needle bearing
- (11) High clutch hub

## B: FUNCTION

### 1. WHEN REVERSE IS SELECTED

Hydraulic pressure from the control valve is applied to the reverse clutch piston when a shift is made into the reverse. The drive and driven plates are pressed together by this pressure, so that the engine torque from the high clutch drum is transmitted to the front sun gear through the 2-4 brake hub.

- |                           |                    |
|---------------------------|--------------------|

| (3) Driven plate          |                    |

# REVERSE CLUTCH

## AUTOMATIC TRANSMISSION

### 2. WHEN REVERSE IS NOT SELECTED

When the select lever is in any position other than reverse, no pressure is applied to the reverse clutch piston. Hence the drive and driven plates are separated from each other, transmitting no power to any element beyond them.

A check ball is built into the clutch piston. This check ball has a function of releasing the pressure which may build up in the fluid remaining behind the piston by centrifugal force generated by the idly rotating high clutch drum, thereby avoiding a half-engaged state of the clutch.

- |                           |                    |
|---------------------------|--------------------|
| (1) High clutch drum      | (5) Front sun gear |
| (2) Reverse clutch piston | (6) Cover          |

| (4) Drive plate           |                    |

## 3. High Clutch

When the 3rd or 4th gear is selected, hydraulic pressure is applied to the high clutch from the shift valve and pressure regulator valve. The clutch drive and driven plates are pressed together, thus transmitting the engine power from the input shaft to the front planetary carrier through the high clutch hub.

A cover is placed inside the piston, and the space between the piston and the cover is filled with ATF. When the high clutch is not in engagement, the centrifugal force generated in the ATF inside the cover cancels out the centrifugal force generated in the ATF remaining behind the high clutch piston, thus preventing incomplete disengagement of the clutch.

## B: FUNCTION

The low clutch operates in the 1st, 2nd and 3rd speed gears.

This clutch engages when hydraulic pressure from the control valve is applied to the low clutch piston, transmitting power through the rear planetary carrier to the reduction drive shaft.

A cover is placed inside the piston, and the space between the piston and the cover is filled with ATF. When the low clutch is not in engagement, the centrifugal force generated in the ATF inside the cover cancels out the centrifugal force generated in the ATF remaining behind the low clutch piston, thus preventing incomplete disengagement of the clutch.

# REDUCTION GEAR

## 7. Reduction Gear

### A: GENERAL

Engine output is transmitted from the rear planetary carrier to the reduction drive shaft and the reduction drive gear. Power to the front wheels is then transmitted through the reduction driven gear and drive pinion to the front final gears and front wheels. Power to the rear wheels is transmitted sequentially from the transfer clutch hub through the transfer clutch, rear drive shaft, propeller shaft, and rear differential to the rear wheels.

## **8. Control Valve**

The hydraulic control system of the automatic transmission consists of an oil pump, valve bodies containing valves, clutches, fluid passages and pipes. The operation of the system is controlled by driver's manual inputs and electrical inputs from the TCM.

### **A: CONSTRUCTION**

The structure of the control valve is simplified by disusing the accumulator and decreasing the number of mechanical valves. This allowed a two-layered body structure, which contributes to minimizing the size and weight. Also, the transfer hydraulic control mechanism is contained in the control valve.

Oil pressure from the duty solenoid for each clutch will be directly applied to the clutch/brake without flowing through an accumulator, therefore the engagement/disengagement control range is widened and the response during gear shift is improved.

# GEAR TRAIN

## 9. Gear Train

### A: CONSTRUCTION

The gear train consists of two sets of planetary gears, three sets of multi-plate clutches, two sets of multi-plate brakes and one set of one-way clutch.

### 2. N RANGE

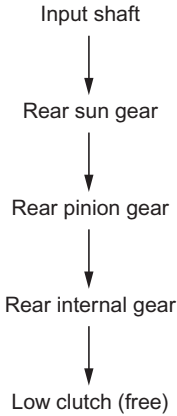

Since the rear sun gear and the high clutch drum are in mesh with the input shaft, they rotate together with the input shaft.

The high clutch drum does not transmit the torque to the planetary unit since the reverse clutch and the high clutch are not engaged.

The torque of the rear sun gear is transmitted to the rear internal gear through the pinion gear.

However, the torque of the rear sun gear is not transmitted to the rear planetary carrier since the low clutch is disengaged and, therefore, the rear internal gear is freewheeling.

As a result, the torque of the input shaft is not transmitted to the reduction drive shaft.

## AUTOMATIC TRANSMISSION

### 4. 1st GEAR OF D RANGE OR MANUAL MODE (BELOW SET SPEED) ( $D_1$ )

When the 1st gear is selected in the D range or in manual mode (below set speed), only the low clutch is engaged. In this state, the rear internal gear attempts to rotate counterclockwise but it is impossible by the action of the one-way clutch which locks the internal gear to the transmission case. As a result, rotation of the rear sun gear causes the pinion gears to rotate around the sun gear. This causes the planetary carrier to rotate. In this way, rotation of the input shaft is transmitted to the reduction drive shaft, after being subjected to speed reduction by the planetary gear train.

On the other hand, the rear internal gear rotates clockwise if the reverse driving force is applied to it by the reduction drive shaft during coasting. This clockwise rotation of the internal gear causes the one-way clutch to freewheel. Since the power path between the reduction drive shaft and the input shaft is lost as a result, no engine braking effect is available.

# GEAR TRAIN

AUTOMATIC TRANSMISSION

# GEAR TRAIN

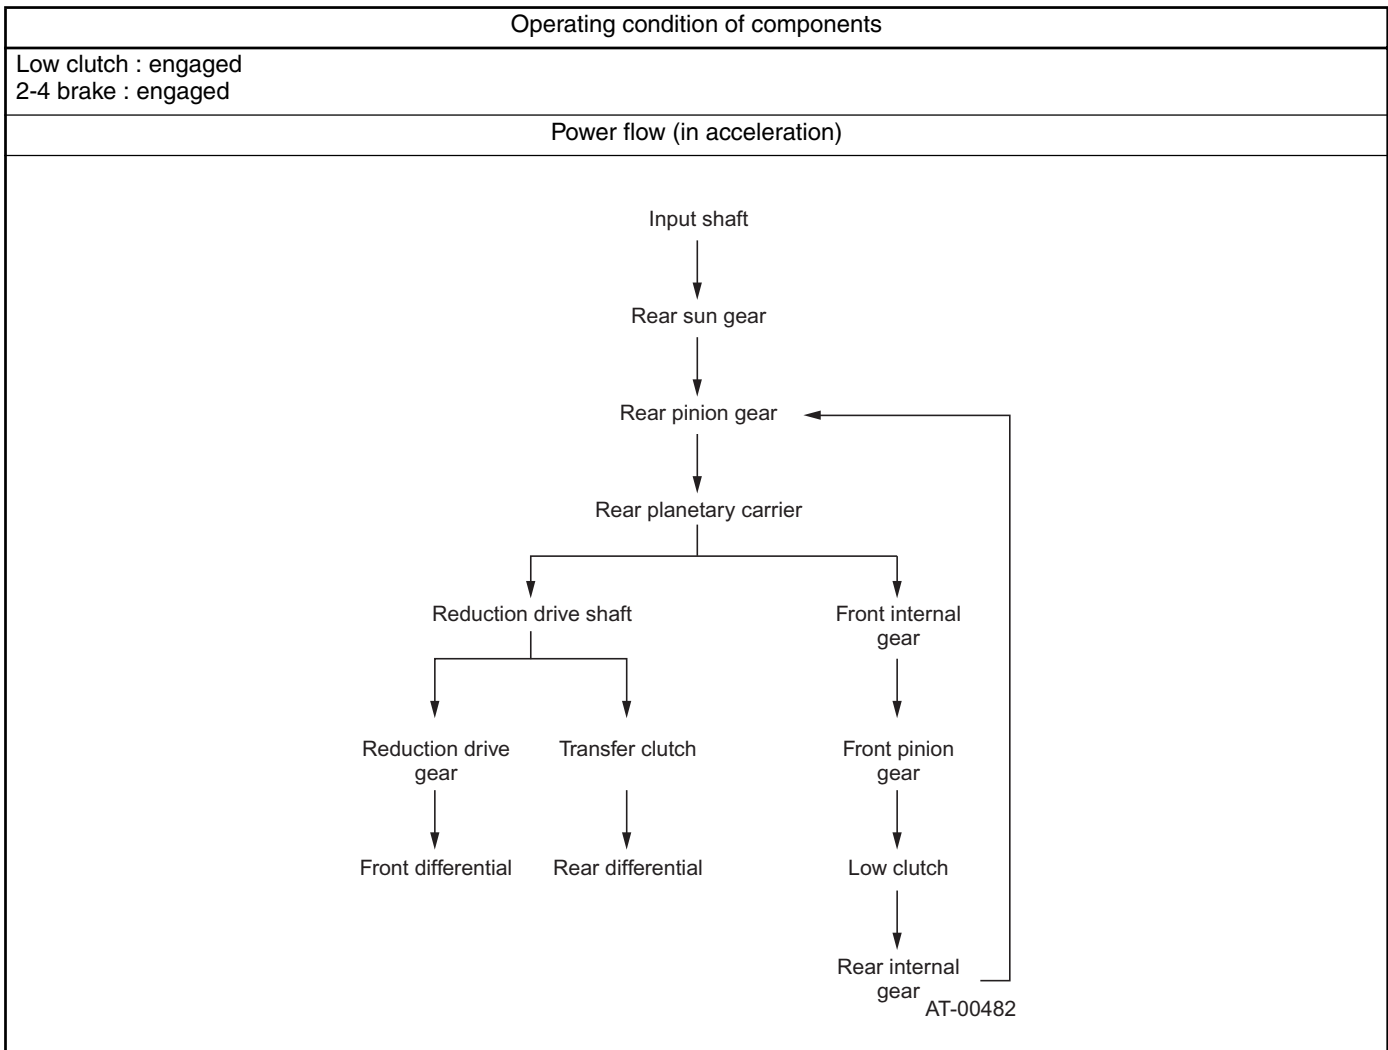

## AUTOMATIC TRANSMISSION

### 5. 2nd GEAR

When the 2nd gear is selected, the 2-4 brake and the low clutch are engaged. The front sun gear is now locked to the transmission case due to engagement of the 2-4 brake. In this state, the torque of the rear sun gear is transmitted to the rear internal gear through the path of the front internal gear, front pinion gears, low clutch drum and low clutch. At this time, the one-way clutch is freewheeling since the low clutch drum is rotating clockwise.

In this power flow configuration, the rear pinion gears are rotated by the rear internal gear at a speed faster than that available from the configuration for the 1st gear, so the rotation speed of the reduction drive shaft is higher than that of the 1st gear.

Since the drive power is transmitted without passing through the one-way clutch in the 2nd gear, the backward driving force from the wheels is transmitted through the reduction drive shaft to the input shaft; this makes the engine braking effect available.

# GEAR TRAIN

## AUTOMATIC TRANSMISSION

---

### 6. 3rd GEAR

When the 3rd gear is selected, the low clutch and the high clutch are engaged. The engaged high clutch rotates through its drum the front planetary carrier, and rotation of the carrier is transmitted to the rear internal gear through the engaged low clutch. In this power flow configuration, the rear sun gear and the rear internal gear rotate at the same speed since the rear pinion gears are solid on their axes and the whole planetary gear train rotates as a unit at the same speed as its sun gear. As a result, the input shaft and the reduction drive shaft rotate at the same speed.

In the 3rd gear, the one-way clutch is freewheeling because the low clutch is rotating clockwise. Since the drive power is transmitted without passing through the one-way clutch, the backward driving force from the wheels is transmitted through the reduction drive shaft to the input shaft; this makes the engine braking effect available.

**MEMO**

# GEAR TRAIN

## AUTOMATIC TRANSMISSION

### 7. 4th GEAR

When the 4th gear is selected, the high clutch and the 2-4 brake are engaged. The engaged high clutch causes the front planetary carrier to rotate, whereas the engaged 2-4 brake causes the front sun gear to be locked to the transmission case.

The front planetary carrier rotates at the same speed as the input shaft. The rotation of the front planetary carrier causes the front pinion gears to revolve around the stationary front sun gear, which causes the front internal gear to rotate faster than the input shaft.

As a result, the reduction drive shaft is driven at a higher speed than the input shaft.

In the 4th gear, the one-way clutch is freewheeling because the low clutch is rotating clockwise. Since the drive power is transmitted without passing through the one-way clutch, the backward driving force from the wheels is transmitted through the reduction drive shaft to the input shaft; this makes the engine braking effect available.

# GEAR TRAIN

## AUTOMATIC TRANSMISSION

### 8. 1st SPEED GEAR OF MANUAL MODE (OVER SET SPEED)

When the 1st gear is selected in manual mode (over set speed), both the low clutch and the low & reverse brake are engaged. Although the power flow configuration is the same as that with the 1st gear in the D range, the one-way clutch produces no freewheeling effect because the low & reverse brake is locking the rear internal gear always to the transmission case.

During coasting, therefore, the backward driving force from the wheels is transmitted through the reduction drive gear to the input shaft. This means, unlike the 1st gear in D range, that the engine braking effect is available in this range.

# GEAR TRAIN

AUTOMATIC TRANSMISSION

AT-00489

# GEAR TRAIN

## AUTOMATIC TRANSMISSION

### 9. R RANGE

When the select lever is placed in the R position, the reverse clutch and the low & reverse brake are engaged. The reverse clutch allows the input shaft torque to be transmitted to the front sun gear, while the low & reverse brake allows the low clutch drum to be interlocked with the transmission case.

The rotation of the front sun gear causes the front pinion gear to rotate in the opposite direction and therefore the front internal gear rotates in the same direction.

At this time, the rotation speed transmitted to the front internal gear is reduced through gearing between the front sun gear and the front pinion gears.

The one-way clutch produces no freewheeling effect because the low & reverse brake is in engagement.

In this range, since the power transmission is made without passing through the one-way clutch, the driving force from the wheels is transmitted through the reduction drive shaft to the input shaft; this makes the engine braking effect available.

# AWD TRANSFER SYSTEM

AUTOMATIC TRANSMISSION

## 10.AWD Transfer System

### A: GENERAL

This all-wheel-drive (AWD) transfer system uses a hydraulic multi-plate type clutch. The clutch is controlled by the TCM through a control valve.

The TCM has in its memory a set of duty ratio data, each defining at what ratio the transfer clutch should transmit the torque for a particular driving condition. Based on the driving condition information it receives from the corresponding sensors (engine torque, vehicle speed, throttle opening, gear range, slip of wheels, etc.), the TCM selects an appropriate duty ratio from the memory and uses it to control the solenoid valve. The solenoid valve then regulates the pilot pressure of the transfer control valve, which creates the pressure to the clutch from the line pressure. The clutch is engaged to a degree determined by the transfer clutch pressure thus created. Through this process, the torque from the engine is distributed to the rear wheels optimally according to driving conditions.

### B: CONSTRUCTION

The transfer clutch drum and rear drive shaft are joined to each other by welding. The rear drive shaft is provided with oil passages for transfer clutch control.

## 11. Electro-hydraulic Control System

### A: GENERAL

The electro-hydraulic control system for the transmission and transfer consists of various sensors and switches, a transmission control module (TCM) and the control valves including solenoid valves. The system controls the automatic transmission operation, including gear shifting, lockup clutch operation, line pressure, pattern selection (NORMAL and SPORTS), and gear-shift timing. It also controls the operation of the transfer clutch. The TCM determines the vehicle's operating conditions from various input signals and controls a total of seven solenoids (line pressure linear solenoid, lockup duty solenoid, 2-4 brake duty solenoid, low clutch duty solenoid, high clutch duty solenoid, low & reverse duty solenoid, and transfer duty solenoid) by sending appropriate signals to them.

## AUTOMATIC TRANSMISSION

AT-02934

# ELECTRO-HYDRAULIC CONTROL SYSTEM

AUTOMATIC TRANSMISSION

## B: INPUT SIGNALS

Signal name	Major function
Accelerator pedal position sensor	Indicates the throttle opening. This signal is used to determine shift point, line pressure, and lockup engaging vehicle speed, which vary with engine load.
Front vehicle speed sensor (located on transmission case)	Indicates the vehicle speed. This signal is used for control of gear shifting, lockup engaging, line pressure, and transfer clutch operation.
Rear vehicle speed sensor (located on extension case)	Used to control transfer clutch, and also as backup signal in case of failure of front vehicle speed sensor.
Engine speed signal	Indicates the engine speed. This signal is used for control of lockup clutch to ensure smooth engagement.
Inhibitor switch	Used to determine gears and line pressures in each of ranges P, R, N, and D.
ATF temperature sensor	Indicates the ATF temperature. This signal is used for inhibition of lockup, release of OD and determination of ATF temperature.
FWD switch	Used for changing the mode from AWD to FWD. Also used for adapting the vehicle to FWD tester roller. Changeover from AWD to FWD can be made by inserting a fuse into the fuse holder.
Torque converter turbine speed sensor	Tells the rotation speed of the input shaft. The proportion of this speed to the vehicle speed determines whether shifting should be made or not.
CAN communication signals	Receives information from ECM, ABSCM and body integrated unit to control the transmission.

## C: OUTPUT SIGNALS

Signal name	Function
Line pressure linear solenoid	Regulates the line pressure according to driving conditions.
Lockup duty solenoid	Regulates the hydraulic pressure of the lockup clutch to operate it in three modes (open, smooth and lockup).
Transfer duty solenoid	Regulates the hydraulic pressure of the transfer clutch to control the driving force to the rear drive shaft.
2-4 brake duty solenoid	Regulates 2-4 brake operating pressure to reduce shifting shocks.
High clutch duty solenoid	Regulates high clutch operating pressure to reduce shifting shocks.
Low clutch duty solenoid	Regulates low clutch operating pressure to reduce shifting shocks.
Low & reverse duty solenoid	Regulates low & reverse brake operating pressure to reduce shifting shocks.
Shift lock solenoid	Controls the shift lock solenoid during range lock control.
CAN communication signals	Outputs transmission information to control modules and the body integrated unit.

# ELECTRO-HYDRAULIC CONTROL SYSTEM

## AUTOMATIC TRANSMISSION

### D: CONTROL ITEMS

Control items		Description of control	
Transmission control	Shifting control	Base shift control	Upshifting and downshifting are set for each range, gear and pattern according to the accelerator pedal position and vehicle speed.
		ABS-in-operation control	Gear speed is determined according to vehicle speed when ABS signal and brake signal is input.
		ATF low temperature control	Shifting into 4th gear is prevented when ATF temperature is below the preset value.
		Sports pattern control (SPORTS light ON)	Sports pattern is selected when the select lever is moved to the manual mode position.
		Base pattern control (SPORTS light OFF)	Base pattern is selected when the select lever is in D range.
	Lockup control	Base lockup control	Lockup control is performed according to throttle position and vehicle speed. (Basically lockup is OFF during gear shifting.)
		Smooth control	Smooth lockup is performed when lockup is switched on.
	Line pressure control	Ordinary control	Line pressure is regulated according to the accelerator pedal position and vehicle speed signals.
	Shift timing control	Gear speed control	Controls each solenoid.
		Lockup control	When shifting, the lockup clutch is temporarily released.
	Adaptive control	Accelerator pedal quick return control	When the accelerator pedal is quickly released from a depressed condition, the gear is held in the current speed.
		Accelerator pedal quick depressing control	When the accelerator pedal is quickly depressed, the transmission down shifts immediately.
		Map switch control	Switches the shift point setting according to the driving condition.
		Braking control	To ensure engine braking effect during braking and improve the re-acceleration performance, the transmission is downshifted in accordance with the deceleration.
CAN communication signals control		Sends and receives vehicle information between control modules and controls each module.	
AWD transfer clutch control	Ordinary transfer control	Transfer clutch pressure is regulated according to the throttle valve angle, vehicle speed, and engine torque.	
	Slip control	Regulates transfer clutch pressure in accordance with the amount of slip.	
	Turning control	Transfer clutch pressure is reduced after detecting a turn.	
	ABS-in-operation control	Transfer clutch pressure is adjusted to a set level immediately after reception of ABS signal.	

## 12.Sensor Systems

### A: ACCELERATOR PEDAL POSITION SENSOR

The accelerator pedal position sensor provides electrical signals corresponding to accelerator pedal position. The throttle valve angular position and accelerator depressing speed are detected by this accelerator pedal position sensor.

### B: REAR VEHICLE SPEED SENSOR

This vehicle speed sensor (output shaft speed sensor) is a Hall element type sensor and is externally mounted on the extension case. It detects the rear drive shaft speed in terms of the peripheral speed of the transfer clutch drum and sends pulse signals (30 pulses per rotation) to the TCM.

AT-01582

(1) Rear vehicle speed sensor

### C: FRONT VEHICLE SPEED SENSOR

This vehicle speed sensor (output shaft speed sensor) is externally mounted on the transmission case. It detects the front drive pinion shaft speed and sends sine wave signals (16 pulses per rotation) to the TCM.

AT-01583

(1) Front vehicle speed sensor

# SENSOR SYSTEMS

## AUTOMATIC TRANSMISSION

### D: ATF TEMPERATURE SENSOR

This sensor is integrated with the transmission harness and is mounted on the transmission control valve body. Its resistance varies in accordance with the ATF temperature. The characteristics of the sensor are as shown below.

AT-02348

(1) ATF temperature sensor

(A) Resistance

(B) Temperature

### E: TORQUE CONVERTER TURBINE SPEED SENSOR

The torque converter turbine speed sensor (output shaft speed sensor) is externally mounted on the transmission case.

The sensor detects the torque converter turbine speed in terms of the rotation speed of the periphery of the high clutch drum coupled to the input shaft, and sends sine wave signals (32 pulses per rotation) to the TCM. The TCM converts this signal into turbine speed to use it for shifting control.

AT-00416

(1) Torque converter turbine speed sensor

## F: INHIBITOR SWITCH

The inhibitor switch assures safety when starting the engine. This switch is mounted on the right side of the transmission case, and is operated by the selector lever.

When the selector lever is set to P or N, the electrical circuit in the inhibitor switch is connected to the starter circuit to enable cranking of the engine.

When the selector lever is in the R or D range, the electrical circuit in the inhibitor switch is disconnected. Hence engine cranking is disabled. In the R range, the backup light circuit is completed in the switch, and the backup lights come on.

In addition to the above function, the inhibitor switch incorporates a circuit for detecting the selected range position and sending the range signal to the TCM.

### Inhibitor switch side connector

AT-00417

Range position	Pin No.
P	(4) — (3) (12) — (11)

## AUTOMATIC TRANSMISSION

---

### G: LINE PRESSURE LINEAR SOLENOID

This solenoid is mounted on the transmission control valve. This adjusts the line pressure in response to electrical current instructions from the TCM. The line pressure is regulated to an optimum level according to the driving condition.

AT-02341

(1) Line pressure linear solenoid 2

### H: 2-4 BRAKE DUTY SOLENOID

This solenoid is mounted on the transmission control valve. This adjusts the pressure applied to the 2-4 brake in response to the duty instructions from the TCM. The engaging force of the 2-4 brake during shifting is properly controlled and shift shocks are reduced.

AT-02342

(1) 2-4 brake duty solenoid

### I: LOCKUP DUTY SOLENOID

This solenoid is mounted on the transmission control valve. Its duty ratio is controlled by signals from the TCM. The solenoid provides smooth engagement and disengagement of the lockup clutch.

AT-02343

(1) Lockup duty solenoid

### J: LOW CLUTCH DUTY SOLENOID

This solenoid is mounted on the transmission control valve. This adjusts the pressure applied to the low clutch in response to the duty instructions from the TCM. The engaging force of the low clutch during shifting is properly controlled and shift shocks are reduced.

AT-02344

(1) Low clutch duty solenoid

# SENSOR SYSTEMS

## AUTOMATIC TRANSMISSION

---

### **K: HIGH CLUTCH DUTY SOLENOID**

This solenoid is mounted on the transmission control valve. This adjusts the pressure applied to the high clutch in response to the duty instructions from the TCM. The engaging force of the high clutch during shifting is properly controlled and shift shocks are reduced.

AT-02345

(1) High clutch duty solenoid

### **L: LOW & REVERSE BRAKE DUTY SOLENOID**

This solenoid is mounted on the transmission control valve. This adjusts the pressure applied to the low & reverse brake in response to the duty instructions from the TCM. The engaging force of the low & reverse brake during shifting is properly controlled and shift shocks are reduced.

AT-02346

(1) Low & reverse brake duty solenoid

### M: TRANSFER DUTY SOLENOID

This solenoid is mounted on the transmission control valve. This adjusts the pressure applied to the transfer in response to the duty instructions from the TCM. Torque distribution to the front and rear is controlled by properly controlling the engagement force of the transfer clutch.

AT-02347

(1) Transfer duty solenoid

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION

## 13. Transmission Control Module (TCM)

The TCM receives various sensor signals and determines the running conditions of the vehicle. It then sends control signals to each solenoid according to the preset gearshift characteristic data, lockup operation data, and transfer clutch torque data (duty ratios).

### A: CONTROL SYSTEM

Control items		Input signals

## B: SCHEMATIC DIAGRAM

AT-02935

## **C: SHIFTING CONTROL**

### **1. ORDINARY SHIFT CONTROL**

The TCM controls each solenoid based on input signal information such as inhibitor switch signals, vehicle speed signals and accelerator pedal position signals, to automatically select the optimum gear position from the shifting map.

### **2. ENGINE COOPERATIVE CONTROL**

During shifting, the TCM outputs a torque-down requirement signal, and the ECM receives this to retard the ignition timing of each cylinder to temporarily decrease the output torque from the engine. Simultaneously with this control, the TCM constantly monitors the shift sequence through vehicle speed sensors and the turbine speed sensor to perform feedback control and optimize gear shifts. Because of this control, a smooth and comfortable gear shifting is ensured under all conditions.

### **3. ABS COOPERATIVE CONTROL**

When the ABS is operating, the optimum gear speed for the vehicle speed is selected by cooperative operation with the ABSCM to prevent degrading the operation of the ABS.

### **4. CONTROL AT HIGH OIL TEMPERATURES**

If the ATF temperature becomes extremely high, shifting control is performed by automatically switching to a shifting map that is less likely to cause temperature rise.

### **5. CONTROL WHEN ATF OR ENGINE COOLANT TEMPERATURE IS LOW**

When the ATF temperature or engine coolant temperature is extremely low at engine start, etc., shifting control is performed by automatically switching to a shifting map that causes temperature rise easier.

### **6. CONTROL WHEN CRUISE CONTROL IN OPERATION**

When the cruise control is operating, shifting control is performed by automatically switching to a shifting map that is suitable for cruise control.

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

---

### **D: LOCKUP CONTROL**

- The TCM has pre-programmed lockup clutch engagement and disengagement conditions for each gear and shift pattern. The engagement and disengagement conditions are defined in terms of the accelerator pedal position and vehicle speed.
- The TCM controls lockup clutch operation through duty solenoids.

#### **1. NON-LOCKUP OPERATION**

The duty solenoid allows the pilot pressure to be applied to the disengaging end of the valve in the control valve body. The valve then opens the clutch disengaging circuit port to add the lockup operating pressure (torque converter clutch regulating pressure) to the disengaging circuit. Moreover, the valve opens the lockup clutch engaging circuit port and allows the hydraulic fluid in the circuit to flow to the ATF cooler, thus lowering the pressure in the circuit. As a result, the lockup clutch is disengaged due to difference in pressure between both circuits.

This control is performed in all gear positions.

#### **2. LOCKUP OPERATION**

The duty solenoid allows the pilot pressure to be applied to the engaging end of the valve in the control valve body. The valve then opens the clutch engaging circuit port that communicates to the torque converters impeller chamber, allowing high pressure fluid to flow to the lockup clutch. The clutch then engages.

- The TCM controls the current to the duty solenoid by gradually changing the current. As a result, the valve also moves gradually, so the clutch engagement pressure increases smoothly. This causes the lockup clutch to become initially in a half-engaged state and then in a fully engaged state, thus preventing shock during engagement.

This control is performed in all gear positions.

### **E: LINE PRESSURE CONTROL**

The oil pump discharge pressure (line pressure) is controlled by the line pressure linear solenoid and the line pressure is regulated to an optimum level corresponding to the vehicle's running conditions.

#### **1. LINE-PRESSURE CONTROL DURING SHIFTING**

The line pressure is controlled by the TCM as follows to meet varying operating conditions.

- The TCM receives throttle angle signals, and the TCM sends a control signal to the line pressure linear solenoid. The pressure from the line pressure linear solenoid is sent to the valve where the line pressure is regulated. The valve adjusts the oil-pump-generated line pressure to make the line pressure matched to the driving condition.

## F: SHIFT PATTERN SELECTION CONTROL

### 1. ADAPTIVE CONTROL

This control is performed to improve the drivability of the vehicle by optimizing gear shifts in accordance with the driver's intention to accelerate or decelerate, and driving conditions such as hill climbing and descending, etc.

- Shift pattern automatic switching control

This control enables selection of the optimum gear speed by automatically switching the shift pattern by estimating driver's intentions and driving conditions through sensor information such as driving resistance, engine speed, acceleration, vehicle speed, and also from calculated values.

Any of the three patterns NORMAL, SPORTS, and SLOPE are continuously and automatically selected under the following conditions.

D range

NORMAL ↔ SPORTS ↔ SLOPE

D range, in sports mode

SPORTS ↔ SLOPE

Normal pattern: covers a wide range from normal driving to high speed driving.

Sports pattern: a shift pattern suitable for driving conditions requiring deep accelerator pedal positions, such as winding road driving.

Slope pattern: this shift pattern controls upshifting to prevent too frequent gear shifting during climbing or descending hills. By combining braking control (in sports mode only) (explained later), engine braking will be positively used when descending hills.

AT-00431

(1) Without climbing and descending control

(3) Brake pedal ON

(2) With climbing and descending control

(4) Re-acceleration

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

AT-00432

**(A)** Base pattern  
(1) Accelerator pedal position

**(B)** Grade control pattern  
(2) Vehicle speed

- Accelerator pedal quick depressing control

When the accelerator pedal is quickly depressed, the TCM interprets this as acceleration is required, and the transmission is downshifted earlier to obtain a greater drive force.

- Accelerator pedal quick return control

When the accelerator pedal is quickly released, the TCM interprets this as deceleration is required, and upshift is prohibited in order to hold the transmission in the current gear speed to prevent frequent shifting and to maintain engine braking effect (operates in sports mode only).

- Braking control

According to the braking force (deceleration) during braking, downshifts are hastened to ensure engine braking effect and obtain a larger driving power for accelerating after braking (operates in sports mode only).

## 2. SPORTS MODE CONTROL

When the shift lever is moved toward the manual gate side in D range, the SPORT light in the combination meter illuminates and the system enters the Sports mode. Gearshift timings are set at higher vehicle and engine speeds to make more use of low speed gears. The full lockup vehicle speed in 4th is also set higher than in the normal mode.

## 3. MANUAL MODE CONTROL

By operating the “+” or “-” switch on the select lever in D range with the sports shift switch ON (in sports mode), the system switches to manual mode. In this state, operating the “+” switch causes upshifting while operating the “-” switch causes downshifting; manual shifting is enabled and the selected gear position is held while driving.

However, at certain vehicle speeds or ATF temperatures, the following inhibiting control is performed.

- Upshift inhibiting and auto downshift control

The gear upshifts each time the “+” switch is operated, however, when the vehicle speed is too low

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION

for the selected gear speed, the TCM inhibits further upshifting. If the vehicle speed becomes too slow for the current gear speed, a downshift will be made automatically to prevent engine stall. When the vehicle comes to a stop, the transmission will always be controlled to shift to 1st speed unless the vehicle was in Manual mode 2nd hold control.

- Downshift inhibiting control

The gear downshifts each time the “-” switch is operated, however, when the vehicle speed is too low for the selected gear speed, the TCM inhibits further shifting. A manual shifting inhibiting buzzer will sound to warn the driver.

- Engine over speed prevention control

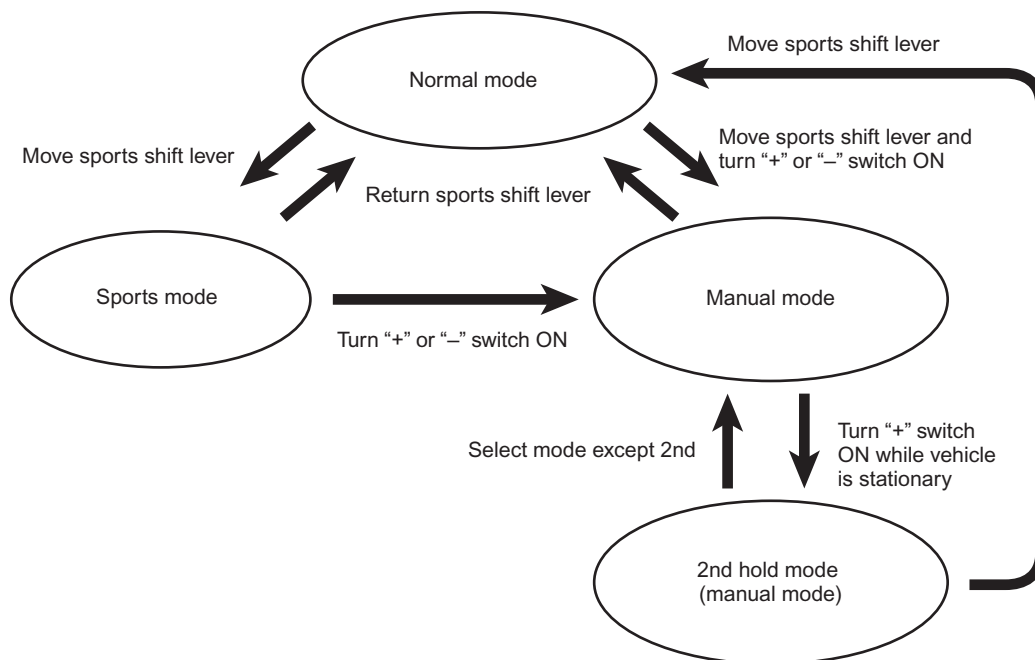

If the engine speed exceeds the preset value during accelerating, the fuel supply is cut to prevent over-revving of the engine.

- Control when the temperature is low or hot

When the ATF temperature is low as in cases such as immediately after start in winter, upshifting to 4th is inhibited to quicken warm up. Upshifting to 4th is also inhibited if the ATF temperature becomes extremely high after severe driving, to prevent further temperature rise.

## 4. 2nd HOLD CONTROL (IN MANUAL MODE)

When the “+” switch is operated when the vehicle is in Manual mode and not moving, the transmission shifts to 2nd speed enabling start in 2nd. This status is held unless the manual mode is canceled, or a speed other than 2nd is selected with the “-” switch. Also, the transmission is held in 2nd when the vehicle is stopped.

AT-02340

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

### 5. ILLUMINATION CONTROL OF VARIOUS INDICATORS

Illuminations of the various indicators on the combination meter are controlled in accordance with the shift pattern selection as shown below.

Status \ Indicator	D ●	SPORT	▲ ▼	1	Operation mode
Normal D range	D ●	SPORT	△ ▽	(extinguished)	Normal mode
In sports mode	D ●	SPORT	△ ▽	(extinguished)	Sports mode
Manual shift mode	D ○	SPORT	▲ ▼	1 — 4	Manual mode

NOTE:  
Indicators printed in solid black show their illuminated status.

AT-02881

## **G: LEARNING CONTROL OF SHIFTING HYDRAULIC PRESSURES**

To constantly ensure excellent shift quality regardless of the variance between friction material and aging, learning control of shifting hydraulic pressures is used.

Learning takes place for every normal shifting under certain conditions, and the learned values are not lost even when the power is turned OFF (or battery's negative terminal disconnected).

## **H: RANGE LOCK CONTROL**

This control prevents the select lever from being moved to the R position when the vehicle is running. Thus damage to components such as the reverse clutch is prevented.

When the specified speed is exceeded the TCM turns off the shift lock solenoid for the select lever. Therefore the range lock control works to inhibit operation from N range to R range, preventing the transmission from put into reverse.

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

### I: CAN COMMUNICATION SIGNALS CONTROL

By interchanging information between control modules such as the TCM, ECM, ABSCM & H/U, etc., the modules are controlled in accordance with the vehicle's driving conditions.

In CAN (Controller Area Network) communication, each control module is connected with 2 lines and a large amount of information is interchanged through such a small number of wiring. Each control module sends and receives information and reads only the necessary information for its own purpose.

## J: AWD TRANSFER CLUTCH CONTROL

### ● Basic control

Type of control	Regulates transfer clutch pressure in response to engine torque, throttle position and vehicle speed.
Gear position	1st thru 4th and reverse
Remarks	<div style="text-align: center;">  <p>AT-01761</p> <p>(1) Ordinary control (2) Transfer clutch capacity (3) Duty-ratio</p> </div>

### ● Slip control

Type of control	Regulates transfer clutch pressure in accordance with the amount of slip.
Gear position	1st thru 4th and reverse
Remarks	Release: Released when the amount of slip becomes smaller than the specified value.

### ● Turning control

Type of control	Decreases transfer clutch pressure upon detection of a turn.
Gear position	1st thru 4th and reverse
Remarks	—

### ● ABS control

Type of control	Regulates to the specified transfer clutch pressure quickly when the ABS signal is input.
Gear position	1st thru 4th and reverse
Remarks	—

### ● P and N range control

Type of control	Regulates to the specified transfer clutch pressure immediately after a P or N range signal is input.
Gear position	P and N
Remarks	—

# ON-BOARD DIAGNOSTICS SYSTEM

## AUTOMATIC TRANSMISSION

### 14. On-board Diagnostics System

#### A: FUNCTION

The on-board diagnostics system detects and stores in the form of a code a fault that has occurred in any of the following input and output signal systems.

Rear vehicle speed sensor	High clutch duty solenoid	Sports shift switch
Front vehicle speed sensor	Low & reverse duty solenoid	Engine speed signal
Throttle position sensor	Transfer duty solenoid	Lockup clutch
Line pressure linear solenoid	ATF temperature sensor	Torque converter turbine speed sensor
2-4 brake duty solenoid	CAN communication signal circuit	1, 2, 3, 4, R gear ratios
Lockup duty solenoid	Inhibitor switch	Shift lock solenoid
Low clutch duty solenoid	Brake switch	

If a fault has been detected, the system tells the fault by causing the SPORT indicator light to blink.

#### B: OPERATION OF SPORT INDICATOR LIGHT

On starting the engine, the SPORT indicator light illuminates and then goes out as shown in the Normal diagram below. If any problem exists, the light continues flashing as shown in the Abnormal diagram below.

AT-02194

- (A) When normal
- (B) When abnormal

- (1) Engine cranking
- (2) After abnormality is detected
- (3) 2 seconds
- (4) 0.25 seconds

## 15.Fail-safe Function

The failsafe control function ensures minimum level of drivability even if a fault should occur in the vehicle speed sensors, accelerator pedal position sensor, inhibitor switch, or any of the solenoids.

- Front and rear vehicle speed sensors

A dual speed-sensing system is used. The speed signal is taken from the transmission (by the output shaft speed sensor). Even if one sensor system fails, the vehicle can be controlled normally with the other normally operating sensor system.

- Accelerator pedal position sensor

If the accelerator position sensor becomes faulty, control will be maintained by assuming that the accelerator pedal position is at a certain angle.

- Inhibitor switch

If the TCM receives different signals simultaneously from a faulty inhibitor switch, it selects a range in the following priority:

D > R > N > P

- Line pressure linear solenoid

If the line pressure linear solenoid system fails, the solenoid is de-energized and the line pressure is raised to the maximum to enable the vehicle to operate.

- Lockup duty solenoid

If the lockup duty solenoid system fails, the solenoid is de-energized and the lockup clutch is disengaged.

- Transfer duty solenoid

When the transfer duty solenoid system becomes faulty, it is de-energized. This causes oil pressure to the transfer clutch to be interrupted and no power is transmitted to the rear axle. (FWD state)

- 2-4 brake duty solenoid

If a fault occurs in the 2-4 brake duty solenoid system, the solenoid is de-energized and the gears are limited to the 2nd or 3rd.

- Low clutch duty solenoid

If a fault occurs in the low clutch duty solenoid system, the solenoid is de-energized and the gears are limited to the 3rd or 4th.

- High clutch duty solenoid

If a fault occurs in the high clutch duty solenoid system, the solenoid is de-energized and the gears are limited to the 2nd or 3rd.

- Torque converter turbine speed sensor

If a fault occurs in the torque converter turbine speed sensor, the gears are limited to the 3rd speed.

- Low & reverse duty solenoid

If a fault occurs in the low and reverse duty solenoid system, the solenoid is de-energized and the gears are limited to the 1st.

# TRANSMISSION MOUNTING

AUTOMATIC TRANSMISSION

---

## 16. Transmission Mounting

### A: GENERAL

The transmission mounting consists of a pitching stopper, cushion rubber, and a cross member.

In addition to support the transmission, these components absorb noise and vibration caused by the transmission.

AT-00438

- (1) Pitching stopper
- (2) Cushion rubber
- (3) Cross member

### 1. General

To improve the dynamic performance and fuel efficiency of the vehicle, a new 5-speed automatic transmission is developed. The features of this new automatic transmission are as follows:

#### A: NEW CONSTRUCTION

- The planetary gears layout has been changed from the conventional 2-planetary to a 3-planetary arrangement.
- The construction of the torque converter has been changed to achieve a higher efficiency.
- The layout of the oil pump has been changed to reduce friction.
- The drive pinion gear has been changed.
- Major components are made of aluminum.

#### B: CHANGES FOR BETTER DRIVING PERFORMANCE

##### 1. IMPROVED SHIFTING PERFORMANCE

- By using a wide ranged and crossed ratio gears, a high driving power is ensured at a wide vehicle speed range, and the torque differential between before and after shifting is minimized.
- By using a system that controls the clutch pressure directly and electronically (direct hydraulic control), an accurate and highly responsive control is achieved.
- By using a one-way clutch, smooth shifting without torque interruption is realized.
- By using a new adaptive control, the shifting map is automatically switched and a more active shifting control is performed in the manual mode.
- The control enables manual shifting by operating the steering switch to UP or DOWN while driving in D range, and returns to normal automatic shifting when certain conditions are met.
- To reduce gear noise from the reduction driven gear and prevent the bending moment of the drive pinion shaft from affecting the engagement of reduction gears, the front and rear ends are supported with bearings.
- To reduce driving noise, the drive shafts and joints are integrated and the transmission side drive axle shaft is abolished.

## **C: MODIFICATION MADE FOR BETTER FUEL EFFICIENCY**

### **1. OPTIMIZED GEAR RATIO**

- The wider gear ratio range obtained by five speeds contribute to better dynamic performance, while improving fuel efficiency at constant speed cruising by enabling use of lower engine speeds.

### **2. IMPROVED EFFICIENCY**

- The efficiency of the torque converter has been increased.
- Friction in the oil pump and gear train are reduced.
- Drive pinion gear teeth are changed to uniform height teeth, and their offset amount is reduced.
- Ranges in which the transmission operates in slipping lockup and full lockup states are widened.

### **3. WEIGHT REDUCTION**

- An aluminum bearing plate is used.
- The planetary carrier, clutch drum and the hub are made of aluminum.
- The wall thickness of the transmission case is reduced.

## **D: CONVENTIONAL MECHANISMS**

- The transfer is provided with a VTD (Variable Torque Distribution) system which consists of a planetary gear type center differential and a hydraulic multi-plated LSD, to electronically control the differential operation and improve safety and drivability.

# CROSS SECTIONAL VIEW

## 3. Oil Pump

### A: CONSTRUCTION

The pump consists of a inner-teeth type rotor, oil pump housing, and an oil pump cover. The inner rotor has nine teeth and the outer rotor has ten teeth.

AT-02066

- |                       |                                       |
|-----------------------|---------------------------------------|
| (1) Oil pump cover    | (6) Outer rotor                       |
| (2) Air breather hose | (7) Oil pump housing                  |
| (3) Nipple            | (8) O-ring                            |
| (4) Stator shaft      | (9) Straight pin                      |
| (5) Inner rotor       | * : Parts that cannot be disassembled |

### B: OPERATION

The inner rotor is connected to the engine crankshaft via a oil pump shaft, impeller side of the torque converter, and drive plate; when the inner rotor turns the outer rotor also turns.

Since the number of teeth on the inner rotor and outer rotor are not the same, a space is formed between the inner rotor and outer rotor and its capacity changes as the rotors turn. Oil is drawn in when the capacity is large and is compressed and discharged when the capacity becomes smaller.

# FRONT BRAKE

AUTOMATIC TRANSMISSION

## 4. Front Brake

### A: CONSTRUCTION

The front brake consists of a front brake piston, return spring, drive plates, driven plates, and a retaining plate.

This brake engages to lock the front sun gear when engine braking is used in the 1st, 2nd and 3rd speeds and in the 5th speed and reverse range.

AT-01560

## 7. High and Low Reverse Clutch

### A: CONSTRUCTION

The high and low reverse clutch consists of a high and low reverse clutch piston, retainer spring, drive plate, driven plate, and a retaining plate.

This clutch engages to fix the mid sun gear with the rear sun gear in the 3rd, 4th and 5th speeds.

It also fix the mid sun gear and rear sun gear when engine braking is used in 1st speed.

In reverse, the mid sun gear and rear sun gear are connected.

(The high & low reverse clutch cannot be disassembled.)

# REVERSE BRAKE

## AUTOMATIC TRANSMISSION

### 8. Reverse Brake

#### A: CONSTRUCTION

The reverse brake which consists of a reverse brake piston, return spring, dish plate, drive plates, driven plates and retaining plate, is placed in a housing formed in the transmission case.

This brake fixes the rear carrier in reverse range.

AT-01564

## 9. Forward Brake

### A: CONSTRUCTION

The forward brake consists of a forward brake hub, forward brake piston, dish plate, drive plates, driven plates, and a retaining plate.

The forward brake restricts the reverse rotation of the mid sun gear in 1st and 2nd speeds.

(The forward brake cannot be disassembled.)

### **10.Low Coast Brake**

#### **A: CONSTRUCTION**

The low coast brake consists of a low coast brake hub, low coast piston, drive plates, driven plates, and a retaining plate.

The low coast brake restricts the reverse rotation of the mid sun gear when engine braking is used in 1st and 2nd speeds of the manual mode.

(The low coast brake cannot be disassembled.)

# CONTROL VALVE

## AUTOMATIC TRANSMISSION

### 11. Control Valve

The control system of the automatic transmission consists of an oil pump, valve bodies containing valves, clutches, and fluid passages. The operation of the system is controlled by driver's manual inputs and electrical inputs from the TCM.

#### A: FUNCTION

Name	Function
<ul style="list-style-type: none"> <li>• Torque converter regulator valve</li> </ul>	Regulates the line pressure to an optimum level (torque converter operating pressure) to prevent excessive torque converter supply pressure.
<ul style="list-style-type: none"> <li>• Pressure regulator valve</li> <li>• Pressure regulator plug</li> <li>• Pressure regulator sleeve</li> </ul>	Regulates the pressure of oil discharged from the oil pump to an optimum level (line pressure) which is suitable for the vehicle's running condition.
<ul style="list-style-type: none"> <li>• Front brake control valve</li> </ul>	Regulates the line pressure to an optimum level (front brake pressure) when the front brake is engaged, and supplies this pressure to the front brake. (regulates clutch pressure in 1st, 2nd, 3rd and 5th speeds)
<ul style="list-style-type: none"> <li>• Accumulator control valve</li> </ul>	Regulates the pressure to the accumulator piston and low coast reducing valve (accumulator control pressure) in accordance with the vehicle's running condition.
<ul style="list-style-type: none"> <li>• Pilot valve A</li> </ul>	Regulates the line pressure to create a constant pressure (pilot pressure) necessary for line pressure control, gear shift control, and lockup control.

<ul style="list-style-type: none"> <li>• Input clutch control valve</li> </ul>	Regulates the line pressure to an optimum level (input clutch pressure) when the input clutch is engaged, and supplies this pressure to the input clutch. (regulates clutch pressure in 4th and 5th speeds)
<ul style="list-style-type: none"> <li>• Direct clutch control valve</li> </ul>	Regulates the line pressure to an optimum level (direct clutch pressure) when the direct clutch is engaged, and supplies this pressure to the direct clutch. (regulates clutch pressure in 2nd, 3rd and 4th speeds)
<ul style="list-style-type: none"> <li>• Lockup control valve</li> <li>• Lockup control plug</li> <li>• Lockup control sleeve</li> </ul>	Engages or releases lockup. It also provides a smooth lockup by performing lockup gradually.
<ul style="list-style-type: none"> <li>• Torque converter lubrication valve</li> </ul>	Operates when lockup is engaged and switches the oil passages of the torque converter, cooling and lubrication systems.
<ul style="list-style-type: none"> <li>• Cooler bypass valve</li> </ul>	Detours excessive cooler circuit oil.
<ul style="list-style-type: none"> <li>• Line pressure relief valve</li> </ul>	Drains excessive line pressure circuit oil.
<ul style="list-style-type: none"> <li>• N-D accumulator</li> </ul>	Builds a shelf-pressure when N-D is selected.
<ul style="list-style-type: none"> <li>• Manual valve</li> </ul>	Delivers line pressure to the circuits according to the selected position. Circuits, which are not delivered with line pressure becomes drain.

# CONTROL VALVE

AUTOMATIC TRANSMISSION

Name	Function
• Front brake hydraulic switch	Monitors front brake oil pressure and lets the system enter the fail safe mode if abnormality is found.
• Low coast brake hydraulic switch	Monitors low coast brake oil pressure and lets the system enter the fail safe mode if abnormality is found.
• Input clutch hydraulic switch	Monitors input clutch oil pressure and lets the system enter the fail safe mode if abnormality is found.
• Direct clutch hydraulic switch	Monitors direct clutch oil pressure and lets the system enter the fail safe mode if abnormality is found.
• High and low reverse clutch hydraulic switch	Monitors high and low reverse clutch oil pressure and let the system enter the fail safe mode if abnormality is found.

## B: ARRANGEMENT

AT-01551

# GEAR TRAIN

## AUTOMATIC TRANSMISSION

### 12.Gear Train

#### A: CONSTRUCTION

The gear train consists of three sets of planetary gears, three sets of multi-plate clutches, four sets of multi-plate brakes and three set of one-way clutches.

↑↓ 5th		○	○			○		△	◇		◇	

- : Engaged
- ◎ : Participates in torque transmission only when driven
- ◇ : Participates in torque transmission only when coasting
- ◇\* : Engaged in sports mode
- △ : Engaged but no effect to output
- △\* : Engaged when vehicle speed is within certain range

AT-02094

### 2. N RANGE

Since the forward and reverse brakes are disengaged, driving power from the input shaft is not transmitted to the output shaft.

# GEAR TRAIN

## AUTOMATIC TRANSMISSION

### 3. P RANGE

- Since the forward and reverse brakes are disengaged as in the N range, driving power from the input shaft is not transmitted to the output shaft.
- The parking pawl, which is linked with the selector lever engages with the parking gear and mechanically holds the output shaft.

## **13.AWD Transfer System**

### **A: GENERAL**

Used in the transfer is the VTD (Variable Torque Distribution) system which combines a compound planetary gear type center differential installed in the transfer case behind the transmission and a hydraulically operated multi-plate differential action limiting device (LSD) located between the output shafts of the center differential. Differential action limiting control is performed by the TCM according to driving and road surface conditions.

The input torque is transmitted to the 1st sun gear of the center differential through the intermediate shaft. From the 1st sun gear, the torque is transmitted through the 1st pinion to the output carrier in the front wheel output shaft, and through the 2nd pinion to the 2nd sun gear in the rear wheel output shaft.

The center differential performs the differential functions of absorbing the speed difference between the front and rear wheels and also distributes drive forces to the front and rear wheels at a predetermined ratio. In normal conditions (when pressure is not applied to the multi-plate clutch), the drive force distribution ratio is 45.7 % to the front wheels and 54.3 % to the rear wheels. The hydraulic multi-plate clutch connected in parallel with the center differential between the carrier and 2nd sun gear functions as a differential action limiting device (LSD) and also as a device that controls torque distribution according to driving conditions.

Differential action limiting control is performed as a “torque responsive control”, where control is based on the input torque to the transfer as calculated from the engine torque, torque converter characteristics, gear ratio, etc. The LSD clutch is controlled by the hydraulic pressure regulated by the transfer valve in the transmission hydraulic control valve assembly, as a result of the TCM directly controlling the linear solenoid. The torque distribution ratio to front and rear wheels changes from 45.7:54.3 to direct connection, in accordance with the hydraulic pressure acting on the piston.

The speed of the front and rear wheels determine the basic signals for the differential action limiting control. The rear wheel speed is detected by the sensor installed above the rear drive shaft, and the front wheel speed is detected by the sensor on the parking gear above the reduction gear.

# AWD TRANSFER SYSTEM

## AUTOMATIC TRANSMISSION

### B: OPERATION

The front-rear torque distribution ratio is determined by the of center differential's compound planetary gears and is varied by changing the degree of engagement of the hydraulically operated multi-plate clutch that connects the center differential output elements according to driving conditions and road surface conditions. The torque distribution ratio is calculated using the following equations, which include torque distribution coefficients (determined by number of gear teeth), input torque to the center differential, and torque capacity of the multi-plate clutch as factors.

1) When the front wheel speed is higher than the rear wheel speed:

$$T_R = 0.543 \times T_i + T_C$$

$$T_F = 0.457 \times T_i - T_C$$

where

$T_R$ : Rear wheel output torque

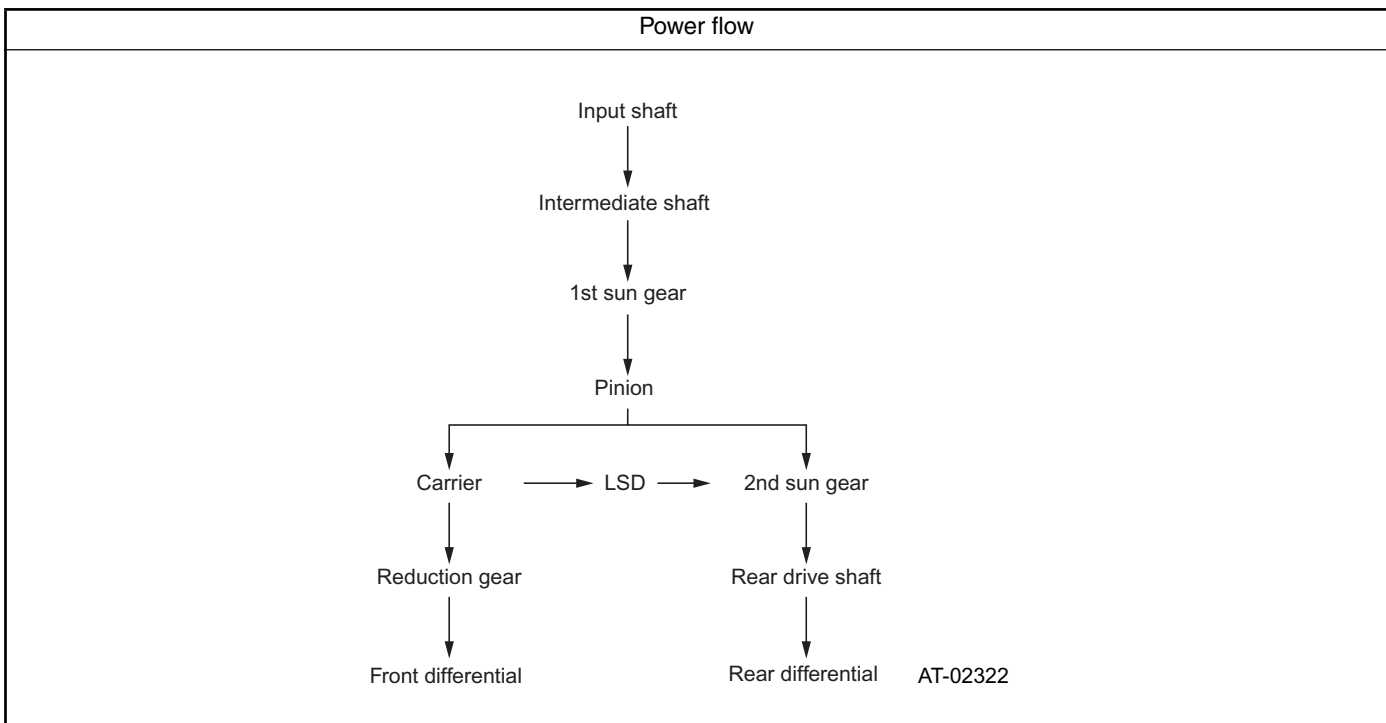

$T_i$ : Input torque to center differential

$T_C$ : Torque capacity of multi-plate clutch

$T_F$ : Front wheel output torque

0.543: Coefficient of rear wheel torque determined by number of gear teeth

0.457: Coefficient of front wheel torque determined by number of gear teeth

AT-01552

2) When the rear wheel speed is higher than the front wheel speed:

$$T_R = 0.543 \times T_i - T_C$$

$$T_F = 0.457 \times T_i + T_C$$

# AWD TRANSFER SYSTEM

AUTOMATIC TRANSMISSION

AT-01553

## <Calculation of front and rear wheel torques>

If the frictional resistance resulting from meshing of the planetary gears and sliding of rotational components are ignored, the torques distributed to the front and rear wheels are expressed by the following equations:

$$T_R = [(Z_{P1} \times Z_{S2}) \div (Z_{S1} \times Z_{P2})] \times T_i$$

$$T_F = [1 - (Z_{P1} \times Z_{S2}) \div (Z_{S1} \times Z_{P2})] \times T_i$$

where

$Z_{P1}$ : Number of teeth of 1st planetary gear

$Z_{P2}$ : Number of teeth of 2nd planetary gear

$Z_{S1}$ : Number of teeth of 1st sun gear

$Z_{S2}$ : Number of teeth of 2nd sun gear

$T_i$ : Input torque

If the number of teeth in each component is the same as that assumed in the equations on the previous page, the following ratios are the calculation results of the equations shown above.

$$T_R = 0.543 \times T_i$$

$$T_F = 0.457 \times T_i$$

As a result, the front-rear torque distribution ratio of the compound planetary gear set without an adjustment by the multi-plate clutch is 45.7 : 54.3.

## **C: CONSTRUCTION**

### **1. CENTER DIFFERENTIAL ASSEMBLY**

The center differential is a compound planetary gear set without internally-toothed gears. Input torque is transmitted to the 1st sun gear of the center differential, and from the 1st sun gear the torque is distributed through the 1st pinion to the carrier (output element of front wheel side), and to the 2nd sun gear (output element of rear wheel side) at a certain ratio.

The compound planetary gears use helical gears for quiet operation and strength. The four pinions are arranged to ensure the best motion balance during operation.

### 3. TRANSFER HYDRAULIC PRESSURE CONTROL UNIT

The transfer hydraulic control unit consists of the transfer linear solenoid installed in the transmission hydraulic control valve assembly and the transmission hydraulic control valve.

The transfer linear solenoid controls the transfer pilot pressure in accordance with the differential action limiting force determined by the TCM based on driving and road conditions, and the transfer hydraulic control valve regulates the line pressure into transfer pressure in accordance with the transfer pilot pressure.

The transfer pressure is sent through the passages formed in the transmission case and extension case to the clutch piston chamber.

# ELECTRO-HYDRAULIC CONTROL SYSTEM

AUTOMATIC TRANSMISSION

## 14. Electro-hydraulic Control System

### A: DESCRIPTION

The electro-hydraulic control system for the transmission and transfer consists of various sensors and switches, TCM, and the control valves including solenoid valves. The system controls the automatic transmission operation, including gear shifting, lockup clutch operation, line pressure, pilot pressure, and gear-shift timing. It also controls the operation of the transfer clutch. The TCM determines vehicle operating conditions from various input signals and controls a total of eight solenoids (front brake solenoid, low coast brake solenoid, input clutch solenoid, high and low reverse clutch solenoid, direct clutch solenoid, lockup solenoid, line pressure solenoid, and transfer solenoid) by sending appropriate signals to them.

AT-02246

AUTOMATIC TRANSMISSION

## B: CONTROL ITEMS

Control items		Description of control	
Transmission hydraulic control	Shifting control	Shift pattern selection	Upshift points and downshift points are set for each range and shift pattern selected by switch operation, according to throttle position and vehicle speed. <Ref. to 5AT section, Transmission Control Module (TCM).>
		Control of linear solenoid for each shift clutch	The linear solenoid for each shift clutch is directly controlled in accordance with the target gear speed. Supported by the learning control and real time feedback functions, control values are corrected any time when necessary to improve shift quality and eliminate errors due to aging.
		Engine braking control	In manual mode, the low coast brake ON-OFF solenoid is controlled to make engine braking available in 1st and 2nd speeds.
	Lockup control	Base lockup control	Lockup engagement and disengagement points are set for each range and shift pattern selected by switch operation, according to throttle position and vehicle speed, and the lockup solenoid is controlled in accordance with these points to engage or disengage the lockup clutch inside the torque converter.
		Smooth control	When the lockup clutch is engaged, the pressure is gradually changed to ensure a smooth engagement.
	Line pressure control	Ordinary control	Line pressure is properly regulated according to information such as the electronic control throttle position, engine torque value, engine speed, vehicle speed, and range position.
		Control during engine braking	Line pressure is regulated in accordance with the vehicle speed while engine braking is used.
		Line pressure control in during shifting	Line pressure is regulated to the necessary value during gear shifting.
		Line pressure control when ATF temperature is low	Hydraulic pressure is controlled to a higher value than normal when the ATF temperature is low.
	AWD center differential control	Ordinary transfer control	
Start control		LSD pressure is regulated according to the torque input to the transfer. Compared to normal control, the control pressure is raised to prevent slip.	
Turning control		When the front and rear wheel speed ratio is less than the set value for a vehicle speed, the LSD pressure is decreased.	
Slip control		When a front or rear wheel starts slipping, the LSD pressure is increased.	
Control while ABS/vehicle dynamics control (VDC) in operation		When ABS/vehicle dynamics control (VDC) operation signal is received, the LSD pressure is adjusted to the set level.	
Base brake control		When the brake switch is ON and throttle valve is fully closed, the LSD pressure is lowered.	

# ELECTRO-HYDRAULIC CONTROL SYSTEM

## AUTOMATIC TRANSMISSION

---

### C: CONTROL OF HYDRAULIC PRESSURE FOR SHIFTS

- Control of linear solenoid for each shift clutch

The linear solenoid for each shift clutch is directly controlled by means of electrical current in accordance with the target gear speed. The control current value is corrected any time when necessary by the learning control and real time feedback functions to improve shift quality and eliminate errors due to aging.

- Engine braking control

In manual mode, the low coast brake solenoid is controlled to make engine braking available in 1st and 2nd speeds.

### D: LOCKUP CONTROL

- By engaging the lockup clutch in the torque converter, the slip in the torque converter is eliminated and power is transmitted more effectively.

- Based on signals from the TCM, the lockup solenoid is controlled in order to let the lockup control valve operate and adjust apply pressure/release pressure, to consequently vary the lockup clutch engagement force.

Lockup operation conditions

Select lever	Gear position	Full lockup
D range	3	Δ
	4	Δ
	5	○
Manual mode	3	○
	4	○
	5	○

Δ: When the hill climbing mode is selected according to driving conditions, or when high ATF temperature is detected.

## 1. LOCKUP DISENGAGED STATE

When lockup is disengaged, the lockup solenoid causes the lockup control valve to open the clutch disengaging port, and the lockup operating pressure is added to the disengaging circuit. In the meantime, the lockup clutch control valve opens the lockup clutch engaging port and allows the hydraulic fluid in the circuit to flow to the ATF cooler, thus lowering the pressure in the engaging circuit. As a result, the lockup clutch is disengaged due to difference in pressure between both circuits. This operation is performed in all speed gears.

## 2. LOCKUP ENGAGED STATE

When lockup is engaged, the lockup solenoid puts the lockup control valve in the lockup state and builds up lockup operating pressure.

The lockup control valve then opens the clutch engaging circuit's port that communicates to the torque converter's impeller chamber, allowing high pressure fluid to flow to the lockup clutch and the clutch is engaged.

This operation is performed in all speed gears, and the lockup engages in response to the vehicle speed when the 5th gear is selected in the D range.

## 3. SMOOTH LOCKUP CONTROL

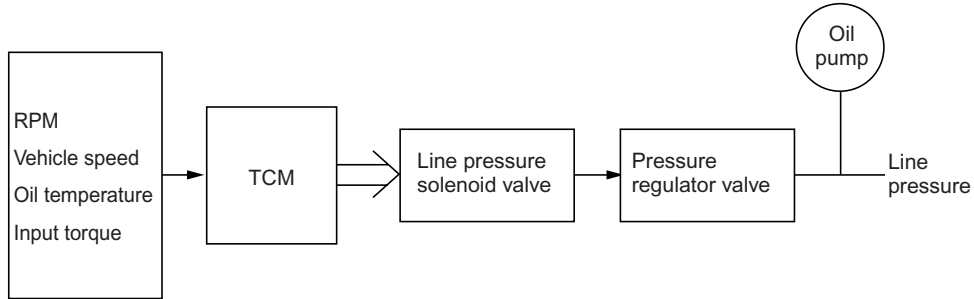

During the transition period from the lockup (disengaged) state to the lockup engaged state, the TCM controls the current output to the lockup solenoid. By changing the current output to the lockup solenoid and gradually raising the lockup clutch pressure, the lockup clutch piston is first put in a partially engaged state and its pressure is gradually increased to reduce shock.

# ELECTRO-HYDRAULIC CONTROL SYSTEM

## AUTOMATIC TRANSMISSION

### E: LINE PRESSURE CONTROL

When torque signals corresponding to the engine drive power is sent from the ECM to the TCM, the TCM controls the line pressure solenoid. Using the line pressure solenoid pressure as a signal pressure, the pressure regulator valve is controlled, and the ATF discharged from the oil pump is regulated to an optimum level corresponding to the vehicle's running conditions.

AT-02256

#### 1. LINE PRESSURE CONTROL IN NORMAL CONDITIONS

The line pressure which engages shift clutches to create 1st to 4th speeds, is regulated to a pressure required at each clutch according to the input torque.

AT-02261

## 2. LINE-PRESSURE CONTROL DURING ENGINE BRAKING IN SPORTS MODE

When engine braking is used to let the transmission downshift, the line pressure is regulated in accordance with the vehicle speed.

## 3. LINE-PRESSURE CONTROL DURING SHIFTING

During shifting, the line pressure is set to a level suitable for the input speed, input torque and the difference between the required and current gear speed.

# ELECTRO-HYDRAULIC CONTROL SYSTEM

## AUTOMATIC TRANSMISSION

---

### 4. LINE PRESSURE CONTROL WHEN ATF TEMPERATURE IS LOW

When the ATF temperature is low, the line pressure control characteristics is set higher than normal so that the clutches and brakes will operate at an earlier stage.

## 15.Sensor Systems

### A: REAR VEHICLE SPEED SENSOR

This vehicle speed sensor is a Hall element type sensor and is externally mounted on the extension case. It detects the rear wheel speed in terms of the peripheral speed of the rear drive shaft and sends pulse signals (22 pulses per rotation) to the TCM.

(1) Rear vehicle speed sensor

### B: FRONT VEHICLE SPEED SENSOR

This vehicle speed sensor is a Hall element type sensor and is mounted on the inside of the transmission case. It detects the drive pinion shaft speed and sends pulse signals (16 pulses per rotation) to the TCM.

Signals from the front and rear vehicle speed sensors are used to calculate controlling vehicle speed, which is in turn used for gear shift control.

(1) Front vehicle speed sensor

# SENSOR SYSTEMS

## AUTOMATIC TRANSMISSION

---

### C: ATF TEMPERATURE SENSOR 1, 2

These temperature sensors are thermistors and each of them is mounted on the control valve body. ATF temperature sensor 1 detects the ATF temperature in the oil pan, and ATF temperature sensor 2 detects the ATF temperature at the torque converter outlet; each sensor outputs electrical resistance signals.

(1) ATF temperature sensor 1

(2) ATF temperature sensor 2

### D: TURBINE SPEED SENSOR 1, 2

Wheel speed sensors are hall element type sensors. Turbine speed sensor 1 detects the speed of the front sun gear, and turbine sensor 2 detects the speed of the front carrier. Each sensor sends pulse signals (60 pulses per rotation) to the TCM. From these two speed values, the TCM calculates the turbine speed and uses it for shifting control.

AT-01559

AT-01646

(1) Turbine speed sensor 1

(2) Turbine speed sensor 2

# SENSOR SYSTEMS

## AUTOMATIC TRANSMISSION

### E: INHIBITOR SWITCH

The inhibitor switch is installed in the control valve and is connected to the TCM with 4 signal lines. The TCM uses this signal to detect range positions and to perform various controls. Relation between signals from the 4 lines (INH1 to 4) and range positions are as shown below:

	INH1	INH2	INH3	INH4
P				
R	○			○
N	○	○		
D	○	○	○	○

When the range position is detected as P or N as shown above, the TCM sends a signal (PN signal) allowing operation of the starter. On the other hand, in R or D range, starter operation is inhibited to ensure safety.

Additionally, when the range position is detected as R, the TCM turns the backup light relay output to ON and lets the backup lights illuminate.

(1) Inhibitor switch

### F: LINE PRESSURE SOLENOID

The line pressure solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. This controls the pressure modifier valve and accumulator control valve A to adjust the line pressure to an optimum pressure level suitable for operating conditions.

AT-01578

(1) Line pressure solenoid

### G: LOCKUP SOLENOID

The lockup solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. It then controls the lockup control valve to provide smooth engagement and disengagement. It also enables stable slip lockup control while supported by learning control and real time feedback functions.

AT-01636

(1) Lockup solenoid

# SENSOR SYSTEMS

## AUTOMATIC TRANSMISSION

---

### H: FRONT BRAKE SOLENOID

The front brake solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. This solenoid is activated when the front brake is to be engaged. Control values are corrected any time when necessary by the learning control and real time feedback functions to improve shift quality and eliminate errors due to aging.

AT-01579

(1) Front brake solenoid

### I: INPUT CLUTCH SOLENOID

The input clutch solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. This solenoid is activated when the input clutch is to be engaged. Control values are corrected any time when necessary by the learning control and real time feedback functions to improve shift quality and eliminate errors due to aging.

AT-01617

(1) Input clutch solenoid

### J: DIRECT CLUTCH SOLENOID

The direct clutch solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. This solenoid is activated when the direct clutch is to be engaged. Control values are corrected any time when necessary by the learning control and real time feedback functions to improve shift quality and eliminate errors due to aging.

The direct clutch pressure can be switched to two range pressures with the direct clutch piston switch valve.

(1) Direct clutch solenoid

### K: HIGH AND LOW REVERSE CLUTCH SOLENOID

The high and low reverse clutch solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. This solenoid is activated when the high and low reverse clutch is to be engaged. Control values are corrected any time when necessary by the learning control and real time feedback functions to improve shift quality and eliminate errors due to aging.

(1) High and low reverse clutch solenoid

# SENSOR SYSTEMS

## AUTOMATIC TRANSMISSION

---

### **L: LOW COAST BRAKE SOLENOID**

The low coast brake solenoid is mounted on the control valve and is directly controlled by ON/OFF instructions from the TCM. This solenoid is activated when the low coast brake is to be engaged during usage of engine braking in 1st or 2nd speed in manual mode.

AT-01619

(1) Low coast brake solenoid

### **M: TRANSFER SOLENOID**

The transfer solenoid is mounted on the control valve and is directly controlled by electrical current instructions from the TCM. This ensures optimum AWD control in accordance with the varying road conditions by engaging/releasing the transfer clutch.

AT-01615

(1) Transfer solenoid

## N: MEMORY BOX

The memory box is mounted on the control valve and stores hydraulic correction values and learned values for the initial shifting pressures for each solenoid, based on its hydraulic characteristics at the time delivered from the factory. The TCM acquires data from this memory box and performs correction based on these data to control each solenoid. This ensures high quality shifting from the time the vehicle was delivered from the factory.

AT-01637

(1) Memory box

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION

## 16. Transmission Control Module (TCM)

The TCM receives various sensor signals and determines the running conditions of the vehicle. It then sends control signals to each solenoid according to the preset gearshift characteristic data, lockup operation data, and transfer clutch torque data.

### **C: SHIFTING CONTROL**

#### **1. ORDINARY SHIFT CONTROL**

The TCM controls each solenoid based on input signal information such as inhibitor switch signals, vehicle speed signals and accelerator pedal position signals, to automatically select the optimum gear position from the shifting map.

#### **2. ENGINE COOPERATIVE CONTROL**

During shifting, the TCM outputs a torque-down requirement signal, and the ECM receives this to retard the ignition timing of each cylinder to temporarily decrease the output torque from the engine. Simultaneously with this control, the TCM constantly monitors the shift sequence through vehicle speed sensors and the turbine speed sensor to perform feedback control and optimize gear shifts. Because of this control, a smooth and comfortable gear shifting is ensured under all conditions.

#### **3. ABS COOPERATIVE CONTROL**

When the ABS is operating, the optimum gear speed for the vehicle speed is selected by cooperative operation with the ABS/CM to prevent degrading the operation of the ABS.

#### **4. CONTROL AT HIGH OIL TEMPERATURES**

If the ATF temperature becomes extremely high, shifting control is performed by automatically switching to a shifting map that is less likely to cause temperature rise.

#### **5. CONTROL WHEN ATF OR ENGINE COOLANT TEMPERATURE IS LOW**

When the ATF temperature or engine coolant temperature is extremely low at engine start, etc., shifting control is performed by automatically switching to a shifting map that causes temperature rise easier.

#### **6. CONTROL WHEN CRUISE CONTROL IN OPERATION**

When the cruise control is operating, shifting control is performed by automatically switching to a shifting map that is suitable for cruise control.

### D: SHIFT PATTERN SELECTION

#### 1. ADAPTIVE CONTROL

This control is performed to improve the drivability of the vehicle by optimizing gear shifts in accordance with the driver's intention to accelerate or decelerate, and driving conditions such as hill climbing, winding road driving, etc.

- Shift pattern automatic switching control

This control enables selection of the optimum gear speed by automatically switching the shift pattern by estimating driver's intentions and driving conditions through sensor information such as driving resistance, engine speed, acceleration, vehicle speed, and also from calculated values.

Any of the three patterns NORMAL, SPORTS, and SLOPE are continuously and automatically selected under the following conditions.

D range

NORMAL↔SPORTS↔SLOPE

D range, in sports mode

SPORTS↔SLOPE

Normal pattern: covers a wide range from normal driving to high speed driving.

Sports pattern: a shift pattern suitable for driving conditions requiring deep accelerator pedal positions, such as winding road driving.

Slope pattern: this shift pattern controls upshifting to prevent too frequent gear shifting during climbing or descending hills. By combining braking control (in sports mode only) (explained later), automatic engine braking will be available when descending hills.

# TRANSMISSION CONTROL MODULE (TCM)

- (1) Accelerator pedal position

- (B)** Grade control pattern
- (2) Vehicle speed

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

---

- Accelerator pedal quick depressing control

When the accelerator pedal is quickly depressed, the TCM interprets this as acceleration is required, and the transmission is downshifted earlier to obtain a greater drive force.

- Accelerator pedal quick return control

When the accelerator pedal is quickly released, the TCM interprets this as deceleration is required, and upshift is prohibited in order to hold the transmission in the current gear speed to prevent frequent shifting and to maintain engine braking effect (operates in sports mode only).

- Braking control

According to the braking force (deceleration) during braking, downshifts are hastened to ensure engine braking effect and obtain a larger driving power for accelerating after braking (operates in sports mode only).

- Control during cornering

When the system interprets that the vehicle is turning a corner by the lateral acceleration and the change rate in vehicle speed, it prevents unwanted upshifts to maintain a stable drive force and cornering performance.

## 2. SPORTS MODE CONTROL

When the shift lever is moved toward the manual gate side in D range, the SPORT light in the combination meter illuminates and the system enters the Sports mode. Gearshift timings are set at higher vehicle and engine speeds to make more use of low speed gears. The full lockup vehicle speed in 5th is also set higher than in the normal mode.

### 3. MANUAL MODE CONTROL

By operating the “+” or “-” switch on the select lever or steering wheel in D range with the sports mode switch ON (in sports mode), the system switches to manual mode. In this mode, operating the “+” switch causes upshifting while operating the “-” switch causes downshifting; manual shifting is enabled and the selected gear position is held while driving.

However, at certain vehicle speeds or ATF temperatures, the following inhibiting control is performed.

- Upshift inhibiting and auto downshift control

The gear upshifts each time the “+” switch is operated, however, when the vehicle speed is too low for the selected gear speed, the TCM inhibits further upshifting. If the vehicle speed becomes too slow for the current gear speed, a downshift will be made automatically to prevent engine stall. When the vehicle comes to a stop, the transmission will always be controlled to shift to 1st speed unless the vehicle was in manual 2nd hold control.

- Downshift inhibiting control

The gear downshifts each time the “-” switch is operated, however, when the vehicle speed is too low for the selected gear speed, the TCM inhibits further shifting. A manual shifting inhibiting buzzer will sound to warn the driver.

- Control when oil temperature is low

When the ATF temperature is low as in cases such as immediately after start in winter, upshifting to 5th is inhibited to quicken warm up.

- Engine over speed prevention control

If the engine speed exceeds the preset value during accelerating, the fuel supply is cut to prevent over-revving of the engine.

### 4. 2nd HOLD CONTROL (IN MANUAL MODE)

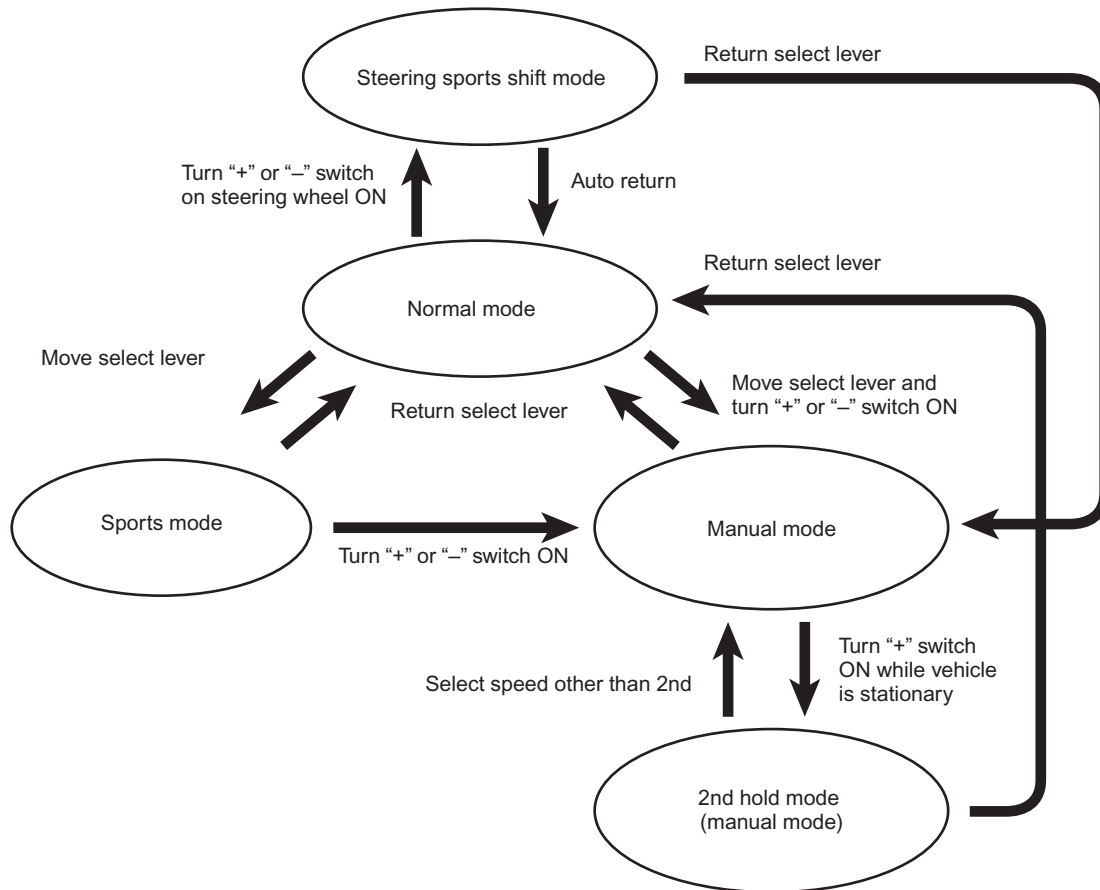

When the “+” switch is operated when the vehicle is in manual mode and not moving, the transmission shifts to 2nd speed enabling start in 2nd. This status is held unless the manual mode is canceled, or a speed other than 2nd is selected with the “-” switch. Also, the transmission is held in 2nd when the vehicle is stopped.

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

### 5. STEERING SPORTS SHIFT CONTROL

By operating the “+” or “-” switch on the steering wheel in D range during Normal mode, the system can be temporary switched to manual mode to perform manual shift operations. In this mode, the mode automatically returns to the previous mode when the next operation is not performed within a specified time or when the vehicle is put in the straight forward accelerating state.

AT-02970

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION

## 6. ILLUMINATION CONTROL OF VARIOUS INDICATORS

Illuminations of the various indicators on the combination meter are controlled in accordance with the shift pattern selection as shown below.

Status \ Indicator	D ●	SPORT	▲ ▼	1	Operation mode
Normal D range	D ●	SPORT	△ ▽	(extinguished)	Normal mode
In sports mode	D ●	SPORT	△ ▽	(extinguished)	Sports mode
Manual mode	D ○	SPORT	▲ ▼	1 — 5	Manual mode
When engine oil temperature is high and high engine speed is maintained	D ○	SPORT	△ ▽	—	Manual mode (at high oil temperature)
In steering sports shift	D ○	SPORT	▲ ▼	1 — 5	Semi sports shift mode
When engine oil temperature is high and high engine speed is maintained (upper row: first 2 seconds, lower row: thereafter)	D ●	SPORT	△ ▽	—	Normal mode (at high oil temperature)
	D ●	SPORT	△ ▽	(extinguished)	Normal mode (at high oil temperature)

**NOTE:**

- Indicators printed in solid black show their illuminated status.
- ATF TEMP indicator illuminates to inform of high ATF temperature.

AT-02882

# TRANSMISSION CONTROL MODULE (TCM)

## AUTOMATIC TRANSMISSION

---

### **E: CONTROL VALVE HYDRAULIC PRESSURE CORRECTION CONTROL AND LEARNING CONTROL**

- Control valve hydraulic pressure correction control

During this control, the TCM acquires the hydraulic pressure correction data stored for each control valve in the memory box installed on the control valves, and then correctively controls the instruction current to each solenoid based on the data. This ensures stable shifting quality irrespective of variance between units.

- Learning control of shifting hydraulic pressures

To constantly ensure excellent shift quality regardless of the variance between friction material and aging, learning control of shifting hydraulic pressures is used.

Learning takes place for every normal shifting under certain conditions, and the learned values are saved in the flash ROM of the TCM. The values are not cleared even when the power is turned OFF (or the battery's negative terminal disconnected).

### **F: AWD CENTER DIFFERENTIAL CONTROL**

#### **1. CONTROL DESCRIPTION**

Engagement of the multi-plate clutch (LSD) in the center differential is controlled according to the torque input to the transfer. It selects a map according to driving conditions and use it as the control basis.

#### **2. NORMAL CONTROL**

The input torque to the multi-plate clutch is calculated according to various factors such as engine torque signals, torque converter turbine speed and selected gear position. Based on the calculation result, the basic coupling force of the clutch is determined.

#### **3. START CONTROL**

When the vehicle speed is 0 km/h (0 MPH), the TCM increases the engaging force of the multi-plate clutch to a higher level compared to that of normal control.

This enables the vehicle to start smoothly without swerving even on a slippery road.

#### **4. TURNING CONTROL**

The TCM makes a correction such that the engagement force of the multi-plate clutch is reduced as the steering angle increases.

This function is performed to improve turning performance at certain vehicle speed range.

## 5. SLIP CONTROL

When front or rear wheels start slipping with the vehicle running slower than the predetermined speed, the TCM makes control to increase the differential action limiting torque.

This function maintains traction and improves driving stability.

AT-00737

- |                                      |                     |
|--------------------------------------|---------------------|
| (A) Front and rear wheel speed ratio | (1) Slip control    |
| (B) Front wheel slip                 | (2) Turning control |
| (C) Rear wheel slip                  | (3) Normal control  |
| (D) Low                              | (4) Start control   |
| (E) Vehicle speed                    |                     |
| (F) High                             |                     |

## 6. ABS CONTROL

When the TCM receives an ABS operation signal from the ABSCM, it adjusts the differential action limiting torque to the predetermined level.

This function improves ABS control.

## 7. BASE BRAKE CONTROL

When the brake switch is ON and the throttle valve is fully closed, the TCM makes control to decrease the differential action limiting torque. The ABS control has priority over this control.

This function improves stability during braking.

## G: RANGE LOCK CONTROL

This control prevents the select lever from being moved to the R position when the vehicle is running. Thus damage to components such as the reverse clutch is prevented.

When the specified speed is exceeded the TCM turns off the shift lock solenoid for the select lever. Therefore the range lock control works to inhibit operation from N range to R range, preventing the transmission from put into reverse.

# ON-BOARD DIAGNOSTICS SYSTEM

## AUTOMATIC TRANSMISSION

---

### 17. On-board Diagnostics System

#### A: FUNCTION

- The on-board diagnosis system detects and indicates a fault by generating a code corresponding to each fault location. The engine malfunction indicator light (SPORTS indicator light) on the combination meter indicates occurrence of a fault or abnormality.
- When the engine malfunction indicator light comes on as a result of detection of a fault by the TCM, the corresponding diagnostic trouble code (DTC) is stored in the TCM.
- On OBD-II available vehicles, it is necessary to connect the SUBARU Select Monitor (SSM) to the data link connector in order to check the DTC.
- To provide various functions and to facilitate fault isolation, a diagnosis system compatible with the SSM is used.
- The on-board diagnostics system detects the following electrical system faults or abnormalities in the system.

ATF temperature sensor 1, 2	Inhibitor switch
Turbine speed sensor 1, 2	CAN communication system
Front and rear wheel speed sensors	Interlock decision
Lockup solenoid (circuit, function)	1st engine brake abnormal
Line pressure solenoid (circuit)	Range lock solenoid (circuit)
Front brake solenoid (circuit, function)	PN signal output
Input clutch solenoid (circuit, function)	PVign power circuit (PVign relay)
High and low reverse clutch solenoid (circuit, function)	Backup light relay output circuit
Direct clutch solenoid (circuit, function)	TCM data communication abnormal
Low coast brake solenoid (circuit, function)	Lateral G sensor
Transfer solenoid (circuit)	Brake switch
Front brake hydraulic switch	Sports mode switch
Input clutch hydraulic switch	Engine speed signal
High and low reverse clutch hydraulic switch	1, 2, 3, 4, 5, R gear ratios
Direct clutch hydraulic switch	

If a fault is detected, the system tells the fault by causing the SPORTS indicator light to blink.

## B: OPERATION OF SPORTS INDICATOR LIGHT

On starting the engine, the SPORTS indicator light illuminates for bulb check and then goes out as shown in the Normal diagram below. If any problem exists, the light continues flashing as shown in the Abnormal diagram below.

(A) When normal

(B) Abnormal

(1) Engine cranking

(2) Abnormality detected

(3) 2 seconds

(4) 0.25 seconds

AT-02194

### 18.Fail-safe Function

- Front and rear vehicle speed sensors, rear wheel speed sensor abnormal

If a fault is detected in either or both of the front vehicle speed sensor and rear vehicle speed sensor, the vehicle speed information received from the ABS unit via CAN communication is substituted for control. This enables normal quality shifting.

- Inhibitor switch abnormal

If an input of other than the specified pattern is entered to the TCM, the select position indicator lights in the combination meter are turned off, the starter is disabled, the reverse light is disabled, the transmission is fixed in D range, and manual mode is inhibited.

- PN signal abnormal

The output is turned OFF (starter inhibited) if an abnormality is detected in the PN signal output. However, if the ECM is receiving range signals through the backup of CAN communication, the starter can be used in P and N ranges.

- AT interlock decision

If an AT interlock decision is made, the vehicle's minimum mobility is maintained by fixing the transmission in 2nd, 4th or 5th speeds in accordance with the engaging pattern detected by the hydraulic switch. Relation between the hydraulic switch detection pattern and fixed gear speeds are as shown in the following table.

- Engine braking in 1st abnormal decision

If 1st engine braking abnormal decision is made, the low coast brake solenoid is deactivated to cancel the engine braking effect.

- Line pressure solenoid abnormal

The solenoid is deactivated and the line pressure set at maximum, 5th speed is inhibited. Except for this, the system is controlled normally.

- Lockup solenoid abnormal

The solenoid is deactivated and lockup is inhibited.

- Low coast brake solenoid abnormal

If the solenoid is failed and stuck in its ON state (electrically or mechanically) the transmission is fixed in 2nd speed, and when the solenoid is failed and stuck in its OFF state (electrically or mechanically) the solenoid is constantly turned OFF. (Engine braking is made not available in 1st and 2nd speeds.)

- Input clutch solenoid abnormal

If the solenoid is failed and stuck in its ON or OFF state (electrically or mechanically) the transmission is fixed in 4th speed to maintain mobility.

- Direct clutch solenoid abnormal

If the solenoid is failed and stuck in its ON or OFF state (electrically or mechanically) the transmission is fixed in 4th speed to maintain mobility.

- Front brake solenoid abnormal

If the solenoid is failed and stuck in its ON state (electrically or mechanically) the transmission is fixed in 5th speed, and when the solenoid is failed and stuck in its OFF state (electrically or mechanically) the transmission is fixed in 4th speed to maintain mobility.

- High and low reverse clutch solenoid abnormal

If the solenoid is failed and stuck in its ON or OFF state (electrically or mechanically) the transmission is fixed in 4th speed to maintain mobility.

# FAIL-SAFE FUNCTION

AUTOMATIC TRANSMISSION

- Transfer clutch solenoid abnormal

If the solenoid is failed and stuck in its ON or OFF state, the transfer solenoid output is constantly turned OFF.

- Turbine sensor 1, 2 abnormal

Shifting control is performed without using turbine sensor values to maintain minimum mobility. 5th speed and manual mode are inhibited.

- TCM data communication abnormal

If communication with the memory box on the control valves fails, backup values stored in the TCM are used for controlling the solenoids.

- CAN communication abnormal

If an abnormality occurs in CAN communication, data received via CAN communication are fixed to preset values to perform shift control and maintain minimum mobility. Lockup and manual mode are inhibited.

# TRANSMISSION MOUNTING

AUTOMATIC TRANSMISSION

---

## 19. Transmission Mounting

### A: GENERAL

The transmission mounting consists of a pitching stopper, cushion rubber, and a cross member.

In addition to support the transmission, these components absorb noise and vibration caused by the transmission.

AT-00438

- (1) Pitching stopper
- (2) Cushion rubber
- (3) Cross member

# GENERAL

AUTOMATIC TRANSMISSION (FROM '08MY)

---

## 1. General

### A: GENERAL

In purpose of improving shifting quality, driving performance and fuel efficiency, we have developed 5-speed automatic transmission mainly with new hydraulic control and electronic control systems. This automatic transmission features the following:

### B: NEW STRUCTURE

- Low coast brake and forward one-way clutch are eliminated to reduce friction torque.
- Torque converter structure is modified to improve acceleration performance for more linearity.
- Control valve structure is modified to reduce drive torque and weight.

### C: MODIFICATIONS FOR DRIVING PERFORMANCE IMPROVEMENT

#### 1. SHIFTING PERFORMANCE IMPROVEMENT

- Structure change of control valve has realized highly accurate and responsive control system.
- Blipping control is employed to provide automatic switching of shift schedule and active shifting control in manual mode.
- A new control system is applied so that operating the paddle switch up ⇔ down while driving in D range enables manual shifting and automatically returns to normal automatic shifting under certain conditions. (models with paddle switch)

### D: MODIFICATIONS FOR FUEL EFFICIENCY IMPROVEMENT

#### 1. EFFICIENCY IMPROVEMENT

- Low coast brake and forward one-way clutch are eliminated to reduce friction on gear train.
- Slip lock-up range is expanded.

#### 2. WEIGHT SAVING

- Low coast brake and forward one-way clutch are eliminated.
- Control valve is changed to two-layer type.

### E: UNCHANGED MECHANISM

The following mechanisms are unchanged from the former systems:

- Oil pump
- Front brake
- Input clutch
- Direct clutch
- High & low reverse clutch
- Reverse brake
- AWD transfer system
- Transmission mount
- Transfer

# CONTROL VALVE

AUTOMATIC TRANSMISSION (FROM '08MY)

## 10. Control Valve

### A: GENERAL

The control system of automatic transmission consists of oil pump, valve body containing valves, clutches and fluid passages. The system is operated by both driver's input and electrical input from TCM.

### B: FUNCTION

Name	Function
Primary regulator valve	Regulates the pressure of oil discharged from the oil pump to the optimum pressure (line pressure) depending on the driving condition.
Front brake control valve	During front brake engagement, regulates the line pressure to the optimum level (front brake pressure) and supplies to front brake. (Regulates the clutch pressure at 1st, 2nd, 3rd and 5th speed)
Modulator valve 1	Regulates the line pressure to create a certain pressure (pilot pressure) required for line pressure control, shifting control and lock-up control.
Modulator valve 2	Regulates the line pressure to create a certain pressure (pilot pressure) required for shifting control.
Forward brake control valve	During forward brake engagement, regulates the line pressure to the optimum level (forward brake pressure) and supplies to forward brake.
High & low reverse clutch control valve	During high & low reverse clutch engagement, regulates the line pressure to the optimum level (high & low reverse clutch) and supplies to high & low reverse clutch. (Regulates the clutch pressure at 1st, 3rd, 4th and 5th speed)
Input clutch control valve	During input clutch engagement, regulates the line pressure to the optimum level (input clutch pressure) and supplies to input clutch. (Regulates the clutch pressure at 4th and 5th speed)
Direct clutch control valve	During direct clutch engagement, regulates the line pressure to the optimum level (direct clutch pressure) and supplies to direct clutch. (Regulates the clutch pressure at 2nd, 3rd and 4th speed)
Transfer clutch control valve	Regulates the line pressure to the optimum level (transfer clutch pressure) and supplies to transfer clutch.
Lock-up control valve	Switches lock-up function between operation and release. Also provides smooth lock-up by continuously performing the lock-up operation.
Oil cooler bypass valve	Bypasses redundant oil of the cooler circuit without sending it.
Line pressure relief valve	Discharges redundant oil of the line pressure circuit.
Manual valve	Distributes the line pressure to each circuit in accordance with each selector position. For the circuits where no line pressure is distributed, drain occurs.
Front brake oil pressure switch	Detects problems in front brake oil pressure and switches to the fail safe mode if a problem is detected.
Forward brake oil pressure switch	Detects problems in forward brake oil pressure and switches to the fail safe mode if a problem is detected.
Input clutch oil pressure switch	Detects problems in input clutch oil pressure and switches to the fail safe mode if a problem is detected.
Direct clutch oil pressure switch	Detects problems in direct clutch oil pressure and switches to the fail safe mode if a problem is detected.
High & low reverse clutch oil pressure switch	Detects problems in high & low reverse clutch oil pressure and switches to the fail safe mode if a problem is detected.

# **AWD TRANSFER SYSTEM**

AUTOMATIC TRANSMISSION (FROM '08MY)

---

## **12.AWD Transfer System**

### **A: GENERAL**

Same mechanism as the existing model.

## 13. Electronic Hydraulic Control System

### A: GENERAL

The electronic hydraulic control system for transmission and transfer consists of various sensors, switches, TCM and control valve containing solenoid valves. This system controls shifting, lock-up clutch operation, line pressure and automatic transmission operation including shift timing. This also controls transfer clutch operation. TCM judges vehicle driving status based on various types of input signals and controls a total of eight solenoids (front brake solenoid, forward brake solenoid, input clutch solenoid, high & low reverse clutch solenoid, direct clutch solenoid, lock-up solenoid, line pressure solenoid and transfer solenoid) by sending appropriate signals.

AT-04727

# ELECTRONIC HYDRAULIC CONTROL SYSTEM

AUTOMATIC TRANSMISSION (FROM '08MY)

## B: CONTROL ITEMS

Control items		Control details	
Transmission hydraulic control	Shifting control	Shift pattern selection	Based on the shift pattern selected by input from switches in each range, upshift and downshift points are set according to accelerator pedal opening angle and vehicle speed. (Refer to "Transmission Control Module (TCM)" in <Ref. to 5AT-33, Transmission Control Module (TCM).>.)
		Linear solenoid control for each shift clutch	Directly controls the linear solenoid for each shift clutch according to target gear range. The control values are constantly corrected by learning control and real-time feedback, contributing shifting quality improvement and prevention of quality aging.
		Engine brake control	In manual mode, controls high & low reverse clutch solenoid so that engine brake is applied at 1st speed.
	Lock-up control	Basic lock-up control	Based on the shift pattern selected by input from switches in each range, lock-up engagement and release points are set according to accelerator pedal opening angle and vehicle speed. In accordance with these points, the lock-up solenoid is controlled to engage and release the lock-up clutch in torque converter.
		Smooth control	In lock-up clutch engagement, gradually changes pressure to provide smooth engagement.
	Line pressure control		Controls the line pressure in accordance with the input torque, front vehicle speed signal, rear vehicle speed signal and gear range.
AWD center differential control	Normal transfer control	Torque sensitive control	Adjusts the multi-plate clutch (LSD) pressure according to torque input to the transfer.
		Control for turning	Adjusts the LSD pressure based on the steering angle and vehicle speed.
		Slip control	LSD pressure increases if front or rear wheels start to slip.
	Cooperation control	Control during ABS operation	LSD pressure is adjusted to the set value during ABS operation.
		Control during braking	LSD pressure is adjusted to the set value while the brake switch is ON with the throttle valve fully closed.
		Control during VDC and TCS operation	LSD pressure is adjusted to the set value during VDC and TCS operation.

# ELECTRONIC HYDRAULIC CONTROL SYSTEM

AUTOMATIC TRANSMISSION (FROM '08MY)

## C: TRANSMISSION SHIFTING HYDRAULIC CONTROL

- Linear solenoid control for each shift clutch

Directly controls the linear solenoid for each shift clutch with electric current according to target gear range. The control current values are constantly corrected by learning control and real-time feedback control, contributing shifting quality improvement and prevention of quality aging.

- Engine brake control

In manual mode, controls high & low reverse clutch solenoid so that engine brake is applied at 1st speed.

## D: LOCK-UP CONTROL

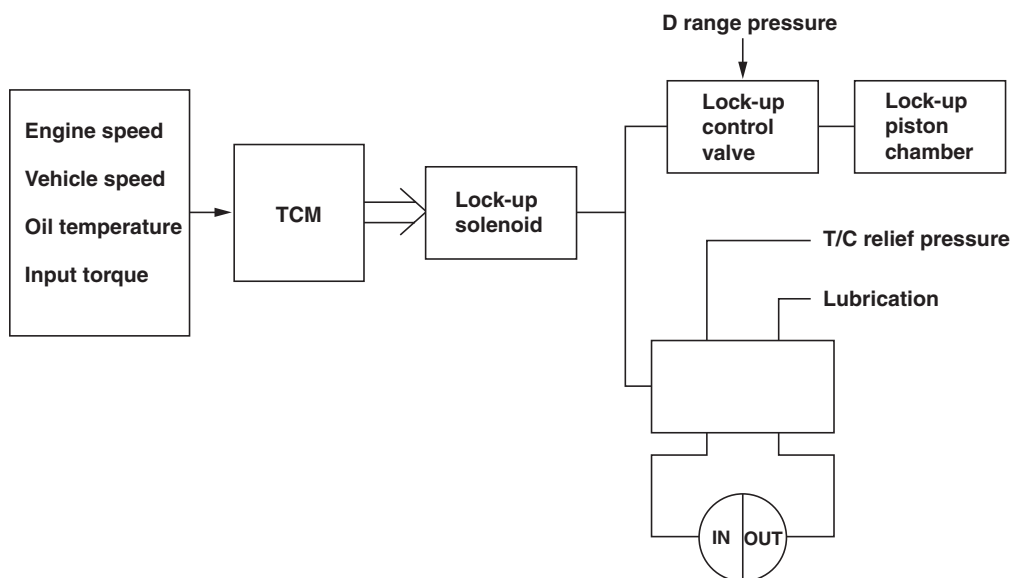

- Engages lock-up clutch in torque converter to prevent torque converter slippage and improve transmission efficiency.

- Upon receipt of signals from TCM, controls lock-up solenoid to operate lock-up control valve, adjusts the application pressure and release pressure, and changes the engaging force of lock-up clutch.

### Lock-up operation conditions

Select lever	Gear position	Slip lock-up	Full lock-up
D range Manual mode	2	○	△
	3	○	△
	4	○	○
	5	○	○

△: Full lock-up occurs when high ATF oil temperature is determined.

AT-01623

# ELECTRONIC HYDRAULIC CONTROL SYSTEM

AUTOMATIC TRANSMISSION (FROM '08MY)

## E: LINE PRESSURE CONTROL

When torque signal equivalent to engine driving force is sent from ECM to TCM, TCM controls the line pressure solenoid. By using the line pressure solenoid pressure as the signal pressure, controls the primary regulator valve and adjusts the pressure of ATF discharged from oil pump to the optimum level depending on the driving condition.

AT-01624

Maximum value of the calculated four values of required line pressure is set as the line pressure.

No.	Control details
1. Required line pressure for lubrication	The line pressure is calculated based on the input torque and gear range.
2. Required line pressure for shift clutch	The line pressure is calculated based on the input torque, front vehicle speed signal, rear vehicle speed signal and gear range.
3. Required line pressure for multi-plate clutch controlled by AWD	The line pressure required for the multi-plate clutch (LSD) is calculated.
4. Required line pressure for lock-up clutch	The line pressure required for the lock-up clutch is calculated.

## 14.Sensors

### A: REAR VEHICLE SPEED SENSOR

This vehicle speed sensor uses the hall element type sensor and is installed on the outside of extension case. This sensor detects the rear wheel speed based on the circumferential speed of rear drive shaft and sends pulse signal (22 pulses per one turn) to TCM.

AT-04734

(1) Rear vehicle speed sensor

### B: FRONT VEHICLE SPEED SENSOR

This vehicle speed sensor uses the hall element type sensor and is installed on the inside of transmission case. This sensor detects the drive pinion shaft speed and sends pulse signal (41 pulses per one turn) to TCM.

The vehicle speed for control is calculated from the signals of front vehicle speed sensor and rear speed vehicle sensor and is used for shifting control.

AT-04733

(1) Front vehicle speed sensor

### C: ATF TEMPERATURE SENSOR

This temperature sensor uses thermistor and is installed on the control valve body. The ATF temperature sensor detects the ATF temperature and outputs it as electrical resistance signal.

AT-04735

(1) ATF temperature sensor

### D: TURBINE SPEED SENSOR 1 AND 2

This speed sensor uses the hall element type sensor. The turbine speed sensor 1 detects the front sun gear speed, the turbine speed sensor 2 detects the front carrier speed, and then both send pulse signal (60 pulses per one turn) to TCM. From these two speed values, turbine speed is calculated and is used for shifting control.

AT-01559

AT-04736

(1) Turbine speed sensor 1  
(2) Turbine speed sensor 2

# SENSORS

## AUTOMATIC TRANSMISSION (FROM '08MY)

### E: INHIBITOR SWITCH

The inhibitor switch is installed in the control valve. TCM detects the range position based on the ON/OFF signal of each range output by the inhibitor switch, and performs various controls. The following list shows the inhibitor switch signal (INH1 — 4) and range position patterns.

	INH1	INH2	INH3	INH4
P	○			○
R		○		
N			○	○
D	○	○	○	

○ : Inhibitor switch ON

If the range position is judged as P or N, TCM outputs the signal (PN signal) to permit starter drive. In R or D range, starter drive is inhibited to ensure safety.

In addition, if the position is judged as R range, TCM turns back lamp relay output to ON and turns the back lamp on.

AT-04737

(1) Inhibitor switch

### F: LINE PRESSURE SOLENOID

The line pressure solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This controls the pressure modifier valve and accumulator control valve A and adjusts the line pressure to the optimum level in accordance with the driving condition.

AT-04744

(1) Line pressure solenoid

### G: LOCK-UP SOLENOID

The lock-up solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This controls lock-up control valve, enabling smooth engagement and release. Real-time feedback enables stable control of slip lock-up.

(1) Lock-up solenoid

### H: FRONT BRAKE SOLENOID

The front brake solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This solenoid is driven when the front brake is operated. The indicator current values are constantly corrected by learning control and real-time feedback, contributing shifting quality improvement and prevention of quality aging.

(1) Front brake solenoid

### I: INPUT CLUTCH SOLENOID

The input clutch solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This solenoid is driven when the input clutch is operated. The indicator current values are constantly corrected by learning control and real-time feedback, contributing shifting quality improvement and prevention of quality aging.

(1) Input clutch solenoid

### J: DIRECT CLUTCH SOLENOID

The direct clutch solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This solenoid is driven when the direct clutch is operated. The indicator current values are constantly corrected by learning control and real-time feedback, contributing shifting quality improvement and prevention of quality aging. Direct clutch pressure can be switched between two types of range pressure with the direct clutch piston switch valve.

(1) Direct clutch solenoid

# SENSORS

AUTOMATIC TRANSMISSION (FROM '08MY)

## K: HIGH & LOW REVERSE CLUTCH SOLENOID

The high & low reverse clutch solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This solenoid is driven when the high & low reverse clutch is operated. The indicator current values are constantly corrected by learning control and real-time feedback, contributing shifting quality improvement and prevention of quality aging.

(1) High & low reverse clutch solenoid

## M: TRANSFER SOLENOID

The transfer solenoid is installed on the control valve and is directly controlled by indicator current from TCM. This engages/releases the transfer clutch, enabling optimum AWD control depending on changes in road surface.

(1) Transfer solenoid

## L: FORWARD BRAKE SOLENOID

The forward brake solenoid is installed on the control valve and is operated by ON/OFF instructions from TCM. This solenoid is driven when the forward brake is engaged during engine brake operation at 1st or 2nd speed in manual mode.

(1) Forward brake solenoid

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION (FROM '08MY)

## 15. Transmission Control Module (TCM)

### A: GENERAL

TCM receives signal from various sensors and judges the vehicle driving status. TCM then sends control signal to each solenoid according to preset shifting characteristics data, lock-up operation data and transfer clutch torque data.

## C: SCHEMATIC DIAGRAM

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION (FROM '08MY)

---

## **D: SHIFTING CONTROL**

### **1. NORMAL SHIFTING CONTROL**

Based on the input signal information such as inhibitor switch, vehicle speed and accelerator pedal opening angle, TCM controls each solenoid and automatically shifts to an appropriate gear position according to the shift schedule.

### **2. ENGINE COOPERATION CONTROL**

When shifting, TCM outputs torque down request signal. Receiving the signal, ECM retards the ignition timing of each cylinder to temporarily reduce the torque developed by the engine. In synchronization with this control, TCM constantly monitors the shifting status using the vehicle speed sensor and turbine sensor, and performs feedback control to obtain optimum shifting. This control enables smooth and comfortable shifting under any conditions.

### **3. CONTROL AT HIGH OIL TEMPERATURE**

When ATF oil temperature is extremely high, the shift schedule is automatically changed so that temperature rise is minimized.

### **4. CONTROL AT LOW ATF OIL TEMPERATURE OR LOW ENGINE COOLANT TEMPERATURE**

When ATF oil temperature or engine coolant temperature is extremely low, at engine start for example, the shift schedule is automatically changed to actively raise the oil temperature.

## E: SHIFT PATTERN SELECTION

### 1. SI-DRIVE CONTROL

By changing the SI-DRIVE mode switch while driving in D range, shift control can be switched among three types according to each engine characteristics.

#### 1. I mode

When I mode engine characteristics is employed, shifting is performed at the optimum point to realize low fuel consumption. Compared to S and S# mode, slip lock-up range and full lock-up range are expanded.

#### 2. S mode

When S mode engine characteristics is employed, shifting characteristics is applied so that linear acceleration can be obtained and the acceleration is even in any vehicle speed range.

#### 3. S# mode

When S# mode engine characteristics is employed, shift timing is intended for higher speed than that of S mode and is set so that full engine performance can be obtained to provide driving with great response. In addition, adaptive control is operated more actively compared to I mode or S mode to realize sportier driving performance.

### 2. MANUAL MODE CONTROL

By operating the manual mode switch to ON (tilting the shift lever to the left) in D range, the mode shifts to the manual mode and the combination meter indicates the current gear range and permission for upshift and downshift.

[+] operation of shift lever or paddle causes upshift and [-] operation causes downshift; and the shift is held in the selected gear range while driving.

- Upshift prohibition and auto downshift control

“▲” mark next to the SPORT indicator indicates permission for upshift, with which upshift occurs by each [+] operation. However, when the current vehicle speed is too low for higher gear range, “▲” mark lights off, prohibiting further upshift.

If the vehicle speed level becomes too low for the current gear range, the gear automatically shifts down to prevent engine stall. When the vehicle stops, the gear always downshifts to 1st except when the vehicle is in the 2nd hold control mode.

- Downshift prohibition control

“▼” mark next to the SPORT indicator indicates permission for downshift, with which downshift occurs by each [-] operation. However, when the current vehicle speed is too high for lower gear range, “▼” mark lights off, prohibiting further downshift. In this case, if downshift operation occurs, the alarm beeps to warn the driver.

When ATF oil temperature is extremely low, for instance, immediately after engine start in winter, upshift to 5th is prohibited to promote warm-up.

- Engine over speed preventive control

If the engine speed exceeds the specified level during acceleration in manual mode, the gear automatically shifts up to prevent engine over speed.

### 3. 2nd HOLD CONTROL (IN MANUAL MODE)

Starting vehicle with 2nd gear on slippery road surface has been enabled.

This condition continues unless

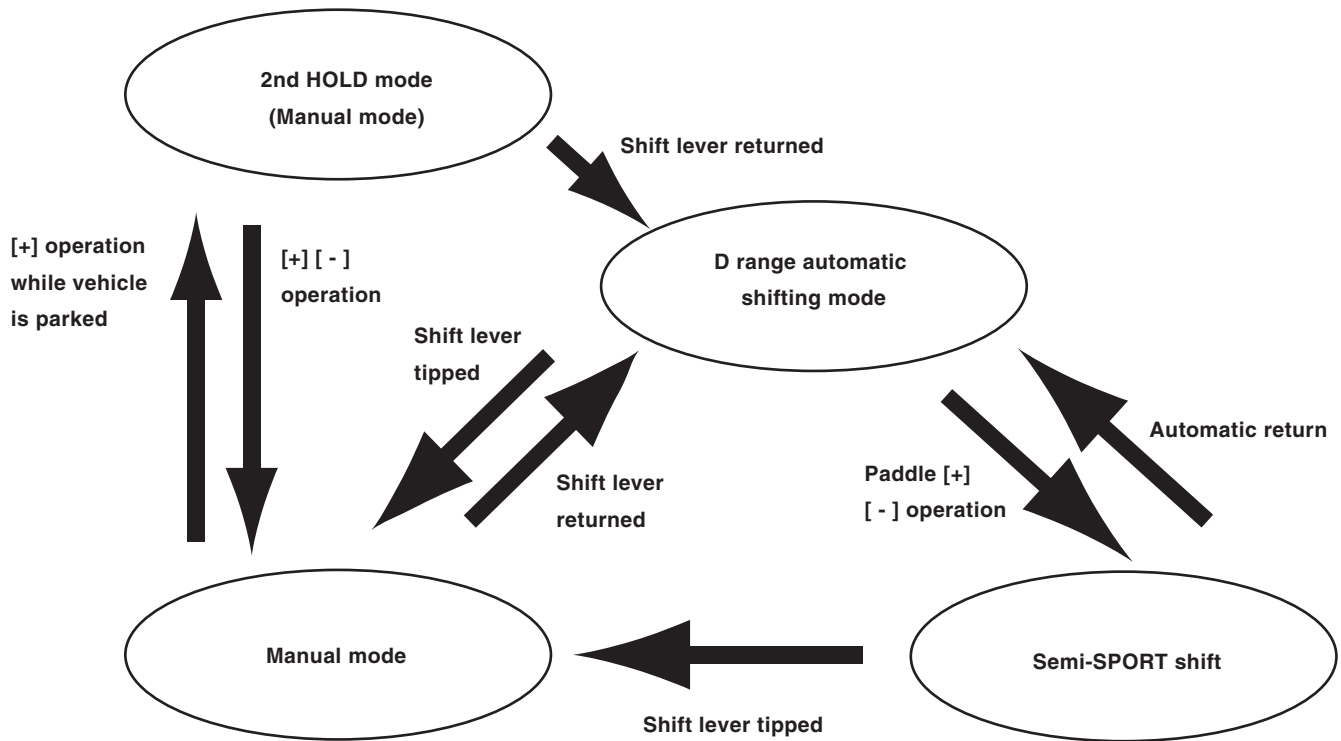

- 1) the manual mode is off,
  - 2) [+] or [-] switch is operated again, or
  - 3) engine over speed preventive control is operated,
- and 2nd gear is maintained while vehicle is stopped.

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION (FROM '08MY)

## 4. SEMI SPORT SHIFT CONTROL (MODELS WITH PADDLE SHIFT)

Operation of [+] and [-] switches on the paddle in D range can temporarily shift the mode to manual mode, enabling gear shifting with manual operation using paddles. This mode is cancelled under the specified conditions such as linear acceleration status, and the vehicle is automatically returns to D range automatic shifting mode. When ATF oil temperature is extremely high, the semi manual mode is prohibited.

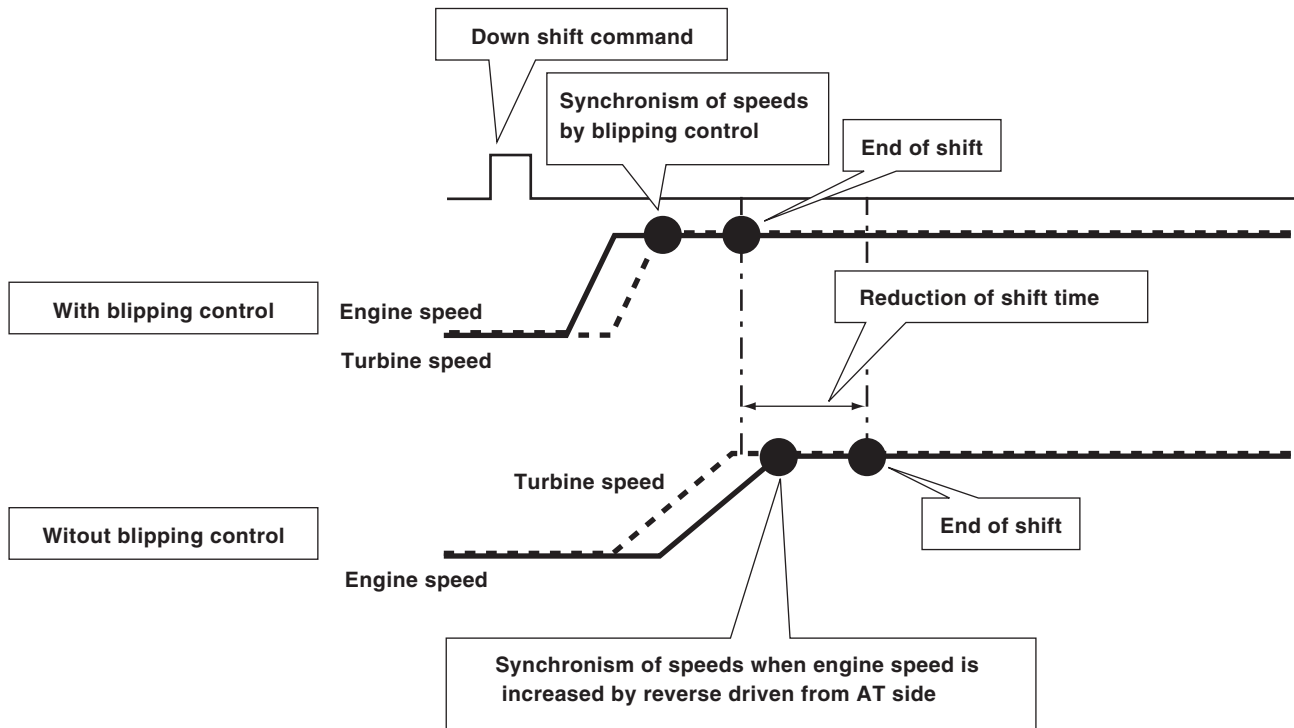

AT-04729

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION (FROM '08MY)

## 5. BLIPPING CONTROL

Under the manual mode or semi SPORT shift mode control, if the gear is shifted down manually at a certain vehicle speed or higher with fully closed accelerator, engine speed automatically increases to be close to the level after shifting, which improves shifting response and shifting quality.

AT-04731

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION (FROM '08MY)

## 6. ADAPTIVE CONTROL

- Uphill/downhill control

Based on the vehicle speed and accelerator opening angle, excess driving force is judged from engine output and acceleration while the road gradient is estimated, in order to select optimum gear range as needed and reduce unnecessary shifting.

AT-04850

- Control during sudden release of accelerator pedal

When accelerator pedal is suddenly released, TCM judges the driver's intention for deceleration and temporarily prohibits shift-up to hold the current gear position in order to ensure engine brake operation.

- Control during braking

Operation frequency of this function in S# mode is higher than that in S mode.

The gear range is held (restraining upshift) or shifted down depending on the driving condition and braking force (deceleration), in order to ensure engine brake operation and driving force for re-acceleration.

- Control during cornering

Operation frequency of this function is as follows: S# > S > I.

Based on the cornering driving judgement from the driving condition and vehicle acceleration (longitudinal and lateral acceleration), unnecessary shift-up is restrained to ensure stable driving force and turning performance.

Control items	Mode	Supporting model
Control during sudden release of accelerator pedal	SI-DRIVE S# mode	Models with SI-DRIVE
	Normal mode	Models with manual mode
	Manual mode	Models with manual mode
Control during braking	SI-DRIVE S# mode	Models with SI-DRIVE
	Normal mode	Models with manual mode
	Manual mode	Models with manual mode
Control during cornering	All modes	Models with SI-DRIVE
		Models with manual mode

## 7. VARIOUS INDICATORS ILLUMINATION CONTROL

Illumination of indicators on the combination meter are controlled as shown below according to shift pattern change.

Condition	Display	
	Arrow mark	7-segment
P, R, N range		P, R, N
Normal D range		D
Manual mode Semi SPORT shift		1 — 5
Engine oil high temperature & engine high speed key		—
At transmission failure		—

▲ and ▼ indicate illumination.

ATF high temperature is informed by illuminating “ATF TEMP”.

# TRANSMISSION CONTROL MODULE (TCM)

AUTOMATIC TRANSMISSION (FROM '08MY)

---

## F: LEARNING CONTROL

- Transmission shifting hydraulic learning control

Online learning control performance has been improved to absorb variation from vehicle to vehicle and quality aging and to ensure constant high shifting quality.

Learning occurs at each normal shifting under certain conditions, and learned values are saved in the flash ROM. The learned values are not deleted even if power is turned to OFF (even if the battery ground terminal is disconnected).

- Initial learning

The system in which measured data of predetermined driving operations for learning is set to TCM as the initial value is employed to assure high shifting quality from immediately after completion of vehicle. This system does not require the memory box that has been located on the control valve, contributing to cost reduction.

## G: AWD CENTER DIFFERENTIAL CONTROL

Control overview

Connection of multi-plate clutch (LSD) of center differential is controlled according to torque input to the transfer.

### 1. NORMAL CONTROL

During normal driving, connecting force of multi-plate clutch (LSD) is determined from the calculation results of the following controls:

- Torque sensitive control

Calculates connecting force of LSD according to torque input to the transfer.

- Control for turning

Calculates reduction in connecting force of LSD based on the steering angle and vehicle speed.

This function improves turning performance within the specific vehicle speed range.

- Control for slip

When the front or rear tires begin to slip, calculates the increase in connecting force of LSD according to the amount and time of the slip.

This function maintains road contact, improving drivability.

### 2. COOPERATION CONTROL

In this control, connecting force of LSD is determined in prior to normal control.

A. Control during ABS operation

During ABS operation, adjusts connecting force of LSD to the specified level. This function improves ABS control.

B. Control during braking

Adjusts connecting force of LSD to the specified level while the brake switch is ON with the throttle valve fully closed. This function improves stability during braking.

C. Control during VDC and TCS operation

During VDC and TCS operation, adjusts connecting force of LSD to the specified level. This function improves VDC and TCS control.

The priority is as follows: A > B > C.

# ON-BOARD DIAGNOSTIC SYSTEM

AUTOMATIC TRANSMISSION (FROM '08MY)

## 16. On-board Diagnostic System

### A: FUNCTION

- The on-board diagnostic system detects malfunction and generates and displays the codes corresponding to the location of each malfunction. The malfunction indicator light (AT OIL TEMP light) on the combination meter blinks to indicate occurrence of a failure or error.
- If the malfunction indicator light lights up as a result of TCM detecting a malfunction, the diagnostic trouble code (DTC) corresponding to the malfunction is stored in TCM.
- When checking DTC on the models supporting OBD-II, it is required to connect Subaru Select Monitor (SSM) to data link connector.
- To facilitate each function and failure diagnosis, a diagnostic system that supports SSM is used.
- The on-board diagnostic system detects electrical failures or system errors as shown below.

Front brake oil pressure switch	Front and rear wheel speed sensor
Input clutch oil pressure switch	Turbine speed sensor 1 and 2
Forward brake oil pressure switch	Brake signal
Direct clutch oil pressure switch	ATF temperature sensor
High & low reverse clutch oil pressure switch	Lateral G sensor
Line pressure solenoid (circuit)	CAN communication system
Transfer solenoid (circuit)	SPORT shift mode switch
Lock-up solenoid (circuit, function)	Range switch system
Front brake solenoid (circuit, function)	Back lamp relay output circuit
Input clutch solenoid (circuit, function)	PN signal output circuit
Forward brake solenoid (circuit, function)	Reverse inhibitor circuit
Direct clutch solenoid (circuit, function)	1, 2, 3, 4, 5, R gear ratio
High & low reverse clutch solenoid (circuit, function)	

If a malfunction is detected, the system notifies the malfunction by blinking the AT OIL TEMP light.

# ON-BOARD DIAGNOSTIC SYSTEM

AUTOMATIC TRANSMISSION (FROM '08MY)

## B: OPERATION OF AT OIL TEMP LIGHT

At engine start, the AT OIL TEMP light illuminates to prove out and then turns off, as shown in “Normal operation” in the figure below. If some malfunction has occurred, the light keeps blinking as shown in “Abnormal operation” in the figure below.

AT-02194

(A) Normal operation

(B) Abnormal operation

(1) Engine start

(3) 2 seconds

(4) 0.25 seconds

(2) Malfunction detected

# FAIL-SAFE FUNCTION

AUTOMATIC TRANSMISSION (FROM '08MY)

## 17.Fail-safe Function

### A: SENSOR FAILURE

If a failure is detected on either or both of turbine speed sensor 1 and 2 installed on the transmission, the gear is fixed in 4th to ensure minimum drivability.

### B: FRONT SUN GEAR OVER-SPEED FAILURE

If an over-speed failure is detected on the front sun gear in the transmission, the gear is shifted to neutral and the vehicle stops. Then the gear is fixed in 2nd from vehicle start.

### C: SOLENOID ELECTRICAL FAILURE

If the solenoid status is fixed to constantly energized or de-energized status due to an electrical failure, the gear is shifted depending on the failed solenoid and its status, and then the gear range is fixed. The table below shows the relation of faulty parts and fixed gear range.

Faulty part	Failure status	Gear range at failure occurrence	Fail-safe gear range	
Front brake	Constantly energized	3rd or lower	3rd	
		4th	N → 3rd	
		5th	Temp 5th → 3rd	
	Constantly de-energized	4th or lower	4th	
		5th	N → 4th	
Input clutch	Constantly energized	3rd or lower	3rd	
		4th or upper	N → 3rd	
	Constantly de-energized	4th or lower	4th	
		5th	N → 4th	
High & low reverse clutch	Constantly energized	2nd or lower	2nd	
		3rd or upper	N → 2nd	
	Constantly de-energized	4th or lower	4th	
		5th	N → 4th	
Direct clutch	Constantly energized	All	5th	
	Constantly de-energized	4th or lower	4th	
		5th	N → 4th	
Forward brake	Constantly energized	2nd or lower	2nd	
		3rd or upper	N → 2nd	
	Constantly de-energized	4th or lower	4th	
		5th	N → 4th	

#### NOTE:

- “→” indicates the gear range after vehicle stop.
- “Temp 5th” refers to keeping 5th until vehicle stop.

# FAIL-SAFE FUNCTION

AUTOMATIC TRANSMISSION (FROM '08MY)

## D: HYDRAULIC FUNCTIONAL FAILURE

When a hydraulic functional failure is detected, the gear is shifted depending on the relation of faulty part and gear position at failure detection in order to ensure minimum drivability. The table below shows the relation of faulty parts and fixed gear range.

		Gear position at failure detection				
		1st	2nd	3rd	4th	5th
Faulty part	Front brake	1	N → 1	N → 1	N → 1	N → 1
	Input clutch	4	4	4	N → 1	N → 1
	High & low reverse clutch	1	N → 1	N → 1	N → 1	N → 1
	Direct clutch	2	N → 1	N → 1	N → 1	N → 4
	Forward brake	4	3	N → 2	N → 2	N → 2

NOTE:

“→” indicates the gear range after vehicle stop.

## E: RANGE SW ERROR

When a range SW error is detected, the gear is shifted to any of 1st, 3rd and 5th depending on the gear range before failure. If ignition is turned to OFF while a range SW error is detected, hydraulic control is electrically set to neutral after engine start until a range is selected.

## F: LINE PRESSURE SOLENOID ERROR

When the line pressure solenoid has an error, the solenoid is turned to OFF to maximize the line pressure. Otherwise, normal control is performed.

## G: LOCK-UP SOLENOID ERROR

When the lock-up solenoid has an error, the lock-up solenoid is constantly set to OFF (lock-up released).

## H: TRANSFER CLUTCH SOLENOID ERROR

When a solenoid ON/OFF error is detected, the transfer solenoid is constantly set to OFF (LSD released).

## I: CAN COMMUNICATION ERROR

When CAN communication has an error, the data received by CAN is fixed to the specified value to perform shifting control and to ensure minimum drivability.

## 18. Transmission Mount

### A: GENERAL

Same mechanism as the existing model.

# 5MT GEAR SHIFT LEVER

CONTROL SYSTEM

---

## 1. 5MT Gear Shift Lever

The manual transmission's gear shift lever system is a parallel link type whose stay is mounted through a cushion rubber.

CS-00342

- |                    |               |
|--------------------|---------------|

| (2) Lever          | (6) Bushing B |
| (3) Cushion rubber | (7) Joint     |
| (4) Boot           | (8) Rod       |

### 1. General

The manual transmission is of a full-time all-wheel-drive design integrating a transmission assembly, front differential, and transfer gear assembly with center differential into a single unit. The transmission has five forward speeds and one reverse speed, and all gears are provided with inertia lock type synchronizers.

The transmission and front differential are housed in an aluminum case, which is split into right and left halves and constitutes also a clutch housing. Located at the rear and joined each other are the transfer case and extension case which house the transfer gears and center differential as well as part of the transmission assembly.

The major features of the transmission are as follows:

- The forward speed gears are helical gears featuring high tooth face strength, large tooth contact areas, and quiet operation.
- Reversing rotation is achieved by making a slidable reverse idler gear engage with both the reverse drive gear on the main shaft and the reverse driven gear integral with the 1st-2nd synchronizer hub on the drive pinion shaft.
- The center differential compensates for the difference in front and rear axle speeds. It consists of a bevel gear set and a viscous coupling located at its rear end, which are housed in a single case. The center differential, together with a pair of transfer gears, transmits the power from the transmission to the drive pinion shaft (front wheel drive shaft) and the propeller shaft. The viscous coupling functions as a differential-action-limiting element.

# GEARSHIFT MECHANISM

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

### 2. Gearshift Mechanism

#### A: CONSTRUCTION

- Helical gears are used for forward speed gears. Reverse speed is achieved by making the drive gear to mesh with the main shaft while making the driven gear and reverse idler gear to mesh with the 1st-2nd synchronizer sleeve of the drive pinion, in order to reverse the rotating direction.
- The synchromesh mechanism for 1st and 2nd speeds are placed at the drive pinion side, while the mechanism for 3rd, 4th, 5th and reverse speeds are placed at the main shaft side.
- On non-turbo models, a double cone synchromesh mechanism is used for 2nd and 3rd speed gears.
- On turbo models, a double cone synchromesh mechanism is used for 1st, 2nd and 3rd speed gears.

# REVERSE CHECK MECHANISM

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

### 3. Reverse Check Mechanism

Located in the transfer case, the reverse check mechanism prevents a direct 5th-to-reverse shift by using a selector arm and cam combination, which allows the gear to be shifted into the reverse only after it has been returned once to neutral.

#### A: CONSTRUCTION

The construction of the reverse check mechanism is as shown in the drawing on the opposing page. The reverse check sleeve is bolted to the transfer case and houses the mechanism main components.

The reverse accent shaft is slidable inside the reverse check sleeve and its smaller-diameter end is fitted with the reverse check cam. The cam can rotate and move axially on the shaft but its leftward movement is restricted by a step formed on the sleeve inner wall.

The reverse accent shaft has hollows in both ends. In the left end hollow are the 1st return spring and its cap and in the right end hollow is the reverse return spring, which pushes the shaft leftward.

Around the check cam is the reverse check spring whose left end applies simultaneous leftward and rotational forces to the cam.

Both the reverse check spring and reverse return spring are retained at their right ends by the reverse check plate which is held in place by the snap ring.

The reverse accent shaft has a V-groove in which the detent ball is pressed by the reverse accent spring fitted through the hole in the reverse check sleeve.

The reverse check sleeve and reverse accent shaft have a slot and a notch at their bottoms, respectively, and the selector arm is inserted in the notch through the slot.

# REVERSE CHECK MECHANISM

## MANUAL TRANSMISSION AND DIFFERENTIAL

---

### B: OPERATION

The drawing below shows the state of the reverse check mechanism when the selector arm is in the neutral position. The 1st and 2nd gears will be selected if the selector arm is moved leftward from this point to a stop and then turned in either way. A rightward movement of the arm to a stop will enable selection of the 5th and reverse gears. In the neutral position, the selector arm receives a rightward force (force toward the 5th and reverse gear side) from the 1st return spring and a leftward force (force toward the 1st and 2nd gear side) from the reverse return spring to stay in that position.

The following explanation describes how the selector arm and reverse check mechanism operate when the driver selects the 5th gear and then selects the reverse gear.

- (1) 1st return spring
- (2) Reverse check sleeve

- (3) Reverse accent shaft
- (4) Reverse return spring

- (5) 5th and reverse gear side
- (6) 1st and 2nd gear side

# REVERSE CHECK MECHANISM

- (2) Reverse accent shaft

- (3) Reverse check cam
- (4) Selector arm

- (5) Reverse check spring

# REVERSE CHECK MECHANISM

MANUAL TRANSMISSION AND DIFFERENTIAL

## 3. WHEN A SHIFT FROM 5TH TO REVERSE IS ATTEMPTED

The selector arm turns toward the reverse gear while pushing the reverse accent shaft rightward and the reverse check cam counterclockwise (as viewed in the direction of arrows A).

The reverse check cam, however, stops to rotate at a point where its stopper hits against the reverse check plate (this point corresponds to the neutral position in terms of the angle) and prevents the selector arm from moving toward the reverse gear selection direction. The selector arm is then axially pushed to the neutral position by the reverse accent shaft, which is given a leftward force by the reverse return spring.

### 4. WHEN A SHIFT TO REVERSE IS MADE AFTER RETURN OF SELECTOR ARM TO NEUTRAL

As the ends of the reverse accent shaft and the reverse check cam are on the same plane, the selector arm now can turn toward the reverse gear selection direction after pushing leftward both the shaft and cam simultaneously.

MT-00326

- (1) Reverse check sleeve
- (2) Reverse accent shaft

- (3) Reverse check cam
- (4) Selector arm

# CENTER DIFFERENTIAL

## 4. Center Differential

### A: CONSTRUCTION

The center differential consists of a set of bevel gears and a viscous coupling.

The center differential has the following two functions: distributing the engine torque to the front and rear wheel drive shafts and absorbing the difference in rotating speed between the front and rear wheels.

The engine torque enters the center differential case from the transmission's driven shaft. The engine torque is then distributed through the bevel gear set directly to the drive pinion shaft and via the transfer drive and driven gears to the rear drive shaft.

The viscous coupling limits the differential action of the bevel gear set when either front or rear wheels spin so that adequate torques are transmitted to the front and rear wheels and proper traction is obtained.

MT-00327

# CENTER DIFFERENTIAL

## MANUAL TRANSMISSION AND DIFFERENTIAL

### B: MECHANISM OF VISCOUS COUPLING

The viscous coupling consists of a number of alternately arranged inner and outer plates and air-and-silicone oil mixture filled into a sealed space that is formed by the center differential case and the rear side gear of the differential gear set. The inner plates have their inner perimeters splined to the side gear and the outer plates have their outer perimeters splined to the center differential case. The outer plates are held apart by spacer rings. There are no spacer rings between the inner rings, so the inner rings are movable slightly in axial directions. X-section rings are used to prevent leakage of silicone oil, which would otherwise occur if the oil is pressurized due to large difference in front and rear axle speeds.

MT-00328

- (1) X-section ring
- (2) O-ring
- (3) Spacer ring
- (4) Outer plate

- (5) Inner plate
- (6) X-section ring
- (7) Side gear (rear)

## 1. TORQUE CHARACTERISTICS

When a speed difference occurs between the center differential case and the rear side gear, a shear force is generated in the silicone oil placed between the outer and inner plates. The torque is then transmitted by the silicone oil between the center differential case and the rear side gear.

The greater the speed difference, the greater the shear force generated in the silicone oil. The relationship between the torque transmission and the speed difference is shown in the figure below. As can be seen from the figure, the smaller the speed difference, the smaller the torque transmission and the differential action.

- (A) Driving torque
- (B) Speed difference

## 2. HUMP PHENOMENON

Silicone oil is heated and expanded as differential action continues. The oil in the viscous coupling expands and compresses the inside air to cause direct plate-to-plate contact or a non-viscous operation to occur; this phenomenon is called hump.

The hump eliminates the rotating speed difference between the center differential case and the rear side gear (or locks the differential), so soon after it has occurred, the internal pressure and temperature drop. The viscous coupling then returns to the normal shear torque transmitting operation. (The hump phenomenon does not occur under normal operating conditions.)

# CENTER DIFFERENTIAL

## MANUAL TRANSMISSION AND DIFFERENTIAL

### C: FUNCTION

When there is no speed difference between the front and rear wheels, the center differential delivers the engine torque to the front and rear wheels at a ratio of 50:50.

When a rotating speed difference occurs between the front and rear wheels, the center differential operates to absorb it in a controlled way by the function of the viscous coupling.

#### 1. DURING NORMAL DRIVING

During straight-line driving on a flat road at a constant speed, all the four wheels rotate at the same speed. The center differential delivers engine torque evenly to the front and rear wheels. The viscous coupling does not generate shear torque because there is no relative movements between the inner and outer plates.

MT-00330

(1) Engine torque

(A) To front differential

(B) To rear differential

# CENTER DIFFERENTIAL

MANUAL TRANSMISSION AND DIFFERENTIAL

## 2. DURING TURNS AT LOW SPEEDS

During turns at low speeds, rotating speed difference occurs between the front and rear wheels, as well as between the left and right wheels. More particularly, the front wheels rotate faster than the rear wheels. The center differential then acts to absorb the speed difference to enable smooth driving.

Although the speed difference is small under this condition, operation of the viscous coupling causes more torque to be transmitted to the rear than to the front.

MT-00331

# CENTER DIFFERENTIAL

## MANUAL TRANSMISSION AND DIFFERENTIAL

### 3. DRIVING ON ROUGH OR SLIPPERY ROADS

- When front wheels are on a slippery surface

When the front wheels begin to spin, the resulting speed difference between the front and rear drive shafts causes the viscous coupling to generate significant amount of shear torque. As a result, the torque distributed to the rear wheels becomes much larger than that distributed to the spinning front wheels. The traction and driving stability are thus ensured on a rough or slippery road.

MT-00332

- When rear wheels are on a slippery surface

When the vehicle is accelerated quickly from a standing start with the rear wheels on a slippery surface, the distribution of the vehicle weight on the front and rear wheels changes and the rear wheels start spinning. Due to the resulting speed difference between the front and rear drive shafts, the viscous coupling generates a significant amount of shear torque, now in the direction opposite to that generated when the front wheels are on a slippery surface. As a result, the torque distributed to the front wheels becomes much larger than that distributed to the rear wheels.

## 1. Driver's Control Center Differential System (From '06MY)

### A: GENERAL

The Driver's Control Center Differential (DCCD) system consists of the sensors and switches such as steering angle sensor, yaw rate and lateral G sensor, or stop light switch, the planetary gear type center differential (with built-in the LSD clutch), and the DCCD control module.

The center differential of double pinion gear type planetary unit distributes the engine torque to the front wheels and rear wheels at the torque ratio of 41:59.

(In the actual planetary gear unit, 3 sets of double pinion gears are used. But the figure shows only 2 sets of double pinion gears for simplification.)

MT-01432

# DRIVER'S CONTROL CENTER DIFFERENTIAL SYSTEM (FROM '06MY)

## MANUAL TRANSMISSION AND DIFFERENTIAL

- The LSD mechanism improves the initial steering operation response further by combining and using the conventional solenoid clutch LSD mechanism and the torque sensing mechanical LSD mechanism.

When the solenoid clutch LSD is in the free condition, the mechanical LSD mechanism performs the differential control of 0 — 30%. The other 30 — 100% differential control can be performed by activating the solenoid clutch LSD.

MT-01433

- |  |                         |
|--|-------------------------|
| (1) Torque cam                         | (5) Pilot clutch hub    |
| (2) Intermediate clutch pressure plate | (6) Pilot clutch        |
| (3) Armature                           | (7) Intermediate clutch |
| (4) Coil                               | (8) Main clutch         |
|  | (9) Main clutch hub     |

- The drivability and stability during cornering were made compatible by using the yaw rate and lateral G sensor and the newly adapted steering angle sensor. With this, the quick steering characteristics and the improvement of cornering ability are achieved, and the tight cornering symptom may also be decreased.

- In manual mode, the engagement power of solenoid clutch LSD can be adjusted within the range of 30 to 100%.

- When a malfunction occurs in the system, the fail-safe control may be performed that releases the solenoid clutch LSD so as to maintain safe conditions. At this time, the Subaru Select Monitor can be used for the system diagnosis.

# DRIVER'S CONTROL CENTER DIFFERENTIAL SYSTEM (FROM '06MY)

## MANUAL TRANSMISSION AND DIFFERENTIAL

### B: OPERATION

The DCCD system has the following 2 modes: "MANUAL MODE" and "AUTO MODE". In MANUAL MODE, as the operation amount of DCCD control dial (driver's will) is prioritized, the control that increases/decreases the engagement power of solenoid clutch LSD is performed. In AUTO MODE, the control that automatically adjusts the engagement power of solenoid clutch LSD corresponding to the input signals of steering angle sensor or yaw rate and lateral G sensor is performed.

#### NOTE:

The solenoid clutch LSD controls the differential control within the range of 30 to 100% [which excludes the differential control (0 — 30%) of the mechanical LSD].

#### Control of DCCD control module

Throttle sensing engagement power	Increases or decreases the engagement power of solenoid clutch LSD based on the amount of accelerator pedal depression by the driver.
ABS operation signal input	Decreases the engagement power of solenoid clutch LSD when the ABS operation signal is input from ABSCM&H/U to DCCD CM.
Brake switch signal input	Decreases the engagement power of solenoid clutch LSD when the brake switch signal is input to DCCD CM.
Parking brake signal input	Releases the solenoid clutch LSD when the parking brake signal to DCCD CM is input.
Tight cornering	Decreases the engagement power of solenoid clutch LSD by judging the vehicle condition from the steering angle sensor signal so as to prevent the tight cornering symptom.
Slip	Calculates the slip amount of each wheel based on the wheel sensor signal, and then corrects the engagement power of solenoid clutch LSD corresponding to the slip amount of wheel.
Cornering	Judges the vehicle cornering condition based on the signals of the steering angle sensor and the yaw rate and lateral G sensor so as to manage both drivability and stability of the vehicle during cornering.
DCCD control dial	Decreases or increases the engagement power of solenoid clutch LSD with the operation amount of the DCCD control dial of the driver.
Fail-safe	DCCD CM indicates the malfunction to the driver by blinking the light on the bottom of DCCD indicator when some malfunctions of system have been detected. When there is a serious malfunction in the DCCD coil, DCCD CM turns the DCCD coil OFF and releases the solenoid clutch LSD completely. If the malfunction is not a serious malfunction, such as the malfunctions of some sensors, DCCD CM performs the control that maintains the system operation as much as possible.
Rear differential oil temperature	When the rear differential oil temperature rises excessively [approximately 150°C (302°F) ] for some reasons such as repetitive hard driving, the rear differential oil temperature switch turns ON and the rear differential oil temperature warning light of the combination meter illuminates. At the same time, DCCD CM performs the control that decreases the engagement power of solenoid clutch LSD. (If the oil temperature drops, the system returns to the normal control automatically.)

## 2. Clutch

- The clutch is a push type clutch. When the pedal is depressed, the self-aligning release bearing is caused to slide on a guide pressing the center of the diaphragm spring. The diaphragm spring is warped and the force having pressed the pressure plate is released, causing the flywheel, clutch disk and pressure plate to be disengaged from each other, and the transmission of drive force is interrupted. The action point of the clutch is located at the tip of each diaphragm spring fingers, which press the pressure plate against the clutch disc.
- A clutch using a diaphragm spring has the advantage of little variation in push load even when the clutch disc is worn. The diaphragm spring is located inside the clutch cover.
- The clutch disk for both of the non-turbo and turbo models has damper springs and is placed in between the flywheel and the pressure plate.
- Inside the clutch cover, the diaphragm spring and pressure plate are combined with each other by means of strap plates, which also serve to prevent the pressure plate from relatively turning.
- The clutch control is hydraulic and the master cylinder is of the conventional type. The cylinder diameter of the master cylinder for turbo models are made larger. Also, on both the non-turbo and turbo models, the pedal depressing effort is optimized and a damper is attached to reduce vibration of the clutch pedal.

| (3) Clutch disc        | (6) Clutch master cylinder |

### 1. General

- The clutch is of a dry, single plate type with a diaphragm spring.
- The clutch is a push type clutch. When the pedal is depressed, the release bearing will press the center of the diaphragm spring to disengage the contact between the pressure plate and clutch.
- The clutch control is hydraulic and operates the release lever using the hydraulic pressure generated in the master cylinder when the pedal is depressed.
- A conventional type flywheel is used on non-turbo models, while a dual mass type flywheel is used on turbo models.
- The clutch start system enables the driver to start the engine only when the clutch pedal is fully depressed.

## 3. Flywheel

### A: GENERAL

#### 1. NON-TURBO MODELS

The flywheel is directly connected to the crankshaft. The mass of the flywheel absorbs the fluctuations in crankshaft rotation, and the flywheel transmits the engine torque to the clutch disc.

#### 2. TURBO MODELS

- The flywheel is of a dual mass type, which consists of a primary flywheel, damper spring, ring gear, planetary gears, and a secondary flywheel.
- The damper spring is attached to the periphery of the primary flywheel.
- The engine power flows from the primary flywheel through the damper spring, ring gear and planetary gears to the secondary flywheel, and then is transmitted to the transmission via the clutch. Torque fluctuation in this power train is dampened by lowering the rigidity of the power train using a two piece flywheel with a damper spring, ring gear and planetary gears in between, which helps reduce vibration and noise from the power unit.

CLUTCH

## 4. Hydraulic Clutch Pedal System

### A: CONSTRUCTION

- The hydraulic clutch pedal is connected to the master cylinder via a rod.
- The clutch pedal and brake pedal are mounted on the same bracket.
- The clutch pedal has a mechanism that reduces (assists) the force required to depress the clutch pedal and reduce the initial pedal depressing force.
- A starter interlock mechanism is provided to prevent the engine from starting unless the clutch pedal is pressed.

CL-00272

(1) Clutch pedal

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 1. Heater System

### A: GENERAL

- A semi-center type integrated air conditioning unit is used, where a high performance heater core and an evaporator core are placed in front and rear of the unit. While ensuring sufficient leg space at the front passenger's seat, resistance to air flow in the air passage is reduced, and the air conditioning system offers a low noise and comfortable environment in all seasons through its functions such as heating, air conditioning, ventilating and defrosting.
- On models with automatic air conditioning, a left/right independent temperature control system is introduced to enable the driver and passenger choose a desirable temperature setting individually.

### C: CONTROL PANEL

- The control panel is incorporated into the center panel. To improve the appearance of the interior, the panel is integrated with the audio panel except for models with some audio equipment variations.

- A rear window defogger switch is located in the control panel.

#### 1. MODELS WITH MANUAL AIR CONDITIONING

- The control panel uses three large-diameter, dial type switches for easy operation and good visual recognition.

- (1) Air flow control dial:  
This switch allows selecting any of the five air flow modes.

AC-00127

- (2) Fan speed control dial:  
This switch allows turning on/off the blower and selecting any of the four blower speeds.

# HEATER SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

# 0 1 2 3 4

AC-00126

- (3) Temperature control dial:  
This switch allows step-less adjusting of the temperature of air delivered through ventilators.
- (4) Rear window defogger switch:  
This switch activates the rear defogger. When the switch is left on, a timer keeps the defogger activated for 15 minutes and then turns it off automatically.
- (5) FRESH/RECIRC switch:  
This switch allows selecting either cabin-air-recirculation or fresh-air-introduction.
- (6) Air conditioning switch:  
This switch turns on or off the air conditioning compressor.

## 2. MODELS WITH AUTOMATIC AIR CONDITIONING

- A motor driven actuator is used for air outlet switching, driver and passenger side temperature control, and FRESH/RECIRC switching.
- A large sized LCD panel which excels in visibility is used for the control panel.
- To eliminate errors due to heat, the cabin temperature sensor is moved from the control panel to the console side panel.

- (1) Fan speed control switch:  
In automatic air conditioning mode, the system controls the blower speed automatically in accordance with sensor signals.  
In manual air conditioning mode, this switch allows selecting any of the six blower speeds.
- (2) Air flow control switch:  
This switch allows selecting any of the four air flow modes.

# HEATER SYSTEM

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

AC-00130

- (3) FRESH/RECIRC switch:  
This switch allows selecting either cabin-air-recirculation or fresh-air-introduction.
- (4) A/C switch:  
This switch turns on or off the air conditioning compressor.
- (5) Rear window defogger switch:  
This switch activates the rear defogger. When the switch is left on, a timer keeps the defogger activated for 15 minutes and then turns it off automatically.
- (6) Temperature control dial (left: driver's seat, right: passenger's seat):  
By turning the left or right dial the temperature of air delivered through ventilators can be adjusted individually at the driver's side and passenger's side. When the dial is turned clockwise the temperature setting rises, and when the dial is turned counterclockwise the setting becomes lower. Temperature setting can be changed in a range between 18 and 32°C in 0.5°C steps.
- (7) Defroster switch:  
When this switch is turned ON the system enters the defroster mode.
- (8) OFF switch:  
All functions are disabled.
- (9) AUTO switch:  
When this switch is turned ON the system enters auto air conditioning mode and automatically controls the blower fan speed, air outlet, fresh/recirculation switching, and compressor operation.

# HEATER SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## D: HEATER AND COOLING UNIT

- Having an evaporator core at the front and a heater core at the rear, this single unit combines both heating and cooling functions.
- The heater and cooling unit incorporates mode doors for creating different air flow modes and an air mix door for mixing heated air and outside air.
- On models with automatic air conditioning, the inside of the heater and cooling unit is separated into left and right parts so that the driver and passenger can individually control the temperature.
- In models with an automatic air conditioning, the mode doors and air mixing door are moved by electric-motor-driven actuators.  
In models with a manual air conditioning system, the air mix door is moved by a linkage cable.

## 1. SPECIFICATIONS

Heater core size	Heat output
264 × 110 × 27	5200 W

# HEATER SYSTEM

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 2. DESIGN FEATURES FOR EACH AIR FLOW MODE

#### 1) Ventilation (FACE) mode

- The passage leading air from the evaporator to the ventilation duct is made straight to reduce air flow resistance.
- When the air temperature is necessary to be adjusted, heated air is blown at right angles against the flow of cool air from the evaporator. This allows the airs to mix thoroughly.

- (1) Evaporator
- (2) Heater core

#### 2) Foot/face (BILEVEL) mode

- The air that has flown through the evaporator is divided into two directions. Part of this air flows through the heater core and becomes warm air. The rest of the air goes to the outlet as cool air, however, this is mixed with the warm air from the heater core. The mixed air then flows to the ventilation and heater ducts.

- (1) Evaporator
- (2) Heater core

# HEATER SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 3) Heating (FOOT) mode

- The air that has flown through the evaporator is heated at the heater core and then flows to the heater ducts.
- To defog the windshield, the defroster door is slightly open and warm air is also sent to the defroster (DEF) duct.
- The side ventilation grills ventilate air always.

- (1) Evaporator
- (2) Heater core

## 4) Defroster (DEF) mode

- Air passages are designed in such a way that air flow resistance is minimized and defrosting performance is maximized.
- The air passages toward the defroster (DEF) outlet is long enough to ensure a same airflow rate at all defroster outlets.
- The side ventilation grills ventilate air always.

- (1) Evaporator
- (2) Heater core

# HEATER SYSTEM

## HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

### 5) Defroster (DEF) /Heating (FOOT) mode

- The air from the evaporator flows through the heater core and the warmed air flows to the defroster (DEF) duct and foot duct to defog the windshield while sending warm air to the legs.
- The air directed to the defroster duct flows out from the front and side defroster ducts to defog the windows.
- The side ventilation grills ventilate air always.

- (1) Evaporator
- (2) Heater core

### E: BLOWER UNIT

- The blower unit uses a low-noise-type motor.

# HEATER SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## F: FILTER

- Clean air filters are available for all models as dealer option. They can remove dust, cigarette smoke particles and other similar impurities in the air.

## G: DUCT

- The ventilation duct and defroster duct are located behind the instrument panel. Both the ducts have been modified in the shape to reduce air flow resistance.
- Defrosting air flow is divided at the center, so that air can flow out evenly through a wide center defroster as well as right and left side defrosters.

AC-00950

# COOLING SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 2. Cooling System

### A: COMPRESSOR

As two scrolls (one movable and other fixed) are engaged, a crescent chamber is formed between multiple contact points. The movable scroll cannot rotate on its own axis but orbits instead, so the operating chamber moves inwards while its capacity is reduced. Intake, compression and discharge take place simultaneously at multiple operation chambers, and compressed refrigerant is sent from the discharge hole at the center to the oil separator and then separated in to refrigerant gas and oil before it is output from the discharge port.

AC-00874

# COOLING SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 1. PRESSURE RELIEF VALVE

This valve opens if the pressure of the high-pressure refrigerant gas rises to a dangerously high level to release part of refrigerant into the atmosphere, thus protecting the compressor. The valve is designed to limit the amount of released gas to the necessary minimum.

- Valve opening pressure: above 3.43 MPa (35.0 kgf/cm<sup>2</sup>)
- Valve closing pressure: above 2.75 MPa (28.1 kgf/cm<sup>2</sup>)
- Valve wide open pressure: below 4.14 MPa (42.2 kgf/cm<sup>2</sup>)

AC-00875

- (A) Pressure MPa (kgf/cm<sup>2</sup>)  
(B) Leakage l/min

# COOLING SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## B: COOLING UNIT

The heater unit and cooling unit are integrated into a single heater and cooling unit.

The cooling section components of this unit include an evaporator, expansion valve, and case.

AC-00947

### 1. EVAPORATOR

The evaporator is a laminated type.

When a low-pressure, low-temperature refrigerant is sprayed by the expansion valve into the evaporator, it evaporates and cools the evaporator surfaces.

The cabin air is drawn by the blower and cooled down as it flows over the evaporator. The cooled air then flows passing through the heater unit and delivered into the cabin through vent outlets.

AC-00856

# COOLING SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## 2. EXPANSION VALVE

The expansion valve regulates the flow of refrigerant such that heat exchange takes place optimally.

The expansion valve performs two functions; it sprays the high-pressure refrigerant from the condenser using a throttle valve, and it regulates the amount of the spray by changing opening of the throttle valve.

The expansion valve consists of such main components as a heat sensing cylinder, diaphragm, ball valve, spring, and adjusting screw.

- |                           |   |
|---------------------------|---|
| (1) Ball valve            | (A) Refrigerant flow                    |
| (2) Shaft                 | (B) From evaporator (low-pressure side) |
| (3) Heat sensing cylinder | (C) To compressor                       |
| (4) Diaphragm             | (D) To liquid tank                      |
|                           | (E) To evaporator (high-pressure side)  |

The heat (temperature) sensing cylinder is held in contact with the evaporator outlet pipe so that a pressure corresponding to the sensed temperature may be applied to the chamber above the diaphragm. There is a pressure equalizing hole which communicates with the chamber below the diaphragm to transmit changes in the refrigerant pressure to the chamber. The ball valve is linked with the diaphragm and moves according to changes in the balance between the force applied to the diaphragm and the tension of the spring.

# COOLING SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

---

## C: CONDENSER

The condenser is a newly developed subcooling condenser that integrates a multi-flow type condenser and a modulator (gas-liquid separator) into a single unit. The condenser has a high heat-exchange efficiency.

- (1) Liquid tank
- (2) Urethane

## 1. SUBCOOLING CONDENSER

The new subcooling condenser has a subcooling section where part of the refrigerant that remains in gas form is cooled and reduced into liquid form. This enables almost 100% of the refrigerant to be re-liquefied.

- (1) Liquid tank

- (A) Suction
- (B) Discharge

# COOLING SYSTEM

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## D: PRESSURE SWITCH

The pressure switch is a high-pressure side component of the refrigeration cycle (cooling cycle). It consists of a diaphragm that receives refrigerant gas pressure, a snap plate, a rod, contacts that open both when the gas pressure is too low and when it is too high, and a switch that operates at mid-pressure.

The pressure switch plays the following roles:

- Prevents “no-gas” operation due to leakage (when gas pressure is too low)
- Protects the system against abnormally high refrigerant pressure (when gas pressure is too high)
- Detects compressor load (mid pressure contact: electric cooling fan output control)

(1) Pressure

---

## H: MODE DOOR ACTUATOR

The mode door actuator incorporates an electric motor which turns in one or the other direction in response to signals from the auto A/C control module. The motion of the electric motor is transmitted to each mode door via a linkage and moves the door to the position appropriate for the selected air flow mode.

AC-00954

- (1) Mode door actuator
- (2) Air mix door actuator

# AUTOMATIC AIR CONDITIONING

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

## I: FRESH/RECIRC DOOR ACTUATOR

The FRESH/RECIRC door actuator incorporates an electric motor which turns in one or the other direction in response to a signal from the auto A/C control module. The motion of the electric motor is transmitted to the FRESH/RECIRC door via a linkage to move the door to the outside-air introduction or cabin-air-recirculation position.

AC-00955

(1) FRESH/RECIRC door actuator

## J: FAN CONTROL AMPLIFIER

The fan control amplifier uses a MOS\* type field effect transistor. This amplifier steplessly regulates the blower motor voltage (in the range between approximately 3V and 12V) in response to gate voltage signals issued by the auto A/C control module.

Since this fan control amplifier features very small voltage drop, it can handle the maximum voltage for the maximum blower speed without need for a high-voltage relay.

\*MOS = metal oxide semiconductor

AC-00720

# **AUTOMATIC AIR CONDITIONING**

HVAC SYSTEM (HEATER, VENTILATOR AND A/C)

**MEMO**

### **1. Airbag System**

#### **A: GENERAL**

##### **1. SRS AIRBAG**

The SRS airbags supplement the seat belts which restrain the body if the driver or passenger is endangered by a severe impact to the front of the vehicle.

If an impact whose magnitude exceeding the preset value is applied to the vehicle, the airbags inflate immediately to prevent the driver and front seat passenger being hit against the steering wheel, instrument panel or windshield.

A two-staged inflator whose airbag inflation speed is changed according to the magnitude of the impact is used.

##### **2. SRS SIDE AIRBAG**

The SRS side airbag supplements the seat belts which restrain the body if the driver or passenger is endangered by a severe impact to the side of the vehicle.

If an impact whose magnitude exceeding the preset value is applied to the side of the vehicle, the side airbags inflate immediately to soften the impact to the driver or front seat passenger especially at their chest area.

##### **3. SRS CURTAIN AIRBAG**

The SRS curtain airbag supplements the seat belts which restrain the body if the driver or passenger is endangered by a severe impact to the side of the vehicle.

If an impact whose magnitude exceeding the preset value is applied to the side of the vehicle, the curtain airbag inflates immediately to soften the impact to the passengers especially at their head area.

## 4. SEAT BELT PRETENSIONER

The seat belt pretensioner improves efficiency of body restraint by retracting the seat belt immediately if the driver or passenger is endangered by a severe impact to the front of the vehicle.

- (1) Driver's seat SRS airbag
- (2) Passenger's seat SRS airbag

- (3) Retractor with pretensioner

- (1) SRS curtain airbag

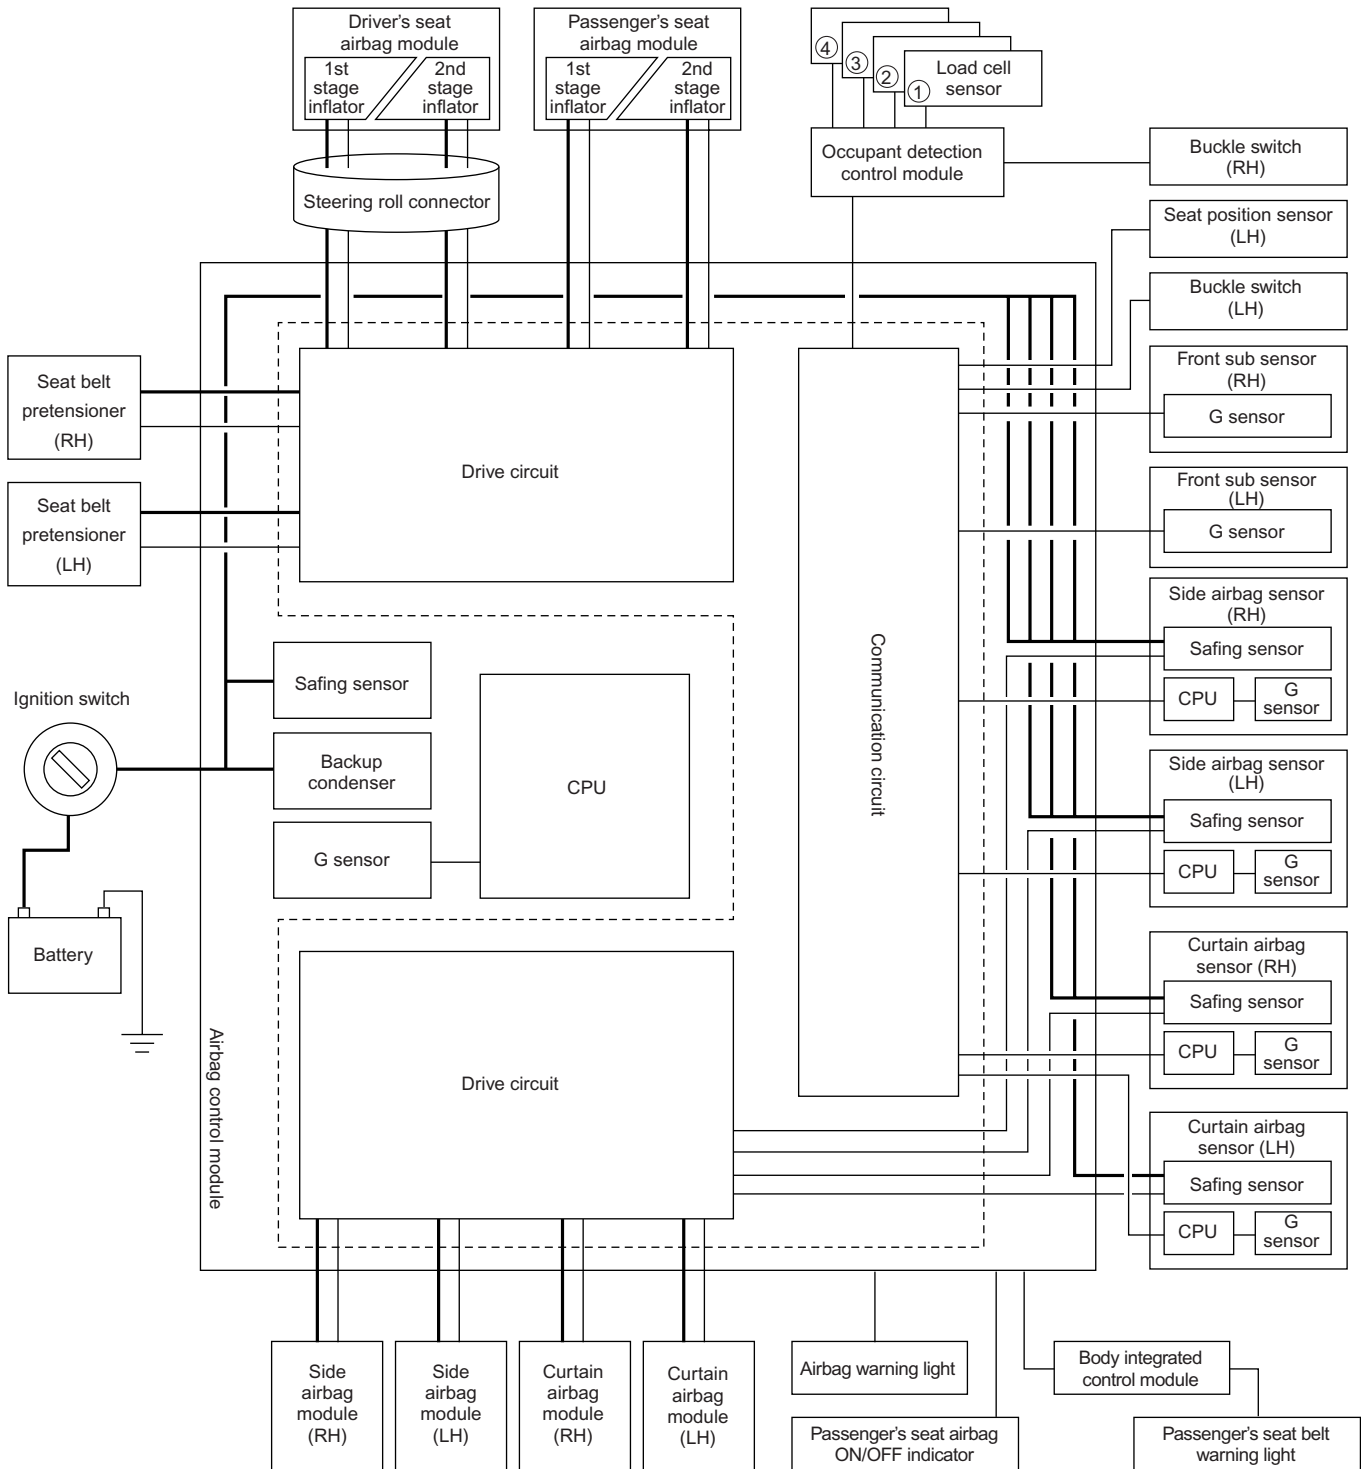

- (2) SRS side airbag

## 1. AIRBAG CONTROL MODULE

The airbag control module is installed inside the center console and contains a safety sensor, G sensor, ignition judgment circuit, and a backup power supply, etc.

The control module receives electric signals from the safety sensor and electric sensor inside the module and also from the front sub sensor to detect the deceleration of the vehicle and judge whether the airbag and pretensioners should be ignited or not. It also has a self diagnosis function which lights up the airbag warning light in the combination meter if a fault occurs in the system. Diagnostic trouble codes generated by the self diagnosis function are stored in the memory in the module.

To prepare for battery voltage fall in an event of an accident, the control module is provided with a backup power supply.

AB-00689

- **Safety sensor**

Inside of the sensor there is a mass weight, which works as a pendulum; if the sensor detects an impact acceleration exceeding a certain limit, the mass weight in the sensor moves to close the contacts and turn the switch ON.

- **G sensor**

Inside of the sensor there are comb-teeth shaped electrodes; in case of a collision the distance between the electrodes varies by the impact to enable detection of the impact acceleration.

# SYSTEM COMPONENTS AND OPERATION

## AIRBAG SYSTEM

---

### 2. DRIVER'S SEAT AIRBAG MODULE

The driver's seat airbag module is built in the steering wheel pad.

The SRS airbag module assembly cannot be disassembled. The driver's seat airbag module assembly consists of an inflator and airbag, and a steering wheel pad.

AB-00692

- (1) Steering wheel pad
- (2) Airbag

- (3) Inflator

# SYSTEM COMPONENTS AND OPERATION

The inflator houses igniters and gas generating agents in a metal container. Igniters and gas generating agents are placed at two locations, and a 2-stage inflator which controls the airbag inflating speed according to the magnitude of impact at a collision is used. If the impact detected by the airbag sensor is equivalent to the level detected at a high speed, sudden collision, the two gas heating agents are ignited simultaneously. If the event of a collision at low or mid speed, the ignition of the 2nd stage gas generating agent is delayed to reduce the output of the inflator. Thus the inflator outputs power suitable for the severity of collision and relieves the impact to the passenger's head or upper body.

## AIRBAG SYSTEM

### 4. SIDE AIRBAG MODULE

The side airbag modules are built in the backrest of left and right front seats (at the door side).

The SRS side airbag module assembly cannot be disassembled. The side airbag module is fixed to the seat frame with a bracket, and consists of an inflator, airbag, and a case.

If a side-on collision occurs, the inflator produces a certain amount of gas to inflate the airbag in a very short time in response to the ignition signal from the side impact sensor.

| (3) Seat upholstery | (6) Inflator   |

## 5. CURTAIN AIRBAG MODULE

The curtain airbag modules are placed at the front pillars, roof sides, and the rear pillars.

The SRS curtain airbag module cannot be disassembled. The curtain airbag modules are fixed to the vehicle body with a bracket and clips, and consists of an inflator and an airbag.

If a side-on collision occurs, the inflator produces a certain amount of gas to inflate the airbag in a very short time in response to the ignition signal from the side airbag sensor and curtain airbag sensor.

(2) Airbag

# SYSTEM COMPONENTS AND OPERATION

## AIRBAG SYSTEM

---

### 6. STEERING ROLL CONNECTOR

The steering roll connector is in between the steering column and the steering wheel, and contains a spirally wound flat cable.

The flat cable maintains connection between the airbag module on the steering wheel and the airbag harness even when the steering wheel is turned. Ignition signal from the airbag control module is sent through the roll connector to the driver's seat airbag module.

(1) Flat cable

(2) Airbag module connector

## 7. SEAT BELT PRETENSIONER

The driver's and front passenger's seat belt retractors contain a seat belt pretensioner.

The airbag control module controls the operation of the seat belt pretensioner. If the front sub sensor and the sensors inside the airbag control module detect an impact exceeding a specified level, the driver's seat and front passenger's seat airbags are deployed almost simultaneously. Upon receiving signals from the airbag control module the gas generator inside the pretensioners are ignited and the gas pressure retracts the seat belts in a very short time to improve the passenger restraint effect.

If the load placed on a seat belt exceeds the predetermined level, the torsion bar is twisted to allow the seat belt to be pulled out, thus lessening the load imposed on the belt wearer's chest.

Once the seat belt pretensioner has been activated, the seat belt retractor remains locked.

# SYSTEM COMPONENTS AND OPERATION

## AIRBAG SYSTEM

### 8. FRONT SUB SENSOR

The front sub sensor is installed to the tip of the front side frame.

If it detects an impact exceeding the specified level from the front, it sends a signal which is used for airbag system deployment judgment to the airbag control module.

To judge the impact to the front of the vehicle more precisely, the sensor is changed from the conventional pendulum type mechanical sensor to an electronic sensor.

AB-00700

(A) Power supply/communication terminal

(B) GND

(1) 5 V power

(2) Current communication circuit

(3) G sensor

(4) Oscillator

## 9. SIDE IMPACT SENSOR

The side impact sensors (side airbag sensor, curtain airbag sensor) are installed at the bottom of the center pillars and the rear quarter pillars.

If the sensor in the side impact sensor detects an impact exceeding the specified level from the side, it sends a signal which is used for airbag system deployment judgment to the airbag control module.

Signals from the side airbag sensors are effective for both the side airbags and curtain airbags, while signals from the curtain airbag sensors detect impact to the rear seat sides and let only the curtain airbags deploy.

AB-00702

(1) OR

## 10. AIRBAG WARNING LIGHT

The airbag warning light is located inside the combination meter. It illuminates if a poor connection in the airbag circuit occurs, or if the airbag control module detects an abnormal condition. When the airbag system is normal, this light comes on when the ignition switch is turned ON and then goes out about 6 seconds later.

AB-00704

## 11. WIRING HARNESS

The airbag harnesses are integrated into the body harness as follows:

- Front sub sensor harness: integrated into the front harness.
- Airbag main harness: integrated into the bulkhead harness.
- Pretensioner and side airbag harnesses: integrated into the rear harness.

## 3. Airbag Connectors

### A: GENERAL

The airbag system uses connectors with a double lock mechanism and an incomplete-coupling-detection mechanism for enhanced reliability. If coupling is incomplete, the airbag warning light comes on in the combination meter.

#### 1. DRIVER'S SEAT AIRBAG MODULE-TO-SEAT BELT PRETENSIONER CONNECTOR

##### Disconnection:

- 1) Lift the lock button using a thin tipped tool like a miniature screwdriver.

AB-00529

- 2) Pull the connector out from the airbag module.

AB-00528

##### Connection:

Carefully insert the connector into the airbag module. Push the connector until a “click” is heard from the lock button.

## 2. AIRBAG MAIN HARNESS-TO-ROLL CONNECTOR, AND PASSENGER'S SEAR AIRBAG MODULE CONNECTOR

(1) Slide lock

### Disconnection:

- 1) Press the slide lock inwards.

- 2) While the slide lock pressed in, disconnect the connector (A).

### Connection:

Insert the female side connector half into the other until a “click” is heard.

# SEAT BELT LIGHT

## SEAT BELT SYSTEM

### 2. Seat Belt Light

#### A: SEAT BELT WARNING LIGHT

A seat belt warning light is provided for the front seats to warn the passengers to fasten the seat belt.

The driver's seat warning light is located in the combination meter, and the front passenger's seat belt warning light and rear seat belt fastening indicator are located at the center of the map light lens.

SB-00170

(1) Driver's seat warning light

(2) Passenger's seat warning light

## **B: SEAT BELT ALARM SYSTEM**

### **1. GENERAL**

When the ignition switch is turned ON, the seat belt warning light in the combination meter illuminates for 6 seconds and the warning buzzer sounds to warn the driver to fasten the seat belt. The seat belt warning light turns off and the buzzer ceases when the seat belt tongue plate is inserted into the seat belt buckle.

If the driver starts the vehicle without fastening the seat belt, the warning light illuminates or blinks and the buzzer sounds to warn the driver to fasten the seat belt. The seat belt warning light turns off and the buzzer ceases when the seat belt tongue plate is inserted into the seat belt buckle.

The passenger's seat side is also provided with a seatbelt alarm system, which turns ON the passenger's seat belt warning light when it detects a passenger through the passenger sensor (load cell sensor). If the driver starts the vehicle without fastening the seat belt, the seat belt warning light illuminates or blinks and the buzzer sounds to warn the passenger to fasten the seat belt.

### **2. SYSTEM STATUS TRANSITION**

Alarms that are given with the seat belt warning light and buzzer vary in accordance with the vehicle speed and seat belt fastened/unfastened state. (The alarm system can warn the driver and the passenger individually, however, if both seat belts are not fastened, the buzzer will give priority to warn the driver.)

1) When the ignition switch is turned ON (with the seat belt not fastened), the seat belt warning light flashes for 6 seconds. If the seat belt is not fastened within this period, an alarm is given with a buzzer sound\*.

\*: The buzzer sounds only when the driver's seat belt is not fastened.

2) After 6 seconds since the ignition switch is turned ON, the seat belt warning light starts to illuminate or flash for every 15 seconds, and the buzzer will sound if the warning light is flashing.

3) If the seat belt is unfastened again when the vehicle speed is at or over 15 km/h (9 MPH), the seat belt warning light repeats illuminating or flashing, and the buzzer will sound if the warning light is flashing.

### **3. CUTOFF FUNCTION**

The warning given after 6 seconds since the ignition switch is turned ON, and the warning function that activates when the seat belt is unfastened while driving can be optionally cut off. The cutoff function is common for both the driver's seat and passenger's seat, and can be set with the driver's seat buckle switch.

Temporary (TEMP) cutoff

1) How to cut: Repeat fastening and unfastening the driver's seat belt for 3 times within 6 seconds after turning the ignition switch ON. (The setting is changed for both the driver's seat and passenger's seat.)

2) Setting lasts: While the ignition switch is turned ON until it is turned OFF. (The cutoff function is canceled when the ignition switch is once turned OFF.)

Permanent cutoff

1) How to cut: Repeat fastening and unfastening the driver's seat belt for 20 times within 30 seconds after turning the ignition switch ON. Enabling and disabling cutting is done with the same operation. (The setting is changed for both the driver's seat and passenger's seat.)

## SEAT BELT LIGHT

### SEAT BELT SYSTEM

---

2) Setting lasts: Until the microprocessor is reset\*.

The cutoff function is reset when the battery is removed (battery positive terminal disconnected) or when the body integrated unit is removed. The cutting function may also be reset when the engine is cranked with low battery voltage.

# WIPER AND WASHER SYSTEMS

## WIPER AND WASHER SYSTEMS

---

### 1. Wiper and Washer Systems

#### A: GENERAL

##### 1. FRONT WIPER

- 1) The front wiper is of a tandem type featuring a wide wiping area. The blade is installed to the arm by means of U-hook joint to improve serviceability.
- 2) The front wiper operates in the HI and LOW speed modes and the INTERMITTENT mode. The operation modes can be selected by turning the wiper switch incorporated in the combination switch.
- 3) In the INTERMITTENT mode, the intermittent unit installed behind the combination switch controls the front wiper operation interval.
- 4) The front wiper system uses a modular construction in which the wiper motor forms an integral part of the linkage. The motor is installed on the body through rubber mounting.

WW-00159

- 5) The size of the motor is minimized by changing the stator shape, coil windings and the magnet.

# WIPER AND WASHER SYSTEMS

6) The mounting bracket is modified. The bracket of the wiper link assembly bracket area breaks if it receives a force exceeding a certain level to absorb the impact in case of a traffic accident, etc.

WW-00228

(1) Bracket

# WIPER AND WASHER SYSTEMS

## WIPER AND WASHER SYSTEMS

---

7) The driver's side wiper arm is angled to disperse the force applied to the wiper arm by the airflow. A part of the dispersed force acts to press the wiper blade against the windshield helping to prevent the wiper blade being lifted up.

WW-00043

(1) Airflow

(2) Angle of twist

(3) Dispersed force

(4) Windshield

8) When wiper arms are raised in cases such as washing the car, always raise the driver's seat side wiper arm first and then raise the passenger's seat side wiper arm. If the passenger's seat side wiper arm is raised first, this will obstruct the way for the driver's side wiper arm. If forcibly raised in the wrong way, the passenger's side wiper arm may be damaged. When lowering the wiper arms, lower the passenger's side arm first.

# WIPER AND WASHER SYSTEMS

## 2. FRONT WASHER SYSTEM

- 1) The front washer system consists of a washer tank, motor and pump unit, and a pair of nozzles.
- 2) The washer tank is installed behind the front bumper under the left headlight.
- 3) The washer motor and pump unit is installed at the bottom of the washer tank.
- 4) The washer nozzles are installed to the front hood at its rear end and from the under side. Each nozzle has a spray hole.
- 5) Each washer nozzle has a check valve at a location approximately 100 mm (3.94 in) from the nozzle.
- 6) The washer tank is filled to its specified capacity when the fluid level is at the “FULL” mark on the filling pipe. Do not fill washer fluid until its level exceeds the “FULL” mark. The fluid may spill during driving or when replacing the head light bulb.

## 3. SPECIFICATIONS

Washer tank	Capacity	4.0 ℓ (4.2 US qt, 3.5 Imp qt)

		LOW	35 — 45 rpm	
	Motor characteristics when bound	HIGH	Torque	25.5 N·m (260 kg-cm, 1.88 ft-lb) or more
			Current	33 A or less
LOW		Torque	31.4 N·m (320 kg-cm, 2.31 ft-lb) or more	
		Current	29.0 A or less	
Wiper blade	Length	Driver side	600 mm (23.62 in)	
		Passenger side	450 mm (17.72 in)	

# REAR WIPER AND WASHER

## WIPER AND WASHER SYSTEMS

### 2. Rear Wiper and Washer

#### A: GENERAL

##### 1. REAR WIPER

1) The rear wiper operates over an angle of 168°.

WW-00291

2) The rear wiper operates intermittently as shown in the following table only when the wiper switch is in the INT position on AT models.

Selector lever position (AT models only)	Vehicle speed km/h (MPH)	Interval (sec)
		Wagon
Reverse (R)	—	Continuous operation
Other than reverse (R)	0 — 20 (0 — 12.4)	12
	20 — 50 (12.4 — 31.1)	9
	50 — 80 (31.1 — 49.7)	6
	over 80 (49.7)	3

# REAR WIPER AND WASHER

## 2. REAR WASHER SYSTEM

- 1) The front and rear washers share the same washer tank.
- 2) The washer motor and pump unit is installed at the bottom of the washer tank.
- 3) The washer nozzle is installed to the lower part of the roof spoiler. The nozzle has two spray holes.
- 4) The washer nozzle is provided with a check valve, which is located just below it.

## 3. SPECIFICATIONS

Wiper motor	Rated voltage	12 V	
	No-load current	2 A or less	
	Speed [at 0.5 N·m (5 kg·cm, 4.3 in·lb)]	25 rpm or more	
	Motor characteristics when bound	Torque	8.8 N·m (0.90 kgf·m, 6 ft·lb) or more
Current		13 A or more	
Wiper blade	Length	350 mm (13.78 in)	

### 3. Vehicle Speed Sensitive Intermittent Wipers (From '06MY)

#### A: GENERAL

When the intermittent wiper is selected, the intermittent stop time is adjusted according to the vehicle speed to effectively secure visibility.

The control module built into the wiper switch assembly controls the intermittent stop time according to the vehicle speed signal provided from the body integrated unit.

WW-00468

The intermittent stop time will change according to the selected position of the intermittent volume switch.

WW-00467

**NOTE:**

- The intermittent stop time in relation to vehicle speed is as shown in the figure, but this may differ from the actual speed.
- Only 5 levels are shown here, but in actual use, it will operate at all positions of the intermittent volume switch.

# HORNS

## COMMUNICATION SYSTEM

---

### 1. Horns

#### A: GENERAL

COM00038

(1) Horns

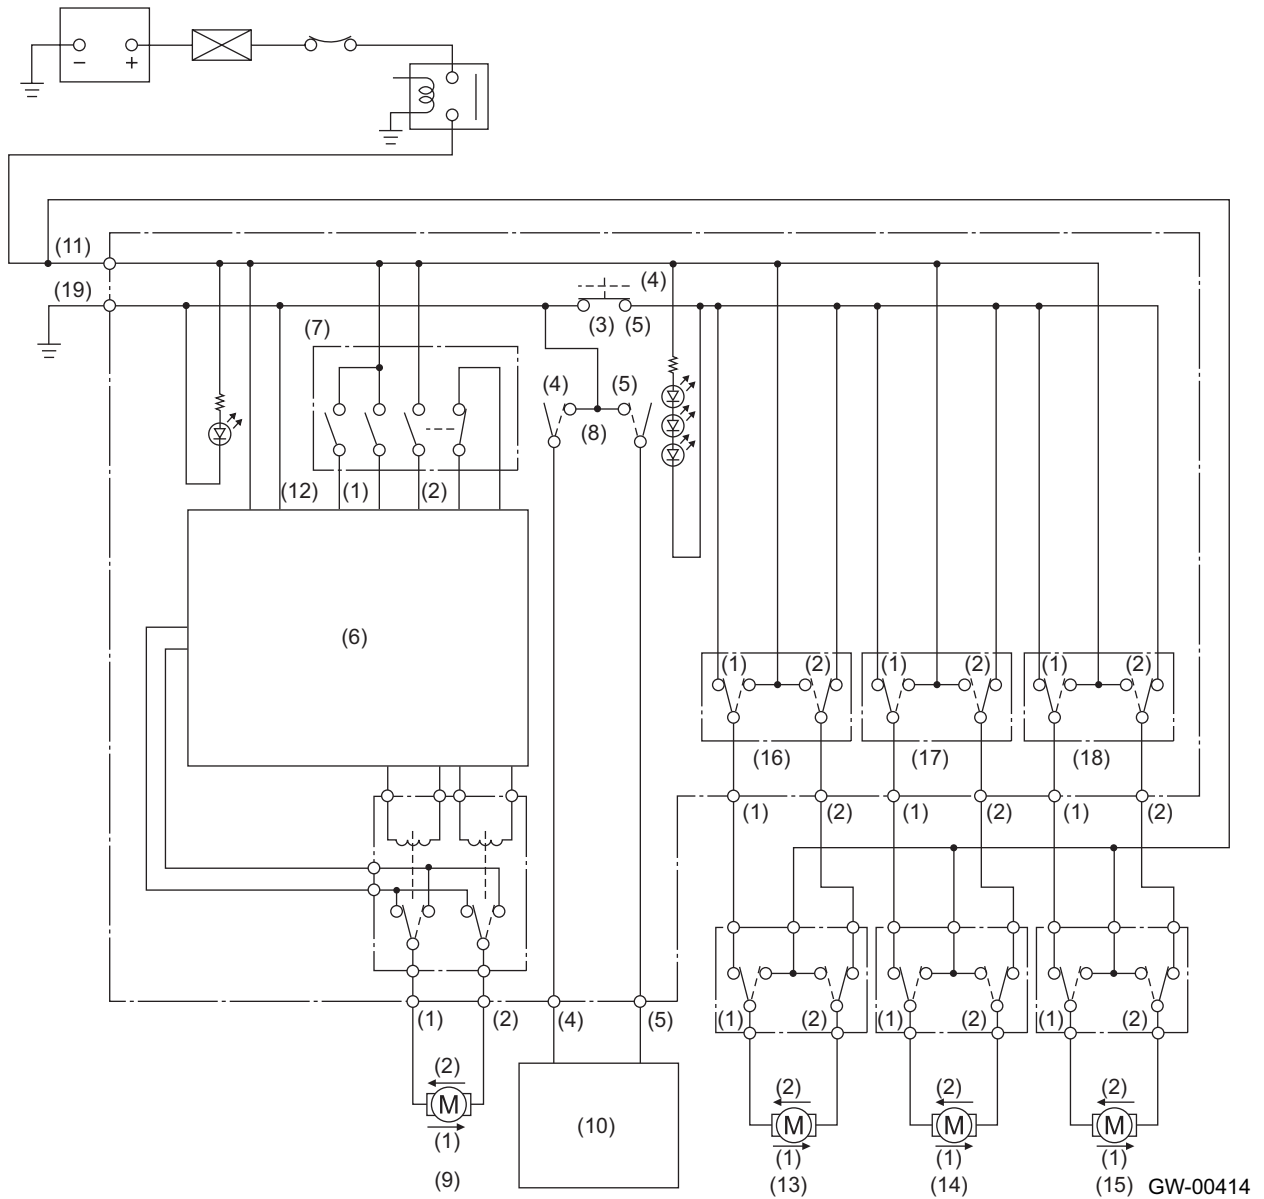

- Two horns (high and low tone) are installed behind the front bumper under the RH headlight.
- By positioning the horns at behind the front bumper and under the RH headlight, repair cost for damage due to light collision can be minimized.

## 1. Power Window

### A: CONSTRUCTION

- The power window system consists of regulator motors and switches for individual doors, relays and a circuit breaker unit.
- Each door window can be opened/closed by pushing down/pulling up the switch.
- Only the driver's door window switch has a 2-stage mechanism:
  - When the switch is pushed down or pulled up lightly and held, the window continues to lower or raise until the switch is released.
  - When the switch is pushed down fully, the window opens to the end position automatically.

## B: SCHEMATIC DRAWINGS

| (10) Door lock controller             |   |

# DOOR MIRRORS

## 2. Door Mirrors

### A: GENERAL

- Door mirrors are powered and remote controllable, and on some models each mirror has a side turn signal light built in it.
- The mirror body is structured as a scalp cap. The portion that may be damaged easier (scalp cap part and the side turn signal lamp part) can be replaced, contributing to reduce repair cost.
- Water drops cannot easily adhere to the mirror surface or front door glass while driving in rain.
- Mirror heaters are used on some models.

- (1) Scalp cap
- (2) Groove
- (3) Side turn signal light

## 3. Wire-type Window Regulator (From '08MY)

### A: GENERAL

- A wire-type window regulator can be more compact than X arm-type regulator. The design is intended for overall weight reduction of the power window regulator assembly.
- Introduction of the wire-type window regulator enables the up-and-down track to become more closer to the glass curvature for much more smooth up-and-down movement.
- A wider space inside the door panel is available now so a space to place a water bottle into is provided in the door trim.

GW-00722

# WIRE-TYPE WINDOW REGULATOR (FROM '08MY)

GLASS/WINDOWS/MIRRORS

---

## B: STRUCTURE

GW-00723

- (1) Motor
- (2) Upper wire

- (3) Lower wire
- (4) Wire-winding drum

- (5) Rail
- (6) Carrier plate

# WIRE-TYPE WINDOW REGULATOR (FROM '08MY)

GLASS/WINDOWS/MIRRORS

## C: OPERATION

The glass moves up and down when the wire (2) is wound or unwound as the motor (1) rotates. When a certain amount of the wire is wound or the same amount of the wire is unwound, the carrier plate (3) attached to the wire moves up and down. This move the glass that is attached to the carrier plate moves up and down as well.

# COMBINATION METER

## 1. Combination Meter

### A: ELECTRO-LUMINESCENT METER

To increase desirability and visibility of the meter, an electro-luminescent meter is used on some models.

- Red LEDs are used for meter rings and needles illumination.
- The brightness of the meter display area can be properly adjusted to meet various conditions.
- An indicator that illuminates when the lighting switch is turned to the next position from OFF is provided.

IDI00162

(1) Meter ring

(2) Needle

## B: ILLUMINATION AND NEEDLES

### 1. INITIAL OPERATION

- Electro-luminescent meter

When the ignition switch is turned ON, the meter rings are illuminated first, and the needles are lit next. Then the needle moves from the minimum reading to the maximum reading, and then returns to the minimum reading. Finally the dial illumination and LCD turn on.

- Standard meter

When the ignition switch is turned ON, the meter needle moves from the minimum reading to the maximum reading and then returns to the minimum reading.

The illumination brightness can be adjusted by selecting any of the six steps of the instrument panel dial. (Adjustment is possible only when the lighting switch is ON for the standard meter.)

IDI00107

(1) Adjustment dial

(2) Brighter

(3) Darker

# COMBINATION METER

INSTRUMENTATION/DRIVER INFO

## C: WARNING AND INDICATOR LIGHTS

- (1) Brake fluid level warning/parking brake indicator light  
This light illuminates if the fluid level in the brake reservoir tank lowers below the specified level and/or when the parking brake is applied.
- (2) Seat belt warning light  
This warning light illuminates when the ignition switch is turned ON, and goes out when the seat belt is fastened.
- (3) Door open warning light  
This warning light illuminates when one or more doors and/or rear gate are not completely closed.
- (4) Low fuel warning light  
This warning light comes ON when the quantity of the fuel remaining in the tank has decreased to 9 ℓ (2.4 US gal, 2.0 Imp gal) or less.
- (5) Engine malfunction indicator light  
This light illuminates if a fault occurs in the MFI (Multiple point Fuel Injection) system.
- (6) Charge warning light  
This warning light illuminates when a fault occurs in the charging system while the engine is running.
- (7) Oil pressure warning light  
This light illuminates when the engine oil pressure decreases below 14.7 kPa (0.15 kgf/cm<sup>2</sup>, 2.1 psi).
- (8) AIR BAG system warning light  
This warning light illuminates if a fault occurs in the airbag system.
- (9) ABS warning light  
This warning light illuminates if a fault occurs in any electrical component of the ABS (Anti-lock Brake System).
- (10) Vehicle dynamics control warning light and vehicle dynamics control OFF indicator light  
This light illuminates when a fault occurs in any electrical component of the vehicle dynamics control. It also illuminates when the vehicle dynamics control OFF switch is pressed.
- (11) AWD warning light (AT)  
This warning light illuminates if the vehicle is driven with front and rear tire sizes different from each other. On 4AT models, this indicator illuminates when the drive mode is changed from AWD to FWD (with the fuse installed in the FWD switch).
- (12) AT oil temperature warning light (AT)  
This warning light illuminates when the ATF temperature exceeds 150°C (302°F).
- (13) Tire pressure warning light  
This warning light illuminates when the air pressure in either of the tires drops below the specified value while traveling, and flashes when a fault occurs in the tire pressure monitoring system.
- (14) Sports mode indicator (AT)  
This indicator illuminates when the AT selector lever is put in the sports mode position, and blinks if a fault occurs in the AT control system.

## COMBINATION METER

### INSTRUMENTATION/DRIVER INFO

When everything is normal, the warning and indicator lights should be ON or OFF as shown below according to ignition switch positions.

Warning/Indicator light		Ignition switch position			
		LOCK/ACC	ON	ST	While engine is running
(1)	Brake fluid level / parking brake	OFF	ON	ON	*1
(2)	Seat belt	OFF	*2	*2	*2
(3)	Door or rear gate open	• Open	ON	ON	ON
		• Closed	OFF	OFF	OFF
(4)	Low fuel level	OFF	*3	*3	*3
(5)	Engine malfunction indicator	OFF	ON	ON	OFF
(6)	Charge	OFF	ON	ON	OFF
(7)	Oil pressure	OFF	ON	ON	OFF
(8)	AIR BAG	OFF	*4	*4	*4
(9)	ABS	OFF	*5	*5	*5
(10)	Vehicle dynamics control	OFF	ON	ON	OFF
(11)	AWD	OFF	*6	*6	*6
(12)	AT oil temperature	OFF	ON	ON	OFF
(13)	Tire pressure	OFF	*5	*5	*5
(14)	Sports mode	OFF	OFF	OFF	*7

\*1: This warning light illuminates when the parking brake is applied.

\*2: This warning light flashes after the ignition switch is turned ON until the drivers seat belt is fastened.

\*3: This warning light illuminates when the quantity of the fuel remaining in the tank has decreased to 9 ℓ (2.4 US gal, 2.0 Imp gal) or less.

\*4: This warning light illuminates for about 6 seconds, and then goes out.

\*5: This warning light illuminates for about 2 seconds, and then goes out.

\*6: This warning light illuminates if the front and rear tire sizes are different from each other. This also illuminates when the drive mode is changed from AWD to FWD (4AT models).

\*7: This light illuminates when the AT selector lever is moved to the sports mode position.

**MEMO**

# COMBINATION METER

INSTRUMENTATION/DRIVER INFO

## D: TELLTALE LIGHT

# COMBINATION METER

INSTRUMENTATION/DRIVER INFO

---

- (1) Turn signal indicator light  
This light blinks in unison with the corresponding turn signal lights when the turn signal switch is operated.
- (2) Lighting switch indicator light  
Turns on when the lighting switch is turned to the next position from OFF.
- (3) Headlight beam indicator  
This light illuminates when the headlights are in the high-beam position.
- (4) Immobilizer indicator  
This light illuminates when the immobilizer systems are armed.
- (5) Front fog light indicator light  
This light illuminates when the front fog lights are ON.
- (6) CRUISE indicator light  
This light illuminates when the cruise control main switch is turned ON.
- (7) SET indicator light  
This light illuminates when the cruise control main switch is turned ON and the SET/COAST switch on the command switch is turned ON.
- (8) Vehicle dynamics control function indicator light  
This light blinks when the vehicle dynamics control is operating.
- (9) AT selector lever position indicator (AT)  
The indicator corresponding to the present AT select lever position illuminates when the ignition switch is in any position other than ACC and LOCK.
- (10) Sports shift indicator (AT)  
Indicates the current gear position when sports shift is selected.

## COMBINATION METER

### INSTRUMENTATION/DRIVER INFO

When everything is normal, the telltales should be ON, OFF or in other states as shown below according to ignition switch position.

Telltale light		Ignition switch position			
		LOCK/ACC	ON	ST	While engine is running
(1)	Turn signal	OFF	Blink	Blink	Blink
(2)	Lighting switch	OFF	*1	*1	*1
(3)	Headlight beam	• High beam	OFF	ON	ON
		• Low beam	OFF	OFF	OFF
(4)	Immobilizer	*2	OFF	OFF	OFF
(5)	Front fog light	Front fog light ON	OFF	ON	ON
(6)	CRUISE	OFF	OFF	OFF	ON
(7)	SET	OFF	OFF	OFF	*3
(8)	Vehicle dynamics control	OFF	*4	ON	OFF
(9)	AT selector lever position	OFF	ON	ON	ON
(10)	Sports shift indicator	OFF	*5	OFF	*5

\*1: Turns on when the lighting switch is turned to the next position from OFF.

\*2: This light illuminates when the immobilizer system is armed.

\*3: This light illuminates when the SET/COAST switch is turned ON while driving at 40 km/h (25 MPH) or higher.

\*4: This light illuminates for about 2 seconds, and then goes out.

\*5: Indicates the current gear position when sports shift is selected. It also illuminates for about 2 seconds when the ignition switch is turned ON.

## E: SPEEDOMETER

### 1. GENERAL

- The speedometer system is an electrical type that uses electric signals from the ABS or vehicle dynamics control (VDC) control module.
- Since the system does not use mechanical components such as rotating cable, there are no opportunities of occurring such problems as meter needle vibration and cable disconnection. Also, it does not constitute any means of mechanical noise transmission.
- The odometer and trip meter readings appear on a liquid crystal display (LCD).
- At the trip meter display, the illumination level and the following trouble information (abnormality of various control modules, communication system, vehicle speed signals, etc.) are shown in addition to the trip meter reading.

Indication	Indicated fault
“Er --”	High speed and low speed CAN communication failed simultaneously
“Er HC”	High speed CAN communication failure
“Er LC”	Low speed CAN communication failure
“Er IU”	Body integrated unit failure inside
“Er EG”	Engine control module communication counter failure
“Er tC”	Transmission control module communication counter failure
“Er Ab”	ABS/VDC control module communication counter failure
“Er SP”	Vehicle speed signal abnormal (ABS/VDC diagnostic trouble code information)
“Er SS”	Vehicle speed signal abnormal (wheel speed signal abnormal)

### 2. OPERATION

The ABS or VDC control module calculates the vehicle speed based on signals from the four wheel speed sensors and sends vehicle speed signals (4 pulses per rotation of wheel) to the speedometer drive circuit and odometer/trip meter drive circuit in the speedometer.

**NOTE:**

Signals from the ABS or VDC control module are also used by the engine control module, automatic transmission control module, etc.

### 3. SPECIFICATIONS

Speedometer	Type		Electric pulse type
	Indication	km/h	The needle points to 60 km/h (37.3 MPH) when 2,548 pulses are input per minute.
		MPH	The needle points to 60 MPH (95 km/h) when 4,104 pulses are input per minute.
Odometer	Type		Pulse count type
	Display		LCD/6 digits; 0 to 999,999 km (miles)
	Indication		Counts up 1 km per 2,548 pulses. (4,104 pulses per mile)(Count down is impossible.)
Trip meter	Type		Pulse count type
	Display		LCD/4 digits; 0 to 999.9 km (miles) and 1000 to 9999 km (miles).
	Indication		Counts up 1 km per 2,548 pulses. (4,104 pulses per mile)(To change the trip meter from A to B or B to A, push the knob momentarily. To return the trip meter to zero indication, keep the knob pushed for more than 1 second.)

# COMBINATION METER

## INSTRUMENTATION/DRIVER INFO

### F: TACHOMETER

The tachometer drive circuit is connected to the engine speed sensing circuit in the engine control module.

When the engine speed increases or decreases, the voltage of the circuit also increases or decreases, changing the magnetic force of the tachometer drive coil.

The tachometer needle then moves in accordance with change in the engine speed.

IDI00112

- (1) Ignition switch
- (2) Combination meter
- (3) Microprocessor

- (4) Tachometer
- (5) Engine control module

## G: WATER TEMPERATURE GAUGE

- Water temperature signals are generated at the engine coolant temperature sensor on the engine, and after converted into digital signals, these signals are sent via the body integrated unit to the combination meter.
- The resistance of the engine coolant temperature sensor changes according to the engine coolant temperature. Therefore, the signals sent to the water temperature gauge also changes according to the engine coolant temperature. As the change in signals causes the magnetic force of the step motor to change, the gauge needle moves according to the engine coolant temperature.
- When the coolant is at a normal operating temperature of approx. 85 to 100°C (158 to 212°F), the gauge needle stays in the middle of the indication range as shown below.

- (1) Red zone
- (2) Indication
- (3) Temperature (°C)
- (4) Ignition switch
- (5) Combination meter

- (6) Microprocessor
- (7) Water temperature gauge
- (8) Body integrated unit
- (9) Engine control module
- (10) Engine coolant temperature sensor

# COMBINATION METER

## INSTRUMENTATION/DRIVER INFO

### H: FUEL GAUGE

#### 1. GENERAL

- The fuel gauge unit consists of a float and a potentiometer whose resistance varies depending on movement of the float. It is located inside the fuel tank and forms an integral part of the fuel pump. The fuel gauge indicates the fuel level in the tank when the ignition switch is in the ON position. When the trip knob is pushed, the fuel gauge illumination comes ON and the fuel level registered just before the ignition switch was turned OFF is indicated, even when the ignition switch is in the OFF position.

- All models are equipped with two fuel level sensors. These sensors are installed in the fuel tank, one on the right side and the other on the left side. Two sensors are necessary because the fuel tank is divided into main and sub tank compartments.

IDI00017

- (1) Main fuel level sensor
- (2) Fuel sub level sensor
- (3) Float

## 2. OPERATION

The low fuel warning light operates as follows:

The signal from the fuel level sensor is converted into a digital signal at the body integrated unit, and then sent to the combination meter. The combination meter microprocessor continually monitors this signal. It turns on the low fuel warning light in the combination meter if a resistance value corresponding to the critical fuel level is detected for a certain time while driving.

This monitoring time has been decided to avoid false operation of the warning light, which may happen when a large part of remaining fuel is collected temporarily in the sub tank compartment.

- (1) Main fuel level sensor
- (2) Fuel sub level sensor
- (3) Fuel tank

## 3. SPECIFICATIONS

	Fuel level	Resistance
Main fuel level sensor	Full	1.0 — 3.0Ω
	Empty	30.9 — 32.9Ω
Fuel sub level sensor	Full	1.0 — 3.0Ω
	Empty	61.1 — 63.1Ω

# COMBINATION METER

## INSTRUMENTATION/DRIVER INFO

---

### I: DIAGNOSIS MODE

#### 1. GENERAL

The combination meter is provided with a self diagnosis function and a diagnostic trouble code display function which indicate DTCs for the engine, transmission and ABS/VDC control modules. To enter diagnosis mode, the diagnosis connector located near the fuse box under the right side of the driver's seat is used.

(1) Diagnosis connector

#### 2. PROCEDURE

##### ● Entering diagnosis mode

- 1) Connect the diagnosis connector.
- 2) Turn ON the ignition switch.
- 3) During initial operation of the meter and while the needle is moving, push the trip knob once to enter diagnostic trouble code display mode, or push the knob twice to enter self diagnosis mode.

##### NOTE:

If the vehicle is driven while in diagnosis mode (vehicle speed signals input), diagnosis mode is cancelled.

##### ● To exit diagnosis mode

Turn OFF the ignition switch and disconnect the diagnosis connector to exit diagnosis mode.

### 3. FUNCTION

- **Self diagnosis mode**

When self diagnosis mode is activated, the system switches to warning lights, indicators, needle movement, illumination or buzzer check mode (sports shift) each time the trip knob is pushed.

- **Diagnostic trouble codes display mode**

When diagnostic trouble code display mode is activated, the display switches to indicate engine control module, transmission control module, or ABS/VDC control module diagnostic trouble codes each time the trip knob is pushed. In addition to the type of control module, the display will show whether the diagnostic trouble codes are now being received, present, or not. If CAN communication is failed, "-----" is displayed.

Control module	Status	Indication
Engine control module	Receiving diagnostic trouble codes	Trip "A" + "P (blink)"
	Diagnostic trouble codes present	Trip "A" + "P xxxx"
	No failure exists	Trip "A" + "P ----"
Transmission control module	Receiving diagnostic trouble codes	Trip "B" + "P (blink)"
	Diagnostic trouble codes present	Trip "B" + "P xxxx"
	No failure exists	Trip "B" + "P ----"
ABS/VDC control module	Receiving diagnostic trouble codes	Trip "A" + "C (blink)"
	Diagnostic trouble codes present	Trip "A" + "C xxxx"
	No failure exists	Trip "A" + "C ----"
CAN communication error	—	"-----"

# CLOCK UNIT

## 2. Clock Unit

### A: GENERAL

The clock unit display can be switched to indicate outside air temperature, fuel efficiency, remaining travel distance or continuous driving time, by operating a button. The DISP button is used for switching the display, and the indicated information switches in the following sequence each time the button is pressed: outside temperature → fuel efficiency at the instant → average fuel efficiency → remaining travel distance → continuous driving time. These data are sent from the combination meter by means of digital communication. This clock unit is provided with a function to automatically display a failure; if the accessory power circuit is open it displays “Acc”, and if the ignition power circuit is open it displays “ign”. If an abnormality is detected in the communication between the combination meter and clock unit or in the received data, “Err” is displayed. If no data can be received, “Err” will always be displayed even when the indication is switched with the DISP button, but when only a specific data is not received, “Err” will be displayed only when the indication is switched to display that data. For example, if outside temperature data is not received “Err” will be displayed only when the thermometer feature is selected, and other indications such as the fuel efficiency meter will be displayed normally.

(A) For U.S.

(B) For Canada

(1) Clock unit

(3) BRIGHT button

(2) DISP button

## **B: OPERATION**

### **1. CLOCK DISPLAY**

The clock shows time when the ignition switch is turned to ACC or further from OFF.

### **2. INSTANT FUEL EFFICIENCY, AVERAGE FUEL EFFICIENCY, REMAINING TRAVEL DISTANCE AND CONTINUOUS DRIVING TIME DISPLAY**

The combination meter microprocessor performs calculations based on vehicle speed signals from the ABS/VDC control module, remaining fuel signals from the body integrated unit, fuel efficiency signals from the engine control module, and engine start signals, and then sends the data to the clock unit.

- **Average fuel efficiency**

The value is calculated from the distance and total amount of consumed fuel since the trip meter has been reset the last time.

- **Instant fuel efficiency**

The value is calculated during driving, based on the traveled distance and amount of consumed fuel recorded for a certain period.

- **Remaining travel distance**

The value is calculated from the average fuel efficiency in recent 30 km (18.8 miles) and the amount of remaining fuel.

- **Continuous driving time**

Indicates the total time since the engine has been started.

### **3. OUTSIDE AIR TEMPERATURE DISPLAY**

The body integrated unit performs calculations based on outside air temperature signals from the ambient sensor and vehicle speed signals from the ABS/VDC control module, and then sends the data via the combination meter to the clock unit.

### **4. BRIGHT (DIMMER CANCELING) FUNCTION**

The dimmer can be cancelled by pushing the BRIGHT button when the lighting switch is ON. The lights returns to the dimmed state when the button is pushed again.

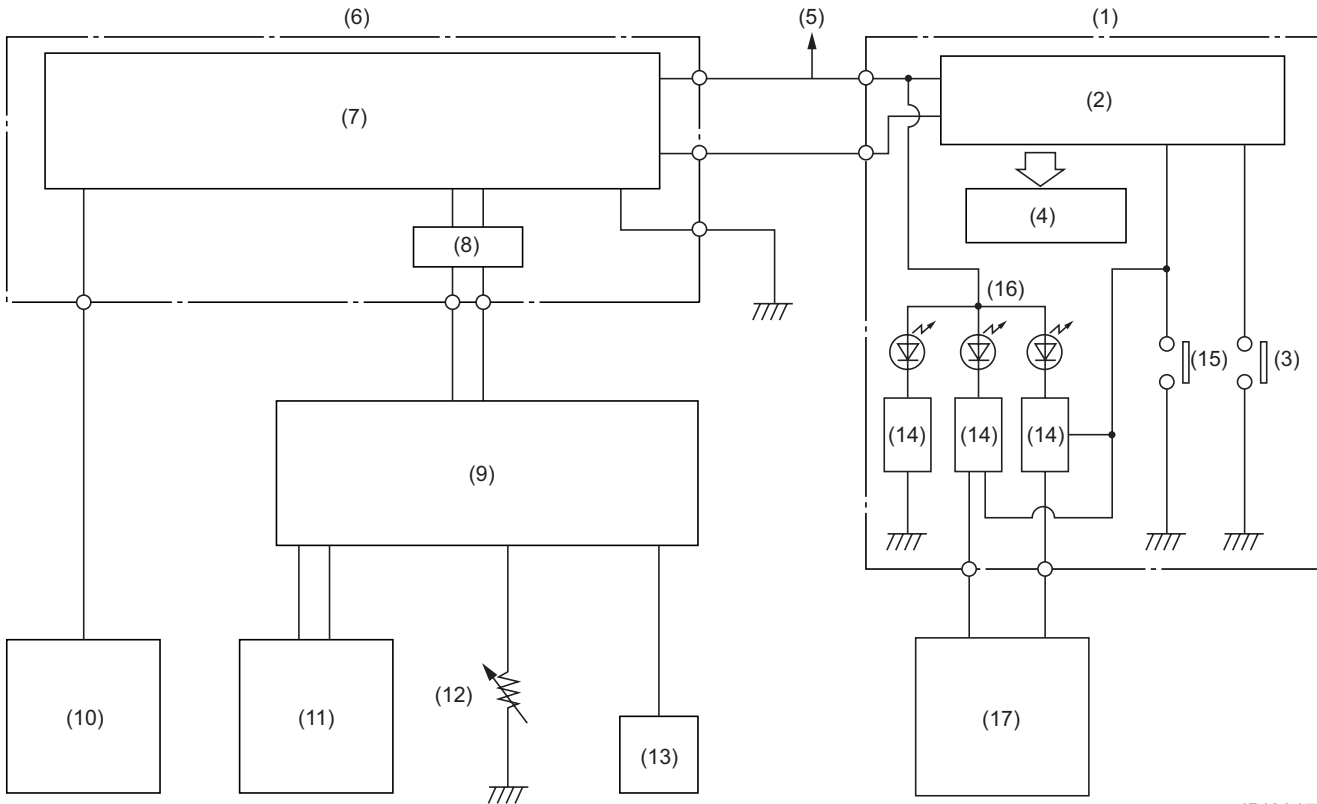

### **5. PASSENGER'S SEAT AIRBAG INDICATOR**

When this indicator (a mark on vehicles for Canada) is ON, the passenger's seat airbag will deploy in case of a front collision that should cause the airbag system to activate. When the indicator (a mark on vehicles for Canada) is OFF the passengers seat airbag will not deploy.

# FRONT SEAT

SEAT

---

## 1. Front Seat

### A: ADJUSTMENT

Adjustment ranges are expanded to fit a wider variety of body types.

- The height of each headrest is adjustable to any of the 3 positions available.
- The uppermost position of the backrest is 11° rearwards from the perpendicular; the reclining angle is widened.
- A “towel bar” type seat slide lever is used for easier operation.
- The seat lifter mechanism has been changed from a system that lifts only the cushion to a system that lifts the entire seat.

SE-00419

SE-00420

**B: HEIGHT ADJUSTER**

The driver's seat is provided with a height adjuster. Both the seat cushion and backrest rise every time the lifter lever is pulled up; they lower every time the lever is pushed down.

The lever is enlarged for easier operation.

SE-00374

(1) Lifter lever

(2) Seat height adjustment range

**C: ACTIVE HEADREST**

In case of rear-end collision, the headrest moves forward to immediately support the passenger's head to reduce the possibility of injury to the neck.

SE-00036

## FRONT SEAT

SEAT

---

- 1) In case of rear-end collision, the passenger's body will move rearward by the impact.
- 2) When the body moves rearward, the thrust receiving plate inside the seat is pressed in.
- 3) When the thrust receiving plate is pressed in, the headrest moves forward due to a levering action.

## 2. Powered Seat System With Memory Preset (From '06MY)

### A: GENERAL

- It is possible to register optimal seat positions adjusted by a driver (seat forward/back position, seat cushion height and angle, back rest angle) to the memory unit.
- Up to 2 seat positions can be registered, and even if the seat position has been changed, it will be possible to call out a registered seat position with a single button. It is possible to set this to use for different drivers, or to set a driving position and a rest position.
- The memory switch assembly for registering and calling out the memory, is located on the side cover of the driver's seat cushion (door side).

### B: COMPONENT

SE-00748

# POWERED SEAT SYSTEM WITH MEMORY PRESET (FROM '06MY)

SEAT

---

## 1. MEMORY UNIT

In addition to storing the current slide/tilt/lifter/reclining positions based on the pulse signals from each motor assembly, registration/call out of preset seat positions is performed by the operation of the memory switch assembly.

The amount of movement for each motor is counted from a reference position, and the counts are recorded by this count. If the counts from the reference position exceeds the limit for some reason, the preset call feature may not operate properly, and initialization will be required in this case.

When a preset seat position is registered or called out, the built-in buzzer will sound.

## 2. MEMORY SWITCH ASSEMBLY

### • SET button

When the SET button is pressed, the unit will enter the registration preparation status. (If the preset call button is not pressed within 5 seconds, the registration preparation status will be cancelled.)

### • Preset call button

- Calls out the registered seat position.
- By pressing the preset call button after pressing the SET button, the seat position is registered.

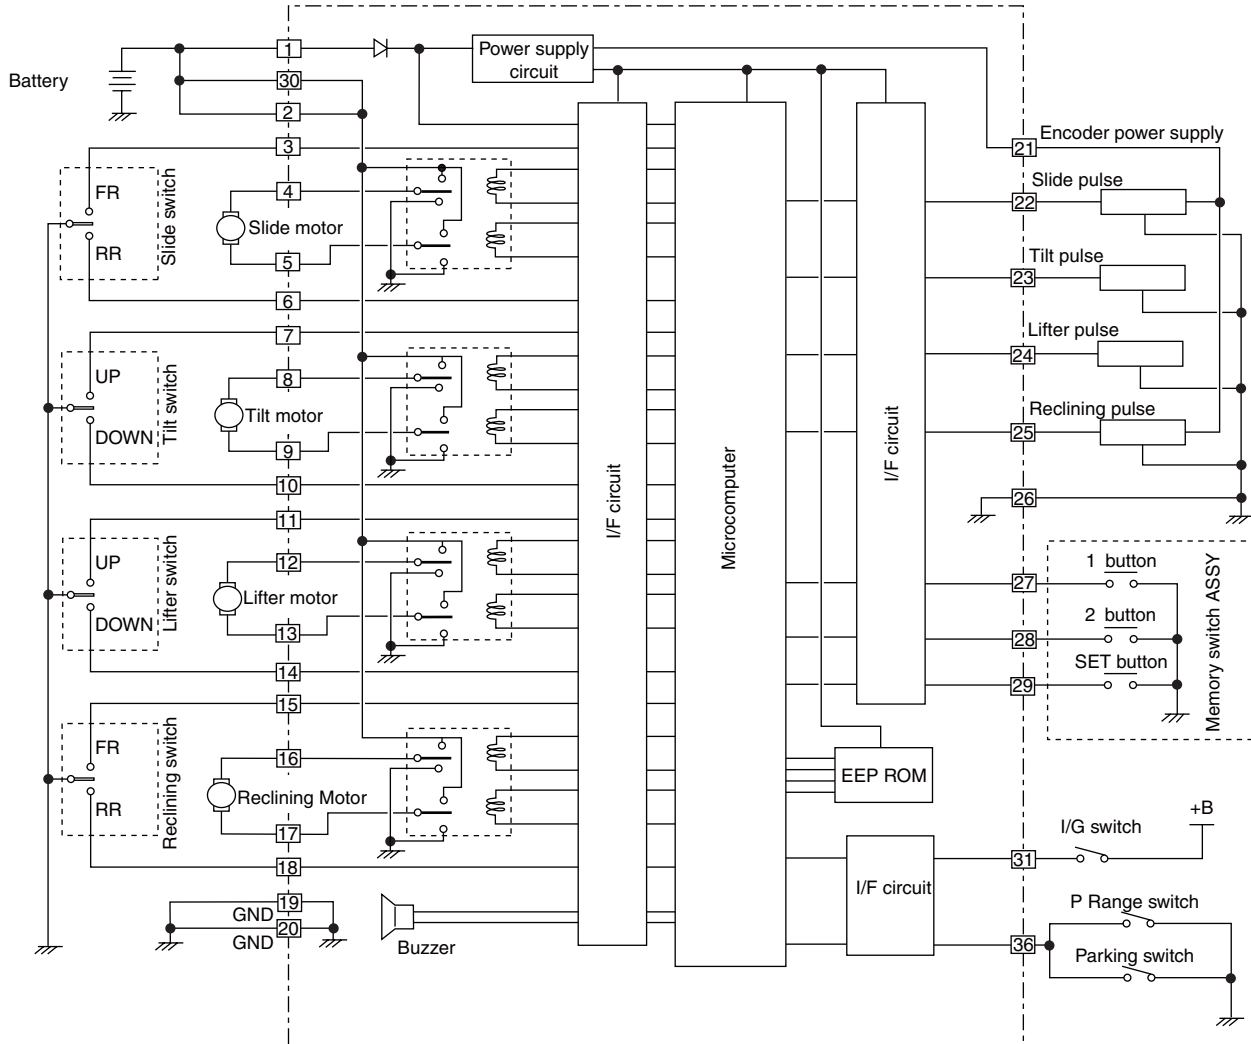

## 3. MOTOR ASSEMBLY

A motor assembly is provided for each function of slide, tilt, lifter, and reclining.

Each motor assembly has a built-in encoder, and sends a pulse signal to the memory unit.

## C: SPECIFICATION

### 1. SYSTEM DIAGRAM

SE-00758

# POWERED SEAT SYSTEM WITH MEMORY PRESET (FROM '06MY)

SEAT

## 2. I/O SIGNAL

DC10 to 16, -30 to +80°C

Terminal No.	Input/output name	Maximum input voltage (V)	Hi level minimum input/output voltage (V)	Low level maximum input/output voltage (V)	Maximum allowable current (A)
1	Main power supply input	16	10	—	3
2	Motor power supply 2 input	16	10	—	25
3	Slide forward switch input	—	—	1.5	50 mA
4	Slide motor forward output	16	9.5	—	23 <sup>*2</sup>

27	Preset call button 1 input	—	—	1	50 mA
28	Preset call button 2 input	—	—	1	50 mA
29	SET button input	—	—	1	50 mA
30	Motor power supply 1 input	16	10	—	25
31	Ignition switch input	16	10	—	3
36	Parking switch input	—	—	1.5	50 mA

\*1: When current flow is 8 mA or less.

\*2: When output time is 4 seconds or less (compatibility with built-in motor circuit breaker)

**D: OPERATION**

**1. SEAT POSITION REGISTRATION**

- 1) Set the seat to the optimum position.
- 2) Press the SET button, and press preset call button 1 or 2 within 5 seconds.
- 3) When the seat position is registered, the buzzer will sound once.

**NOTE:**

Even if the battery is removed, the registered seat position will not be deleted.

**2. CALLING OUT THE PRESET SEAT POSITION**

By pressing the preset call button 1 or 2, the seat will return to the registered seat position.

**CAUTION:**

**1 The operational conditions for the preset call operation is as follows.**

**AT model:**

<b>Ignition switch</b>	<b>Selector lever</b>	<b>Operational condition</b>
ON	"P" range position	Preset call allowed
ON	Other than the "P" range	Preset call prohibited
OFF	"P" range position	Preset call allowed
OFF	Other than the "P" range	Preset call allowed

**MT model:**

<b>Ignition switch</b>	<b>Parking brake</b>	<b>Operational condition</b>
ON	Applied	Preset call allowed
ON	Disengaged	Preset call prohibited
OFF	Applied	Preset call allowed
OFF	Disengaged	Preset call allowed

**2 If the following is performed while performing the seat preset call, the call out operation will be cancelled.**

- When power seat operation by manual switch is performed
- When preset call button 1 or 2 is pressed
- When the SET button is pressed

# POWERED SEAT SYSTEM WITH MEMORY PRESET (FROM '06MY)

SEAT

## 3. INITIALIZATION

In relation to the reference position recorded by the memory unit, if the actual amount of seat movement does not match the pulse count, (eg. motor should only count up to 10 but counted to 11 during movement), the preset call operation may not function properly. If the registered position and the called out position differs, it is necessary to perform initialization.

NOTE:

Steps 1 to 4 may be performed in any order.

SE-00750

1. Operate the slide switch and move the seat towards the rear. Even after reaching the rearmost position, continue to operate the switch until a buzzer is heard.
2. Operate the reclining switch and move the back rest forward. Even after reaching the foremost position, continue to operate the switch until a buzzer is heard.
3. Operate the tilt switch and move the seat cushion downward. Even after reaching the lowest position, continue to operate the switch until a buzzer is heard.
4. Operate the lifter switch and move the seat cushion downward. Even after reaching the lowest position, continue to operate the switch until a buzzer is heard.
5. When the switch operation in the 4th step is turned from ON to OFF, if the initialization has been completed properly, the buzzer will sound 3 times.

NOTE:

If the following conditions occur, the initialization operation will be cancelled.

- If the interval of operations between steps 1 to 4 exceed 10 seconds
- If all operations from steps 1 to 4 are not performed
- If power is cut off during the operations of steps 1 to 4, or if the voltage to the unit falls below the operating voltage

## 3. Rear Seat

### A: OPERATION

#### 1. SEDAN MODELS

The backrest has an armrest. It is also featured with a “center through” function.

#### 2. WAGON MODELS

- Unlock the backrest by pushing the release button and then fold the backrest forwards.
- The backrest and shoulder portions are separated to improve support of the rear passenger's body. The backrest is also provided with a single-action folding feature, which contributes to form a flat luggage room by folding only the backrest forwards.

SE-00377

# WALK-IN FEATURE (FROM '06MY)

SEAT

## 4. WALK-IN Feature (From '06MY)

### A: GENERAL

A WALK-IN feature is provided on the second row seats to make it easier for the 3rd row passengers to get in and out of the vehicle.

SE-00752

### B: MECHANISM

SE-00753

(1) Reclining lever

(2) WALK-IN lever

## C: FUNCTION

### 1. FOLDING

When the WALK-IN lever is operated, the recliner is released through a wire inside the seat, and the seat backrest will fold forward. This will press the WALK-IN bracket against the lock plate, and rotate centered on the hinge center, pulling the slide release cable, and the seat slide lock will be released.

SE-00754

(A) When locked

(B) When folded

(1) Lock plate

(3) WALK-IN bracket

(4) Slide release cable

(2) Hinge center

### 2. WHEN FOLDED FORWARD

When the reclining lever is operated, the lock plate is pulled up with the wire. The pulled up lock plate is maintained at that position, and it will become possible to fold forward.

SE-00755

(1) Lock plate

(2) Hinge center

(3) WALK-IN bracket

# OCCUPANT DETECTION SYSTEM (UNTIL '05MY)

SEAT

## 5. Occupant Detection System (Until '05MY)

### A: GENERAL

The passenger's seat is equipped with an occupant detection system, which consists of an occupant detection control module and four loadcell sensors, etc.

The occupant detection system sends signals to control the deployment of the passenger's seat air-bag when a child or small person is sitting in the passenger's seat.

### B: SYSTEM CONFIGURATION

The components of the occupant detection system are integrated as a seat cushion frame assembly; the assembly cannot be disassembled and the components cannot be replaced separately.

#### 1. OCCUPANT DETECTION CONTROL MODULE

SE-00475

The occupant detection control module is installed under the passenger's seat and detects the presence/absence and physique of the person sitting in the passenger's seat based on signals sent from the loadcell sensors to send signals to the airbag control module.

If there is any abnormality in the occupant detection control module, the airbag warning light in the combination meter illuminates to warn the driver of system abnormality. Diagnostic trouble codes can be read by using a Subaru select monitor.

## 2. LOADCELL SENSOR

SE-00476

Four loadcell sensors are installed on the passenger's seat and each sensor measures the load to send signals to the load occupant detection control module.

# OCCUPANT DETECTION SYSTEM (UNTIL '05MY)

SEAT

---

## 3. PASSENGER'S SEAT AIRBAG INDICATOR

SE-00477

The passenger's seat airbag indicator light is built in the center part of the instrument panel. The light indicates the result judged by the occupant detection control module.

Depending on the occupant detection control module's decision, the passenger's seat airbag may not deploy even in case of a frontal collision, however, the driver's seat airbag will deploy and the driver/passenger seat belt pretensioners are controlled to activate. Also, the driver/passenger seat side airbags and the left/right curtain airbags are controlled to activate.

For initial check of the occupant detection system, both the ON (will deploy) and OFF (will not deploy) indicators will illuminate for about 6 seconds after the ignition switch is turned ON, and then turns OFF simultaneously for 2 seconds.

## 6. Occupant Detection System (From '06MY)

### A: GENERAL

In '06MY, the occupant detection system was changed. The loadcell sensor that is located between the seat cushion and the seat frame consists of the bladder (bag) containing silicon gel and the pressure sensor connected with a hose. When the passenger sits in the passenger's seat, the silicon gel contained in the bladder is pushed. The loadcell sensor measures this pressure, and then it sends the signal to the occupant detection control module. The occupant detection control module detects the physique of the person sitting in the passenger's seat based on the signals, and then it sends the control signal to the airbag control module.

The belt tension sensor was also added to the outer seat belt. The belt tension sensor detects the status that seat belt is continuously tensioning (when the child seat is attached to the passenger's seat, etc.), and then it sends the signal to the occupant detection control module.

SE-00666

SE-00667

SE-00668

- (1) Occupant detection control module
- (2) Loadcell sensor
- (3) Bladder (with silicon gel)
- (4) Belt tension sensor

# OCCUPANT DETECTION SYSTEM (FROM '06MY)

SEAT

---

MEMO

# SUNROOF

SUNROOF/T-TOP/CONVERTIBLE TOP

---

## 1. Sunroof

### A: SEDAN MODELS

#### 1. DESCRIPTION

The sunroof operates on an automatic opening/closing system including tilt and slide mechanisms.

- A motor with a built-in microprocessor is used for the sunroof motor, which provides one-touch automatic opening and closing functions with a jamming prevention feature. (The system operates in auto mode when the switch is pushed for more than 0.3 seconds.)
- Reduced thickness of the sunroof provides extra overhead clearance in the passenger compartment.
- The frame, glass lid and mechanism parts are refined to reduce considerable amount of weight.

#### 2. FUNCTION

##### ● Sunroof tilting and sliding operation

- With the glass lid fully closed, pushing the rear side of the tilt switch causes the rear end of the glass lid to rise by 30 mm (1.18 in). Pushing then the front side of the switch causes the lid to lower to the original position.
- Pushing the OPEN/CLOSE switch rearward causes the glass lid to slide rearward and open. Pushing the switch forward causes the glass lid to move forward and stop at a point 150 mm (5.91 in) before the fully closed position. Pushing the switch again closes the lid completely.

##### ● Sunshade operation

- The sunshade can be opened or closed manually when the glass lid is closed.
- The sunshade moves rearward together with the glass lid when the OPEN side of the OPEN/CLOSE switch is pushed. (When closed, only the glass lid moves.)

## B: WAGON MODELS

### 1. DESCRIPTION

The sunroof operates on an automatic opening/closing system, and the joined opening area consists of a tilting front glass lid and a sliding rear glass lid.

SR-00105

- (1) Front glass lid
- (2) Rear glass lid
- (3) Motor
- (4) Frame
- (5) Sunshade

- The sunroof openings are joined to form a single, wide opening (720 mm (28.35 in) long and 600 mm (23.62 in) wide), aiming to improve the “open and free” feeling to a great extent.
- A motor with a built-in microprocessor is used for the sunroof motor, which provides one-touch automatic opening and closing functions with a jamming prevention feature. (The system operates in auto mode when the switch is pushed.)
- The frame, glass lid and mechanism parts are refined to reduce considerable amount of weight.
- The contour and tilt-up angle of the front glass lid are refined to enhance the effect as a deflector and reduce the wind blowing into the cabin when the sunroof is open. Also, the edge shape of the front glass lid is optimized to minimize unpleasant wind shearing noise.

# SUNROOF

SUNROOF/T-TOP/CONVERTIBLE TOP

---

## 2. FUNCTION

### ● **Open and close operations**

- When the switch is pushed rearwards, the rear edge of the front glass lid tilts up by 45 mm (1.77 in).
- When the switch is pushed forwards, the front glass lid tilts down to the fully closed position and then stops.
- When the sunroof switch is pushed rearwards while the front glass lid is fully closed, the rear end of the front glass lid stops at a position ready for tilting up. When the switch is pushed again, the rear end of the front glass lid further tilts up to a position of 70 mm (2.76 in), and the rear glass lid slides and opens to a position 410 mm (16.14 in) from the rear end of the front glass lid and stops. When the sunroof switch is pushed again, the rear glass lid opens to the wide-open position [550 mm (21.65 in) from the front glass lid rear end].
- When the sunroof switch is pushed forwards while the rear glass lid is at its wide-open position, the rear glass lid moves forward, and then comes to a stop when its front end reaches a position 150 mm (5.91 in) from the rear end of the front glass lid. When the sunroof switch is pushed again, the rear glass lid moves to the fully closed position, and the front glass lid closes until it reaches its tilted up position. When the sunroof switch is pushed once more, the front glass lid tilts down to the fully closed position.

### ● **Sunshade operation**

- When the front glass lid tilts up, the shade opens at its front edge by 20 mm (0.79 in) in connection with the lid, to improve ventilation. However, when tilting down the shade will not move in connection with the front glass lid so the shade must be manually closed.
- The sunshade automatically opens or closes together with the rear glass lid. However, when completely closing the sunroof, the sunshade will come to a stop at a position 170 mm (6.69 in) before the fully closed position even when the front glass lid is completely tilted down. Close the shade manually after the glass lid is completely closed.

# UNDER COVER

EXTERIOR/INTERIOR TRIM

---

## 1. Under Cover

### A: FLOOR UNDER COVER

- A floor under cover is installed to both sides of the vehicle's floor part to improve the aerodynamic characteristics at the underside of the vehicle.
- Taking recycling reasons into account, polypropylene (PP) material is used.

EI-00824

### B: FUEL TANK PROTECTOR

- A fuel tank protector is installed to prevent damage to the fuel tank by flying stones etc. during driving.
- Taking recycling reasons into account, polypropylene (PP) material is used.

EI-00825

## 2. Front Bumper Beam

A bumper beam assembly is placed inside the front bumper. The beam assembly is fastened to the chassis frame and absorbs the shock energy in case of a front collision to enhance safety of the vehicle.

EI-01034

- (1) Energy absorber foam
- (2) Bumper beam reinforcement
- (3) Bumper beam bracket

# REAR BUMPER BEAM

EXTERIOR/INTERIOR TRIM

---

## 3. Rear Bumper Beam

- A bumper beam assembly is placed inside the rear bumper. The beam assembly is fastened to the chassis frame and absorbs the shock energy in case of a rear collision, etc. to reduce damage to the vehicle.
- The rear bumper assembly consists of a bumper face bracket, main beam, main beam bracket, and energy absorber foam made of PP foam.

EI-01035

- |                       |                          |
|-----------------------|--------------------------|
| (1) Main beam         | (4) Energy absorber foam |
| (2) Main beam bracket | (5) Lower bracket        |
| (3) Beam upper rear   | (6) Corner bracket       |

## 4. Roof Spoiler (Wagon Models)

- The spoiler is built into the rear gate and is provided as standard equipment.

- In connection with providing the spoiler on all models, the high mount stop light and rear washer nozzle are incorporated in the roof spoiler.

EI-00821

(1) High mount stop light

(2) Rear washer nozzle

# INSTRUMENT PANEL

EXTERIOR/INTERIOR TRIM

## 5. Instrument Panel

- By modularizing the panel with the steering support beam, a sufficient rigidity is obtained, its quality is stabilized, and maintainability is improved.
- By tilting the center panel toward the driver, its operability and visibility is improved.
- There is no longer a split line between the passenger's airbag module lid and the instrument panel, contributing to a better appearance.
- Taking recycling reasons into account, PP resin is used for the main body. The entire upper part of the instrument panel is covered with urethane foam material with a soft surface skin. This material feels soft while it also contributes to protect passengers.
- An insulator is installed to the backside of the instrument panel. The insulator absorbs noise from the engine room and contributes to improve the quietness in the cabin.
- The panel is upholstered as far as the leg area of front passenger to improve the feel of material.

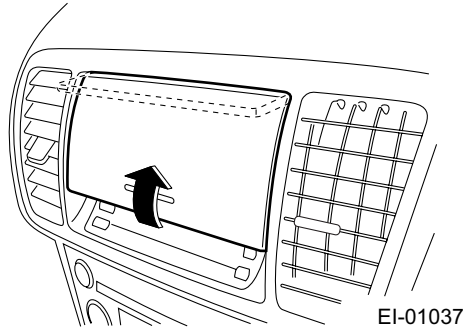

EI-01036

- |   |  |
|---|--|
| (1) Center pocket                       | (6) Cup holder for front seat passengers |
| (2) Clock                               | (7) Ashtray and cigarette lighter        |
| (3) Fuse box cover                      | (8) Center panel                         |
| (4) Console box                         | (9) Glove box                            |
| (5) Cup holder for rear seat passengers |  |

## A: CENTER POCKET

- A pocket with a lid is provided at the center of the instrument panel.
- Night illumination, which operates in connection with the lighting system, is provided.

## B: ASHTRAY AND CIGARETTE LIGHTER FOR FRONT SEAT PASSENGERS

- These are located at the lower part of the center panel and can be opened in one-push action.
- The ashtray and cigarette lighter are provided with night illumination, which operates in connection with the lighting system.

# INSTRUMENT PANEL

EXTERIOR/INTERIOR TRIM

---

## C: GLOVE BOX

- The glove box is provided with a damper that controls the glove box lid to open slowly.
- It is also provided with night illumination that operates in connection with the lighting system.

EI-01068

## D: CUP HOLDER FOR FRONT SEAT PASSENGERS

- Provided with a shutter type lid that can be closed when the cup holder is not used.
- The cup holder can hold a container up to a 500 cc size plastic bottle or an L size paper cup.

EI-00688

## E: CONSOLE BOX

- An accessory socket is provided in the console box.

EI-01069

- When using the socket, the cable can be routed out from the front of the console box so that the cable will not be trapped even when the console lid is closed.

EI-01038

# DOOR TRIM

EXTERIOR/INTERIOR TRIM

---

## 6. Door Trim

Shock absorbing pads installed to the backside of the front and rear door trims attenuate the impact due to a secondary collision.

EI-00826

## 7. Trunk Room Trim

Trunk lid trims and trunk lid arm covers are used to improve the feel of material.

EI-00823

# TRUNK ROOM TRIM

EXTERIOR/INTERIOR TRIM

---

**MEMO**

# FRONT HOOD

EXTERIOR BODY PANELS

---

## 1. Front Hood

An aluminum hood is used on all models to reduce weight.

## 2. Rear Gate Panel

An aluminum rear gate panel is used on all models.

By changing the material to aluminum, the weight is reduced and the opening and closing of the rear gate is facilitated.

EB-00166

# TRUNK LID

## EXTERIOR BODY PANELS

### 3. Trunk Lid

#### A: TRUNK LID ARM

By minimizing the size of the trunk lid arm, the traveling radius of the arm is made smaller to acquire a wider cargo space.

EB-00167

(1) New type

(2) Former type

The trunk lid arm is stored inside the trunk trim when the trunk lid is closed. This prevents the luggage from interfering with the arm when closing the trunk.

EB-00168

## 4. Front Fender Panel

By providing a clearance (A) between the wheel apron upper area and the fender upper area, the impact absorbing capacity and pedestrian protection is enhanced.

(1) Fender extension, front

(2) Fender extension, rear

EB-00172

# DOOR

## 5. Door

### A: DOOR CONSTRUCTION

- The front and rear doors have in their inside a side door beam and a window shoulder area reinforcement.

EB-00229

(1) Side door beam

(2) Window shoulder area reinforcement

- Tight closure of each door is ensured by the double weather strip at the bottom which also reduces intruding noise.

EB-00170

- (1) Outer weather strip
- (2) Inner weather strip
- (3) Door panel

- (4) Scuff plate
- (5) Side sill spoiler

### B: REAR DOOR CATCHER

This prevents the rear door from deflecting into the cabin in case of a side collision.

EB-00171

# DOOR

EXTERIOR BODY PANELS

---

**MEMO**

# FRONT

## LIGHTING SYSTEM

---

### 1. Front

#### A: GENERAL

LI-00446

- |  |                            |
|--|----------------------------|
| (1) Headlight  | (3) Front fog light        |
| (2) Front turn signal/parking, front side marker light | (4) Side turn signal light |

- The headlight of all models consists of four halogen bulbs, and projector type low beam lights are used.
- The front turn signal/hazard warning light, parking/front side marker light and the front side reflex reflector are incorporated into the headlight.
- The fog light is either of a projector type or a large sized multiple reflector type.
- On some models, the side turn signal lights are built into the lower part of the door mirrors to improve visibility. Also, LEDs (light emitting diodes) are used for light source to improve the durability.

## 2. Rear

### A: GENERAL

#### Sedan models

(1) High mount stop light

(2) Turn signal/hazard warning light

(3) Backup light

(4) Stop/tail/rear side marker light

(5) License plate light

#### Wagon models

(1) High mount stop light

(2) Rear side marker light

(3) Stop/tail light

(4) Turn signal/hazard warning light

(5) Backup light

(6) License plate light

## REAR

### LIGHTING SYSTEM

---

- On sedan models, the rear turn signal/hazard warning light, stop/tail/rear side marker light, and the backup light are incorporated into the rear combination light. On wagon models, the rear turn signal/hazard warning light, stop/tail light, and the rear side marker light are incorporated into the rear combination light. On both the sedans and wagons, the rear reflex reflector and the rear side reflex reflector are incorporated into the rear combination light. On wagons, the backup lights are built in the rear gate garnish.
- The high mount stop light is installed to the bottom inside of the rear window on sedans, and to the rear of the roof spoiler on wagons.
- By using LEDs (light emitting diodes) as light source for the high mount stop light on wagon models, space is saved, efficiency is improved, and power consumption is reduced while the durability is improved.

# AUDIO SYSTEM

## ENTERTAINMENT SYSTEM

### 1. Audio System

#### A: GENERAL

##### 1. AUDIO

Three types are provided.

- Audio sets of all grades are shaped in a non-standard form to make them fit the contour of the instrument panel.
- All grades are CD-R/RW compatible\*.
- The highest grade audio system is also compatible with CD-R/CD-RWs\* containing MP3 files.
- The audio unit for automatic air conditioning equipped models has a built-in CD changer. Up to six CDs can be loaded.

\*: Some CD-R/RW discs with particular characteristics, scratches or dirty spots may not be usable.

##### 2. SPEAKERS

- On models with six speakers, a full-range speaker is installed to each door and a tweeter is installed to each front door.
- On models with seven speakers, a full-range speaker is installed to each door and a tweeter and sub woofer are installed to each front door. The sub woofer is mounted on the rear right quarter trim (wagons).

Models with the 6 speaker system

ET-00096

- (1) Audio unit
- (2) Front speaker

- (3) Tweeter
- (4) Rear speaker

## Models with the seven speaker system

ET-00152

- (1) Audio unit
- (2) Front speaker
- (3) Tweeter

- (4) Rear speaker
- (5) Woofer (wagons)

### 3. ANTENNA

- An on-glass antenna system is equipped on all models.
- The antenna amplifier is installed at the upper part of the rear left pillar on sedan models or at the upper center part of the rear gate on wagon models.

# SATELLITE SWITCHES

## ENTERTAINMENT SYSTEM

---

### 2. Satellite Switches

#### A: GENERAL

The driver can operate the audio system without releasing the hand from the steering wheel, Illumination is provided for nighttime visibility.

- (1) Mode switch
- (2) ^ v (Up/down) switch

- (3) + - (volume) switch
- (4) Mute switch

## 1. MODE SWITCH

The mode of the audio system can be changed.

## 2. $\wedge$ $\vee$ (UP/DOWN) SWITCH

- When receiving radio or TV waves, the frequency can be changed upwards or downwards. When the receiver is tuned to a radio or TV station during the upward or downward seek, the seek stops. (seek up/seek down)
- While listening to a CD, the next track or previous track can be selected. (track up/track down)

## 3. + – (VOLUME) SWITCH

The sound level can be turned up or down.

## 4. MUTE SWITCH

The sound can be temporarily muted. When this switch is operated, "MUTE" is indicated on the audio display. The sound level is resumed when the switch is pushed again.

# SATELLITE SWITCHES

ENTERTAINMENT SYSTEM

---

**MEMO**

# IGNITION KEY

## 1. Ignition Key

### A: GENERAL

- A keyless entry system with a keyfob type transmitter is introduced. On models with immobilizer system, a transponder is assembled in the key.

SL-00388

(1) Transponder built-in

SL-00389

- (1) Lock button
- (2) Unlock button

- (3) Trunk or rear gate button
- (4) Panic button

## 2. Ignition Switch

### A: GENERAL

#### 1. IGNITION SWITCH

- The ignition switches on the MT models have a safety mechanism that prevents inadvertent locking of the steering wheel during driving. The driver cannot turn the ignition key from “ACC” to “LOCK” unless the key is pushed inward at the “ACC” position (arrow 1 in the drawing below).

SL-00031

- The ignition key for AT models can be turned to the LOCK position only when the select lever is in the P position.

SL-00032

- (1) Ignition switch
- (2) Key interlock solenoid (AT)
- (3) Ignition key cylinder

#### 2. KEY REMINDER CHIME

The reminder chime sounds when the driver’s door opens and the ignition key is in the “LOCK” or “ACC” position. The chime stops when the key is turned to the IGN position or removed from the ignition switch.

#### 3. IGNITION SWITCH ILLUMINATION

The ignition switch illumination is lit for 3 seconds and then gradually darkens and turns off after the driver’s door is closed. If the ignition switch is turned to the ON position while the ignition switch illumination is ON, the ignition switch illumination turns OFF immediately. The body integrated unit controls the delayed off function.

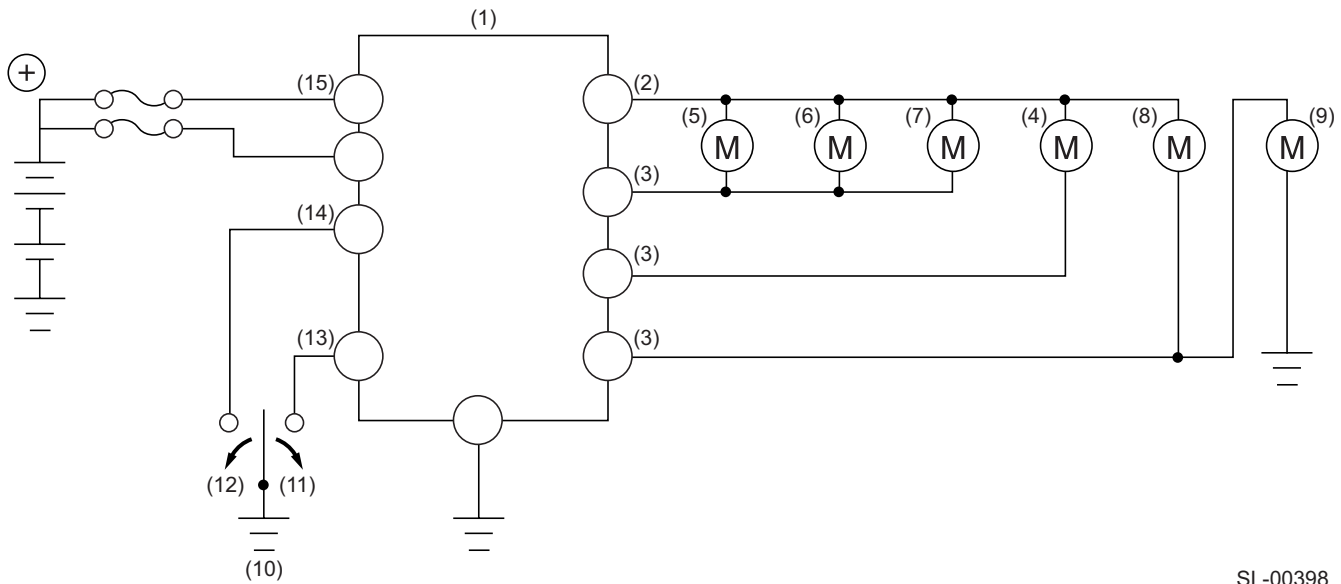

# POWER DOOR LOCK

## 3. Power Door Lock

### A: CONSTRUCTION

- The power door lock system consists of a body integrated unit, drivers door lock switch, front door lock actuators, rear door lock actuators, and a rear gate lock actuator.
- When the driver's/front passenger's door is locked or unlocked using the door lock switch, the other doors and the rear gate are also locked or unlocked automatically.

## 4. Keyless Entry System

### A: CONSTRUCTION

- The keyless entry system consists of a transmitter, keyless entry control unit (with a built-in antenna), body integrated unit, door lock actuators, door switches, hazard warning lights, buzzer, and the interior light.
- The keyless entry system operates on a radio frequency, so the transmitter can be used in almost all directions relative to the vehicle. However, in some radio wave conditions the system may not operate properly.

#### NOTE:

The customizing function enables selection of coupled operation with the hazard warning lights. <Ref. to SL-12, Customizing Function.>

### B: FUNCTION

#### 1. DOOR LOCKING

- 1) Push the LOCK button on the transmitter once.
- 2) All doors are locked.
- 3) Check that the buzzer sounds once and the hazard warning lights flash once.

#### 2. DOOR UNLOCKING (DRIVER'S DOOR)

- 1) Push the transmitter's UNLOCK button once.
- 2) The driver's door is unlocked and the interior light turns ON (when the interior light switch is set at the DOOR position).

#### NOTE:

The interior light illuminates for 15 seconds and then fades out. (However, if a door locking procedure is performed again during this period, the lights will go out immediately.) The extinguishing time can be changed with the customizing function.

- 3) Check that the buzzer sounds twice and the hazard warning lights flash twice.

#### 3. DOOR UNLOCKING (ALL DOORS)

- 1) Push the UNLOCK button on the transmitter 2 times within 5 seconds.
- 2) All doors are unlocked.
- 3) Check that the buzzer sounds twice and the hazard warning lights flash twice.

#### NOTE:

- When the unlock button is pushed while any of the doors (except rear gate or trunk) is open, all door locks are unlocked.
- When pushing the UNLOCK button on the transmitter twice to unlock all doors, the system may not respond if the interval between the 1st time and 2nd time is too short.

# KEYLESS ENTRY SYSTEM

## SECURITY AND LOCKS

---

### 4. OPENING THE TRUNK

- 1) Push the TRUNK button on the transmitter for more than 1 second.
- 2) The trunk lid opens.
- 3) Check that the buzzer sounds twice and the hazard warning lights flash twice.

### 5. UNLOCKING THE REAR GATE LOCK

- 1) Push the TRUNK button on the transmitter once.
- 2) The rear gate lock is unlocked.
- 3) Check that the buzzer sounds twice and the hazard warning lights flash twice.

### 6. SELF POSITION DETECTION FUNCTION

- 1) Push the LOCK button on the transmitter 3 times within 5 seconds.
- 2) Check that the horn sounds once and the hazard warning lights flash 3 times.

### 7. PANIC ALARM

- 1) Push the panic button on the transmitter.
- 2) The horn sounds intermittently and the hazard warning lights will flash too. The panic alarm sounds for 30 seconds, however, to stop the alarm within this 30 seconds period, push any button on the transmitter.

### 8. ANSWER BACK (BUZZER SIGNALING) ON/OFF SELECTION

- 1) Push the UNLOCK button on the transmitter.
- 2) Push the LOCK and UNLOCK buttons on the transmitter simultaneously for more than 2 seconds to deactivate the answer back function. The function is armed again when the same operation is repeated.
- 3) When the answer back function is activated, the buzzer will sound once and the hazard warning lights flash once. When it is deactivated, the buzzer will sound twice and the hazard warning lights flash twice.

### 9. DOOR OPEN WARNING FUNCTION

The buzzer sounds five times and the hazard warning lights flash five times if the LOCK button on the transmitter is pressed with any door, the rear gate, or the trunk lid open.

### 10. TRANSMITTER REGISTRATION

- Up to 4 transmitters per vehicle can be registered.
- For the transmitter registration method, see Service Manual.

## 5. Alarm System (Burglar Alarm System)

### A: FEATURES

- The alarm system protects the vehicle from a theft action (unauthorized entry into the vehicle). Upon detection of such an action, it gives alarm by causing the horn to sound and the hazard warning lights to flash.
- Unauthorized entry is monitored through the switches on the doors, rear gate, and trunk lid. If any of the switches is turned ON, the system interprets it as an attempt of unauthorized entry and gives alarm warning.
- Unauthorized entry is also monitored by the impact sensor (dealer option). The system operates in the same manner as mentioned above whenever the sensor senses an abnormal impact on the vehicle.

### 1. WARNING

- When activated, the alarm system causes the hazard warning lights to flash and the horn to sound intermittently. In addition to this, the security indicator light in the combination meter lights up.
- The alarms automatically turn OFF after 30 seconds. However, they will be reactivated if the vehicle is tampered with again.
- The alarms are activated when a door, rear gate or trunk lid is opened without unlocking with the keyless entry transmitter. (When the system is set, a warning is given even if a door is opened by operating the inner door handle.)
- The alarms are also activated when an impact on vehicle body is sensed. (Only vehicles with an impact sensor, which is available as dealer option.)
- On vehicles with an impact sensor, the alarms are activated even if electrical wirings for these equipment are cut.

### NOTE:

- For information regarding the impact sensor, refer to their installation and operating instructions.

# ALARM SYSTEM (BURGLAR ALARM SYSTEM)

## SECURITY AND LOCKS

---

### 2. HOW TO SET THE SYSTEM

- 1) Remove the key from the ignition switch.
- 2) Close all the windows. Close and all doors, rear gate, and the trunk lid.
- 3) Push the LOCK button on the transmitter.
- 4) The keyless buzzer will sound once and the hazard warning lights flash once.

#### NOTE:

The system can be set even if the windows are open.

5) Check that the security indicator light flashes. If any of the doors or the rear gate is not closed properly, lock operation will not be accomplished when the LOCK button on the transmitter is pushed and therefore the keyless buzzer will not sound nor the hazard warning lights will not flash. When setting the alarm system, activation of the keyless entry system must be confirmed by the sound of keyless buzzer and flashing of the hazard warning lights. When the door, rear gate or trunk lid is closed, they will be automatically locked and the alarm system starts working. The indicator light blinks when the system is set and starts monitoring, and continues to blink until the system is disarmed. When the security indicator lamp is blinking as (B), the system is not ready yet and the alarm will not activate when a door is opened.

(A) Monitoring delay set to 0 seconds

(1) ON

(B) Monitoring delay set to 30 seconds (After 30 seconds has elapsed the system enters blinking status (A).)

(2) OFF

(3) 2 seconds

(4) 1 seconds

### 3. HOW TO UNSET THE SYSTEM

- 1) Push the UNLOCK button on the transmitter.
- 2) The keyless buzzer will sound twice and the hazard warning lights flash twice.
- 3) The security indicator light turns OFF.
- 4) The interior light illuminates for maximum 30 seconds and then fades out. (However, if a system is set during this period, the interior light will turn OFF.)
  - Insert the key into the door key cylinder and turn the key in the unlocking direction.

### 4. HOW TO STOP ALARMS

- Push a button on the transmitter. (Either of the LOCK, UNLOCK, or TRUNK buttons will work)
- Insert the key into the ignition switch and turn the key to the ON position. However, the alarm will not cease unless a registered key is used. (models with immobilizer)
- Insert the key into the ignition switch and repeat switching OFF to ON for three times. (models without immobilizer)
- Insert the key into the door key cylinder and turn the key in the unlocking direction.

## 6. Immobilizer System

### A: CONSTRUCTION

The immobilizer system consists of the following components: combination meter, body integrated unit, engine control module (ECM), transponder inside the ignition key, and an antenna fitted to the key cylinder.

The antenna receives a vehicle ID code emitted from the transponder when the key is inserted into the key cylinder.

The ID code is transmitted to the body integrated unit. The body integrated unit compares the code with a one that has been registered in it. The body integrated unit also compares the ID code with the ECM and the combination meter. If these ID codes match with each other, the system allows the engine to be started. The engine may be able to start when the key is inserted even if the codes do not match. The engine, however, will automatically stop after a few seconds.

The immobilizer function is activated automatically when the key is removed from the key cylinder and when 60 seconds have passed after the ignition switch was turned to the "ACC" or "OFF" position. When the function is activated, the indicator light on the combination meter flashes at intervals of 0.2 seconds ON and 2.8 seconds OFF. (When security system is not set)

This indicator light flashing indicates to the thief that the system is ready to function.

If the immobilizer system fails, an incorrect key is used or an incorrect ECM is installed, the immobilizer indicator light will illuminate when the key is inserted into the key cylinder or when the ignition switch is turned ON.

#### NOTE:

To heighten the anti-theft performance of the immobilizer system, the system is designed in a way that the immobilizer cannot be deactivated by simply reconnecting the wiring or by replacing parts. Therefore, care must be taken when replacing or repairing the related components.

SL-00053

| (3) Key cylinder       | (7) Engine control module                              |
| (4) Antenna            | (8) Combination meter<br>(immobilizer indicator light) |

## B: REGISTRATION

Registration is a procedure that must be carried out when an additional key is purchased or when either a key, ECM or combination meter is replaced. The procedure includes initialization of the system and re-registration of the ID code. Once initialized, the system loses the ID code it has retained so far and has no code until a new code is registered. ID codes for up to four keys (transponders) can be registered with a body integrated unit.

To prevent a copied key to be used, any set of keys (four maximum) can be registered only with one body integrated unit. Therefore, if a body integrated unit is replaced with a new one, the keys having been used with the old body integrated unit cannot be used with the new body integrated unit. The keys must be replaced simultaneously with the body integrated unit.

Registration is carried out by an authorized person using a select monitor and a special program. Access to the program is strictly controlled for reasons of security. The security ID (kept by customer) is required for registration. As the ID code for all registered keys are cleared when registration is started, registration must be performed with all keys including spares handed from the customer.

# CUSTOMIZING FUNCTION

## SECURITY AND LOCKS

### 7. Customizing Function

#### A: GENERAL

- The following system can be customized by using a SUBARU select monitor.

System name		Initial setting	Customized settings	
Room light (delayed extinguishment)	Illuminating time after door closed	5 seconds	0 seconds (OFF)	
			3 seconds (short)	
			8 seconds (long)	
	Illuminating time after keyless unlock operation	20 seconds	0 seconds (OFF)	
			10 seconds (short)	
			30 seconds (long)	
Keyless entry system	Answer back buzzer	Existence setting	Yes	No
		ON/OFF	ON	OFF
	Hazard answer back		ON	OFF
Alarm system	Warning	ON/OFF	ON	OFF
		Monitoring delay setting	30 seconds	0 seconds
	Impact sensor	Existence setting	No	Yes
		ON/OFF	OFF	ON
	Passive arming switching		OFF	ON
Rear defogger timer		OFF after 15 minutes	Operates for 15 minutes or continuously	
Wiper deicer		OFF after 15 minutes	Operates for 15 minutes or continuously	
Lockout prevention		ON	OFF	
Battery drain prevention		ON	OFF	

\*:Setting is possible only with SUBARU select monitor.

#### NOTE:

Items above must be set to coincide with the vehicle's equipment and specifications for normal operation and diagnosis.

### 1. Cruise Control

#### A: OPERATION

- The cruise control system automatically controls the vehicle speed. It allows the vehicle to run at a constant speed without need for the driver to keep the accelerator pedal depressed.
- The cruise control system is controlled by the engine control module (ECM).
- When the driver has activated the system and made a desired speed setting, the engine control module (ECM) compares the actual vehicle speed detected by the speed sensor with the preset speed in the engine control module (ECM) memory, and then generates a signal according to the difference between the two speeds.

This signal is transmitted to the electronic control throttle.

The electronic control throttle operates the throttle valve as necessary to keep the preset vehicle speed.

### B: LOCATION OF COMPONENTS

CC-00263

- (1) Engine control module (ECM)
- (2) Cruise control command switch (with built-in MAIN switch)
- (3) Stop light and brake switch
- (4) Cruise indicator light and cruise set indicator light
- (5) Transmission control module (TCM) (AT)
- (6) Inhibitor switch (AT)
- (7) Neutral position switch (MT)
- (8) Clutch switch (MT)

# CRUISE CONTROL

## CRUISE CONTROL SYSTEM

### C: CONTROL AND OPERATION

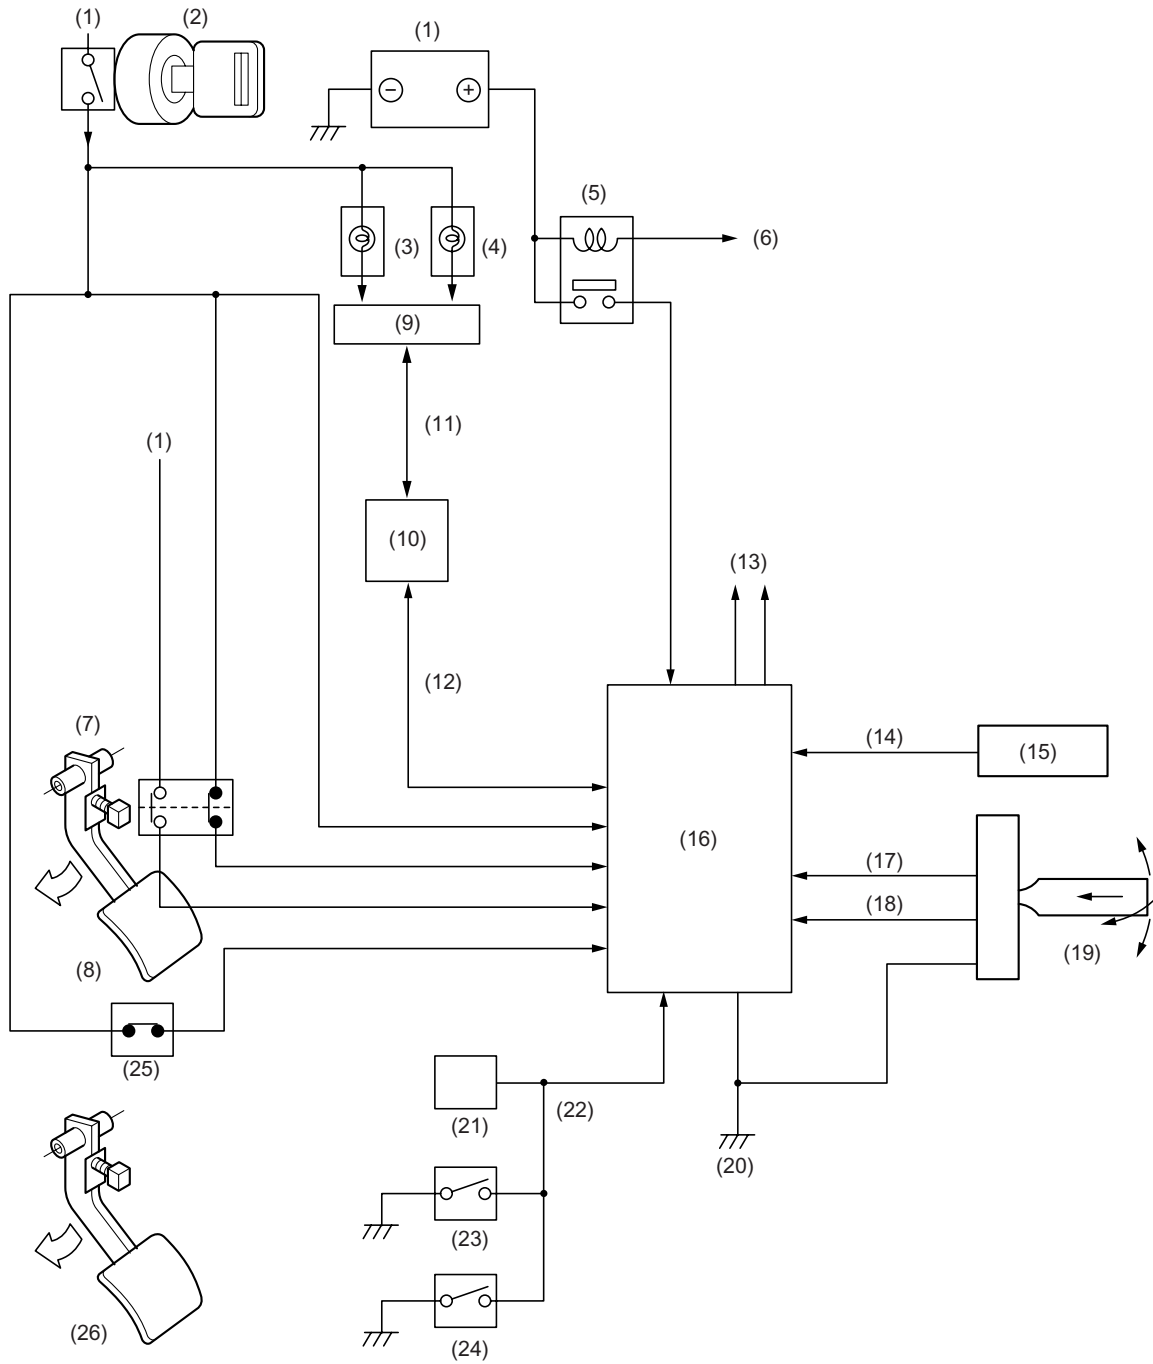

Vehicle speed control	When the actual vehicle speed is higher than the set speed, the throttle valve of the electronic control throttle moves in the closing direction by the amount corresponding to the difference between the two speeds. When the actual vehicle speed is lower than the set speed, the throttle valve of the electronic control throttle moves in the opening direction by the amount corresponding to the difference between the two speeds.
Speed set function (SET function)	When the SET/COAST switch is pressed while the vehicle is running at a speed greater than 40 km/h (25 MPH) and the MAIN switch is ON, the cruise control is set at the current vehicle speed (this speed becomes the "memorized speed") and the vehicle maintains this speed thereafter.
Resume control function (RESUME function)	When the RESUME/ACCEL switch is turned ON after the cruise control is temporarily cancelled, the vehicle speed returns to the memorized speed, which was stored just before the cruise control was cancelled. This occurs only when the vehicle is running at a speed greater than 32 km/h (20 MPH). In the following cases, however, the memorized speed is cleared. (1) Ignition switch is turned OFF (2) MAIN switch is turned OFF (3) Abnormality in the system is detected
Deceleration control function (1) (COASTING function)	When the SET/COAST switch is pressed for a prolonged time while the vehicle is governed by the cruise control, the memorized vehicle speed of the cruise control is changed to the vehicle speed value reached at the moment the switch is released after slowing down. However, the cruise control is cancelled when the vehicle speed becomes lower than the lower limit of the speed setting range.
Deceleration control function (2) (TAP DOWN function)	When the SET/COAST switch is pressed for a short time while the vehicle is governed by the cruise control, the cruise control subtracts a certain amount from the memorized speed to obtain a new value. However, when the actual vehicle speed largely differs from the memorized speed, the actual speed becomes the new memorized speed of the cruise control.
Acceleration control function (1) (ACCELERATING function)	When the RESUME/ACCEL switch is pressed for a prolonged time while the vehicle is governed by the cruise control, the memorized speed of the cruise control is changed to the vehicle speed value reached at the moment the switch is released after accelerating. However, when the vehicle speed is higher than the upper limit of the speed setting range, the upper limit becomes the memorized speed of the cruise control.
Acceleration control function (2) (TAP UP function)	When the RESUME/ACCEL switch is pressed for a short time while the vehicle is governed by the cruise control, the cruise control adds a certain amount to the memorized speed to obtain a new value. However, when the actual vehicle speed largely differs from the memorized speed, the cruise control maintains the former memorized speed.
Cruise control cancel function	When any of the following conditions is met, the cruise control is cancelled. (1) Stop light switch ON (brake pedal depressed) (2) Brake switch OFF (brake pedal depressed) (3) Clutch switch ON (clutch pedal depressed) (4) Neutral switch ON (shift lever moved to neutral) (5) CANCEL switch ON (command switch pulled) (6) Ignition switch OFF (7) MAIN switch OFF (8) Transmission gear in 1st or reverse (9) Actual vehicle speed drops below 32 km/h (20 MPH) (10) Abnormality in the system is detected

# CRUISE CONTROL

## CRUISE CONTROL SYSTEM

### E: COMMAND SWITCH (CRUISE CONTROL LEVER)

- When the vehicle is driven with the cruise control activated, the command switch controls its operation. It inputs MAIN signal, SET/COAST signal, RESUME/ ACCEL signal or CANCEL signal to the engine control module (ECM).
- When the cruise control MAIN switch is turned ON, the cruise indicator light in the combination meter illuminates. Also, when the cruise control is set, the cruise set indicator light in the combination meter illuminates.

- (1) Command switch
- (2) MAIN
- (3) CANCEL
- (4) SET/COAST

- (5) RESUME/ACCEL
- (6) Engine control module (ECM)
- (7) Ground

- The command switch is located on the right side of the steering wheel, so the driver can operate it without releasing hands from the steering wheel.
- The command switch is a self-returning lever type.

#### 1. MAIN SWITCH

When the switch is pushed once the cruise control system turns ON and becomes ready to set the cruise control. When the switch is pushed again the cruise control turns OFF.

#### 2. CANCEL, RESUME/ACCEL AND SET/COAST SWITCH

Each switch contact is held closed as long as the lever is kept pressed in the relevant direction (except the CANCEL switch which should be pulled), and resulting current is applied as a signal to the engine control module (ECM).

### F: CANCEL SIGNAL

A cancel signal deactivates the cruise control function. Operating any of the following switches results in generation of a cancel signal. On receiving a signal, the engine control module (ECM) cancels the cruise control function.

- Stop light switch
- Brake switch
- Clutch switch (MT)
- Inhibitor switch (AT)
- Neutral position switch (MT)
- MAIN switch (OFF operation)
- Command switch (CANCEL position)
- Ignition switch (OFF operation)

### G: VEHICLE SPEED SIGNAL

Vehicle speed signals are sent from the ABS control module or vehicle dynamic control (VDC) control module to the engine control module (ECM), which uses the signals in controlling the cruise control function.

### H: ENGINE CONTROL MODULE (ECM)

- Based on signals from the related switches and sensors, the engine control module (ECM) controls all the following control functions:  
Constant speed control; speed setting control; deceleration control; acceleration control; resume control; manual cancel control; low speed limit control; electronic control throttle control
- The engine control module (ECM) (A) is located at the legroom of the front passenger's seat.

CC-00274

# CRUISE CONTROL

## CRUISE CONTROL SYSTEM

---

### I: FAIL-SAFE FUNCTION

The cruise control system has a fail-safe function that cancels the cruise control operation when any of the following conditions occurs.

#### 1. CONFLICT BETWEEN CRUISE CONTROL SWITCHES AND CANCELLATION SIGNAL GENERATING SWITCHES

- The cruise control system is deactivated if any of the cruise control switches (SET/COAST, RESUME/ACCEL, and CANCEL switches) is turned ON while any of the cancellation signal generating switches (brake, stop light, clutch, neutral position and inhibitor switches) is activated. The system is re-activated when the cruise control switch is turned OFF and then turn ON again after the cancellation signal generating switch has been returned to its released position.
- When the ignition switch is turned ON while any of the command switches is in the ON position, the cruise control system is deactivated. The system deactivating function is retained until the ignition switch is turned OFF.

#### 2. ABNORMALITIES IN ELECTRIC CIRCUITS

The cruise control system is deactivated and the set speed is also canceled if any of the following abnormalities occurs in the system electric circuits. The system deactivation function is retained until the ignition switch is turned OFF.

- Abnormality of the command switch is detected.
- Abnormality of the stop light switch and brake switch is detected.
- Abnormality of the inhibitor switch is detected. (AT)
- Abnormality of the neutral position switch is detected. (MT)
- Abnormality of the ignition switch is detected.
- Change in vehicle speed signal is detected.
- Abnormality in any of the engine related sensors is detected.
- Abnormality of the brake switch input circuit in the engine control module (ECM) is detected.
- The MAIN switch and command switch were already ON when the ignition switch is turned ON.

#### 3. CRUISE CONTROL CANCEL FUNCTION

When any of the following conditions is met, the cruise control is cancelled.

To set the cruise control again, the vehicle speed must be returned to within the speed setting range and necessary conditions must be met.

- Abnormal engine speed acceleration is detected.
- The vehicle speed has dropped below the lower control limit during cruise control driving.
- The vehicle has been running at speed higher than the set speed for an abnormally long time during cruise controlled driving.
- The set speed became impossible to be maintained for some reason (steep upgrade, hand brake operation, abnormal engine power drop, etc.).

### 1. General

#### A: LAN

- The LAN system\*<sup>1</sup> enables data sharing among computers, that otherwise are left to function as independent systems, by connecting them via communications lines.
- Introduction of the LAN\*<sup>1</sup> system has improved equipment and functions while reducing the weight of the vehicle by eliminating a considerable amount of harnesses.
- Data transmission/reception is via CAN \*<sup>2</sup>, which offers high-speed communication and also ensures a high level of reliability.
- Depending on control requirements, two transmission rates are used: high-speed CAN running at 500 Kbps, which is an ISO 11898 and manages power-related units; and low-speed CAN running at 125 Kbps, which is an ISO 11519-2 and manages body-related functions.
- Networks running at different transmission rates usually cannot share data between them, however, the body integrated unit with a gateway (hookup) function enables data sharing between different-rate networks.

#### NOTE:

\*<sup>1</sup>: LAN (Local Area Network). A system where multiple computers (units) are linked via serial communication for data sharing.

\*<sup>2</sup>: CAN (Controller Area Network). A serial communications protocol in compliance with ISO 11898 and ISO 11519-2.

#### B: CAN

- CAN is a serial communications protocol in compliance with relevant ISO standards.
- With its high bit rates, CAN enables quick, large-volume data transmission/reception.
- Based on continuous change in bus level (logical signals: low “0” and high “1”) stemming from voltage difference between CAN\_High and CAN\_Low, data and other frames are configured for message identification.
- If an error is detected, CAN’s fault confinement feature prevents the error from impacting units.
- If an error is detected, an error frame (notification that an error has been detected) is sent to units, telling them not to perform control based on data including errors.
- Depending on the status of the error detected, transmission/reception of the relevant data will be aborted.

**C: COMPARISON BETWEEN CAN AND CONVENTIONAL DATA COMMUNICATION**

- With conventional data communication, each sensor relies on its dedicated wiring for message to be sent between units. As data volume grows, so does the volume of wiring.
- CAN uses only one twisted-pair cable to connect between units for shared communication.

**1. CONVENTIONAL COMMUNICATION**

LAN00045

- |                          |                  |
|--------------------------|------------------|
| (1) Sensor               | (4) TCM          |
| (2) ECM                  | (5) Transmission |
| (3) Communication wiring |                  |

**NOTE:**

Conventional data communication needs as many data transmission lines as sensors used. (parallel signals)

# GENERAL

## LAN SYSTEM

---

### 2. CAN COMMUNICATION

LAN00046

- |                   |                   |
|-------------------|-------------------|
| (1) Sensor        | (4) CAN line (HI) |
| (2) ECM           | (5) TCM           |
| (3) CAN line (LO) | (6) Transmission  |

#### NOTE:

- With CAN, one twisted-pair cable (2 wires) manages transmission of all data. (serial communication)
- The main wire runs between the terminal resistor on the ECM and that on the ABSCM or vehicle dynamics control (VDC) CM & H/U. Other units are connected, in parallel, to the main wire via branch wires.

## 2. LAN Configuration

### A: NETWORK ARCHITECTURE

LAN00131

- |  |  |                                      |
|--|--|--------------------------------------|
| (1) Body integrated unit                         | (6) Combination meter                        | <b>(A)</b> High-speed bus (500 Kbps) |
| (2) ECM  | (7) A/C ECM<br>(vehicles with automatic A/C) | <b>(B)</b> Low-speed bus (125 Kbps)  |
| (3) TCM  |  | <b>(C)</b> High-speed system units   |
| (4) ABSCM or VDCCM & H/U                         |  | <b>(D)</b> Body integrated unit      |
| (5) Steering angle sensor<br>(vehicles with VDC) |  | <b>(E)</b> Low-speed system units    |

**NOTE:**

- Bit rate 500 Kbps: The bit rate of 500 Kbps means that 500,000 bits of data are transmitted per second.
- Bit rate 125 Kbps: The bit rate of 125 Kbps means that 125,000 bits of data are transmitted per second.

○: Installed units

LAN00048

- (1) ECM
- (2) TCM (AT models)
- (3) VDCCM & H/U (vehicles with VDC)
- (4) Steering angle sensor (vehicles with VDC)
- (5) ABSCM & H/U (vehicles without VDC)
- (6) Body integrated unit
- (7) Twisted-pair cable
- (8) CAN\_HI
- (9) CAN\_LO
- (10) Terminal resistor

## NOTE:

- Terminal resistors built into the ECM and VDCCM & H/U stabilize traffic on the bus, and enables signals distinction from the voltage difference between the two bus lines (CAN\_High and CAN\_Low). These bus lines are called the main lines. Other units are connected in parallel to the main lines. These wires are called branch lines.
- If one bus line of the main lines becomes open, this is detected as an error and communication becomes no longer possible.
- If one bus line of a pair of branch lines becomes open, communication with the unit connected to the branch line becomes no longer possible, however, communication with other units remain intact. (The error will be displayed.)

# LAN CONFIGURATION

## LAN SYSTEM

| (5) Steering angle sensor | (10) Clock (vehicles without monitor screen) | (15) High-speed CAN (driving control system) |

## 3. What is CAN?

### A: FEATURES

- Some of the basic specifications of CAN, intended to ensure smooth multiplex data communication, are described below.

#### 1. MULTIMASTER

- When the bus (communication line) is free, any unit may start to transmit a message.

#### 2. MESSAGE TRANSFER

- All messages on CAN bus are sent in fixed formats.

- When the bus (communication line) is free, any unit connected to the bus may start to transmit a message.

- If two or more units start to transmit messages at the same time, these messages are prioritized using the identifier.

- The identifier does not indicate the destination of the message, but it signifies message priority for bus access.

- If two or more units start to transmit messages at the same time, bitwise (smallest-unit) arbitration is performed over the identifiers carried by the messages. The unit that has won the arbitration as carrying a higher-priority message continues to send the message while the unit that has a lower priority stops sending the message, and starts sending the message again after waiting for a while.

#### 3. SYSTEM FLEXIBILITY

- As units connected to the bus do not have unique information like an address, other units can be added to the bus without changing the software, hardware, or application of the units.

#### 4. BIT RATE

- The bit rate can be set to suit the applications of the communication network.

- The bit rate of all units connected to the same network (bus) must be uniform. Connecting units of different bit rates to the same bus will cause communication disturbances.

#### 5. ERROR SIGNALING AND COMMUNICATION RECOVERY

- Error signaling: Any unit connected to a bus can detect an error, and upon detecting an error, the unit notifies all other units of the error.

- Communication recovery: If a unit detects an error while sending a message, the unit will abort the message and keep retransmitting the message until it is successfully sent. (communication recovery)

#### 6. FAULT CONFINEMENT

- In CAN, there are two types of errors: temporary alteration of data on the bus caused by external noise or other disturbances; and permanent alteration of data on the bus caused by faulty units, failed drivers, open wire, or other failures. Causal units will be cut off from the bus to prevent such disturbances/failures from affecting other units.

## 7. CONNECTION ENVIRONMENTS

- The CAN bus accommodates connections of a number of units to it.
- There are no limitations on the number of units that can be connected to the CAN bus, however, if the bus length needs to be longer or the bit rate needs to be higher, the number of units needs to be smaller. On the other hand, if the bus length is relatively short or a relatively slower bit rate can be accepted, a greater number of units can be connected.
- As signals are distinguished with the voltage difference between the two bus lines (CAN\_High and CAN\_Low), the main lines and branch lines must be properly connected.

## 4. Fault Detection

### A: COMMUNICATION ERROR INDICATIONS

- If a fault occurs in the body integrated unit or LAN system (in any unit or the communication circuit), a communication error indication is given at the trip information display area on the combination meter.
- The indication differs by the type of fault, and related indicators such as the CHECK ENGINE light illuminate.
- If a communication error indication is given, one or more diagnostic trouble codes are stored in the body integrated unit. To read out diagnostic trouble codes, use a Subaru select monitor.
- If more than one diagnostic trouble code is stored, indication is given in the following order of priority: (1) High-speed CAN (2) Low-speed CAN (3) integrated unit (4) EGI (5) TCM (6) VDC

#### NOTE:

The indication returns to the normal trip display when the trip reset switch is pushed.

(1) Communication error indication area (trip meter)

#### CAUTION:

- Information registered in the body integrated unit must coincide with the vehicle's equipment and specifications for normal operation and diagnosis.
- If the body integrated unit is brand-new or put in factory mode, the key ring illumination blinks to indicate that equipment setting is not completed.

## Types of communication error indications

Communication error indication	Description	Location of fault
Er --	High-speed CAN and low-speed CAN failed	Abnormality is found in both the high-speed and low-speed CAN communication systems.
Er HC	High-speed CAN failed	Abnormality is found in the high-speed CAN system.
Er LC	Low-speed CAN failed	Abnormality is found in the low-speed CAN system.
Er IU	Integrated unit failed	Abnormality is found in the integrated ECM or in its related parts.
Er EG	EGI communication data abnormal	Abnormality is found in the EGI ECM or in its communication system.
Er tC	TCM communication data abnormal	Abnormality is found in the TCM ECM or in its communication system.
Er Ab	ABS/VDC communication data abnormal	Abnormality is found in the ABSCM/VDCCM & H/U unit or in its communication system.

## B: SUBARU SELECT MONITOR

### 1. READING DIAGNOSTIC TROUBLE CODES

- Diagnostic trouble codes can be read with a Subaru select monitor set in its body integrated unit mode.

### 2. READING CURRENT DATA

- Use a Subaru select monitor to read analog and digital data. (Confirm necessary items when customizing.)

### 3. MEMORY CLEAR MODE

- Use a Subaru select monitor to erase diagnostic trouble codes.

### 4. CUSTOMIZING (SETTING FUNCTIONS)

- Use a Subaru select monitor to perform detailed setting of body control related functions.
- When replacing immobilizer related components, registration of the immobilizer may be necessary.  
(Refer to the immobilizer registering manual.)

#### CAUTION:

When customizing, do not change the factory mode resetting function to factory mode. If you do this, settings stored in the body integrated unit will be reset to initial values and the unit will not operate normally. In this case, perform registration of the body integrated unit from the very beginning.

**MEMO**

# FRONT SUSPENSION

## FRONT SUSPENSION

---

### 1. Front Suspension

#### A: GENERAL

The front suspension is a McPherson strut-type independent suspension which have coil springs and dampers. The suspension on each side consists of a front arm, stabilizer, and a strut assembly.

The front arm is an "L" shaped arm. The outer end of the front arm is fixed to the front axle through a ball joint. The front of the arm's inner end is fitted to the front cross member while the rear of the inner end is fixed to the vehicle body.

The front cross member is bolted to the vehicle body.

The front cross member bears the front arm, steering gearbox, and stabilizer.

FS-00133

- |                |                        |
|----------------|------------------------|
| (1) Strut      | (4) Stabilizer link    |
| (2) Ball joint | (5) Stabilizer bar     |
| (3) Front arm  | (6) Front cross member |

## B: CONSTRUCTION

### 1. FRONT ARM

- By optimizing the shape of the front arm, a high strength and light weight are simultaneously achieved.
- The arm has a maintenance-free ball joint fitted by a castle nut at its outer end. A rubber bushing is used at the front, and a hollowed bushing is used at the rear.

FS-00134

- (1) Front arm
- (2) Front bushing
- (3) Rear bushing

# FRONT SUSPENSION

## FRONT SUSPENSION

---

### 2. STRUT

- The strut consists of a cylindrical double-acting low pressure gas filled damper that attenuates shock from the road surface.
- A camber angle adjustment mechanism, which uses eccentric bolts, is provided at the joint between the strut and axle housing.

### 3. STABILIZER

- The solid round rod stabilizer is attached to the front cross member through rubber cushions and its right and left ends are connected to the front arm through ball joints.
- The attitude change of the vehicle during a turn is controlled by the bar's torsional resistance.

FS-00135

- (1) Stabilizer bar
- (2) Stabilizer link

# REAR SUSPENSION (MULTI-LINK TYPE)

## REAR SUSPENSION

---

### 1. Rear Suspension (Multi-link Type)

#### A: GENERAL

The rear suspension is a multilink type.

The suspension on each side consists of a rear arm, front link, upper link, rear link, sub frame support arm, shock absorber, and a coil spring.

The front link, rear link, and upper link are all attached to a sub frame which in turn is installed to the vehicle body through bushings.

This type of suspension is characterized by small changes in camber and toe-in against external input of vertical, longitudinal and lateral forces.

RS-00125

- (1) Rear stabilizer
- (2) Rear sub frame
- (3) Upper link
- (4) Rear link
- (5) Front link
- (6) Rear arm
- (7) Sub frame support arm

## B: CONSTRUCTION

### 1. REAR ARM

- Acts mainly on longitudinal loads.
- The rear arm bears the rear brake system and rear axle bearing unit.

### 2. FRONT LINK

- Acts on lateral loads.
- The link is made of steel pressed in a “U” section form, and the left and right ends of the link are connected to the rear sub frame and rear arm through rubber bushings.

### 3. REAR LINK

- Acts on lateral loads.
- The link is made of steel pressed in a “U” section form, and the link is connected to the rear sub frame and rear arm.
- A toe-in adjustment mechanism, which uses eccentric bolts, is provided at the joint between the rear link and rear sub frame.

- (1) Rear link
- (2) Eccentric bolt

## REAR SUSPENSION (MULTI-LINK TYPE)

### REAR SUSPENSION

---

#### 4. UPPER LINK

- Acts on lateral loads.
- The left and right ends of the link are connected to the rear sub frame and rear arm through rubber bushings.
- This also supports the helper and prevents bottoming of the suspension.

RS-00127

- (1) Upper link
- (2) Helper

## 5. SHOCK ABSORBER

- Acts on vertical loads together with the coil spring.
- The shock absorber is a cylindrical double-acting low pressure gas filled type and it attenuates shock from the road surface.

## 6. STABILIZER

- The solid round rod stabilizer is attached to the rear sub frame through rubber bushings and its right and left ends are connected to the rear arm through ball joints of the stabilizer link.
- The attitude change of the vehicle during a turn is controlled by the bar's torsional resistance.

- (1) Stabilizer bar
- (2) Stabilizer link

## REAR SUSPENSION (MULTI-LINK TYPE)

### REAR SUSPENSION

---

#### 7. HELPER

- The helper acts as a bump stopper together with the upper link by limiting the shock absorber stroke when the vehicle encounters a bump.

RS-00130

(1) Helper

## 8. SUB FRAME SUPPORT ARM

- Made of steel pipe whose both ends fixed to the rear arm bracket and rear sub frame.
- Restricts the twist between the rear sub frame and vehicle body.

- (1) Sub frame support arm
- (2) Rear arm
- (3) Rear shock absorber

# REAR SUSPENSION (DOUBLE WISHBONE TYPE)

## REAR SUSPENSION

---

### 2. Rear Suspension (Double Wishbone Type)

#### A: GENERAL

A new, double wishbone type suspension has been developed as the rear suspension for this 7-seat SUV.

This double wishbone type suspension consists of the upper arm, the front lateral link, the rear lateral link, the trailing link, the shock absorber, and the coil spring.

Without changing the drive advantage of the multi-link type rear suspension that was used in Legacy, the following measures have been taken to greatly improve the comfort of long-distance driving.

- Revision of the wheel stroke direction during the bump stroke  
During the bump stroke, the wheels are set to move toward the rear of the vehicle to reduce the harshness when driving over bumps.
- Revision of the damper lever ratio  
The lever ratio has been greatly reduced to 1.2, there is plenty of damping force even with a minute stroke, and a more flat feeling is given.
- Full floating type  
All the suspension arms and links are attached to the sub-frame, so the noise picked up by the tires is insulated by the bushing.

RS-00210

# REAR SUSPENSION (DOUBLE WISHBONE TYPE)

REAR SUSPENSION

---

- (1) Upper arm
- (2) Rear sub-frame support plate
- (3) Rear stabilizer
- (4) Shock absorber
- (5) Rear lateral link
- (6) Trailing link
- (7) Front lateral link
- (8) Front sub-frame support plate
- (9) Rear sub-frame

# REAR SUSPENSION (DOUBLE WISHBONE TYPE) (FROM '08MY)

## REAR SUSPENSION

### 3. Rear Suspension (Double Wishbone Type) (From '08MY)

#### A: FEATURE

Double wishbone rear suspension optimizes the camber angle in relation to the ground while increasing the amount of change in camber angle. This makes the tires grab the ground vertically at all times, providing the best result of the tire performance.

Length of each link is set as long as possible to eliminate an excessive toe change, providing more moderate bump toe-in. This suppresses behavior changes due to conditions on the road surface or body roll, assuring stable drivability.

#### B: STRUCTURE

Double wishbone rear suspension is mainly consists of A-shaped upper arms on top of both right and left sides, two lateral links underneath of the both sides, and the trailing links positioned in the longitudinal direction.

All link arms and rear differential system are attached to the sub frame and mounted on the body via bushings.

The rear lateral links are attached with the shock absorbers with coaxially-arranged coil springs and the stabilizers.

RS-00292

- |                     |                       |                        |
|---------------------|-----------------------|------------------------|
| (1) Upper arm       | (4) Rear lateral link | (6) Front lateral link |
| (2) Rear stabilizer | (5) Trailing link     | (7) Rear sub frame     |
| (3) Shock absorber  |                       |                        |

## C: OPERATION

The wheel center lateral trajectory is set to lean toward rear as shown in the figure below, providing arrangement that reduces inputs from road surface such as vibration and noise by diverting them rearward when the suspensions make strokes.

The shock absorbers are arranged in the same direction as the wheel center lateral trajectory to prevent the top mounts from twisting during strokes, receiving inputs from road surface directly into shock absorbers' axial direction.

In this design even small inputs are absorbed well, providing both drivability and ride quality at a high level.

RS-00288

(1) Input

(2) Wheel center lateral trajectory

(3) Shock absorber axis

# WHEEL & TIRE

## WHEEL AND TIRE SYSTEM

### 1. Wheel & Tire

#### A: STANDARD TIRE

Aluminum wheels are provided with a center cap.

The following four types of disk wheels are provided for model grades.

(B) 17 × 4T

# TIRE PRESSURE MONITORING SYSTEM

## WHEEL AND TIRE SYSTEM

---

### 2. Tire Pressure Monitoring System

#### A: GENERAL

To comply with the requirements of FMVSS No. 138, a direct detecting type tire pressure monitoring system, which consists of four transmitters (each integrated with a tire air valve) and a receiver (installed under the driver's seat) is introduced.

WT-00075

- (1) Indicator lights
- (2) Transmitter
- (3) Receiver

## B: TRANSMITTER (TIRE PRESSURE SENSOR)

Detects the tire pressure with the sensor built inside the transmitter, which is integrated with the tire air valve.

The sensor contains a battery as a power source.

The battery life is 10 years or 160,000 km (100,000 miles).

The battery cannot be replaced separately; when the battery becomes weak the whole sensor assembly must be replaced.

WT-00076

- (1) Transmitter (tire pressure sensor)
- (2) Nut
- (3) Tire pressure sensor built-in part
- (4) Wheel
- (5) Tire

When the vehicle speed increases to 11 — 32 km/h (7 — 20 MPH), the roll switch built in the sensor turns ON, and the sensor starts to transmit pressure data\*<sup>1</sup> together with the ID code\*<sup>2</sup> and function code\*<sup>3</sup>.

When the switch is turned ON, the transmitter takes measurement once in every 30 seconds, and sends the result once in every minute.

When the vehicle is stopped for 15 minutes or more, the sensor enters sleep mode to minimize battery consumption.

\*1: Detected tire pressure data

\*2: ID code allocated to each transmitter

\*3: A code indicating the current transmitter mode

The transmitter switches its mode according to its condition as follows.

These condition information are referred to as “function codes”.

# TIRE PRESSURE MONITORING SYSTEM

## WHEEL AND TIRE SYSTEM

---

### Function codes

Mode	Code	Function
Learn mode	000	This is the initial mode when the transmitter is turned ON using a transmission activation tool (ST).
Low battery mode	001	Enters this mode when the transmitter battery voltage drops. This code is transmitted when the transmitter voltage becomes low.
OFF mode	010	Transmitter is OFF (no pressure detection, no data transmission).
Re-measure mode	011	This code is transmitted if the detected pressure differs by 8.4 kPa (0.086 kgf/cm <sup>2</sup> , 1.218 psi) or more compared with the previous data. (sudden change in pressure due to tire burst, tire pressure adjustment, etc.)
Wake mode	101	This code is transmitted when the condition changes from vehicle stopped (transmitter roll switch OFF and data not transmitted) to vehicle running (transmitter roll switch turns ON and data transmission starts).
Normal pressure mode	111	This code is transmitted when the condition is none of the above; vehicle normally running or stopped (within 15 minutes after stopped).

# TIRE PRESSURE MONITORING SYSTEM

## C: RECEIVER

The receiver has a built-in antenna.

The receiver collects tire pressure data from the transmitters, and turns on the indicator to warn the driver when it concludes that the tire pressure has dropped below a certain value.

The receiver is provided with a system fault diagnosis function.

WT-00079

- (1) Power supply
- (2) Ignition switch
- (3) Receiver
- (4) Antenna
- (5) Ground

- (6) Transmitter
- (7) Integrated unit
- (8) Vehicle speed
- (9) Subaru select monitor

# TIRE PRESSURE MONITORING SYSTEM

## WHEEL AND TIRE SYSTEM

---

### 1. RECEIVER FUNCTIONS

- Receiving function: Receives data from the transmitters and decides whether the data is valid or not.
- Pressure judgment function: The indicator turns ON to warn the driver if the tire pressure drops below the preset value (180 kPa, 1.835 kgf/cm<sup>2</sup>, 26.11 psi). At the same time, a diagnostic trouble code is stored in the memory inside the receiver to identify which tire has low pressure. (low pressure detection turns ON at 180 kPa (1.835 kgf/cm<sup>2</sup>, 26.11 psi), turns OFF at 200 kPa (2.039 kgf/cm<sup>2</sup>, 29.01 psi))
- Diagnosis function: The indicator flashes and a diagnostic trouble code is stored in the memory inside the receiver if a system abnormality such as data reception failure, bad received data, or bad transmitter condition is detected.

### 2. CONDITIONS JUDGED AS A FAILURE

The receiver decides that the system has failed when any of the following conditions is met.

- EEPROM abnormal: The written data does not coincide with the loaded data when the ID is registered.
- Data reception failure: Transmitter data could not be received for 10 minutes or more while driving at a speed exceeding 40 km/h (24.9 MPH).
- Function code abnormal: “Re-measure” function code is received for 5 times in series, though the pressure change compared to the last data was within 7 kPa (0.071 kgf/cm<sup>2</sup>, 1.02 psi) while driving at a speed exceeding 40 km/h (24.9 MPH).
- Air pressure data abnormal: “FFH”\* pressure data has been received for 5 times in series while driving at a speed exceeding 40 km/h (24.9 MPH).
- Low battery: Function code for the “low battery” mode has been received for 20 times or more in series.
- Vehicle speed sensor abnormal: Function code for the “wake” mode has been received while the vehicle speed signal is 6 km/h (3.7 MPH) or lower.

\*FFH is transmitted when the pressure data exceeds the upper limit (352kPa, 3.59 kgf/cm<sup>2</sup>, 51.05 psi) of pressure detection.

If the indicator comes ON due to low tire pressure, the indicator will turn OFF when the under-inflated tire is inflated to normal pressure.

## **D: SUBARU SELECT MONITOR**

The Subaru Select Monitor (SSM) enables the user to perform the following operations.

- Transmitter ID registration: The new ID can be registered when the transmitter is replaced due to battery life, etc.
- Data monitoring: The status of the function code, tire pressure, vehicle speed, indicator illuminating pressure, or I/O signal can be displayed.
- ID data display: The registered four IDs and the currently received data for each ID can be displayed.
- Diagnostic trouble codes display: Stored diagnostic trouble codes can be read.
- Erasing diagnostic trouble codes: Diagnostic trouble codes can be erased after repair work is completed.

## 2. Limited Slip Differential (LSD) (Viscous Coupling Type)

### A: GENERAL

The limited slip differential (LSD) automatically limits the differential action and distributes torque to the left and right wheels adequately to enhance driving stability when the left and right wheels are rotating at speeds different from each other during driving on a slippery road (muddy, snow-covered or slushy road) or cornering.

### B: CONSTRUCTION

The V/C (viscous coupling) type LSD has outer plates and inner plates arranged alternately. Each outer plate is splined to the inside of the differential case at its outer periphery and each inner plate is splined to the outer circumference of the left side gear at its inner periphery.

The outer plates are held in position by spacer rings while the inner plates can slide in the axial direction along the spline teeth.

The space between the differential case and the left side gear is filled with a mixture of high viscosity silicone oil and air and hermetically sealed with X-rings.

# LIMITED SLIP DIFFERENTIAL (LSD) (VISCOUS COUPLING TYPE)

## DIFFERENTIALS

---

### C: OPERATION

#### 1. WHEN RIGHT AND LEFT WHEELS ROTATE AT THE SAME SPEED

During normal straight-ahead driving where the right and left wheels rotate at the same speed, the differential case and side gears rotate together, just as in conventional differentials. As a result, driving torque is distributed equally to the right and left side gears.

DI-00296

## 2. WHEN RIGHT AND LEFT WHEELS ROTATE AT DIFFERENT SPEEDS

When a speed difference occurs between the right and left wheels, the differential case and the left side gear do not rotate at the same speed any more. The speed difference between them corresponds to that between both the wheels. Because of the shear force caused in the silicone oil, a differential torque is then generated, which limits differential action.

For example, if the left wheel spins due to small road resistance, a speed difference occurs between the right and left wheels. Since there is the V/C between the differential case and left side gear, a differential torque corresponding to the speed difference is generated in the V/C. This differential torque is transferred from the left wheel to the right wheel. As a result, a greater driving torque is distributed to the right wheel which is rotating at a lower speed.

When the right wheel spins, the differential torque is transferred from the right wheel to the left wheel. Also in this case, a torque greater by the differential torque than the torque to the spinning wheel is transmitted to the wheel rotating at the lower speed.

## 1. Anti-lock Brake System (ABS)

### A: FEATURES

- To reduce the size and weight, this ABS has a hydraulic control unit, an ABS control module, a valve relay and a motor relay integrated into a single unit (called ABSCM & H/U).
- The ABS electrically controls the brake fluid pressure to each wheel to prevent the wheel from locking during braking on slippery road surfaces, thereby enabling the driver to maintain the directional control.
- If the ABS becomes inoperative, a fail-safe system is activated to ensure same level of braking performance as with a conventional brake system. In that case, the warning light comes on to indicate that the ABS is malfunctioning.
- The ABS is a 4-sensor, 4-channel system. The system is a four-wheel independent control type, which controls each of the wheel brakes individually.

# ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

## C: PRINCIPLE OF ABS CONTROL

When the brake pedal is depressed during driving, the wheel speed decreases and the vehicle speed does as well. The decrease in the vehicle speed, however, is not always proportional to the decrease in the wheel speed. The non-correspondence between the wheel speed and vehicle speed is called “slip” and the magnitude of the slip is expressed by the “slip ratio” which is defined as follows:

$$\text{Slip ratio} = (\text{Vehicle speed} - \text{Wheel speed}) / \text{Vehicle speed} \times 100\%$$

When the slip ratio is 0%, the vehicle speed corresponds exactly to the wheel speed. When it is 100%, the wheels are completely locking while the vehicle is moving.

The braking effectiveness is represented by the “coefficient of friction” between the tire and road surface. The larger the coefficient, the higher the braking effectiveness. The diagram below shows the relationship between the coefficient of friction and the slip ratio for two different road surface conditions (asphalt-paved road and icy road), assuming that the same tires are used for both the conditions and the vehicles are moving forward. Although the braking effectiveness (coefficient of friction) depends on the road surface condition as shown and also on the type of the tire, its peak range generally corresponds to the 8 — 30% range of the slip ratio.

The ABS controls the fluid pressure to each wheel to maintain the slip ratio within this range.

- (A) Slip ratio
- (B) Coefficient of friction between tire and road surface
- (1) Icy road
- (2) Asphalt-paved road
- (3) Control range by ABS

## D: ABS WHEEL SPEED SENSOR

Each of the ABS wheel speed sensors detects the speed of the corresponding wheel. The sensor consists of a sensor body and a magnetic encoder. The magnetic encoder is a permanent magnet with N poles and S poles arranged alternately, and when this turns together with the wheel the magnetic field at the sensing area of the sensor body changes. The sensor body has a hall element and outputs signals at a frequency proportional to the wheel speed.

# ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

## E: EBD (ELECTRONIC BRAKE FORCE DISTRIBUTION)

The EBD system utilizes the function of the conventional ABS. This system prevents premature locking of the rear wheels by using electronic control instead of a proportioning valve. The system provides a feature to optimize the brake force distribution to the front and rear wheels according to change in loading conditions or displacement of the center of gravity during deceleration.

The ABSCM calculates the optimum brake force distribution from the difference in speed between the front and rear wheels. Based on the results, the ABSCM controls the rear wheel brake pressure through the ABS hydraulic unit (H/U) to achieve the optimum brake force distribution suitable for the driving condition.

The proportioning valve is disused on EBD equipped vehicles.

- (1) Brake force to rear wheels
- (2) Brake force to front wheels
- (3) Optimum brake force distribution for light loaded conditions
- (4) Optimum brake force distribution for heavy loaded conditions
- (5) EBD controlled brake force distribution
- (6) PCV controlled brake force distribution (reference)

## F: ABS CONTROL MODULE AND HYDRAULIC CONTROL UNIT (ABSCM & H/U)

### ● ABS control module section (ABSCM)

The ABSCM contains two micro control modules (MCMs) which communicate with each other. Both the MCMs process the same program and each MCM monitors the other's outputs. If a mismatch occurs between their outputs, the ABSCM cuts off the system and activate the fail-safe function.

The ABSCM can store a maximum of 3 diagnostic trouble codes (DTC) in a ROM. If more than 3 faults have occurred, only the 3 most recent failures are stored and others are erased. Trouble diagnostic trouble codes remain stored until they are internally or externally erased.

The ABSCM has a test routine (sequence control pattern) which facilitates checking of the hydraulic control unit.

### ● ABS control

Using primarily the wheel speed data from each ABS wheel speed sensor and secondarily the vehicle deceleration rate data from the G sensor as parameters, the ABSCM generates a simulated vehicle speed when there is a risk of wheel lock-up. Using the simulated vehicle speed (called "dummy" vehicle speed) as a reference, the ABSCM determines the state of the wheel in terms of the tendency toward lock-up. If the result shows that the wheels are about to lock, the ABSCM issues commands to energize or de-energize the solenoid valves and activate the motor pump of the H/U to modulate the brake fluid pressures that act on the wheel cylinders, thereby preventing the wheels from locking.

The ABSCM controls the fluid pressure to each of the four wheels independently.

### ● Functions available using SUBARU select monitor

When the SUBARU select monitor is connected, the ABSCM allows it:

- To read out analog data
- To read out ON/OFF data
- To read out or erase diagnostic trouble codes
- To read out data showing conditions under which a trouble code has been stored (freeze frame data)
- To initiate ABS sequence control pattern

### ● Indication functions

Under the control of the ABSCM, the ABS warning light provides the following two indication functions:

- ABS fault alerting
- Valve ON/OFF indication (when sequence control pattern is initiated)

## ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

---

### ● **Hydraulic control unit section (H/U)**

The H/U is a fluid pressure controller consisting of, among others, a motor, solenoid valves, a housing and relays. It also constitutes passage of the two diagonally split brake circuits.

- The pump motor drives an eccentric cam which in turn moves the plunger pump to generate hydraulic pressure.
- The housing accommodates the pump motor, solenoid valve and reservoir. It also constitutes a brake fluid passage.
- The plunger pump, when operated, draws the brake fluid from the reservoir, lets the fluid in a wheel cylinder drain into the reservoir, and/or forces the fluid into the master cylinder.
- The outlet solenoid valve is a 2-position type. It opens or closes the brake fluid passage between a wheel cylinder and the reservoir according to commands from the ABSCM.
- The inlet solenoid valve is duty-controlled to reduce brake fluid pulsation for minimum ABS operation noise.
- The reservoir temporarily stores the brake fluid drained from a wheel cylinder when pressure “decrease” control is performed.
- The valve relay controls power supply to the solenoid valves in response to a command from the ABSCM. In normal (IG ON) condition, the relay is closed to supply power to the solenoid valves. When an error occurs in the system, the valve relay is turned OFF to keep the fluid pressure circuit in the normal mode (non-ABS mode).
- The motor relay closes and supplies power to the pump motor in response to a command from the ABSCM during the ABS drive mode operations.
- The H/U has four operating modes; normal mode (non-ABS mode), and three ABS active modes, i.e., “increase”, “hold” and “decrease” modes.

## 1. DURING NORMAL BRAKING (ABS NOT ACTIVE)

Both the inlet and outlet solenoid valves are not energized.

This means that the inlet port of the inlet solenoid valve is open, whereas the outlet port of the outlet solenoid valve is closed. So the fluid pressure generated in the master cylinder is transmitted to the wheel cylinder, producing a brake force.

### NOTE:

For simplicity of explanation, operation of the hydraulic control unit is represented by operation of a single wheel circuit.

# ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

| (3) Inlet solenoid valve | (9) Motor                 |
| (4) Check valve          | (10) Outlet port closed   |
| (5) Deenergized          | (11) Deenergized          |
| (6) Pump                 | (12) Reservoir            |

---

## 2. PRESSURE “DECREASE” CONTROL (ABS ACTIVE)

Both the inlet and outlet solenoid valves are energized, which means that the inlet port is closed and the outlet port is open.

In this state, the wheel cylinder is isolated from the master cylinder but open to the reservoir, so the brake fluid in it can be drained into the reservoir, decreasing its pressure and reducing the braking force of the wheel.

The brake fluid collected in the reservoir is forced into the master cylinder by the pump.

During this phase of ABS operation, the pump motor continues operating.

### NOTE:

For simplicity of explanation, operation of the H/U is represented by operation of a single wheel circuit.

# ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

ABS00444

- |                          |                           |

| (6) Pump                 | (12) Reservoir            |

### 3. PRESSURE “HOLD” CONTROL (ABS ACTIVE)

The inlet solenoid valve is energized, so the inlet port is closed.

On the other hand, the outlet solenoid valve is de-energized, so the output port is also closed. In this state, all the passages connecting the wheel cylinder, master cylinder and reservoir are blocked. As a result, the fluid pressure in the wheel cylinder is held unchanged.

During this phase of ABS operation, the pump motor continues operating.

**NOTE:**

For simplicity of explanation, operation of the H/U is represented by operation of a single wheel circuit.

# ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

ABS00445

- |                          |                           |

| (3) Inlet solenoid valve | (9) Motor                 |
| (4) Check valve          | (10) Outlet port closed   |
| (5) Energized            | (11) Deenergized          |
| (6) Pump                 | (12) Reservoir            |

## 4. PRESSURE “INCREASE” CONTROL (ABS ACTIVE)

Both the inlet and outlet solenoid valves are de-energized, which means that the inlet port of the inlet solenoid valve is open, whereas the outlet port of the outlet solenoid valve is closed. So the fluid pressure generated in the master cylinder is transmitted to the wheel cylinder and increased fluid pressure in the wheel cylinder applies the brake with a larger force.

During this phase of ABS operation, the pump motor continues operating.

### NOTE:

For simplicity of explanation, operation of the H/U is represented by operation of a single wheel circuit.

## G: ABS CONTROL CYCLE CURVES

Depressing the brake pedal increases the brake fluid pressure in each wheel cylinder, which in turn decreases the wheel speed (or increases the wheel deceleration rate). When the brake fluid pressure is increased to a level of point “A” of the brake fluid pressure curve in the diagram (at which the wheel deceleration rate exceeds threshold “ $-b_0$ ”), the ABSCM makes a pressure “hold” control. At the same time, the ABSCM calculates a “dummy” vehicle speed which is a reference speed it uses in the next stage of control.

When the wheel speed then drops below the slip ratio setting, i.e., a speed lower than the “dummy” vehicle speed by the predetermined value (at point “B” of the pressure curve), the ABSCM makes a control to prevent the wheel from locking, or a pressure “decrease” control.

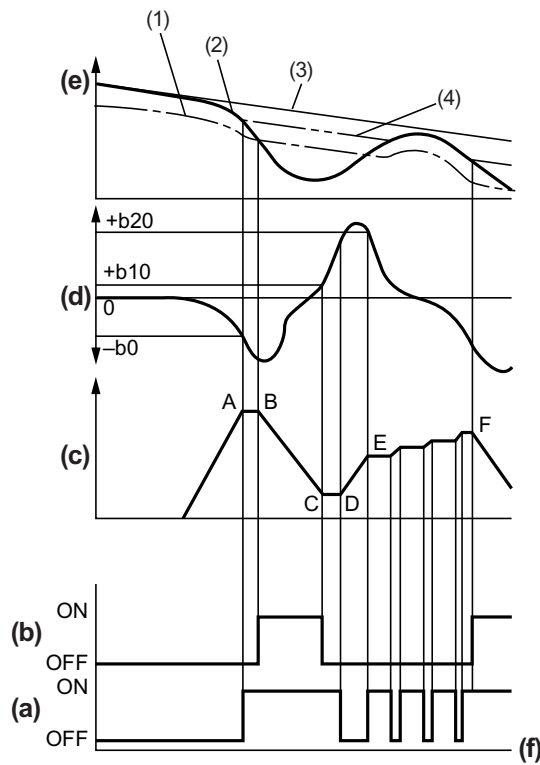

As the wheel cylinder pressure decreases, the wheel speed starts increasing (or the wheel acceleration rate starts rising). When the wheel acceleration rate exceeds threshold “ $+b_{10}$ ” (at point “C” of the pressure curve), the ABSCM makes a pressure “hold” control. When the wheel acceleration rate exceeds threshold “ $+b_{20}$ ” (at point “D” of the pressure curve), the ABSCM recognizes that wheel lock-up will not occur and then makes a pressure “increase” control.

When the wheel acceleration rate drops below threshold “ $+b_{20}$ ”, (at point “E” of the pressure curve), the ABSCM starts pressure “hold” and “increase” control cycles at a given interval.

When the wheel deceleration rate then exceeds threshold “ $-b_0$ ” (at point “F” of the pressure curve), the ABSCM immediately makes a pressure “decrease” control.

## H: ABS WARNING LIGHT AND BRAKE WARNING LIGHT (ALSO FUNCTIONS AS EBD WARNING LIGHT)

When a fault occurs in the signal transmission system or the ABSCM, the ABS warning light and brake warning light in the combination meter come on. At the same time, the current to the hydraulic control unit is interrupted. The brake system then functions in the same manner as a system without ABS.

If the warning light comes on, one or more diagnostic trouble codes should be stored in the ABSCM. To identify these codes, use a Subaru select monitor.

# ANTI-LOCK BRAKE SYSTEM (ABS)

ABS

## I: G SENSOR

The G sensor detects changes in the vehicle's acceleration/deceleration rate in the longitudinal direction.

A piezo-resistor is formed on the beam. When the mass area moves during acceleration and deceleration, the beam distorts causing the resistance of the piezo-resistor to change. This change is converted into change in voltage and sent to the ABSCM.

# VEHICLE DYNAMICS CONTROL (VDC) SYSTEM

## VEHICLE DYNAMICS CONTROL (VDC)

### 1. Vehicle Dynamics Control (VDC) System

#### A: GENERAL

The vehicle dynamics control (VDC) system is a driver assist system which enhances vehicle's running stability by utilizing the anti-lock brake system (ABS) and traction control system (TCS) functions in combination with its own function which reduces sudden changes in vehicle behavior that are likely to occur when traveling on a slippery road or quickly avoiding an obstacle on the road.

## B: OPERATION PRINCIPLE OF VDC

### 1. OVERSTEER BEHAVIOR SUPPRESSION

When the vehicle starts to spin during cornering, the VDC control module (VDCCM) actuates the brakes on the front and rear outer wheels. As a result, a yaw moment is generated in a direction that counteracts the yaw moment resulting from oversteer so that the vehicle's behavior is stabilized.

VDC00105

- (1) Braking force
- (2) Yaw moment resulting from oversteer

# VEHICLE DYNAMICS CONTROL (VDC) SYSTEM

## VEHICLE DYNAMICS CONTROL (VDC)

---

### 2. UNDERSTEER BEHAVIOR SUPPRESSION

When the vehicle starts to drift outward during cornering, the VDCCM causes the rear inner wheel to be braked. As a result, a yaw moment is generated in a direction that counteracts the yaw moment resulting from understeer so that the vehicle's behavior is stabilized.

VDC00106

- (1) Braking force
- (2) Yaw moment resulting from understeer

# VEHICLE DYNAMICS CONTROL (VDC) SYSTEM

VEHICLE DYNAMICS CONTROL (VDC)

## C: FUNCTIONS USED IN VEHICLE'S BEHAVIOR STABILIZATION CONTROL

Vehicle dynamics control (VDC) function	The vehicle dynamics control (VDC) determines the driver's intention from the data provided by the steering angle sensor, braking pressure sensor, engine-related sensors and other relevant sources and recognizes the result as the target vehicle behavior. At the same time, it determines the vehicles actual behavior from the data provided by the yaw-rate sensor, lateral G sensor, ABS wheel speed sensor and other relevant sources. Then, the module compares the target and actual vehicle behaviors to estimate how the vehicle is running (whether it understeers, oversteers, slips or is in other condition), and based on the result, performs braking control of individual wheels, engine output control and AWD control as necessary to correct the vehicle's running condition.
TCS function	The TCS constantly receives signals from the relevant sensors to monitor the vehicle speed. When the running wheels slip exceeding a certain limit, it performs braking control of individual wheels, engine output control and AWD control as required to maintain optimal traction and adequate side force.
ABS function	The ABS constantly receives signals from the relevant sensors to monitor the vehicle speed. When the slip of wheels during braking exceeds a certain limit, it performs braking control of individual wheels and AWD control as required to maintain optimal traction and adequate side force.

### NOTE:

- "Braking control" is effected by the VDCCM as follows:

The VDCCM calculates the required braking force for each wheel and sends signals to the VDC hydraulic unit. The hydraulic unit's motor pump is then operated to generate the required hydraulic pressure. Further, it controls the hydraulic unit's solenoid valves to increase, maintain or decrease the hydraulic pressure applied to the brake wheel cylinder as required.

When the brakes are applied by the driver, however, the braking force is controlled by the hydraulic pressure resulting from the driver's action.

- "Engine output control" is effected by the VDCCM as follows:

The VDCCM calculates the target engine output for each condition, and sends commands to the engine control module. The engine control module compares the target engine output with the current engine output. Based on the comparison, the throttle opening or fuel injection is controlled. The targeted engine output is then achieved.

- "AWD control" is effected by the VDCCM as follows:

When necessary, the VDCCM sends a command to the automatic transmission control module. According to the command, the transmission control module controls the transfer clutch so that the torque is distributed between the front and rear axles optimally.

# VEHICLE DYNAMICS CONTROL (VDC) SYSTEM

## VEHICLE DYNAMICS CONTROL (VDC)

### D: SYSTEM COMPONENTS AND FUNCTIONS

VDCCM	<ul style="list-style-type: none"><li>• Determines the vehicle's running condition from various sensor signals and, based on the result, controls the vehicle dynamics control (VDC) hydraulic unit, ABS and TCS as required.</li><li>• Performs CAN communication with the engine control module, automatic transmission control module and the steering angle sensor.</li><li>• Causes the system to stop and the warning light to illuminate if a fault occurs in a circuit of the electrical system. Stores the code that indicates the location of the fault.</li></ul>
Vehicle dynamics control (VDC) hydraulic unit (VDCH/U)	Actuates the pump motor in response to a command from the VDCCM and changes fluid passages using solenoid valves to control the hydraulic pressures applied to the wheel cylinders.
Steering angle sensor	Detects the steering direction and angle when the steering wheel is operated by the driver, and outputs signals corresponding to them to the CAN line.
Yaw-rate and lateral G sensor	Detects the yaw-rate and lateral G of the vehicle and outputs it to the VDCCM.
Pressure sensor	Detects the hydraulic pressure resulting from driver's brake pedal operation and outputs it to the VDCCM.
ABS wheel speed sensor	Detects the speed of each wheel and outputs it to the VDCCM.
Engine control module (ECM)	Controls the engine output in response to commands from the VDCCM. Further, it transmits current engine output and engine speed signals etc. to the VDCCM.
Automatic transmission control module	Controls the transfer clutch in response to commands from the VDCCM during vehicle dynamics control (VDC) control, ABS control or TCS control so that torque is distributed optimally between the front and rear axles.
ABS warning light	Alerts the driver to an ABS fault.
Vehicle dynamics control (VDC) warning light and vehicle dynamics control (VDC) OFF indicator light	<ul style="list-style-type: none"><li>• Alerts the driver to a vehicle dynamics control (VDC) or TCS fault.</li><li>• Illuminates to tell the driver that the vehicle dynamics control (VDC) and TCS are inactive. (when system is not failed)</li></ul>
Brake warning light	Alerts the driver to an EBD fault. This warning light is also used for parking brake warning and brake fluid level warning.
Vehicle dynamics control (VDC) operation indicator light	Blinks when the vehicle dynamics control (VDC) is operating or lights steadily when the TCS is operating.
Vehicle dynamics control (VDC) OFF switch	<ul style="list-style-type: none"><li>• Allows the driver to temporarily disengage the vehicle dynamics control (VDC).</li><li>• In "temporarily disengaged" status, the vehicle dynamics control (VDC) OFF indicator light illuminates.</li></ul>

#### NOTE:

CAN (Controller Area Network) communication refers to bidirectional multiplex high-speed communication.

### E: VDC OFF SWITCH

A switch which allows the driver to temporarily disengage VDC control.

In some occasions, better results are obtained by canceling the VDC to allow the drive wheels to slip for a certain amount:

- When starting the vehicle on icy or unpaved, steep uphill roads.
- When escaping from mud or snow when the wheels are caught in them.
- When the VDC OFF switch is pressed while the engine is running, the VDC OFF indicator light in the combination meter illuminates, and VDC control is temporarily disengaged. When the VDC OFF switch is pressed again, the VDC OFF indicator light turns off and the system returns to “engaged” status. (Temporarily disengaged status and engaged status are altered each time the switch is pressed.)
- If the VDC OFF switch is pressed and held for more than 10 seconds, the VDC OFF indicator light in the combination meter turns off. The system will not allow further operation of the switch until the engine is started for the next time.

VDC00249

## **F: OPERATION OF VDC HYDRAULIC UNIT (VDC H/U)**

### **1. DURING NORMAL BRAKING**

No solenoid valves are energized. The ports of the inlet solenoid valve and cut solenoid valve are open, while the ports of the outlet solenoid valve and suction solenoid valve are closed.

In this state, the fluid pressure generated by the master cylinder can be applied to the wheel cylinder through the open ports of the cut solenoid valve and inlet solenoid valve.

#### **NOTE:**

For simplicity of explanation, operation of the hydraulic unit is represented by operation of a single wheel circuit.

| (8) Check valve            | (16) Deenergized          |                            |

## 2. PRESSURE “DECREASE” CONTROL WITH BRAKE PEDAL DEPRESSED

The inlet solenoid valve and outlet solenoid valve are energized, while the other solenoid valves are not energized. This means that the ports of the inlet solenoid valve and suction solenoid valve are closed, while those of the outlet solenoid valve and cut solenoid valve are open.

Although the fluid pressure generated by the master cylinder can reach the inlet solenoid valve through the open port of the cut solenoid valve, the pressurized fluid cannot go further since the passage is blocked there. On the other hand, since the port of the outlet solenoid valve is open, the brake fluid in the wheel cylinder can flow out into the reservoir. The fluid pressure in the wheel cylinder decreases as a result. The brake fluid in the reservoir is pumped back into the master cylinder.

### NOTE:

For simplicity of explanation, operation of the hydraulic unit is represented by operation of a single wheel circuit.

| (8) Check valve            | (16) Energized            |                            |

### 3. PRESSURE “HOLD” CONTROL WITH BRAKE PEDAL DEPRESSED

Only the inlet solenoid valve is energized. This means that the ports of the inlet solenoid valve, outlet solenoid valve and suction solenoid valve are all closed except that of the cut solenoid valve.

In this state, the fluid pressure generated by the master cylinder is transmitted through the open port of the cut solenoid valve to the inlet solenoid valve but not beyond the inlet solenoid valve since the passage is blocked there. Since the port of the outlet solenoid valve is also closed, the fluid pressure in the wheel cylinder is held unreleased.

The pump is always operated whenever commanded by the VDCCM.

**NOTE:**

For simplicity of explanation, operation of the hydraulic unit is represented by operation of a single wheel circuit.

| (8) Check valve            | (16) Deenergized          |                            |

## 6. PRESSURE “HOLD” CONTROL WITH BRAKE PEDAL NOT DEPRESSED

The cut solenoid valve, suction solenoid valve and inlet solenoid valve are all energized, while the outlet solenoid valve is de-energized. This means that the ports of the cut solenoid valve, inlet solenoid valve and outlet solenoid valve are closed, while the port of the suction solenoid valve is open.

In this state, the pump is activated, forcing the brake fluid in the master cylinder reservoir tank through the open port of the suction solenoid valve. The fluid passage is, however, blocked by the closed inlet solenoid valve. Since the port of the outlet solenoid valve is also closed, the fluid pressure in the wheel cylinder is held unreleased.

The fluid pressure generated by the pump becomes higher and higher because the port of the inlet solenoid valve is closed. When it reaches a certain level, the built-in relief valve of the cut solenoid valve opens and allows the brake fluid to return into the master cylinder reservoir tank.

### NOTE:

For simplicity of explanation, operation of the hydraulic unit is represented by operation of a single wheel circuit.

| (8) Check valve            | (16) Check valve          |                            |

## 7. PRESSURE “DECREASE” CONTROL WITH BRAKE PEDAL NOT DEPRESSED

The cut solenoid valve, suction solenoid valve, inlet solenoid valve and outlet solenoid valve are all energized. This means that the ports of the cut solenoid valve and inlet solenoid valve are closed, while those of the suction and outlet solenoid valves are open.

In this state, the pump is activated drawing the brake fluid from the reservoir and forcing it toward the master cylinder through the open port of the suction solenoid valve. The fluid passage is blocked by the inlet solenoid valve, so the fluid cannot flow toward the wheel cylinder. Since the port of the outlet solenoid valve is open, on the other hand, the brake fluid in the wheel cylinder is allowed to be drawn into the reservoir, so the fluid pressure in the wheel cylinder decreases. The brake fluid drawn into the reservoir is raised from it and forced into the master cylinder reservoir tank through the suction solenoid valve.

The pressure of the fluid in the passage toward the cut solenoid valve becomes higher and higher as the pump operates since the valve is closed. When the pressure reaches a certain level, the build-in relief valve of the cut solenoid valve opens, releasing the brake fluid into the master cylinder reservoir tank.

### NOTE:

For simplicity of explanation, operation of the hydraulic unit is represented by operation of a single wheel circuit.

## 2. Hill Start Assist (From '08MY)

### A: GENERAL

This system keeps the vehicle from moving backwards while a driver move foot from the brake to the accelerator by holding brake pressure for one second via brake pressure control, assisting the driver to start off the vehicle on a uphill.

### B: OPERATION

When the driver depresses the brake to stop the vehicle on an uphill, the system recognizes that the vehicle is at a stop from the wheel speed sensor signals.

Then the G sensor detects the inclination of the road surface where the vehicle stops.

The vehicle dynamic control unit holds brake pressure for one second when the brake is released (the brake light switch OFF) and the accelerator and clutch pedals are operated.

# FRONT AND REAR DISC BRAKES

## BRAKE

---

### 1. Front and Rear Disc Brakes

- Each of the front and rear disc brakes consist of a brake caliper, brake pads, and a brake disk rotor.
- The front disc brakes are of a ventilated disc type which features high heat dissipation and superb braking stability. The rear disc brakes are either a ventilated disk type or a solid disk type.
- Each disc rotor, which is fitted on the outside of the hub, is secured together with the wheel using the hub bolts. This facilitates its removal and installation.
- The brake pads have a wear indicator which gives a warning when the pad is worn down to the limit.

BR-00352

- (1) Disc rotor
- (2) Caliper body

## A: PAD WEAR INDICATOR

A wear indicator is provided on the inner disc brake pads. When the pad wears down to 1.5 mm (0.059 in) the tip of the wear indicator comes into contact with the disc rotor, and makes a squeaking sound as the wheel rotates. This alerts the driver to the situation.

BR-00020

(1) Wear indicator

(2) New pad

(3) Worn pad

(4) Disc rotor

## B: FRICTIONAL MATERIAL OF BRAKE PADS

The brake pads materials do not contain any asbestos which is harmful to human body.

# MASTER CYLINDER

BRAKE

---

## 2. Master Cylinder

- The master cylinder consists of a brake fluid reservoir chamber that stores brake fluid, and a hydraulic chamber section that converts the force applied to the brake pedal into hydraulic pressure.
- The hydraulic pressure generated in each of the two hydraulic chambers are sent to the brake caliper of each wheel through the 2 diagonally split brake circuits.

BR-00366

- (1) Reservoir tank
- (2) Secondary hydraulic chamber
- (3) Primary hydraulic chamber

## A: BRAKE FLUID LEVEL SWITCH

The brake fluid level switch is located inside the brake fluid reservoir tank and causes the brake system warning light on the combination meter to come on when the fluid level has dropped below the predetermined level.

The switch assembly consists of a reed switch (normally open) and a permanent magnet that is incorporated in a float.

When the brake fluid level is normal, the float is far above the reed switch, so the force of the magnet is unable to act on the reed switch. The warning light circuit, therefore, remains open.

When the brake fluid level drops to a level approximately 20 mm (0.79 in) below the maximum level and the float lowers accordingly, the magnet aligns with the reed switch, activating the reed switch contact. The warning light then comes on to warn the driver of the situation.

The warning light may, although momentarily, illuminate even when the brake fluid level is normal if the vehicle tilts or swing largely.

BR-00147

(1) Warning light

(2) Reed switch

(3) Permanent magnet

# BRAKE BOOSTER

BRAKE

## 3. Brake Booster

The brake booster is a tandem type that uses two diaphragms.

By utilizing the differential pressure between the intake manifold vacuum and atmospheric pressure, a high braking force can be obtained even when the pedal depressing effort is small.

The brake booster is installed between the brake pedal and master cylinder. This contributes to improve the response to the brake pedal. If it fails, the brake servo effect is lost requiring a larger pedal effort, however, the braking force is still maintained.

# PARKING BRAKE

## PARKING BRAKE

---

### 1. Parking Brake

The parking brakes are applied by manually operating the lever to mechanically control the rear wheels through a cable.

Each rear disc brake rotor contains a drum brake mechanism which is used exclusively for the parking brake.

PB-00055

## A: OPERATION

### 1. SETTING

When the parking brake lever is pulled, the shoe actuating lever to which the end of the parking brake cable is connected turns the strut in direction “F” around point “P”.

The strut then presses the brake shoes A and B against the drum. These brake shoes utilize a floating design and are movably supported by hold-down pins. The force applied to brake shoe A and the reaction force “F” applied to the brake shoe B via point “P” press them against the brake drum.

PB-00051

# TILT STEERING COLUMN

POWER ASSISTED SYSTEM (POWER STEERING)

---

## 1. Tilt Steering Column

### A: TILT MECHANISM

- The steering wheel vertical position can be adjusted within a 38 mm (1.50 in) range by using the tilt lever to unlock the steering column and lock it again at the desired position.

PS-00470

- (1) Tilt steering column
- (2) Tilt lever
- (3) 23 mm (0.91 in)
- (4) 15 mm (0.59 in)

### B: ENERGY-ABSORBING MECHANISM

- To absorb the backward movement energy generated in the engine compartment in the event of a frontal collision, a press-fitted pipes type steering column jacket has been adopted. When an impact load exceeding a certain level is applied to the steering column, jacket A slides on jacket B.

Since jacket B is press-fitted in jacket A, friction generated between them absorbs the impact. The column bending load is supported by the press-fitted jackets.

- Another measure to alleviate impact on the driver in the event of a collision is the ripping plate, which is located between the steering column and the tilt bracket attached to the steering support beam. When a large impact load is applied to the steering column, the ripping plate is deformed and torn progressively. The impact energy is absorbed during this process.

## C: STEERING SUPPORT BEAM

- The steering column is held in position by a support beam, which is installed crosswise in the vehicle body at a level close to the steering wheel to reduce the overhang distance of the steering wheel from the supporting point of the column. The steering shaft upper bearing is also located close to the steering wheel to increase supporting efficiency as well as to minimize vibration of the steering wheel.

PS-00475

(1) Steering support beam

## 2. Power Steering System

### A: HYDRAULIC SYSTEM

- The fluid pump is directly driven by the engine through a belt.
- The fluid flow is maintained almost constant regardless of change in the engine speed by the function of the flow control valve. The flow-regulated fluid is delivered to the control valve through hose A.
- When the steering wheel is turned, the rotary control valve connected to the pinion shaft opens the hydraulic circuit corresponding to the direction in which the steering wheel is turned. The fluid then flows into chamber A or B via pipe A or B.
- The fluid pressure in chamber A or B acts on the rack piston in the same direction as the rack shaft is moved by rotation of the steering wheel. This helps reduce the effort required of the driver to operate the steering wheel.
- Movement of the rack piston causes the fluid in the other chamber to return to the reservoir tank via pipe A or B, control valve, and hose B.
  - As the steering shaft is connected to the pinion shaft mechanically via the rotary control valve, the steering system can operate as a manual system even if the hydraulic system becomes inoperative.
  - To control the maximum fluid pressure, a relief valve is built into the fluid pump to prevent build-up of excessive fluid pressure.
- Since a damper valve is provided in the fluid passage, the steering stability in straight forward direction is improved and kickback is reduced.

# POWER STEERING SYSTEM

POWER ASSISTED SYSTEM (POWER STEERING)

## B: GEARBOX ASSEMBLY

### 1. POWER CYLINDER

The gearbox integrates the control valve and power cylinder into a single unit. The rack shaft serves as a power cylinder piston. The rotary control valve is located around the pinion shaft.

The rotary control valve and power cylinder are connected to each other by two hydraulic fluid pipes.

PS-00626

- (2) Rack shaft
- (3) Cylinder

- (4) Power cylinder
- (5) Pinion shaft
- (6) Control valve

# POWER STEERING SYSTEM

## POWER ASSISTED SYSTEM (POWER STEERING)

### 2. ROTARY CONTROL VALVE

The rotary control valve consists of a rotor (which rotates together with the steering shaft), a pinion (which is connected to the rotor and torsion bar), and a sleeve (which rotates together with the pinion). The rotor and sleeve have grooves C and D, respectively, which form fluid passages  $V_1$  through  $V_4$ .

The pinion is in mesh with the rotor with adequate clearance, which enable the rack to be moved manually by rotating the steering shaft (fail-safe feature).

- (17) Torsion bar
- (18) Rotor
- (A)** Cross-sectional view A (fluid passage switching circuit)
- (B)** Cross-sectional view B (pinion-to-rotor engagement)

# POWER STEERING SYSTEM

## POWER ASSISTED SYSTEM (POWER STEERING)

### ● Principle of operation

When the torsion bar is twisted by a rotational force applied to the steering wheel, the relative position between the rotor and sleeve changes. This changes the cross-sectional area of fluid passages  $V_1$ ,  $V_2$ ,  $V_3$  and  $V_4$ . The fluid passages are thus switched and the fluid pressure is controlled in accordance with the operation of the steering wheel.

### ● When no steering force is applied:

The rotor and sleeve are held at the neutral position. Fluid passages  $V_1$ ,  $V_2$ ,  $V_3$  and  $V_4$ , which are formed by grooves C and D are open equally. Under this condition, the fluid from the pump returns to the reservoir tank so that neither fluid pressure builds up nor the rack piston moves in the power cylinder.

PS-00012

- (1) Chamber A
- (2) Chamber B
- (3)  $V_1$

- (4)  $V_2$
- (5)  $V_3$
- (6)  $V_4$

- (7) From fluid pump
- (8) To A
- (9) To B

# POWER STEERING SYSTEM

POWER ASSISTED SYSTEM (POWER STEERING)

- When steering force is applied:

When the steering wheel is turned to the right, for example, fluid passages  $V_1$  and  $V_3$  are opened while fluid passages  $V_2$  and  $V_4$  are nearly closed.

At this point, the fluid pressure in chamber A of the power cylinder increases depending on the degree of closure of fluid passages  $V_2$  and  $V_4$  so that the rack piston moves to the right. The fluid in chamber B, on the other hand, is drained through fluid passage  $V_3$  into the reservoir tank.

PS-00013

- (1) Chamber A
- (2) Chamber B
- (3)  $V_1$

- (4)  $V_2$
- (5)  $V_3$
- (6)  $V_4$

- (7) From fluid pump
- (8) To A
- (9) From B

- Fail-safe function

If fluid pressure fails to build up due to, for example, a broken fluid pump drive belt, the steering wheel rotating torque is transmitted from the valve rotor to the pinion through mechanical engagement between them.

# POWER STEERING SYSTEM

## POWER ASSISTED SYSTEM (POWER STEERING)

---

### 3. DAMPER VALVE

The damper valve is incorporated in the control valve body and is placed in the fluid passage at between the rotary control valve and the power cylinder chamber. Since the damper valve limits rapid flow of fluid caused by external force, the steering stability in straight forward direction is improved and kickback is reduced.

PS-00685

- (A) To control valve
- (B) To chamber A or B

# POWER STEERING SYSTEM

POWER ASSISTED SYSTEM (POWER STEERING)

## C: FLUID PUMP AND RESERVOIR TANK

The fluid pump is a vane type driven by the engine via belt.

The reservoir tank is mounted on the vehicle body.

The fluid pump incorporates the flow control valve and relief valve, each performing the following functions:

- The flow control valve regulates the flow rate of discharged fluid to a constant level irrespective of the engine speed.
- The relief valve protects the system from excessively high pressures that may occur, for example, when the steering wheel is turned all the way.
- To stabilize the fluid temperature, an oil cooler is installed between the reservoir tank and gear-box.

# POWER STEERING SYSTEM

## POWER ASSISTED SYSTEM (POWER STEERING)

- The fluid pump is belt-driven by the engine. The fluid flow is controlled according to the engine speed so that an adequate steering resistance is given during high-speed operation. The fluid pump is a variable capacity type vane pump whose delivery rate per rotation decreases as the engine speed increases. The pump is integral with a pump control valve and relief valve.
- The vane pump consists of a rotor, a cam ring, and 11 vanes. When the rotor rotates, the vane in each slot of the rotor is moved out by centrifugal force in radial directions and pressed against the cam ring. The fluid from the suction port is confined in chambers formed between two adjacent vanes and carried to the discharge port. Since the cam ring is movable in relation to the rotor, the volume of each chamber is variable. This enables the delivery rate per rotation of the pump to be changed.

- (1) Suction
- (2) Vane
- (3) Rotor
- (4) Cam ring
- (5) Discharge

# POWER STEERING SYSTEM

## POWER ASSISTED SYSTEM (POWER STEERING)

### ● Flow control

The variable capacity pump changes its delivery rate per rotation by changing the degree of eccentricity of the cam ring according to its rotating speed (engine speed).

PS-00628

| (3) Idling     | (7) Delivery rate per unit time        |
| (4) Low-speed  | (8) Delivery rate per rotation of pump |

### NOTE:

In the following description, pump speed ranges will be indicated using the speed points A through D shown in the drawing above.

# POWER STEERING SYSTEM

POWER ASSISTED SYSTEM (POWER STEERING)

## Low-range-speed operation (A — B range)

In this speed range, as well as in all the other speed ranges, two different pump discharge pressures are always applied to the control valve; one is directly led from the discharge port to the left end of the valve and the other is led through an orifice (variable orifice) to the right end of the valve. Since the orifice has a pressure reducing effect, the latter pressure is lower than the former.

When the pump is operating at a low speed, its discharge pressure is also low, resulting in only small difference between the two pressures. In this condition, the valve stays pushed leftward by the spring, allowing the non-pressurized tank fluid to enter chamber A. To chamber B, on the other hand, the orifice-reduced discharge pressure is applied, so the cam ring is pushed leftward by the cam ring spring. This makes the eccentricity of the cam ring a maximum and, therefore, the delivery rate per rotation of the pump becomes a maximum.

- (1) Control valve
- (2) Reservoir tank fluid
- (3) Control valve spring
- (4) Gear box
- (5) Cam ring spring

- (6) Variable orifice
- (7) Pressure chamber A
- (8) Pressure chamber B
- (9) Cam ring

# POWER STEERING SYSTEM

## POWER ASSISTED SYSTEM (POWER STEERING)

### Mid- to high-range-speed operation (B — D range)

During mid-range speed operation, the pump increases its delivery rate. Since the pressure before passing through the variable orifice increases, the control valve moves rightward, overcoming the tension of the control valve spring. This movement of the control valve allows the pressure upstream of the variable orifice to be directed to chamber A after being adjusted to a necessary pressure\* by the port opening area created by the control valve. On the other hand, chamber B receives the reservoir pressure (suction pressure). This means that the pressure in chamber A is higher than that in chamber B. As a result, the cam ring moves rightward against the tension of the cam spring. This causes the delivery rate per rotation of the pump to be reduced, so that the flow rate of the fluid to the steering gear box decreases accordingly.

The above control is performed when the pump is operating at a speed in the B — D range.

\* The “necessary pressure” for chamber A is a pressure required to move the cam ring to the position corresponding to each predetermined flow rate (pump delivery rate). The pressure is obtained by changing the port opening area appropriately through displacement of the control valve. The displacement of the control valve is determined by how much the pressure before the variable orifice is different from that after the orifice.
